THE MILITARY SITUATION.

THERE is not now the shadow of a doubt that Fort Sumter lies a heap of ruins. The entire course of the combined land and naval operations towards this end, from the time of the landing on Morris Island, six weeks ago, now stands forth a very complete and perfect piece of work, and presents the triple result of opening a new epoch in siege operations, seriously crippling the Rebellion in its material parts by closing for ever the leading inlet for blockade-runners, and throwing into the scales of the Union the weight of a moral prestige which will be profoundly felt both at home and abroad. It is true, Charleston is not yet taken, and we cannot share the popular illusions as to the immediate certainty of this achievement. The work still before the army and navy is immense. But enough has already been done to "shut up in measureless content" all who have at heart the speedy triumph of the cause of the Union.

General GILLMORE effected the landing of his force on Morris Island, under cover of the navy, on the 10th of July, and forthwith began that slow, difficult engineering labor of opening parallels, erecting batteries, etc., which, while it prepares the grandest results, is apt to pass unheeded by the public. In the meanwhile, the fleet of iron-clads and wooden gunboats has been assiduously engaged in firing at the enemy's works on Morris Island and at Fort Sumter, for the purpose of engaging their attention while the preliminary operations of the siege went on. When guns enough had been mounted, General GILLMORE began his operations on Fort Wagner, and after a vigorous shelling by his batteries and the fleet, an assault was made on that work with a view of carrying it. The attack was repulsed. General GILLMORE proceeded with his siege operations, resolving to leave Fort Wagner aside and concentrate his efforts on Fort Sumter, regarding that as the key to the whole situation, and confident that the reduction of the great stronghold here accomplished, the minor works on Morris Island would fall by their own weight.

Monday the 17th inst. found the preliminary preparations complete, and the bombardment was begun at daybreak of that date. General GILLMORE opened all his batteries on Fort Sumter, firing over Fort Wagner and the intermediate space. The ordnance used consisted of two-hundred-pounders, one-hundred-pounder and eighty-pounder Parrot rifles, and eighty-pounder Whitworth guns rifled. At the same time, Admiral DAHLGREN moved up the entire available naval force, leading with the flag in the Monitor *Weehawken*, followed by the Monitors *Catskill*, *Nahant*, and *Montauk*—the *Passaic* and *Patapsco* in reserve for Sumter. The *Ironsides* was placed opposite Fort Wagner, and the gunboats *Canandaigua*, *Mahaska*, *Cimarron*, *Ottawa*, *Dai-Ching* and *Lodona* at long range. After a steady and well-directed fire, Fort Wagner was silenced shortly after nine o'clock. The only casualty was the killing of the gallant Fleet-Captain, G. W. RODGERS, who had taken command of his old vessel, the *Catskill*, for the attack.

Meanwhile the fire of the shore batteries was working effectually upon the gorge of Fort Sumter, which appeared to have been strengthened in every possible manner. The Monitors *Passaic* and *Patapsco* now steamed up and devoted themselves for the rest of the forenoon to the attack of Fort Sumter, taking position at two thousand yards from the fort. The siege batteries continued the bombardment during the whole of the day. Fort Sumter scarcely replied. Of the result of Monday's work we have no precise information. Newspaper accounts, however, state that several craters "five or six feet in depth" could be observed in the south-west face. The sand traverse or barricade which the enemy had thrown up to protect the gorge about the sallyport was, at an early hour, penetrated by shell, which knocked out some of the lower tiers, and brought the pile tumbling down about the wharf in an irregular mass, but still in such a position as to protect the wall in a great degree.

On Tuesday the 18th, at four o'clock in the morning, the bombardment was renewed. Additional guns had been placed in position during the night. In consequence of a severe gale and high sea, however, the navy was unable effectually to co-operate in the attack. As before, Fort Sumter was all but silent, batteries Wagner and Gregg being the only assailants on the rebel side. As night closed in the effects of the firing was observable in "deep holes" in the south-west face, and only a portion of the parapet remained; the coping was torn off, and one corner knocked away completely.

The third day of the bombardment—Wednesday the 19th—witnessed a "continuation of the same," though the firing is stated not to have been as rapid as on the two previous days. The gunners, however, had got the range perfectly, and no ammunition was wasted. In the afternoon two of the Monitors advanced towards Fort Sumter for the purpose of attacking it at two thousand yards range, but the current was so strong that the vessels became unmanageable, and the officers were compelled to abandon the design. Fort Sumter fired but one gun during the day, and the new rebel batteries on James Island were the only ones really alive. The firing was kept up regularly throughout the night. "Shots," say the accounts, "were now going through one side of Fort Sumter and passing out of the opposite side; we could see the channel through the apertures made." The siege batteries fired 130 rounds, 75 of which struck Fort Sumter. In the afternoon one of the eighty-pounders was disabled in the breech, the result of its own discharge.

It was now resolved to remove the Whitworth guns and replace them by Parrott rifles. At night a sap was constructed from the third parallel to within two hundred yards of Fort Sumter, and, including to-day, 2,500 have struck. The damage is, of course considerable; and for the last two days all the guns on the south face of the Fort have been disabled."

Thursday, the 20th, opened on the fourth day of the siege. The firing was still exceedingly heavy, though the Monitors did not even advance towards the rebel works. At about noon Fort Wagner opened heavily on the land batteries, but ceased after the *Ironsides* got fairly to work. In the morning the rebels commenced shelling the marsh battery from their works on James Island. During the day they fired 116 shots, with but trifling results. Our sappers were still approaching Fort Wagner. On the fifth day of the bombardment, Friday the 21st, says the Richmond *Sentinel*, "the fire of the enemy's land batteries has been kept upon Fort Sumter, and more guns are disabled." A heavy fire was also kept up on battery Wagner, both from the fleet and the land, and also upon battery Gregg. On Saturday the 22d, the land batteries opened on Fort Sumter from south to north, and the Monitors, coming within closer range, from east to west. The rebel papers report *six hundred and four shots fired that day at Fort Sumter, of which four hundred and nineteen struck inside and outside!*

As the results of this extraordinary week's bombardment—a siege unparalleled in military annals, it is announced that "Sumter is an immense ruin!" The surrender, however, had not taken place. "Col. Rhett," says a Charleston dispatch, "is ordered with his brave garrison to hold his outpost, even as a forlorn hope, until he is relieved or the place taken." On Sunday, 23d, at eleven o'clock, Gen. GILLMORE sent a communication giving notice that at eleven o'clock on Monday, the 24th, he would open fire on Charleston, and "in the meantime non-combatants would go out of the city." The loss of life on the rebel side, during the week's firing, appears to have been quite severe. The real work of the navy still remains to be done—to pass beyond Fort Sumter into Rebellion Roads, and reduce the batteries that line both sides of the water approach to the city. It is doubtless a task that will test to the full the powers of our iron fleet; but the public has implicit confidence that Admiral DAHLGREN and his gallant force will do all that can possibly be done. The only hope for the rebels now is that their interior batteries are still sufficiently formidable to repel our fleet; or that BEAUREGARD make his long promised attack "with the bayonet" on our land force on Morris Island. The denouement of this wonderful drama will of course be watched with the greatest interest.

—THE situation of the Army of the Cumberland is of a nature to attract the liveliest attention of all who have any adequate appreciation of the supreme strategic importance of the objective point towards which the operations of General ROSECRANS are directed. The great mountain system which runs like a wedge into the heart of the Confederacy has been aptly styled "the citadel of a large fortress, of which the walls are formed by the parallel ridges, the ditches by the rapid streams in the valley, and the doors by the gaps." Chattanooga is a natural bastion on the salient angle of the great line of rebel communications. The possession of this will give us the same advantage the enemy has so long had, namely, interior lines, while it will throw them back on exterior lines and permit their attack and defeat in detail. If General ROSECRANS shall be successful in his work, it will change the whole nature of military combinations and operations over the whole theatre of war. ROSECRANS' advance from the old position at Tullahoma and Winchester was commenced a fortnight ago, but the absence of details as to the finest of march leaves us in darkness as to a movement of great military interest. The right column (McCOOK's corps) appears to have moved by way of Winchester and Cowan, striking the river at Bellefonte, Ala., twelve miles west of Stevenson. The

centre column (THOMAS' corps) moved over the mountains on a line nearly parallel with the Nashville and Chattanooga railroad, crossing the river by pontoons at or near Bridgeport, Ala. The left column (CRITTENDEN'S corps) moved directly eastward, crossing the mountains to the north and east of Chattanooga, and making the passage of the Tennessee river at a ford about thirty miles above Chattanooga. Thence the intention seems, by a left swinging movement, to plant his force south of the river in the rear of Chattanooga. Thus far, we have not intelligence of the execution of this movement. One advance, indeed, had appeared opposite Kelley's ferry on the south side of the river on the 21st inst., and immediately opened fire on the city. Up to the latest advices there has been nothing beyond this artillery practice, and there appears to have been no enemy found north of the river.

The defences of Chattanooga are spoken of in a vague, general way as exceedingly strong; but it is certain that they have all been improvised since Gen. ROSECRANS began his advance from Murfreesboro', six weeks ago. If the left wing, however, was able to carry out the manœuvre above pointed out, it would turn the position, thus obviating the necessity for any direct assault. Accounts are conflicting as to the distribution of the rebel force. Gen. BRAGG is located variously at Rome and at Atlanta, and the force differently at Chattanooga as put variously as a mere home guard, as two divisions and as a much larger force. General JOE JOHNSTON is said to be in command.

The advance of the army of Gen. ROSECRANS is attended by a cooperative advance of a column under Gen. BURNSIDE from Kentucky into East Tennessee, making Knoxville his objective. The objection that usually attaches to double lines of operation may be obviated in the present instance by the fact that each column will hardly encounter any more formidable force than the small force of eight or ten thousand men under Gen. BURNSIDE, who has for many months been guarding that line, in the vicinity of Knoxville.

In judging the progress of the campaign in East Tennessee, we must remember that Gen. ROSECRANS is in a region which presents obstacles to military operations equaled only by the Alps. There are few or no roads, and such as there are are hardly passable. Gen. ROSECRANS accordingly is engaged in *making* roads, and details of whole divisions of his army are at this work. His line of communication is also enormously extended—over three hundred miles, in fact, and very difficult to guard. These facts must be borne in mind by those who do not wish to be led astray by illusions regarding the campaign towards Chattanooga.

—THE Army of the Potomac continues quietly to hold the line on the upper Rappahannock, taken up weeks ago. The enemy holding the line of the Rapidan, and observing the line of the Rappahannock down as far as Fredericksburg, which they occupy with a *corps de gloire* preserves an attitude of inactivity. Whatever reasons there may be for this in the rumors current a week ago, looking towards a renewal of the offensive by Gen. LEE, the opportune appearance of Gen. ROSECRANS' army on the flank of the line of Chattanooga, has doubtless given a very effectual quietude to all such designs. The rebels have derived a great part of their force from the line of the Rapidan, in interior lines, they were able rapidly to concentrate at the decisive point, while holding the Union forces elsewhere in reserve. The manœuvring issues pending both at Charleston and Chattanooga, however, put such concentration of troops in Virginia out of the question, and will rather dictate a reduction from the army in that field for reinforcements at the points directly threatened. The line of communications of the Army of the Potomac cannot be left by the Orange and Alexandria railroad, from Washington to Warrenton, and the only enemy with whom Gen. MEADE at present has to contend, are the partisan rangers, who hang on the flanks of this line in wait for plunder. Conscripts continue to reach the army, and, being incorporated with veterans, will rapidly be moulded into effective soldiers.

—On the Mississippi, Gen. GRANT has since the surrender of Vicksburg, confined his efforts to the consolidation of the results of his magnificent campaign. His army is, for the present, broken up—detached as garrisons at various posts, and employed in patrolling the river, to protect the great artery from the interference of guerrillas. The Mississippi squadron under Admiral PORTER, is also engaged in keeping the river free to commerce. Vessels are now stationed at all points on the Mississippi as the ferry to New Orleans, where there is no danger of being molested by guerrillas, and Admiral PORTER announces that vessels "need not wait for convoy," though, "if convoy is requested it will be granted."

—In the Southwest, the raid by Col. PHILLIPS into Central Mississippi is worthy of note as one of the series of dashing operations in the West, which are doing so much to cripple the Confederacy by the vital resources. Starting from Lagrange, Tenn., on the 13th inst., the expedition reached Grenada, Miss., on the 17th, destroying fifty-seven locomotives, upwards of four hundred cars, the depôt buildings, machine and blacksmith shops, and a large quantity of ordnance and commissary stores.

—ACTIVITY in the Navy has been confined to the operations at Charleston, Admiral PORTER'S observation of the Mississippi, and the arduous, but unostentatious labor of blockading. A rebel dispatch from Wilmington, N. C., under date of the 24th inst., announces that on the 23d, the frigate *Minnesota* and six gunboats bombarded Fort Fisher, and our force succeeded in destroying the steamer *Hebe*, which had run aground some days previously.

PROPOSED CHANGES IN FORTIFICATION.*

Since the art of fortification is subordinate to the laws which govern the effects of the weapons used in attack and defence, it is necessary that an important change should be made in the dimensions and relations of the several parts of a work, to keep pace with the great improvements in ordnance and small arms, and thus remedy many of the defects of the "bastioned system."

The length of the lines of defence being based on the range of fire arms, and these lines governing the relations of the works, it follows that the common bastion front of 360 yards, based upon a range of 200 yards, may be extended to 600 yards, to correspond with the line of defence of the Minié rifle, which will not be less than 400 yards. From this must result many changes in the several parts of the fortification whereby their capabilities for defence are greatly increased.

In the "bastioned system," which is composed of an "enceinte" or "body of the place," made up of bastions connected by curtains, and outworks which receive the main force of the attack, and which are to be disputed inch by inch, the body of the place is little better than a redoubt into which the garrison retreats after the loss of the outworks, for the purpose of capitulation. For since the loss of one bastion involves the loss of all the others, but few commanders will wait the wall breaches in the body of the place after the exterior works have fallen.

This weakness of the body of the place shows the importance of so constructing fortifications that the outworks may be capable of the greatest powers of defence. It is proposed to renew the curtains connecting the several bastions, and this same thesis detached bastions to partake of the character of outworks. The extended front will enable them to be increased in size, admitting of the construction of redoubts within them, and enabling them to contain a heavier armament and larger number of defenders.

The spaces between the bastions will be covered by "demi-lunes," as in the old system, which, from their increased size will have greater saliency, and thus throw the bastions into deep re-entering angles.

These bastions with their redoubts, as well as the demi-lunes are independent of the body of the place. And the interior of each bastion is also commanded by each of its collateral bastions. This necessitates the simultaneous capture of three bastions instead of one, which forces the enemy to a prolonged development of his works. And even when these bastions are captured the enemy, to reduce the place, is forced to move across the bastion to descend upon the glacis of the "enceinte" by means of a trench.

The "enceinte" should be composed of bastioned fronts, surmounted by a parapet, and surrounded by a ditch and covered way; and is to be so arranged as to be protected by the exterior works. It will thus be sheltered from ricbochet firing during the progress of the siege, and will consequently remain uninjured until the enemy have made good their lodgment in three consecutive exterior bastions.

The proposed system, of which but a brief outline is here given, has the additional advantages over the old of requiring fewer men to guard the place against surprise, because of its disconnection with the exterior bastions, and facilitating sorties and offensive reprisals, by reason of the exterior cover which the gorges of the bastions furnish the besieged; from whence he can issue by the flanking ditches. Besides, the increased size of the works admits of the employment of movable artillery, in addition to the fixed armament. This is important, and can be readily adopted when it is considered that rifled ordnance, while maintaining a certain caliber, doubles the weight of the projectile; or, in maintaining the weight of the projectile, admits of a diminution in the weight of the pieces, which may thus become light and portable.

This additional armament will be of great value, as it can be changed from one point to another as desired, accompanying the besieged in his sorties, attacks, and offensive reprisals. It can be mounted on the summit of a breach, transferred to the flanks of an assaulting column, and placed in numerous positions to inflict severe injury upon the besiegers.

In a word, the proposed change will furnish an increased number of strong outworks commanded, to a certain extent, by each other, and by the body of the place, each of which is capable of being defended at every step before the garrison retires to the body of the place, which itself is capable of sustaining an attack before capitulation.

ENGINEER.

—The depredations committed upon our Commerce call Maríoe by the rebel privateers have never been fully recorded, but we have facts enough to enable us to form a very correct estimate as to our loss. A list before us of the unfortunate craft which have fallen a prey to the *Calhouns* and *Floridas* and *Alabamas* of the rebels, fixes the number at near two hundred in all. The classes of vessels are about equally divided, and all commerce has had its share in the terrible ordeal. The China trade seems to have suffered most. The total value of the vessels and cargoes destroyed may be roughly computed at between twelve and fifteen millions of dollars. Of this sum, the losses of the China trade amount to full three-fifths. Among the captures, the *Alabama* has been the most successful. Her captures exceed fifty, and comprise 21 ships, 15 barks, 10 schooners, 6 brigs, one gunboat (the *Hatteras*), and one steamer (the *Ariel*). The *Sumter* comes next with about thirty captures, mostly brigs and barks. The *Florida* shows a list somewhat smaller, while the *Jeff. Davis* has made less than a dozen. The *Tacony* did much havoc in her short-lived career, capturing 16 vessels, most of them fishing smacks, on the coast of New England. The months of June and July have been the harvest time of these sea-robbers. Of the vessels captured the majority are of a tonnage under 500 tons. Only fourteen exceed a thousand tons burthen.

—The following Regular troops are now stationed at various points in and near this city to secure the enforcement of the conscription: The Second, Third, Fourth, Sixth, Seventh, Eighth, Tenth, Seventeenth, Eighteenth, Nineteenth and Seventieth Infantry, and Battery C of the Fifth Artillery. Besides these, seven New York cavalry, infantry and artillery regiments, five Ohio, three Massachusetts, five Vermont, three Michigan, three Indiana, one Minnesota and two Wisconsin Infantry regiments, and one Connecticut regiment of infantry, together with one Massachusetts cavalry regiment, are stationed here. This makes a total of forty-four regiments and batteries now on duty here—a formidable force, and one able to fully protect the National interests.

—Captain A. W. Calwell, 3d R. I. V. A., under date of August 12, relates the following incidents of artillery practice in Morris Island. This morning I put one of my old guns (the smooth) and fourth a steamer (from the size of the Newport steamers,) two miles and a half off. That is what we call the shooting. At five o'clock this afternoon the Chief of Artillery ordered me to fire into Sumter, and I put seven shots into her—some of them looked as if they had entered the barn door. My company have named all of my guns—No. 1, Baby Waker; No. 2, Whistling Dick; No. 3, Brick Driver; No. 4, Crasher. In my firing yesterday morning, I knocked one of the guns from the top of Sumter over the parapet into the water. It was a chance shot.

—A Philadelphia correspondent of the Cincinnati *Gazette* relates the following—On the 8th a vessel ran the blockade at Cape Fear river. She was loaded with stores chiefly for the rebels. The colonel in command of a part of the rebel forces deserved the vessel at what he called the Quarantine. The people of Wilmington, N. C., demanded of the colonel to surrender the cargo to them. He imperiously refused. They called upon Governor Vance, who finally got on a stump in the market house and addressed them. He said they should be protected. The Governor made a formal demand of the Colonel. Wishing to deliver the vessel to him at the Wilmington wharf. The General hesitated, the people became infuriated, and finally General W., to appease them, acceded to the demand of the Governor. And the day the people demanded the removal of the Colonel. This was also granted.

—The recent cavalry expedition to Granada, Miss., occasioned the destruction by the rebels of fifty-seven locomotives and four hundred cars. This makes seventy-seven locomotives and six hundred cars captured or destroyed, as the direct result of the Vicksburg campaign.

—A general order from Major-General Couch places the district of country including the counties of Berks, Schuylkill, Lehigh, Northampton, Carbon, Monroe, Luzerne, and Columbia, under command of Major-Gen. Sigel, headquarters at Reading, Pa.

*I am indebted for the main suggestions of this article to a recent French work on Fortification, by V. Morillot, an officer of the Legion of Honor, etc.

CORRESPONDENCE.

THE CAVALRY BUREAU.

FROM OUR OWN CORRESPONDENT.

After two years of experience, the Government is at last waking up to the necessity of a more thorough organization of the means, resources, and system, whereby the cavalry branch of the service may be rendered more efficient. It is impossible for a person not actually in the field, to appreciate the rapid destruction of horseflesh in our active campaigns. A raid of three or four days, or a single combat of four or five hours, may—generally does—dismount from five hundred to a thousand horses.

As long ago as March last, when General AVERILL fought his spirited fight at Kelly's Ford—the first formidable cavalry fight of the war—the writer had his attention strongly called to the fact that the Government had been pursuing a wrong course in regard to mounting and equipping our cavalry. In a subsequent conversation with General AVERILL, on the same subject, I learned how easily and how cheaply the cavalry horses, but for red tape, might, at the opening of Spring, have been fat and sleek and ready for work, instead of poor, starved, and almost good for nothing. The horses were compelled to stand in the open air all winter. There was neither timber nor lumber to build them sheds. The Government had several million feet of condemned oneway in the wharf storehouses of Baltimore, Philadelphia, and New York. Requisition was made for the same. The coal could not be cut—the horses froze and suffered, and the canvas still rots in the warehouses.

But the Government, like everybody else, learns profitable lessons by dear experience, and now, with regard to the cavalry, it is doing what ought to have been done before, perhaps, but doing it now in earnest, and on a scale befitting the importance and necessities of the service.

The organization of the Cavalry Bureau in Washington, upon the broad ground proposed, is the most important object yet undertaken in regard to any service. It is designed that the entire management of everything pertaining to a cavalryman or cavalry horse shall pass through this Bureau. The very first thing undertaken is the re-mounting of all dismounted cavalrymen. There is a vast necessity for keeping a cavalry man mounted; dismounted, he becomes the worst kind of a straggler. So severe has been the cavalry service for the past six months, that at times as high as one-fourth of the horses have been without good horses. This is now being fast remedied. The first innovation is the abolishment of the contract system for purchasing horses. Any body bringing twenty-five horses to the Government yard will have them inspected, and if they pass, be gets his money without trouble. The class of horses now being bought is better than heretofore. Higher prices are also paid than formerly, under the contract system. The Government is now paying for good horses from $125 to $147, but they must be good horses, and pass a rigid inspection. At present about four hundred men per day are being re-mounted.

The Bureau has already commenced the construction of immense yards and stables in a very excellent location near Washington, at being on the point of land across the Eastern Branch, and below the Government Insane Asylum, on the Maryland shore of the Potomac. It is the intention to construct stables here for ten to twelve thousand horses, and yards in proportion, for training and drilling them. Barracks for a large camp are also being built, and when a detachment of cavalry arrives for new horses, the men will have a camp ready.

It is proposed, as soon as it can be perfected, to have and keep on hand a sufficient number of horses to give the cavalry an entire remount, so that at any time that any corps may change their exhausted horses for fresh ones. The exhausted horses will be put in the stables, and recruited in strength, so that they may be again re-issued, and the cavalry never have fresh animals. A horse should never be used beyond a certain point of endurance; but when exhausted—not broken down—if sent back to a stable, such as this will be, his value is saved, and in a short time he again becomes fit for use.

In addition to the stables, the Bureau is establishing blacksmith, saddlery, and other shops, equipment depots, &c. Every requisite will be kept on hand and furnished with unusual promptitude.

The Bureau is located in Washington, on H. street, between 13th and 14th, in a fine, roomy building. Major-General George STONEMAN is in charge. He is ably assisted by two eminently practical and energetic officers—Lieutenant-Colonel ALEXANDER, as assistant adjutant-general (formerly chief of staff of the Cavalry Corps), and Lieutenant-Colonel SAWTELLE as quartermaster. The remounting of men is at present in charge of Lieutenant-Colonel SWEITZER, formerly of General McClellan's staff. These gentlemen all understand their business thoroughly. The Bureau, being a great necessity, must prosper, while it relieves the quartermaster's department of much labor.

At present the regular brigade of cavalry is the first in hand in the new camp and stables. The men are already re-mounted, but they will remain some time longer to recruit their numbers and their physical energies. CORCORAN.

WASHINGTON, Aug. 24, 1863.

MILITARY AND NAVAL ACADEMIES.

To the Editors of the Army and Navy Journal:

SIR,—I am happy to receive your Prospectus of the U. S. ARMY AND NAVY JOURNAL. I shall take a great interest in its publication, and trust it will meet with success. Such a journal has been greatly needed, and under proper management can be made of great service in disseminating sound information in regard to military matters, as well as in elevating the tone of the public service, and correcting the abuses which disclose themselves from time to time. May I direct your attention, even, to one to which I hope you will, at an opportunity, give your consideration. I allude to the system of instruction in our Military and Naval Academies. Great as is the good which these institutions have done, they are prevented from accomplishing what they ought to accomplish by a system which admits cadets who know little more than their letters, and which, therefore, wastes the first year or two years upon the very rudiments of education. This is a consequence, no doubt, of the disposition of politicians to prostitute every public interest to their own ends. Members of Congress hold the virtually the appointing power to the Military and Naval Academies, and if they cannot use this power to the promotion of fools and dunces, of what benefit can it be to themselves? The politicians have, consequently no possible demand the usefulness of the schools to which I have referred, and they will quite do so, if they are let alone.

The present is a favorable time to call public attention to abuses which seriously affect the public security; and the management and mismanagement of these schools is precisely one of these abuses. B.

WASHINGTON, August 20th, 1863.

A WORD ON THE OTHER SIDE.

To the Editor of the Army and Navy Journal:

SIR,—Amid the abundant praise bestowed upon the ironclads will you not allow an old sailor a word on the other side? Now, sir, though the question of the impregnability of ironclads receive a satisfactory solution at Charleston, and the Monitors and Ironsides are proved impregnable through the severest possible test of their ability to resist shot and shell, there must still remain objections to armored vessels which should exempt their opponents from the charge of unreasonable old fogyism. Are the Monitors and Monitors alfred is so complete that their officers and crew may escape the perils of battle, they are still forced to accept the alternative of the daily discomforts of a life in the confined and necessarily ill-ventilated apartments of the submerged vessels. If they escape untouched the life and limb, it is at the expense often of constitutions so shattered that they must bear through years of ill health and suffering the pain otherwise concentrated into a brief period of agony. By so much as a life which must be thus endangered is to be preferred to death; by so much as a shattered constitution is better than a maimed limb;—by so much does the security of the Monitor outweigh the comfort of wooden vessels. In the one case the risk of injury is represented by but a small per centage on the sum of the crew engaged; in the other each man has it to bear in his individual experience. Is it surprising, then, that our sailors should entertain prejudices against the impregnable Monitors, and cling tenaciously to their vulnerable wooden hulls? OLD FOGY.

OUR BOUNTY LAWS.

To the Editor of the Army and Navy Journal.

SIR,—The General Government have ever labored to make the duties of our volunteers as light as possible. The utmost exertions have been made to them such privileges as the service will allow. The pay was increased from $11 to $13 per month, and ample provision made for such as are disabled from wounds received in the service. The law of July 11th, 1862, provides for the payment of bounty to the widow and orphan children, to a deceased soldier, and the act of July 22d, 1861, for the payment of $100 to every soldier who has served for two years, or during the war, it sooner ended. By an amendment, passed March 3d, 1863, the bounty of $100 is to be paid to any one, no matter how long he has served, provided he has been wounded in the service.

The act is by no means perfect, and should receive the attention of Congress at its next session. Many men have been discharged for disability on the ground of not having remained in the service for two years, are not the subjects of bounty. If a man has lost his health in his country's cause, he is entitled to it as well as one who has received a wound. The diseased man may be just as much broken in constitution as the wounded one; why, then, should the distinction be made? Some soldiers have taken their discharge papers not knowing that by so doing they were depriving themselves of the bounty. In one instance, a discharge was given to a soldier against his will, and ever since he has been at the expense of medical attendance. Many thus discharged have become a public expense. Certainly the Government should care for those who have lost their health in its defence. Some time since, one who was taken prisoner was paroled, and on his return was mustered out of the service. He is deprived of his bounty because, forsooth, he was so unfortunate as to fall into rebel hands. Provision should be made for such cases, and we trust that they will be duly remembered during the next session. Grumblers there have been from the days of Adam to the present time. Far be it from us to grumble or complain. Our Government have a mighty work on hand, and it would require perfection to have all things right at once. I trust that Congress will receive favorable consideration what is injurance demands, and that our soldiers will never have a just cause of complaint. S.

UNRELIABLE REPORTING.

To the Editor of the Army and Navy Journal:

SIR,—A few days since there appeared in the naval column of the major portion of the daily journals of this city the following item:

"GREAT FEAT IN NAVAL ORDNANCE.

"Within the past few days there have turned out the Brooklyn Navy Yard two 200-pound Parrott guns rifled. This is the first time ordnance of this calibre has been submitted to the rifling process in this country. The guns resemble the 100-pounders in every respect, save that there is a reinforced band around the breech, which materially strengthens them. The Parrott foundry has now a 300-pound gun nearly ready for rifling, and another of the same weight. One of the iron sheds attached to the South Atlantic fleet, under Admiral Dahlgren, is said to be armed with a number of the latter kind, for which one is not known. The largest gun in the navy before the advent of this class was the Dahlgren 150-pounder, which weighed thirty-five pounds of powder."

Reading the above is hardly worth noticing, except so far as it does the inventive genius of our country injustice, it may perhaps be deemed worthy of correction in your journal.

The "200-pounder Parrott guns" have been in use in the U. S. Navy nearly two years. A three-hundred-pounder gun is now at Morris Island. All of Capt. Parrott's guns are unquestionably the finest guns in our service, and it is the general opinion in Naval circles that they will supersede all other rifled guns. It is significant that Dahlgren has sent a requisition to the Ordnance Department for eighty of these guns, to replace his own smooth bores.

The Parrott gun was in use long before the 15-inch, or "Dahlgren gun," as the reporter calls it, was cast, or perhaps conceived of. AJAX.

BROOKLYN NAVY YARD, August, 1863.

AMERICAN ORDNANCE IN ENGLAND.

The following is from the London *Army and Navy Gazette*, of the 8th inst.—

"We mentioned in our last number the successful efforts which have been made in the improvement of their cannon ordnance, which we believe to be traceable to the spirit of emulation which exists between the Army and Navy Ordnance Departments, and their working heads, Captains Rodman and Dahlgren being held responsible for the weapons turned out. The slightest alteration in the form or construction of either the army or navy guns is closely watched by the other Department; and the result is already a marked advance. Most artillerists have fixed (now Admiral) Dahlgren, the best form of gun is the, and to Captain Rodman, of the United States Army, is owing the present admirable plan of casting hollow and cooling from the interior of the gun; and although the one contracts longitudinally as the other does, while in the heavy fort guns and field pieces, there is scarcely any difference in the patterns of their weapons, which are all cast at the same foundries, and of similar bore, so that the shot are interchangeable. After careful experiments, however, the value of which are best indicated by the fact of their being adopted by the Woolwich Ordnance Committee, as confirming their statement of the necessity for altering our old plan of proving guns, it has been found that guns could not be depended upon for rifled guns, and consequently Mr. Parrott has set about strengthening those which are already rifled. This plan differs as much from the looping pursued in France and Spain as from our own building-up system, for, instead of placing a single massive jacket over the breech of the gun. So effectually does it strengthen the rifled weapons, that they are found to safely withstand 1,000 rounds with elongated shot, and to give a velocity of 1,800 feet per second with the solid balls, which are also used in the practice. The rifled guns used are three and six are of the 32-pounders 8 and 10-inch bore, and which besides do excellent work as rifles, with a range which few guns reached, have attained such as 2,200 at 10 degrees elevation. We trust that these results will attract the attention of our responsible authorities.

VACCINATION.

—A medical correspondent of an English paper wishes to call the attention of his profession to the voluble tincture of malice in the treatment of deafness and other diseases of the nervous mechanism.

ARMY GAZETTE

ORDERS REVOKED.

So much of General Orders, No. 284, of the 1st last., as directs the names of Lieutenant-Colonel Joseph Jones, late Artillery, to be on board on retired list, to be revoked.

So much of special Orders, No. 192, current series from this office, as dismissed Surgeon W. D. Bisbee, Veteran Volunteers, to by direction of the President, revoked, and he is hereby reinstated in his former position in the army.

PROMOTIONS FROM THE RANKS.

The following promotions, for meritorious conduct on the field, have been made from the ranks for make of the regular army:

To be Second Lieutenants, to rank from August 10, 1863.

First Cavalry—Sergeant Henry Jones, company K, Fifth Cavalry.

Second Cavalry—Ordnance Sergeant James Cahill; First Sergeant Charles Meester, of company I, Fourth Cavalry; Sergeant James Sargen, of company B, Fourth Cavalry.

Fourth Cavalry—Commissary Sergeant Sebastian Gunther; First Sergeant Augustus Brandon, of company D.

Second Artillery—Sergeant John Smith, of company L.

Fifth Artillery—Ordnance Sergeant Richard Wilson.

Fourth Infantry—Ordnance Sergeant Nicholas Redmond, First Sergeant John Miller, of company F.

Fifth Infantry—Sergeant Benjamin F. Nash, of company F; Sergeant C. H. Green of the general service.

First Infantry—Sergeant Daniel F. Jones, of company K; First Sergeant Samuel R. Wallace, of company B.

Second Infantry—Sergeant Thomas Deasy.

Fifth Infantry—Sergeant-Major Edward Wash.

Seventh Infantry—Ordnance Sergeant Daniel Robinson.

Tenth Infantry—First Sergeant John L. Smith, company K; Sergeant James B. Mauny, of general service.

Twelfth Infantry—First Sergeant Anton Meyer, of company E.

First Battalion, Fourteenth Infantry—First Sergeant John Patterson, of company F, Second Battalion; Corporal James H. May, of company B, First Battalion.

Thirteenth Infantry—Sergeant Robert Nelson, of company B, First Battalion; Sergeant Andrew W. Hunter, of company A, First Battalion.

Fifteenth Infantry—First Sergeant James P. Brown, of company K, First Battalion; Sergeant-Major Edward Hall, of the general service.

Sixteenth Infantry—Sergeant-Major Walter Clifford, of the First Battalion; First Sergeant Peter J. Coomber, of company B, Second Battalion; First Sergeant Samuel Goeller, 9th company, of company A, Second Battalion.

Seventeenth Infantry—Quartermaster Sergeant John W. Carter, of the First Battalion.

Eighteenth Infantry—First Sergeant Henry C. Pollman, of company B, Second Battalion.

Twenty-first Infantry—First Sergeant John Raines, of company B, First Battalion, Fifteenth Infantry.

CONDITIONAL DISMISSALS.

The following officers will be dismissed from the service, unless, within fifteen days after they shall have received notice of the military authorities at Washington, and answer the charges preferred against them:

Absent without proper authority—Captain Alexander McElroy, Thirteenth Pennsylvania Cavalry.

Lieutenant John C. Dodd, Seventh Indiana Volunteers.

Colonel L. A. Dayton, Fiftieth Illinois Volunteers.

Major Lewis D. Hubbard, Third Illinois Cavalry.

Major John Ayres, Third Illinois Cavalry.

Captain H. C. Sumner, Fifth Kansas Volunteers.

Captain A. J. Hopkins, sixth New York Cavalry.

Captain Charles Albright, Twelfth New Hampshire Volunteers.

First Lieutenant Alfred Hall, Fifty-fourth Illinois.

Captain Richard Wilson, Third Wisconsin Volunteers.

Intemperate—Lieutenant William Vanderbilt, Sixty-fifth New York Volunteers.

Lieutenant-Colonel Wm. Cudlipp, Twelfth Maryland and Fifty-fifth New York Volunteers.

Intemperate—Surgeon Charles W. Plum, Second New York Cavalry.

Disobedience of orders and desertion—Lieutenant W. W. Wheeler, Fifty-fourth Illinois and Eighty-third New York.

Evading duty under General Orders No. 72—Captain T. A. Crouch, Fifth Maine Battery.

First Lieutenant Chester White, Thirteenth Pennsylvania Cavalry.

Failure to report for muster—Assistant-Surgeon Thomas Alfred C. Smith, Fourth Rhode Island Cavalry.

Absent without leave—Quartermaster Milroy's Brigade.

First Lieutenant Samuel P. Crowley, Fourth United States Infantry.

Failure to report at conditional camp—Captain W. H. Beebe, Eighty-first Pennsylvania Volunteers.

Second Lieutenant Charles Wood, Seventeenth New York Volunteers.

First Lieutenant Charles White, Thirteenth Pennsylvania Cavalry.

RETIRED AT THEIR OWN REQUEST.

Colonel Hannibal Day, 6th Infantry; Lieutenant-Colonel George Saunton, 1st Artillery. Vice to date from August 1st.

THE MEDICAL DEPARTMENT.

By Circular No. 14, issued from the Surgeon-General's office, under date of August 16th, Surgeons in charge of Hospitals are informed that they are authorized to purchase, for the use of the sick, by making proper requisition therefor.

The importance of the improvement of procuring pure Port Wine for the use of the sick, by making proper requisition therefor.

The importance of the improvement of procuring pure Port Wine for the use of the sick, by making proper requisition therefor.

This wine is pleasant and astringent, and is the pure juice of the grape, purchased by the Medical Department in bond, and bottled at the Medical Purveying establishments.

ORDERS.

Surgeon J. L. Lord, U. S. Vols., to report to Maj.-Gen. Reserves.

Assist.-Surgeon R. A. Bell, U. S. Vols., to report to Gen. Meade.

Vol., to report to the Medical Director Department of Washington.

Assist.-Surgeon Wm. Hoffman, U. S. Vols., to report to the Medical Director Department of the Susquehanna.

Assist.-Surgeon Reynolds, U. S. Vols., to report to the Medical Director Department of Virginia.

Assist.-Surgeon S. J. Shultz, U. S. Vols., to report to the Medical Director Department of Virginia.

Assist.-Surgeons J. H. Dougherty and Nathan P. Rice, U. S. Vols., to report to the Medical Director Department of Virginia.

Assist.-Surgeons P. A. White and Otis A. Humphrey, U. S. Vols., to report to the Medical Director Department of the Gulf.

Surgeon Thos. Simon, U. S. Vols., to report to Gen. Meade.

Assist.-Surgeon C. H. Crane, U. S. Vols., to report to Medical Director Department of the Monongahela.

Assist.-Surgeon Wm. Hoffman, 125th N. Y. Vols., to report for duty to the Medical Director Department of Washington.

Assist.-Surgeon C. H. Crane, U. S. Vols., to report to Col. Hoffman, Commissary General of Prisoners.

Medical Director Jos. K. Barnes, to report to the Medical Inspector-General U. S. Army.

Surgeon R. H. Gilbert, U. S. Vols., to report to Gen. Meade.

DISCHARGED FOR PROMOTION.

The following named officers have been discharged the service, with a view to their enlistment as hospital stewards: Private John Hessel, 1st N. J. Cav.; and Wm. B. Stiles, 93d Ohio; Sergt. Harrison Wagoner, 38th Iowa; Corp. J. A. Rentzen, 97th N. Y.; Private R. L. Hamilton, 1st Maryland Cavalry.

DISMISSALS.

By direction of the President the following medical officers have been dismissed the service of the United States:

Assist.-Surgeon R. O. Marshall, 124th N. Y., on account of habitual intemperance.

Assist.-Surgeon Alexander Wilson, 121st Penn. Vols., for absence without leave and drunkenness.

Assist.-Surgeon John M. Sullivan, U. S. Vols., for drunkenness and neglect of duty.

Assist.-Surgeon G. W. Johnson, 32d Ind. Vols., discharged from service on account of incompetency.

Assist.-Surgeon Alfred Hulse, 56th N. Y. Vols., having tendered his resignation, has been discharged from the service on account of physical disability and failure to properly account for his absence from his command, he having rendered but little service to the Government.

HONORABLY DISCHARGED.

The following-list officers having tendered their resignations, have been honorably discharged the service of the country:

Assist.-Surgeon David L. Booth, Mississippi Marine Brigade.

Assist.-Surgeon D. A. Storey, 14th Ohio Vols.

Surgeon H. Hood, 58th N. Y. Vols.

RESIGNATIONS.

The President has accepted the resignation of Surgeon E. C. Franklin, U. S. Vols.

ASSIGNED.

Surgeon Nedlem Mills, U. S. A., is assigned to duty as Medical Inspector, Department of the Tennessee.

Surgeon C. Sutherland, U. S. A., is assigned to duty as Medical Director at Fortress Monroe.

RESTORED.

By order of the Secretary of War, the order dismissing Surgeon E. P. Morrow, 3d Ind. Vols., has been revoked, and he is restored to his position, from which he should never have been killed.

Surgeon C. S. Moore, 12th Ky. Vols., dismissed by special orders No. 54 from the 1st Division, Cumberland, 1863, is restored to his command, provided the vacancy has not been filled.

LEAVES OF ABSENCE.

Leaves of absence have been granted to the following officers:

Surgeon Jos. Pancoast, U. S. A., for 20 days.

Asst.-Surgeon G. G. Renn, 65th N. Y. Vols., for 20 days.

Surgeon H. P. Ferguson, 5th N. Y. Cav., for 20 days.

Surgeon N. D. Ferguson, 8th N. Y. Cav., for 20 days.

Asst.-Surgeon Wm. Hoffman, 125th N. Y. Vols., for 20 days.

Acting Asst.-Surgeon T. P. Sprague, U. S. A., 15 days.

Med. Inspector Jos. Pancoast, U. S. A., 15 days.

Surgeon Daniel F. Smith, N. J. Vols., for 20 days.

Asst.-Surgeon C. H. Crane, U. S. Vols., for 20 days.

Surgeon S. H. Hunter, U. S. Vols., for 20 days.

Surgeon J. W. Ellis, U. S. Vols., for 20 days.

COMMISSARIES OF MUSTERS.

The following are announced as the newly appointed Commissioners and Assistant Commissaries of Musters, under the Mustering Regulations, as far as received:

1ST ARMY CORPS.

Commissary, Lieut. R. Ogden Doremus, U. S. Infantry, appointed April 15, 1863.

Assistant Commissaries, Lieut. C. H. Robe, 147th N. Y. Vols., 1st Div., April 21, 1863; Capt. D. E. Ransom, 3d U. S. Artillery, 2d Div., March 24, 1863; Lieut. Wm. Hall, 12th U. S. Inf., 3d Div., April 14, 1863; Lieut. J. P. Reed, 90th Penn. Vols., 3d Div., April 14, 1863; Major C. H. Morgan, 1st U. S. Artillery, 3d Div., 1863.

2D ARMY CORPS.

Commissary, Capt. E. P. Pratt, 1st U. S. Cav., March 24, 1863.

Assistant Commissaries, Lieut. W. F. Wilcox, 148 Penn. Vols., 1st Div., April 21, 1863; Lieut. Wm. Hall, 12th U. S. Inf., 3d Div., April 14, 1863; Lieut. F. S. Feuch, 1st U. S. Artillery, 3d Div., April 14, 1863; Capt. Wm. Hoffman, 1st U. S. Cav.

3D ARMY CORPS.

Commissaries, Lieut. R. Ogden Doremus, U. S. Inf., April 22, 1863; Capt. S. S. Poland, 2d U. S. Inf., June 16, 1863.

Assistant Commissaries, Capt. A. J. Slaughton, A. I. G., Major 10th U. S. Inf.—Div., March 16, 1863; Capt. C. Sanford, A. D. C., Div., May 20, 1863; Capt. Wm. Hoffman, 1st U. S. Cav.

4TH ARMY CORPS.

Commissary, Capt. A. J. Slaughton, 13th U. S. Inf., May 19, 1863.

5TH ARMY CORPS.

Commissaries, Capt. Orrin Smith, 1st U. S. Inf., July 17, 1861; Lt. Col. A. S. Webb, A. I. G., Capt. 12th U. S. Inf., March 10, 1863—relieved July 1, 1863.

Assistant Commissaries, Col. A. Ames, 20th Me. Vols., 1st Div., April 20, 1863; Capt. Wm. Hoffman, 1st U. S. Cav., April 13, 1863; Capt. W. Barnard, 18th Mass. Vols., 1st Div., April 15, 1863; Lieut. C. S. Bennett, 1st U. S. Inf., 1st Div., April 15, 1863; Capt. C. H. Stewart, 126th Penn. Vols., 3d Div., April 13, 1863; Capt. Chas. Hamilton, 1st U. S. Cav., 3d Div., April 13, 1863.

6TH ARMY CORPS.

Commissary, Lieut. J. P. Reed, 90th Penn. Vols., 3d Div., 1863.

Assistant Commissaries, Capt. A. M. Taylor, 37th N. Y. Vols., 1st Div., April 19, 1863; Capt. Wm. Hoffman, 1st U. S. Cav., April 13, 1863; Capt. C. H. Stewart, 126th Penn. Vols., April 24, 1863; Lieut. Col. J. F. Kent, A. I. G., March 20, 1863.

7TH ARMY CORPS.

Commissary, Col. G. A. Pitcher, 12th U. S. Cav., March 19, 1863—relieved April 9, 1863.

8TH ARMY CORPS.

Commissary, Maj. H. W. Wharton, 9th U. S. Inf., March 4, 1862.

Assistant Commissaries, Capt. W. C. Rowell, A. D. C., 2d Div., March 20, 1863; Capt. D. E. Ransom, 3d U. S. Artillery, 1862; Capt. W. Hoffman, 1st U. S. Cav., April 28, 1863; Lieut. J. S. Reed, 4th U. S. Artillery, 2d Div., March 24, 1863; Lieut. R. Hall, A. D. C., 2d Div., April 7, 1863.

9TH ARMY CORPS.

Commissary, Major E. W. Smith, A. A. G., Lieut. 15th U. S. Inf., March 26, 1863.

Assistant Commissaries, Lieut. C. E. Hay, 3d U. S. Cav., 1st Div., March 26, 1863—relieved July 1, 1863; Lieut. S. Skinner, U. S. Artillery, 1st Div., 1863—relieved June 24, 1863; Lieut. F. Reynolds, 1st Art., July 1, 1863.

11TH ARMY CORPS.

Commissaries, Capt. H. Hasbrouck, 1st U. S. Inf., April 16, 1863; Lieut. C. B. Carey, 45th N. Y. Vols., March 26, 1863—relieved April 16, 1863.

Assistant Commissaries, Capt. Wm. Hoffman, 1st U. S. Cav., 1st Div., 2d Div., May 11, 1863; Capt. C. F. Wickham, 55th Ohio Vols., 1st Div., April 20, 1863; Capt. Wm. Hoffman, 1st U. S. Cav., 1st Div., April 4, 1863; Major Beckett, 61st Ohio Vols., 2d Div., April 4, 1863.

Commissary, Capt. Wm. Swett, 17th U. S. Inf., April 25, 1863.

Assistant Commissaries, Lieut. J. M. Patterson, 2d Mass. Vols., 1st Div., February 25, 1863; Capt. M. Watts, 109th Penn. Vols., 3d Div., May 9, 1863.

12TH ARMY CORPS.

Commissary, Major M. Lenox, 1st U. S. Inf., April 15, 1861.

Assistant Commissaries, Lieut. F. Van Vliet, 3d U. S. Cav., 1st Div., April 20, 1863; Capt. W. Hoffman, 1st U. S. Cav., 1st Div., April 20, 1863; Lieut. C. Meinhold, 2d U. S. Cav., 1st Div., April 20, 1863; Lieut. Beth Wedg, 5th Wis. Vols., 2d Div., March 20, 1863; Dougherty, 1st U. S. Inf.

19TH ARMY CORPS.

Commissary, Capt. G. C. Moody, 19th U. S. Inf., April 6, 1863.

Assistant Commissaries, Capt. Wm. Hoffman, 1st U. S. Cav., 1st Div., April 13, 1863—relieved June 15, 1863; Capt. W. H. T. Taylor, 19th U. S. Inf., 1st Div., April 24, 1863; Capt. C. H. Stewart, 126th Penn. Vols., 1st Div., 3d Div., April 24, 1863; Capt. F. E. McIlvaine, 19th U. S. Inf., 1st Div., April 24, 1863; Capt. C. Sanford, A. D. C., 1st Div., April 24, 1863; Capt. A. L. Hough, 19th U. S. Inf., 2d Div., May 11, 1863; Capt. C. J. Dickey, 19th U. S. Inf., 3d Div., April 24, 1863; Lieut. T. Morris, 19th U. S. Inf., 1st Div., 13th June, 1863.

20TH ARMY CORPS.

Commissary, Capt. C. Van Horn, 15th U. S. Inf., March 26, 1863.

Assistant Commissaries, Lieut. G. O. Schofield, 2d U. S. Cav., 1st Div., March 26, 1863; Lieut. A. J. Rose, 12th U. S. Inf., 2d Div., March 26, 1863; died June 26, 1863; Lieut. C. J. Dickey, 19th U. S. Inf., 3d Div., April 20, 1863.

22D ARMY CORPS.

Commissaries, Major D. J. Bonner, A. D. C., April 13, 1863—relieved April 24, 1863; Capt. D. A. Williams, 1st U. S. Inf., April 13, 1863.

Assistant Commissaries, Lieut. Wm. Hawley, 2d U. S. Cav., 1st Div., April 20, 1863; Lieut. W. G. Hollman, 2d U. S. Cav., 3d Div., April 17, 1863; Lieut. G. Russell, 3d U. S. Cav., 4th Div., April 13, 1863; Lieut. C. Meinhold, 2d U. S. Cav., 1st Div., April 13, 1863; Lieut. J. Fahey, 2d U. S. Cav., 4th Div., April 24, 1863; Lieut. F. H. Wilcox, 3d U. S. Cav., 3d Div., April 20, 1863.

17TH ARMY CORPS.

Commissary, Lieut. E. Knox, 13th U. S. Inf., April 16, 1863.

Assistant Commissaries, Capt. C. A. Carey, 4th Mass. Vols., April 18, 1863; Major W. Hoffman, 1st U. S. Cav., 1st Div., April 18, 1863; Lieut. Col. J. F. Kent, A. I. G., March 20, 1863; Major L. N. Palmer, 6th U. S. Cav., April 19, 1863; relieved June 19, 1863.

Commissaries, Capt. W. Schuyler, Add'l A. D. C.; April 3, 1863; Capt. S. B. Livingston, A. A. G., April 3, 1863.

Assistant Commissaries, Capt. J. Bonland, 8th, A. D. C., 1st Div., April 3, 1863; Capt. Paul Frank, 1st Missouri Cavalry, Provost, May 30, 1863; Capt. A. Buhan, A. D. C., 2d Div., April 3, 1863; Capt. Wm. Hoffman, 1st U. S. Cav., 3d Div., April 3, 1863; Capt. Chas. Hamilton, 1st U. S. Cav., 3d Div., April 3, 1863.

23D ARMY CORPS.

Commissary, Capt. I. D. Vermilya, 1st U. S. Inf., April 28, 1863.

Assistant Commissaries, Capt. J. W. Long, 2d U. S. Inf., — Div., May 16, 1863—relieved June 10, 1863; Capt. Wm. Hoffman, 1st U. S. Inf., Dist. south of Potomac, — Div., April 24, 1863; relieved June 10, 1863; Lieut. R. Hall, A. D. C., 2d Div., April 24, 1863—relieved June 10, 1863; Lieut. R. Wolle, 12th U. S. Inf., 3d Div., April 24, 1863—relieved June 10, 1863; Lieut. H. W. Knaka, 12th U. S. Inf., 3d Div., April 24, 1863; Lieut. H. K. Rathbone, 12th U. S. Inf., Military Governor of Washington, April 24, 1863.

24TH ARMY CORPS.

Commissary, Capt. J. Hall, 1st U. S. Cav., May 27, 1863.

A. G. O. WAR DEPARTMENT, WASHINGTON.

Commissary, Lieut. W. Wolf, 13th U. S. Inf., May 24, 1863.

HEADQUARTERS ARMY OF THE POTOMAC.

Commissary, Capt. Wm. Hoffman, 1st U. S. Cav., July 28, 1863; Major W. Faliaro, A. Q. M., and A. D. C., April 23, 1863—relieved by Capt. Hoffman, 1st U. S. Cavalry, July 28, 1863.

CAVALRY CORPS, ARMY OF POTOMAC.

Commissary, Capt. Wm. Hoffman, 1st U. S. Cav., August 12, 1863; 1st Lieut. J. W. Koster, 1st N. J. Cav., 3d Div., May 13, 1863.

Assistant Commissaries, Capt. W. Hoffman, 1st U. S. Cav., April 20, 1863; Capt. W. Moritt, 2d U. S. Cav., April 22, 1863—relieved June 26, 1863; Capt. C. Meinhold, 2d U. S. Cav., 1st Div., April 13, 1863—relieved June 13, 1863; Capt. J. M. Kennedy, 6th N. Y. Cav., 1st Div., April 13, 1863; Capt. C. H. Stewart, 126th Penn. Vols., May 20, 1863; Col. G. A. H. Blake, 1st U. S. Cav.

DEPARTMENT OF THE EAST.

Commissary, Lieut. J. C. Amherst, 4th U. S. Cavalry, Sept., 1863—relieved August 1, 1863.

HEADQUARTERS ARMY OF THE POTOMAC.

Commissary, Capt. H. Hasbrouck, 1st U. S. Inf., April 27, 1861.

DEPARTMENT OF THE OHIO.

Commissary, Major T. Swords, 1st U. S. Inf., March 27, 1863.

Assistant Commissaries, Capt. S. B. Hunt, 15th U. S. Inf., Dist. of Kentucky, — Div., May 21, 1863; Capt. W. Hoffman, 1st U. S. Cav., May 21, 1863; Lieut. M. C. Goden, 18th U. S. Inf., Dist. C. Ky., April 17, 1863; Capt. W. Hoffman, 1st U. S. Cav., 1st Div., April 13, 1863; Capt. J. H. Pratt, (See 2nd Army Corps); Lieut. J. C. Henderson, 2d U. S. Cav., 1st Div., April 13, 1863; Capt. C. Sanford, A. D. C., 4th Div., June 5, 1863—Relieved August 1, 1863.

DEPARTMENT OF THE CUMBERLAND.

Commissary, Capt. J. H. Young, 6th U. S. Inf., April 9, 1863.

Assistant Commissaries, Capt. W. Hoffman, 1st U. S. Cav., 1st Cav. Div., April 17, 1863; Capt. W. D. Bickes, 9th Penn. Vol. Cav., 1st Cav. Div., April 17, 1863; Capt. W. Hoffman, 1st U. S. Cav., 1st Reserve Corps, April 18, 1863; Lieut. H. E. Stansbury, 19th U. S. Inf., Dist. Nashville, April 18, 1863; Lieut. J. A. Dickson, 15th U. S. Inf., 1st Div., May 8, 1863.

DEPARTMENT OF THE MISSOURI.

Commissary, Col. B. J. E. Bonneville, U. S. A., April 3, 1863.

Assistant Commissaries, Capt. C. Sanford, A. D. C., 1st Div., April 3, 1863; Capt. C. H. Stewart, 126th N. Y. Vols., April 3, 1863; Capt. D. Buhan, A. D. C., 2d Div., April 3, 1863; Capt. Wm. Hoffman, 1st U. S. Cav., 3d Div., April 3, 1863; Capt. C. Dist. of Kansas, May 9, 1863; Lieut. D. L. Caulfield, 16th U. S. Inf., Dist. of Kansas, Frontier, April 3, 1863; Lieut. R. Wolle, 12th U. S. Inf., Dist. Missouri, Mo. State Militia, Dist. K. K. No., May 1, 1863; Lieut. J. Bonland, 8th U. S. Inf., 1st Div., April 3, 1863; Lieut. Beth Wedg, 5th Wis. Vols., 2d Div., April 3, 1863; Lieut. C. Meinhold, 2d U. S. Cav., 5th Div., May 9, 1863; Lieut.-Col. Enoch Steen, 3d U. S. Inf., April 20, 1863; Lieut. A. Collins, 15th U. S. Inf., Dist. of Rolla, July 8, 1863.

DEPARTMENT OF NORTH CAROLINA.—See 10th Army Corps.

DEPARTMENT OF THE SOUTH.—See 10th Army Corps.

DEPARTMENT OF THE GULF.—See 19th Army Corps.

DEPARTMENT OF THE PACIFIC.

Commissary, Capt. A. W. Kyan, 6th U. S. Cav., April 12, 1862.

Assistant Commissaries, Capt. J. Bonland, 8th U. S. Inf., May 1, 1862—relieved June 22, 1863.

DEPARTMENT OF THE TENNESSEE.

Commissary, Col. G. A. Gillem, U. S. A., April 16, 1863—relieved.

Assistant Commissaries, Capt. A. C. Gillem, A. Q. M.—relieved; Lieut. J. Bonland, 8th U. S. Inf., 1st Div., April 3, 1863; relieved April 15, 1863; Major D. Chase, 15th U. S. Inf., April 15, 1863; Capt. W. Hoffman, 1st U. S. Cav., 1st Div., April 15, 1863; Capt. C. Sanford, 3d Cav., April 28, 1863; 1st Lieut. A. E. McDonald, 23d Ind. Vols., April 11, 1863.

DEPARTMENT OF THE NORTHWEST.

Commissary, Capt. W. Hoffman, 1st U. S. Cav., April 13, 1863—relieved May 9, 1863; Major L. Stigreave, U. S. Engineers, May 9, 1863.

Assistant Commissaries, Major A. D. Nelson, 1st U. S. Inf., Dist. Minn., April 13, 1863; Capt. W. Hoffman, 1st U. S. Cav., Dist. Minn., April 13, 1863; Capt. C. Dist. of Minn., March 26, 1863—relieved June 15, 1863; Lieut. J. A. Rose, 12th U. S. Inf., 2d Div., April 13, 1863; Lieut. C. Meinhold, 2d U. S. Cav., 1st Div., April 15, 1863; Lieut. C. Dist. Minn., April 15, 1863; Capt. J. M. Trowbridge, 16th U. S. Inf., March 26, 1863. One List of Marketing Officers.

—A Point Lookout, Md., letter says that, on the first of this month, that Point and adjoining county of St. Mary's, was formed into a military district, and formed a separate department from the middle one, under General Schenck. The Department of St. Mary's is now under the entire control of Brig.-Gen. Wm. Hoffman, Commissary-General, who arrived at the Point on the 2d of August, with his staff and two regiments of New Hampshire volunteers, the 2d and 12th, to establish a prisoners' depot for a large number of rebels whose arrival there have arrived over 1700 prisoners. It is the intention of the Government to confine some 10,000 prisoners at this point, and I think it is very probably true, as there is large improvements going on in the shape of building a great many cook and mess houses, besides the digging of some sixteen wells, all under the direction of Capt. Nelson Plate, A. Q. M.

—Seventy-five companies have thus far been organized and mustered into the Invalid Corps, and have been assigned to garrison and other duty not requiring too much fatigue or exposure. This corps is proving itself a valuable addition to the service, especially as it relieves healthy troops for more active service in the field.

ARMY PERSONAL

—The venerable Lieutenant-General Scott is spending the summer at West Point, where he is engaged upon a history of his military career.

—It is said, Gen. Hooker will have a command soon.

—Gen. Wadsworth will be commissioned to raise colored regiments.

—Gen. Sigel has been relieved from his duties in Pennsylvania, and has shall marched out of the service.

—General Buford returned to his command in the field on Friday of last week.

—Maj.-Gen. Blair has gone from Newport to Boston for a few days. He had a reception at the latter place. He returns to Newport to meet the Postmaster-General.

—Mr. F. E. Foster, of the Pendleton Office, has been appointed Adjutant-General of East Virginia, with the rank of Brigadier-General.

—Lieut. Copley, who has been on duty at the Provost-Marshal's, in Washington, for nearly two years, has been relieved.

—Col. R. B. Hodington, of Gen. Fremont's staff, lately on duty on the court-martial of which Gen. Slocum is President, has been relieved. Col. Lunsey McGee takes his place.

—Brigadier-General Viele, late Military Governor of Norfolk, arrived in Washington last Friday, from a short visit to New York.

—General Grover, one of the heroes of Port Hudson, arrived at Washington from New Orleans recently. He returns to the Army of the Gulf in a few days.

—Capt. L. B. Ellison, of Brooklyn, is now in Philadelphia, in attendance upon a Court-Martial, as one of its members.

—Gen. Burnside now commands the 23d Army Corps, formerly Gen. Stevens'. The 9th, Gen. Burnside's old corps, is retained in Kentucky as a reserve.

—General Halbert E. Paine has declined to be a candidate for Governor of Wisconsin, at the approaching Union Convention.

—General Tuttle has been put in nomination by the democrats for the position of Governor of Iowa. He is a republican in politics.

—Captain Reno, brother of the lamented General Reno, has recently passed one of the wealthiest and most beautiful ladies of Harrisburg.

—Brigadier-General Isaac F. Quinby, who was recently sentenced by his old command, the 10th Ohio Volunteers, with a Maltese cross of solid gold, with a large emerald set in the centre, studded with diamonds. The cross is to be worn in a silver shield and pin, by which it is secured to the breast of the wearer, and after making the handsomest badge that can be worn by a soldier.

—Generals Archer and Jones are the only rebel officers now on Johnston's Island, Lake Erie, prisoners of war. General Jones is a Virginian by birth, and was captured at the battle of Gettysburg. His brother is a merchant at St. Louis. General Barksdale, Colonel Humphrey, of Charleston's Station, Mississippi, owns three plantations at Port Gibson, worth more than $3,000,000. Many others are men of large property.

—General Burnside has issued the following order, announcing the appointment of Colonel Hanson, of the 20th Kentucky Volunteer Infantry, under arrest for the surrender of Lebanon, was issued under an entire misapprehension of the facts. He has since been able to remove the impression the arrest may have occasioned, and to commend Col. Hanson and his troops for their behavior on the occasion."

—A complimentary dinner was given to Brigadier Major Arthur a few evenings ago at Chicago. Among those present were Gen. Marshall, Col. F. N. Arnold, Gen. Farnsworth, Capt. McGlashen, John McArthur, Sr., Col. H. Turner, Col. Mulligan, Col. Dodge of Iowa, Colonels, Col. Samuel Raymond, Hon. John Wentworth, and Messrs. Valentine, Armour, McAllister, Anthony and others well known as public men.

—Colonel James C. Rice, of Albany, has been made a brigadier-general. He originally went out as a subaltern in a New York regiment, and was the first battle of Bull Run; was subsequently promoted to the lieutenant-colonelcy of the 44th, of which, soon after going into active service, he was appointed colonel, which, except when acting as brigadier, he has had the immediate command through all his campaigns.

—Capt. Uric Dahlgren, formerly of the staff of Major-General Hooker, but more latterly leading a picket force to Indiana engaged in the service of the army, is to be the colonel of a volunteer cavalry regiment, soon to be formed out of the drafted men. Two regiments of this kind, to serve for three years, are to be formed. Capt. Dahlgren was severely wounded at Hagerstown, and had a leg amputated. He is now at Newport.

—A curiosity is in session, in New Orleans, for the trial of Col. J. S. Morgan, 90th N. Y. V., upon charges of drunkenness and misbehavior before the enemy, at Donaldsville. The witnesses thus far examined are Gen. Weitzel, Col. Dudley, 30th Massachusetts, Col. Birge, 13th Connecticut, Col. Van Zedt, and Maj. Lieut. Colonel of the 90th New York, and Surgeon Briggs of the latter regiment. Col. Morgan had been recommended for a star by the officer of the division in his charge a few days before the action at Donaldsville.

—General Francis C. Barlow, who was severely wounded at the battle of Gettysburg, has been removed to his home in New York city. He entered the service as a private in the Twelfth New York Militia, but was soon promoted to the colonelcy of the Sixty-first New York Volunteers, which regiment he led through the Peninsula campaign. Subsequently, at Antietam, he was severely wounded, and for gallantry in that battle he was made a brigadier-general. After the battle of Chancellorsville he was assigned to the command of a division in the Eleventh Corps. At Gettysburg he was again wounded, and for a time his recovery was thought to be impossible, but he is now doing well.

—Major Prime, of the U. S. Engineers, has been tendered the appointment of Brigadier-General, and declined it. He graduated, at the head of his class, in 1850. At the seige of Vicksburg, he served as Chief of Engineers. Major Prime's declination to wear the brigadier's star is probably accounted for by the fact, that as a general he would be more likely to be ordered to the field, where he would not have an opportunity of pursuing the scientific duties for which he is so eminently fitted.

—Col. J. H. Easterbrook, commanding District troops on the Santa Fé road, has published a letter, dated at Fort Larned, Kansas, in which he pays a high compliment to Lieutenant-Colonel Eggleston, of Washington, commanding section 9th Wisconsin battery, and the other noncommissioned officers and privates of the detachment, for the active, able, and efficient manner in which they managed matters, which, in the space of five days, they reinforced the beleaguered Post of Fort Larned. The gallant detachment (with one other detachment), having achieved an average of forty-one miles per day in marching to the scene of operations.

—Col. Adams, of the Minnesota regiment, is in Washington convalescing from wounds received at Gettysburg. He was wounded six different times. The first divided the fifth rib, the ball passing through the body, and going out at the back. Shortly afterward, a ball struck him in the groin of the left leg, and immediately following, a ball struck him about the end of the same leg, which has not yet been extracted. He was struck three times more, but the wounds were very slight. This was at the beginning of the fight, and at the time of the charge of the Second corps. After being wounded, Colonel Adams lay upon the field four days, without attention. Colonel Adams has been twice wounded before, at Malvern Hill and at Antietam.

—Gen. Meade is said freely now at the Pequot House, New London, last week.

—Brig-Gen. I. N. Palmer is in command of the defences at Newport, N. Y.

—Brig-Gen. J. D. Webster, of Gen. Grant's staff, arrived at Cairo on the 19th inst., from Vicksburg, en route for Chicago.

—Brig-Gen. Wesley Merritt, Commander of the Regular Cavalry Brigade in the Army of the Potomac, is lucky enough for his command.

—Maj.-Gen. Butler is to lay aside the sword temporarily, to take the stump in favor of the Union Republican candidate for Governor.

—Gen. Grant still remains at Vicksburg. He occupies a fine house, and lives handsomely with him.

—Maj.-Gen. Franklin has superseded Gen. Dudley in command at Baton Rouge. Gen. Andrews continues in command at Port Hudson.

—Gen. McClellan said family were at the Pequot House, New London, last week.

—Brig-Gen. I. N. Palmer is in command of the defences at Newport, N. Y.

—Brig-Gen. J. D. Webster, of Gen. Grant's staff, arrived at Cairo on the 19th inst., from Vicksburg, en route for Chicago.

—Brig-Gen. Wesley Merritt, Commander of the Regular Cavalry Brigade in the Army of the Potomac, is lucky enough for his command.

—Maj.-Gen. Butler is to lay aside the sword temporarily, to take the stump in favor of the Union Republican candidate for Governor.

—Gen. Grant still remains at Vicksburg. He occupies a fine house, and lives handsomely with him.

—Maj.-Gen. Franklin has superseded Gen. Dudley in command at Baton Rouge. Gen. Andrews continues in command at Port Hudson.

—Col. S. A. M. Dudley has been appointed Inspector-General of the Department of the Gulf. Col. J. C. Jones, until recently chief of Gen. Weitzel's staff, has been promoted to a majority.

—Major-General Banks, with a strong military force, crossed upon high sport of operations on the Rappahannock, and his pursuit of Lee in the direction of Culpeper.

—Major-Gen. Foster, accompanied by his staff, visited Baltimore and Washington, for the purpose of attending the wedding of his brother. The party returned to their headquarters at Old Point in the steamer.

—Among the officers at Saratoga is Col. Percy Windham, the Fourth Colonel of the 1st Maine Cavalry Cowards. He has a fine looks in one of his limbs, and limps somewhat as he walks. Mrs. Windham is with him.

—Major W. R. Rowley, of Gen. Grant's staff, but for some months past Medical Director of the District Provost Marshal of the Army of Columbus, Ky., was relieved on the 23d, and appointed Provost Marshal of the 16th Army Corps, under order of the General commanding, he will report for duty at Vicksburg immediately.

—Among the officers of Gen. Grierly's expedition against the Indians John Bennet, a wealthy Englishman, a graduate of Oxford, and former officer of the British army, is with him. He is also a colonel on a bullet hunt in the Northwest, and took a seminal position in the rear of Gen. Grierly's column, behind Lieutenant Love.

—On the 19th inst., Major-Gen. John J. Peck assumed command of the 18th Army Corps, Major-Gen. W. F. Smith, and announced his following as his staff: Major Benjamin B. Foster, Assistant-Adjutant-General; Surgeon Wm. H. Forwood, Medical Director; Lieut.-Col. Wm. Dow, Chief Commissary of Subsistence; Capt. R. C. Webster, Chief Quartermaster; Lieut. Wilson Shannon, Aide-de-camp; Lieut. James D. Ostwaut, Aid-de-Camp. The remainder of the staff will be announced in future orders.

—The following officers have arrived at hotels in this city during the last week: Capt. Wilson, Maj. Gen. Smith's staff, Mertin, Rorbett & S.; Col. Berdue, U. S. S. S.; Col. Crook, 93d N. Y. V.; Lieut. Grieve, 5th U. S. Cavalry; Col. Bowen, 142d N. Y. V.; Col. G. F. Foster; J. F. Dreuillard, U. S. A.; Capt. Sweet, U. S. A.; Capt. Hoffman, U. S. A.; Capt. Hasbrouck, U. S. A.; Capt. Burbeck; C. W. Campbell, U. S. A.; Capt. Wickins; Col. Wren, U. S. A.; Capt. Wm. Hall, U. S. A.; Capt. Wm. Hall, U. S. A.; Officers Capt. Johnson Clough, U. S. A.; Foster, U. S. A.; J. S. Foster, U. S. A.; Lieut. Col. Wm. Hall, U. S. A.; Lieut. Col. Wm. Hall, U. S. A.; Lieut. Col. Wm. Hall, U. S. A.; Lieut. Col. Wm. Hall, U. S. A.; M. S. Stone, U. S. A.; Lieut. Black, 122d O. V.; Lieut. G. K. Forrester, U. S. A.; Lieut. Gregory J. Wiley; W. Wade, Q. M. 7th Mich. V.; J. S. Pollock, 8th O. V.

CURIOUS DEMAND.

A few days ago, a dilapidated individual presented himself at the disbursing office of the Department of the Interior, when the following dialogue ensued:—

"Sir," said he, "I have called for an amount of money due to me as a clerk in the — bureau since 1861.

"Since 1861!" ejaculated the clerk; "why I—why have you been absent?

"Because, sir, at that time I was required to take the oath of allegiance to the United States Government. I could conscientiously affix my name to any paper which should virtually prove an evidence of my endorsement of the Administration. But a short time after the breaking out of the fearful rebellion is played out, and the Southern Confederacy a memory. I have kept my conscience clear, have been true to it, and if you examine the books you will find that my name is still there, and that the —— bureau owes me three months' pay."

An examination proved the truth of the man's statement.

—A communication from Beauregard's Chief of Staff, published in the Charleston *Mercury*, announces that the negroes in arms captured on Morris Island are held subject to the order of the Governor of South Carolina, in accordance with the act of the Rebel Congress directing the delivery of such captured negroes to the Governors of the States in which the capture might be made.

—Among the persons drafted in New York on Monday, in the fifteenth ward, were nine artists, as follows, W. F. Dana, W. J. Hennessey, Wm. Hart, John O. B. Truman, John Pepe, A. Bierstadt, J. R. Griffith, Geo. H. Hall, and Theodore Pine. Bierstadt is at the Rocky Mountains.

NAVAL GAZETTE.

THE ATTACK UPON CHARLESTON.

REAR-ADMIRAL DAHLGREN'S OFFICIAL DISPATCH.

FLAG STEAMER DUNMORE,
OFF MORRIS ISLAND, Aug. 18,1863.

Hon. Gideon Welles, Secretary of the Navy, Washington:

SIR,—Yesterday was begun another series of operations against the enemy's works. Early in the morning, General Gillmore moved all his batteries upon Fort Sumter, from over Fort Wagner and the intermediate space. About the same time, I moved up the entire available naval force, leading with my flag in the *Weehawken*, followed by the *Catskill* and *Nantucket*—the *Patapsco* and *Patapsco* in reserve for Sumter; the *Ironsides* in position opposite to Wagner, and the gunboats manned in the margin, at long range, viz., *Conemaugh*, J. F. Grun, *Mahaska*, Commander A. B. Creighton, *Cimmarron*, Commander A. K. Hughes, *Ottawa*, Lieutenant-Commander J. L. Davis, *Dai Ching*, Lieutenant Commander J. L. Chaplin, *Iosloo*, Lieutenant-Commander E. Brodhead.

As the fair mne, the *Weehawken* was within about 400 yards of Wagner; the other three Monitors followed, and the *Ironsides* took them in nose and broadside ground of water permitted. After a steady and well-directed fire, Wagner was silenced about 9.13 A.M., and that of our own vessels was slackened in consequence. Subsequently, as the inshore batteries was working effectually upon the gorge of Sumter, which appeared to have been strengthened in every possible manner. At this time, the fire was shifted to the *Passaic*, which, with the *Patapsco*, both having rifled guns, steamed up the channel until within short range and ends of Fort Sumter, when fire was opened on the gorge, angle and southeast front of the work. The *Patapsco* fired very well, and is believed to have struck the scarp with three successive times. To all this Sumter scarcely replied; Wagner was silenced; the latter's heavy guns maintained a deliberate fire at the *Passaic* and *Patapsco*.

It was now noon; the men had been hard at work from daybreak and needed rest—Sir Dahlgren was shifted to the *Passaic*, which, with the *Patapsco*, both having rifled guns, steamed up the channel until within short range and ends of Fort Sumter, when fire was opened on the gorge, angle and southeast front of the work. The *Patapsco* fired very well, and is believed to have struck the scarp with three successive times. To all this Sumter scarcely replied; Wagner was silenced; the latter's heavy guns maintained a deliberate fire at the *Passaic* and *Patapsco*.

It was now noon; the men had been hard at work from daybreak and needed rest—Sir Dahlgren was shifted to the *Passaic*, which, with the *Patapsco*, both having rifled guns, steamed up the channel until within short range and ends of Fort Sumter, when fire was opened on the gorge, angle and southeast front of the work. The *Patapsco* fired very well, and is believed to have struck the scarp with three successive times. To all this Sumter scarcely replied; Wagner was silenced; the latter's heavy guns maintained a deliberate fire at the *Passaic* and *Patapsco*.

The officers and men of the vessels have done their duty well, and will continue to do so. All went well with us, save one sad exception, Captain Rodgers, of the *Keokuk*, was killed, as well as Paymaster Woodbury, who was standing near him. Captain Rodgers had more than once asked, in this command, to be should go to the front, and assumed the command of his vessel, the *Catskill*, and he repeated the inquiry twice during the morning's action. He was in charge of the *Weehawken*, just while preparing to move into action. In each instance I replied, "Do as you choose." He finally said, "Well, I will go in the next time, and I am ready for you." The *Weehawken* was lying about 1,000 yards from Wagner, and the *Catskill*, with my flag-officer on board of me, the fire of the fort coming in steadily. Observing the tide to have risen a little, I directed the *Weehawken* to be carried in closer, and the order was about to be given when I noticed the *Catskill* was also under way, which I remarked to Captain Calhoun. It occurred to me that Captain Rodgers detected the movement of the *Weehawken*, and was determined to be closer to the enemy, if possible. My attention was called off immediately by a position for the *Weehawken*, and soon after it was reported that the *Catskill* was going out of action, with a signal flying that her captain was disabled. He had been killed instantly.

It is but natural that I should feel deeply the loss thus sustained, for the close and confidential relations which the duties of Fleet-Captain necessarily occasioned, impressed me deeply with the worth of Captain Rodgers. Brave, intelligent, and highly capable, devoted to the service and to the flag under which he passed his life, the country cannot afford to lose such men. Of a kind and generous nature, he was always prompt to give relief when he could. I have directed that all respect be paid to his remains; and the country will see, I am sure, that due honor to the memory of one who has not spared his life in her hour of trial.

I have the honor to be, very respectly,

Your obedient servant,

JNO. A. DAHLGREN, Rear-Admiral,
Commanding South Atlantic Blockading Squadron.

NAVAL ORDERS

DETACHED.

Commander Macomb from the command of the *Genesee* and ordered to return home.

Commander Collins from the command of the *Octorara* and ordered to the Navy Yard, Boston.

Commander Lee from the command of the *Florida* and ordered to command the gunboat *Penobscot*.

Commander Howell from the command of the *Florida* and awaiting orders.

Lieutenant Howell from special duty in New York and ordered to the command of the *Metamora*.

Lieutenant-Commander W. Queen from ordnance duty in the North Atlantic Blockading Squadron, and ordered to the command of the steamer *Florida*.

Lieut. Commander Earl English from the command of the *Sonoma* and given sick leave to return North.

Chief Engineer John W. Moore, from the *Richmond* and waiting orders.

Acting Master Robert F. Wyatt from the *Genesee* and waiting orders.

Acting Master Paymaster George C. Taylor from the *Seminole* and waiting orders.

Second Assistant Engineer Robert Potts from the *Monticello* and waiting orders.

Acting Second Assistant Engineer J. Madison Cate from the *Dandelion*.

Boatswain John Bates from the *Potomac* and ordered North.

Captain James Alden from command of the *Richmond*, and ordered to command the steamer *Fort Jackson*, vice Captain Henry Walker detached at his own request.

Lieut.-Commander Joseph W. Bradford, from the Navy Yard, Portsmouth, N. H., and ordered to command the *Nyack*.

Lieutenant Gilbert A. Wilkes, from the *Dacotah* and ordered to the *Richmond*.

Lieutenant Winfield S. Schley, from the *Richmond*, and granted thirty days's leave.

Assistant Engineer Samuel V. Stillings from the staff fleet *Ella*, and ordered to report to Chief Engineer Faron, at New York Navy Yard, for duty on the U. S. steamer *General Sedgwick*.

Acting Master A. L. Gardner from the *Ella* and awaiting orders.

First Assistant Engineer G. B. N. Towers from the *Richmond* and ordered to special duty at Boston, Mass.

Second Assistant Engineer Charles Fisher from the *Merrithead* and waiting orders.

Gunner James Thayer from the *Richmond* and ordered to ordnance duty at the New York Navy Yard.

Gunner Wm. Cheney from the New York Navy Yard ordered to the *Richmond*.

Third Assistant Engineer Nelson Ross from the *Kearsarges* and ordered to the South Atlantic Blockading Squadron.

Third Assistant Engineer H. H. Fisher from the prize steamer *Circle* and ordered to the *Kearsarge*.

Boatswain Peter A. Chaser from the *Richmond* and awaiting orders.

Boatswain Thomas Hall from the receiving ship at New York and ordered to duty on the South Atlantic Blockading Squadron.

Acting Assistant Surgeon Wm. H. Dodd from the *Vincennes* and ordered to Port Royal.

Acting Paymaster Wm. A. Mann, from the DeKalb, and granted leave of absence.

Acting First Assistant Engineer Wm. H. Dobb, from the *Dacotah*, ordered to Squadron off charleston.

Acting Assistant Engineer Thomas F. Hosford, Acting Master H. R. Billings, Acting Ensigns M. Hall, W. B. Cobb, W. L. Bowers, and J. Wilcox, to the *Wyalusing*, ordered to the Mississippi squadron.

Acting Gunner F. Moseley, Acting Third Engineer H. Maxson, Acting Third Assistant Engineer Thomas Dempsey, from the receiving ship at New York and ordered to the *Wyalusing*. Acting Ensigns Charles Yates Bishop, Wm. Cobb, Acting Master's Mate Henry W. Loring and Acting Master's Mate W. Wall, from the *Alabama*.

Acting Assistant Surgeon N. S. Campbell, from the *Keystone State*, and ordered to Port Royal.

Acting Assistant Surgeon Henry Shaw, from the R. R. *Aries*, and ordered to the *Fort Royal*.

Second Assistant Engineer Thomas K. Dalkehart, from the *Katahdin*, and ordered North to examination.

Ensigns Isaac Hall, Thomas Wemple, John J. Reed, John H. Reed, and Edward G. Bunchine, from the *Hartford* and ordered to Newport, R. I., for duty on the *Vermont*.

Acting Engineer Sidney Hall Emery, from the *Alabama*, and granted sick leave.

Acting Assistant Surgeon Alfred E. Avery and Acting Volunteer Lieutenant W. B. Hart, granted leave of absence.

ORDERED.

Commodore Thatcher has received preparatory orders to command the Pacific Squadron, vice Commodore Wilkes, detached and ordered North.

Captain John Pe'tamp to the command of the steam frigate *Wabash*.

Commander Armstrong has received preparatory orders to command the steam sloop *Brooklyn*, vice Commander Bell, detached, and awaiting orders.

Commander Parrott to command the gunboat *Tioga*

Commander Craven has received preparatory orders to command the *Sloop-of-war Oneida*.

Lieutenant Commander Bell, detached and ordered the gunboat *Cimarron*.

Lieutenant Commander Guthrie's order to command the *Sagamore* is revoked, and he is ordered to command the gunboat *Genesee*.

Acting Second Assistant Engineer E. L. Brink, detached to the *Ella*, Acting Masters' Mate G. B. Knowlton, to the *Ada*.

Acting Assistant Engineer Wm. Wilson, to the *Ella*. G. Musgrave, to Cairo, Illinois; Acting Gunner Wm. Bates and Acting Assistant Engineer Wm. Lee, to the *Commodore Perry*. Acting Assistant Paymaster to the *Penobscot*.

Acting Paymaster W. H. Churchill, to the *Nyack*; Acting Assistant Paymaster J. H. Bennett, to the Mississippi Squadron.

Acting Ensigns Wm. Hall, Wm. Cobb, Wm. Bowers, Wm. First Assistant Engineer Wm. Wilson, and Acting Third Assistant Engineer C. W. Dyhouse to the *General Sedgwick*.

Acting Assistant Surgeon Wm. Hall, to the *Sonoma*; Acting Ensign George W. Wood, ordered to the *Dandelion*.

Third Assistant Engineer Wm. Ross, ordered to the *Commodore Barney*.

Acting Master Jackson Maxwell to the *Richmond*.

Assistant Surgeons Jos. W. Shively, Henry F. Vesberry, John J. Gilbert, and Wm. Hall, to the *Vermont*, as Fleet Surgeon.

Acting Assistant Paymaster R. H. Brink, for duty on board the U. S. Steamer *Commodore Barney*, at Boston, Mass.

Ensigns Wortlane Johnson, Hayden L. French, and George S. Bliss, to the *Wyalusing*, ordered to the Mississippi.

Assistant Paymaster Thomas T. Caswell to the screw sloop *Pocahontas*.

Acting Assistant Paymaster A. B. Robinson, to screw steamer *Pawnee*.

Acting Assistant Paymaster Wm. H. Rowland, to the *Ella*.

Assistant Surgeon Samuel N. Brayton, to the sloop-of-war *Canandaigua*, vice Assistant Surgeon Charles Eversfield, ordered home.

Second Assistant Engineer Thomas W. Rae, to screw steamer *Katahdin*.

Third grade ants James W. Clark, E. D. Leavitt, jr., and P. G. Goggin to side-wheel steamer *Mackinaw*.

Third Assistant Engineer C. H. Harrison, to iron-clad steamer *New Ironsides*.

Acting Assistant Engineer Thomas McGeagh, to screw steamer *Dandelion*.

Acting Assistants Engineer Augustus F. Nagle, to the East Gulf Blockading Squadron.

Acting Ensign H. F. Moffat to the *Fort Jackson*.

Acting Assistant Engineer Wm. B. Crosby, to the Mississippi Squadron.

Acting Assistant Engineer H. T. Mansfield, to the *Nyack*.

Second Assistant Engineer Albert Moody, ordered to the *Neptune*.

Acting Master's Mate Wm. Cochrane to the steam sloop *Hendrick*, vice Sailmaker John J. Holbrook waiting orders.

RESIGNED.

Acting Chief Engineer Wm. H. Dennis, Acting C. Lee Moore, Acting Ensign Charles R. Bryant, Acting Volunteer Lieutenant Robert Hall, Acting Ensigns Wm. Hall, Acting Master's Mate Lewis H. Mann, C. C. Johnson and Edward Napier, Acting Master's Mate Stephen B. Millett.

DISMISSED.

Acting Assistant Surgeon Samuel P. Quimby, for negligence and insubordinate conduct.

Acting Assistant Engineer Wm. S. Reid, and Acting Master's Mate Joseph Hall, to the *Ella*. S. D. Lane and Wm. Young, Acting Third Assistant Engineer Thomas Henderson, Acting Ensign Samuel Merrill, Acting Master's Mate John M. Brainard and F. Kemble.

APPOINTED.

John J. Duffield, Edward G. Bishop, and Thos. H. Dickson, Acting Assistant Paymasters.

Charles Cumpston, Wm. P. Franklin, Charles R. Jones, Gorham S. Johnson, William E. Grantt, John Wright, Harrison B. Cleaves, Patrick C. Sullivan, Wm. H. Hayes, Wm. Jones, David Wagner, W. F. Vaughan, Thomas W. Lewis, John E. Wright, Charles W. Arnold, Wm. H. Hopkins, Jos. M. Tuttle, and Robert Hamilton, Acting Masters.

Thomas M. Hare, John J. Minston, Edward Roberts, and Andrew R. Bayley, First Assistant Engineers.

Daniel C. Stillson, Charles McMillan, John W. Paul, George Woodall, Cornelius McCoy, and Samuel Hobbs, Acting Second Assistant Engineers.

Charles J. Morgan, S. A. Bryant, H. T. Ering, Frederick Howe, George M. Hayman, and George F. Rock, Acting Third Assistant Engineers.

Samuel E. Hooker, Acting Assistant Surgeon.

Thomas H. Dickson, Acting Assistant Paymaster.

John Rogers and Reuben A. Turner, Acting Masters.

—A collision took place on the 21st, at New Inlet, Wilmington, N. C., between the U. S. Steamer *Connecticut* and the *Quaker City*, of so serious a nature as to probably permanently disable the latter vessel. The *Connecticut* escaped without suffering any great damage.

VARIOUS NAVAL MATTERS.

—A dispatch at the Merchants' Exchange Room, Boston, reports the following blockade runners at Bermuda, 4th inst.:—British steamers Gibraltar, Banshee, Harriet Pinckney, Adal, Zilla, Gladiator, and Spalding. Also the rebel steamers Lady Davis, Eugene and Advance. The Stanton was also in port. She has been in which measures seven feet and eight inches around the breech.

—The ship Francis B. Cutting, which arrived at this port on Monday from Liverpool, reports that while in latitude 41° 18' N. and longitude 64° 12' W. she was boarded by the Florida, and bonded for $10,000, when she was permitted to pursue her course.

—We have the report of the arrival off Charleston of the fine side-wheel steamer *Philadelphia*, Captain Reynolds, from Port Royal, flag-ship of Admiral Dahlgren. The *Dunmore* was found to be too small for the transaction of the immense business of the fleet.

—A launch of the *Wabash* was captured near Cumming's Point in the Confederate blockade runner *Juno*, Lieutenant Porcher commanding, on the night of the 4th inst. The launch contained a crew of twenty-two men, under the command of Acting Master E. K. Haines, of the *Wabash*, and carried a twelve-pound howitzer. Twelve of the crew jumped overboard, and the remaining, including Haines, surrendered. Two of our men were subsequently arrested on Sullivan's Island, having swam over two miles from the captured launch.

—Orders have gone from the Navy Department to St. Louis, directing the new iron-clad vessel *Ozark* to be completed in the quickest manner possible. She will be remembered, has on board a new destructive war-weapon of which we have spoken before. She is to be armed by Chief Engineer Whittaker, U. S. N., who was ordered home to have his apparatus applied to the vessel. The *Ozark* has an iron-clad deck, which is 1½ inches in 18ft feet wide, and draws five feet of water. She has six bolters, four on each side, and two amidships. The bolts are five inches diameter and six inches thick; and the armor plates are three inches thick

—An unsuccessful rumor left Queenstown on the 13th inst. She came from Clyde, and is described as a long, rakish-looking two-funnelled steamer, originally employed as a blockade runner.

The British steamer *Jane* was overhauled by the Federal steamer *Kearsarge*, off Fayal, on the 23d of July. No contraband of war was found on board of the *Jane*, and the *Kearsarge* allowed her to proceed.

—The war-steam *Brooklyn* arrived at the Brooklyn Navy Yard on Saturday morning last, from Port Royal, after an absence of over two years from a Northern port. She left Philadelphia in December, 1861, and reported to Flag Officer Du Pont, off Port Royal, S. C., where she went duty on the blockade, and entered the Mississippi river with Admiral Farragut, and was in all of the fights thereafter on that river. She has been in the Texas blockade. She left New Orleans on the 13th inst., stopping at Charleston, where she took on board the body of the late Captain George W. Rodgers and Paymaster Woodbury, of the *Catskill*.

—The iron-clad *Tecumseh* is to be launched next week at Jersey City. The Secretary of the Navy has given the nine vessels contracted for after the completion of the first monitor. Her turrets, armor, interior filling up and general characteristics will be the same as those of the nine vessels, with few exceptions. The new ventilating apparatus introduced into the iron-clad *Passaic*, will be adopted in this vessel, as well as in all of her class.

—A Board of Naval Surgeons, for the examination of assistant surgeons, for promotion, as well as candidates for admission to the medical corps of the Navy will be convened at the Naval Asylum at Philadelphia on the first of September. The Board is composed as follows:—Surgeon Lanman M. Greene, President; Surgeon A. A. Henderson, and Surgeon B. Vreeland.

—It is reported that the British Government has made an appeal to the United States Supreme Court in the matter of the *Peterhoff*. In the meantime, however, Judge Betts has made an order that the vessel, together with her tackle and stores, be appraised, and it is understood that the Navy Department will purchase her at the appraisal.

—A board of officers, composed of Lieutenant Commander Blake, of the *Eutaw*; Volunteer Lieutenant Ives, of the Pocahontas, and Acting Master Hamilton, of the *Ella*, are in session at the Navy Yard, Washington, D. C., for the purpose of examining Master's Mates for promotion to Ensigns.

—Mr. W. H. Webb will launch on Saturday, the 29th, from his yard at the foot of Sixth street, East River, the new iron-clad frigate *Dunderberg*, for the Navy. This ship was built from the same model as the *Ri d'Italie* which was launched on the 18th of April, and is now nearly ready for service.

—The *Marion*, the ship of instruction for young men in the naval service, and which has been lying at the Charlestown Navy Yard during the past two weeks, sailed on Tuesday morning, accompanied by the yacht *America*.

—Workmen are engaged almost night and day endeavoring to get the *Commodore Perry* ready to sail by the 1st of October. The lower work of the vessel will not be very far advanced until she is afloat, as all efforts are concentrated on the machinery and boilers.

—The regular examination for applicants for admission to the Naval Academy is now progressing at Newport, R. I., and a large number of candidates are before the board. Admiral Goldsborough, Commodore Hoff, and other members of the board, are much pleased at the good class of youngsters who have applied for an opportunity to serve their country. One new feature at this Academy is the attachment of the steam gunboat *Quinebaug* to the institution for the purpose of giving practical illustrations of the working of steam engines. Mr. Green, the able professor of steam engineering, is highly gratified at the examinations with which their students take hold of this branch of their studies.

UNITED STATES NAVAL SQUADRON LIST.

The following comprises the squadron list of the United States Navy. It is the intention to add each vessel on the list as she puts into commission, and to note changes as they occur, from week to week. Those marked with an asterisk in the Ship List are acting as the flaggs ships at time allotted to each purpose. In future it will be found as complete and reliable.

We shall desire it a favor if officers attached to the vessels will inform us of any changes in the stations of their vessels or in their lists of officers.

NOTICES TO CORRESPONDENTS.

The Editor of this JOURNAL will always be glad to receive from officers in the two services, correspondence and general communications of a character suited to its columns. It is necessary that the writer should, in all cases, accompany his communications, not for publication, but as a guarantee of good faith.

Officers are especially requested to give us early notification of all personal matters of general interest; of the movements of vessels, of casualties among officers; and military and social events.

The Editor will, at all times, be pleased to respond, in these columns, to enquiries in regard to navies and other matters.

From gentlemen in the medical service we shall be glad to receive communications on military hygiene, practical surgery, and reports of remarkable operations and novel forms of treatment.

The subscription price of THE ARMY AND NAVY JOURNAL is FIVE DOLLARS a year, or THREE DOLLARS for six months, invariably in advance. The subscription price may be sent in United States funds, or Quartermasters', Paymasters' or other drafts, which should be made payable to the order of the Proprietor, W. C. Church.

All communications should be addressed to the ARMY AND NAVY JOURNAL, New York.

U. S. ARMY AND NAVY JOURNAL.

NEW-YORK, SATURDAY, AUGUST 29, 1863.

THE ARMY AND THE NATION.

WE take it that one of the most important results in the great moral transformation of the American people effected by the War for the Union is the altered tone of public sentiment which is slowly grown up in the minds of men in regard to our National Army, understanding, of course, by this term both services—the *Pellos armata*—the embodied war-power of the Nation on land and sea. For the future we are a military people. It is hardly possible that we shall henceforth lapse into the infinitely false and fatal delusions that for a generation or two, at least, have held possession of the public mind. To secure this beyond a doubt, it remains that theory shall consolidate what practice has taught, by the establishment of principles lying at the force of a National creed touching the status, rights and relations of the National Army.

It has been often remarked, since the outbreak of the war, that if we had had a standing army of fifty thousand men, the Rebellion never would have occurred. This statement is doubtless quite correct; but it in reality begs the whole question. In order that we should have had an army of fifty thousand men, it was necessary that we should *not* have had the very order of sentiments and theories in which the Rebellion took root, and without which it never would and never could have seen the light.

To reach to the root of this matter would require a piece of historical analysis quite beyond the scope of the present article. The fact remains, that delusive notions have for many years held possession of the public mind regarding war, our establishments, the army, military education, and military men. Look at the course of our National Legislation for a generation or two: it has been, with but rare exceptions, repressive to the army and navy—marked by parsimony, and "bound to saner doubts and fears." And the tone of public sentiment, especially at the North, has been as bad, if not worse. Its whole tendency has been to frown upon the army, to isolate it from sympathy and honor, and throw it into an attitude of antagonism. Military men were looked upon as idle pensioners on the public purse, sporting their epaulettes in the fashionable circles of metropolitan society. And this indignity, too, in face of the fact that no service in the world has been so hard-worked as ours: a fact strikingly illustrated in the circumstance that insurance corporations have refused to take risks on army officers, as statistics proved, so severe were the duties and hardships imposed upon our small army, that the ratio of mortality in our service—even in so-called peace times—was greater than in that of any other service in the world, peace and war included!

Among the complexity of causes in which this prejudice had its origin, we may count as prominent ones, first, certain loose political theories and vicious social doctrines brought into the sphere of public thought by the French studies and sympathies of some of our earliest political writers; secondly, the spurious peace-sentimentalism that obtained such currency a few years ago. This notion, originating with a few European *doctrinaires*, was seized upon by many in this country, especially in the North, and particularly in New England. According to those visionaries, a new millennium of peace had dawned upon the world; war was henceforth to cease, and armies become useless and burdensome anachronisms. It was a curious bit of that Titanic irony we sometimes see in affairs that, just about the time these vagaries reached their climax, a great European war broke out, involving in it the leading Powers, and shaking the continent to its foundations.

In addition to the causes already enumerated as among the formative influences that gave this false bias to public opinion on military affairs, we should mention the entire absorption of our people in purely material interests. This is undoubtedly a tendency incident to all modern peoples. Our Political Economics tell us much of the Wealth of Nations, but very little of the Strength of Nations. They forget that cardinal truth set forth by BACON in one of his powerful aphorisms, that, "Neither is money the sinews of war (as is trivally said,) but the sinews of men-at-arms, in base and effeminate people, are failing." There appears to be in the life of modern societies a counter movement, so that, often, while their wealth goes on increasing, their strength declines. Now, we do not mean to intimate that the prosperity of our good. This is the age of material developments. We do not expect to restore the age of chivalry, and would not if we could. Modern nations need vast wealth, vast resources. But there is a limit beyond which this tendency cannot safely go; and when it goes so far that Strength declines—the death advance, the decay of that nation has begun, and the time comes when even its wealth falls a prey to the invader. "When a strong man armed keepeth his palace," says the Good Book "his goods are in peace; but when a stronger than he shall come upon him, and overcome him, he taketh from him all his armor wherein he trusted, and divideth his spoils."

The South, on these matters, it must be confessed, always held sounder doctrines than the North. The nature of their institutions was doubtless favorable to the military spirit, but there was, besides, always a strong sentiment in favor of the profession. It is sometimes charged on the *élevés* of our Military Academy that in their tastes and attachments, their political and social views, previously to the war, they very generally assimilated with the South. There is no wonder they did. And yet it is worthy of remark, so strong is the sentiment of loyalty which the army breeds, that, notwithstanding the South has always favored and the North always frowned on the army, the moment it came to be a question of the disruption of the nation, the proportion of those educated at our Military Academy who deserted the flag was less than in excess of what it would have been had the graduates from the North gone with the North, and the graduates from the South with the South, and had not a very considerable proportion of men over whom the sectional traditions of the South could be supposed to have peculiar sway preserved their fealty to the Union. And in regard to the body of the army and navy, President Lincoln, in his Inaugural Message, signalized the remarkable fact that not a single common soldier or sailor had abandoned his allegiance to the flag.

Let us hope that in the future history of our country, juster views in these regards will prevail—that a military spirit will be cultivated, that the army will be cherished. "In all grades," says Marshal MARMONT, "the profession of arms is noble, because, for all alike it is composed of sacrifices, and is rewarded, before all, by public estimation and glory. To speak disdainfully of those who compose the rank and file of armies is a kind of blasphemy, even to speak of them with indifference is to misconceive the very conditions of our nature." And more especially is this true in our country. Under our system the civil power controls the military. The war-power is not the prerogative of the military but of the civil government. The prating, therefore, which is sometimes heard in regard to the dangers of Cæsarism or military despotism can arise only either from a knavish spirit, or from a fundamental misconception of the genius of our institutions. With us the army is simply the arm *of* the nation: not an arm *over* the nation. If it be truly its *arm*, therefore, its arm for protection and for vengeance, it is a living, incorporate part of the body politic, sharing its sympathies, motives, desires. In the great volunteer army which has been in the field during the past two years, a *million* of citizens have, for longer or shorter periods, borne arms in the public service. We believe their army life has made them better men and better citizens. That it has raised their sentiment of patriotism, no man who has seen our armies in the field will deny. The feeling of the army regarding the late attempts to discourage the conscription strikingly illustrates this. We doubt if these attempts would ever have been made if their originators had foreseen what contempt and indignation they were destined to stir up in the army—what white fury sat on the lips of men eager to leave the ranks in their front and come to settle accounts with those who they regarded as worse rebels in the rear.

These tendencies are all profoundly encouraging, no doubt. And yet, powerful though the shock be which the old anti-military prejudices have received, and committed though we believe we are and will be by the whole current of events to correct practical action as to our war establishments, we readily foresee how strong the temptations to a relapse will be,—how strong will be the attempts, through the machinery of partisan politics, operating on the passions and interests of men quick to forget the lesson when the immediate material occasion is removed. While battles in the field go on, therefore, there is need of a battle for the army itself. The UNITED STATES ARMY AND NAVY JOURNAL is designed as an arena on which this contest may be fought. We shall bring what strength we can, entrenched behind what we believe to be impregnable positions, to the service of this cause. We believe in the army. We believe it is a necessity to the nation. This does not mean, perhaps, that we favor bloated and expensive war-establishments or a huge standing army. What is important is that the spirit and temper of the nation be right on these great questions. This is the one paramount aim of this JOURNAL. We have no other creed than the army has—the creed of loyalty, the creed of nationality. Of party politics we know nothing and care nothing. With such aims our enterprise is launched forth, and committed to the consideration of both branches of the United Service.

THE REDUCTION OF FORT SUMTER.

IT is with no slight gratification that we are able to open the issue of the ARMY AND NAVY JOURNAL with the illuminated initial of the reduction of Fort Sumter. We have not, as yet, the tidings of the actual surrender: but this mere technicality is of small moment in face of the crowning fact that the historic fort, whose possession was the first ominous triumph of the Rebellion, lies to-day a mass of ruins.

The facts thus far developed regarding the reduction of Fort Sumter are too scanty to permit of an appreciation of this notable and highly important piece of engineering skill. The solution of this to what extent to be done are also still too obscure for us to see the way clearly up to the aim of these operations—the possession of Charleston. It is announced that Gen. GILLMORE is shelling the city with his three-hundred-pounder Parrott rifle. The line of fire to the city is prodigious—four miles and a half: though not beyond the powers of this great engine. He can, no doubt, throw a certain number of shell into Charleston: but the task will ultimately reduce itself to the question of our ability to approach the city and meet the force of the enemy with the bayonet, or to move up the harbor with the fleet of iron-clads.

Fort Sumter, standing as a sentinel midway at the entrance of the harbor, was the key to the approach by water. It was absolutely necessary to eliminate this element from the problem before a single step could be taken. The attack by the iron fleet under Admiral DUPONT, last April, demonstrated conclusively the incapacity of that fleet unaided to reduce Fort Sumter. The weakest of the strongholds of Charleston in its powers of defence, Fort Sumter was the strongest of them all in its powers of offence. The offensive powers of the guns of the iron-clads measured against the offensive powers of the tremendous battery of Fort Sumter proved so inadequate that in the trial, five out of the nine vessels were in an hour so disabled as to be compelled to retire from the combat without having done the least or any considerable damage. This being definitively settled, the present attack has been wisely planned and conducted on different principles. The brunt of the work has been made, this time, to rest on the land force. The navy has, thus far, played a secondary part. The Monitors have been handled with an excessive delicacy; and even after Fort Sumter was half in ruins, Admiral DAHLGREN appears to have cautiously avoided exposing his vessels to its fire. Having obtained a footing on Morris' Island, Gen. GILLMORE immediately began the work of opening parallels and constructing batteries. Over a month was spent on this work, and after considerable practice at various times at Fort Wagner, aided by the navy, and an assault which turned out disastrous-

by, the bombardment of Fort Sumter was formally begun on Monday, the 17th inst., and continued during the entire week. The range was something unprecedented—a mean of over four thousand yards. The guns used were rifles of a calibre much greater than have ever been used in the history of sieges. Their breaking power as against brick walls was reduced in a mathematical certainty, and the result of the three days' fire was to leave two faces of the fort in ruins.

In the meantime, between our siege batteries on Morris Island and Fort Sumter stands Fort Wagner, which holds out almost unscathed. We know of nothing in the whole history of siege operations more curious than this; and the result is of a nature to revolutionize all received systems of land defences. Side by side stand an improvised sandwork, formed from materials under the fire of the workmen, and a regularly constructed brick fort, resting on granite foundations, and mounted with an armament of prodigious strength. In a few hours' bombardment the regular fort is a mass of ruins: after six weeks' firing the irregular improvisatio remains intact. It is a lesson to us; a lesson to the world.

Until, therefore, the fleet can pass up *beyond* Fort Sumter, Wagner will remain a formidable obstacle and estepel to further progress. There is nothing, as yet, to show what method Admiral DAHLGREN proposes for his attack upon the harbor. From Fort Sumter across to Fort Moultrie there is a line of obstructions and torpedoes barring the passage. The rebel defences on the right side are also formidable—battery Beauregard, battery Bee, fort Moultrie, a long work *en crémaillère* among which Forts Ripley, Johnston, and the Sappoo batteries figured, while the heavy guns which the rebels some time ago removed from Fort Sumter, have been mounted on the left side of the harbor, from Fort Johnston downwards. We need not say that the attack, both in what has been done and what remains yet to be done, presents several problems of great novelty and importance, and that the development of the operations will be followed with the most hasborbing interest by the whole professional world.

CAPT. G. W. RODGERS: IN MEMORIAM.

THE country has learned through Admiral DAHLGREN'S touching announcement of the death of Capt. RODGERS, how noble and precious a life has been offered up for its sake; but to those who were privileged to share the sweet and sacred friendship of this fine soul, a more poignant and lasting grief remains. To each man in the Navy his death will come as a personal calamity, for he was loved with a singular affection by his brother-officers; and the circles at home will long mourn the loss of a friend peculiarly dear and beloved.

The brief facts of RODGERS' death are already familiar to all. Although acting as Fleet-Captain, he resumed command of his old vessel, the Monitor *Catskill*, for the attack of Fort Wagner, and had carried her to within very close range of that work, when a shot, hitting the top of the pilot-house (within which Capt. RODGERS was, directing the action of the ship), broke it inwards, instantly killing the commander. The turrets of our iron-ships have already proved to more than one brave man a worse than Ugolino-tower, fabled in DANTE'S wondrous epic. In the last attack on Fort Sumter, in April, the quartermaster of the Monitor *Nahant* was killed and the pilot and captain wounded, by a bolt in the pilot-house, knocked inwards by the impact of a shot. We know well that regrets are unavailing; but this matter must be inquired into. If this calamity is due to any carelessness or imperfection in the construction of the ships, it should be known; for, as Admiral DAHLGREN rightly says, "the country cannot afford to lose such men."

We give in another column, such biographical facts as are known of the career of RODGERS, as he moved among men and in the sphere of his professional duties; but what strokes or limner's craft can convey the subtle traits of that pure, sweet, shy soul—of that tender, loving heart? RODGERS' nature presented that fine marriage we sometimes see, of womanly tenderness, delicacy and grace with the most heroic gallantry. Born of a naval family—of a name and ancestry renowned in our maritime annals, his whole life had been devoted to the service, at home and abroad, and for the latter few years of his life, as commander of the school-ship *Constitution*, in connection with the Naval Academy at Annapolis. It may not be generally known that it was Captain RODGERS who saved this ship to the country at the outbreak of the war. A combination of secessionists had been formed to seize this fine vessel, hoist on her the first Confederate flag, and take her out as a privateer. RODGERS penetrated the design, and by his coolness and decision, completely foiled it. He was a skilled sailor—learned in all the theory and practice of his profession—a soul of "courage all compact," and one of the most dashing officers in the navy. In the attack on Fort Sumter under Admiral DUPONT, in April last, he commanded the *Catskill*; and although his vessel was almost the last in the appointed line of battle, yet when the fleet got within range, he impetuously threw his ship past all the others, carrying her up almost under the very walls of Sumter. The spectacle was one to delight any lover of the sea. In the words spoken of COLLINGWOOD by NELSON, at Trafalgar, "See how that noble fellow carries his ship into action!" But, indeed, it was natural for him to do spontaneously great and gallant deeds. And one cannot read without a pang the account of Admiral DAHLGREN, which intimates that this very unrestrained ardor of his, by carrying him within too close range of the rebel fort, may have been the occasion of his death.

But if he was capable of doing great things, he was not capable of doing them with any vulgar ambition of notoriety; and what the public knows of him it knows not by him, but in spite of him. In fact he was not sufficiently worldly-minded for greatness or distinction. There was in his nature a certain subtle shyness or withdrawness—

"His soul was like a star and dwelt apart."

But this did not interfere with his capacity for the warmest manly friendship. "When I have a friend," said he to the writer on one occasion, "I grapple him to my heart with hoops of steel." Latterly, this tenderness, this subduedness increased much in him, seeming to withdraw him from life, lifting him above the coils and confusions of this "weary and unintelligible world," and made in his mood and manner a certain subtle something that struck his friends and familiars with the conviction that this fine soul was not long to move among us.

To us, who loved him, his image remains as last we saw him, on the night following the attack on Sumter. We went on board the *Catskill* and spent the night with him. In the forenoon of Sunday: the whole fleet was in the deepest depression, and it was expected to renew the attack the morning following. Our conversation was prolonged till long after midnight, and at last we lay down, without undressing, on the sofa in the cabin. RODGERS never retired, but when he thought we were asleep, he took up his Bible and passed the whole remainder of the night on his knees in prayer. To our mind's eye this pious, beautiful soul remains for ever in this prayerful attitude—

"A statue solid-set,
And moulded in colossal calm."

—It does not need a very thorough acquaintance with military matters to be able to see that during the last two years this country has suffered terribly from its failure to profit by the experience of other nations in the organization of armies. We may succeed in spite of our victitions of the commonest principles established in the history of war, but it will be with unnecessary sacrifice of life, and through the tuition of suffering and defeat. Viewed in the light of our great fundamental errors, in neglecting the organization of a strong reserve corps, and in failing to exercise more care in the selection of officers, the work accomplished in this war by American troops is beyond all praise, and far beyond the anticipations of those who early recognized the default and urged corrective measures.

The Government is now engaged in raising another army. We hope it will not fail to heed the suggestions of the past, but will speedily organize a strong reserve force, so placed that it may be made available in those cases of emergency which continually arise in a great war, and for which we have hitherto been almost invariably unprepared. Two years' experience of campaigning have furnished the material for enough competent officers to save us from the infliction of another lot of politician leaders.

Elsewhere, in this paper, will be found some valuable suggestions on this subject from one of our most accomplished general officers. We commend the suggestions which he has frequently and earnestly pressed upon the attention of the Government; not only military men but every reflecting person will readily understand their force and soundness.

—We are glad of the effort which is now being made at Washington, to give a closer and more definite organization to the Signal Corps. This body sprang suddenly into existence upon the creation, by the War Department, of Col. MYERS' admirable system of signalling. At first it was necessarily experimental; but it gradually grew into such proportions as to become a very noticeable branch of the service. The necessity of organization then began to be felt. With all their merits, and with all the aid they were able to render in the conduct of operations, the loose, irresponsible manner in which the officers of the corps wandered about—thoroughly detached, and under no immediate and full control by the commanders whom they served, brought the flagman into a certain degree of disrepute. To get them into a more definite shape; to weed out unworthy officers; and to give the corps greater efficiency and higher reputation, are the objects of the examining board, which is now slowly doing its work in Washington.

—We hope some thorough statistician will not fail to undertake the work of gathering together a table of the voluntary contributions of the people to this war. We fancy the figures would swell to a size that would astonish the world. Every loyal city, town, and village, almost every business firm, and hundreds of thousands of individuals have, at one time or another, during the last two years, had something to offer for the comfort of the soldier—for his equipment, for his spiritual benefit, and for the healing of his diseases and wounds. The sum of these loyal charities must exceed that of all the other benevolent contributions of the country in any five previous years combined. Added to the millions expended upon the war by the National and State Governments, it makes the cost of this rebellion a prodigious sum. And yet the flow of these generous offerings of the people is far from stayed. The appeal has only to be made, and the response is now almost as ready and liberal as ever. In sending on the sacrifices of the American people for the preservation of their institutions, these popular contributions will not be forgotten by the historian.

—SINCE the success of General MEADE in Pennsylvania and General GRANT in Mississippi, the tone of the English military press towards this country has greatly changed, and the opinion is now prevalent that the Southerners, notwithstanding the boldness of their attitude, feel deeply the heavy blows recently inflicted upon them by the Federal army, which has now succeeded in piercing the external armor of the Confederacy. The *Army and Navy Gazette* says: "Any one "who watched the course of events, and saw that the "Federals were dismayed by no loss, and persisted, in "the face of all impediment, with a dogged perti"nacity, year after year, in recruiting, equipping, and "marching their armies against the South, must have "been satisfied that the Confederates, who never made "fair use of any of their great victories by following "up their enemy, must ultimately be exhausted by "mere loss of blood in face of incessant hornet-like "attacks." Those who have followed the columns of the paper which speaks thus, will be able to understand what a change the argument of Federal victory has been able to effect. In a later issue, that of Aug. 15, the *Gazette* returns to the subject, and summing up the list of recent Federal successes, says: "It requires "no great powers of prophecy, historical parallels, and "similar faith, to believe that the South can continue "her resistance to the North in the field, or preserve "her States from the sway of Washington pro"consuls."

—THE death of Fleet-Captain RODGERS' has been inaccurately stated in all the journals as having been caused by the mere explosion of the signal parrott, in the pilot-house of the *Catskill*, struck by a shot. A letter kindly shown us by Capt. C. R. P. RODGERS, brother of George, written by Capt. A. C. RHIND, who went on board the *Catskill* to transfer the remains of Capt. RODGERS to the *Wabash*, tells the story truly. The top of the pilot-house of the *Catskill* was crushed in by a shot or shell, causing the death of Capt. RODGERS and Paymaster WOODBURY, who were the only persons in the pilot-house. The fact has not only a sad interest in connection with the death of the gallant sailor; but is of importance in its scientific bearings.

CAVALRY.*

THERE is nothing more notable in the history of cavalry, than the frequency with which it is mentioned by the great captains, with regrets at its absence on special occasions. "If, at the days of Lutzen and Bautzen, I had had sufficient cavalry," writes NAPOLEON in his Memoirs, "I should have reconquered Europe." And from the time when VARRO, at Cannæ, uttered the bitter lament that all was lost on account of the want of horsemen to meet HANNIBAL'S legions, to our own day, when Marshal ST. ARNAUD wrote to the Minister from the Crimea, "Ah, Monsieur, if Sire, if I had had cavalry, I should have obtained results, and MENSCHIKOFF would have been now without an army," military annals are full of the like expressions.

The employment of cavalry has hit off as a single stroke when Marshal SAXE, with two hit the knave a colonel of a regiment of horse, called cavalry *l'arme du moment*—the arm of the moment, or, in other words, the arm for an emergency. For though there are not wanting instances of battles won entire by the cavalry, the most brilliant achievements have been in suddenly coming on in aid at the opportune moment, turning the scale of victory, and giving a decisive character to the issue. A nullity at all but the special "moment," when that moment come, it can, if fitly handled, achieve results little short of the miraculous. And certainly, from the experience of campaigns in which cavalry has been next to useless, and of others in which, as at Cannæ, Naseby, Rosabach, Leuthen, Jena, it has performed feats that, if not fortified beyond the touch of skepticism, are yet to-day absolutely incredible, there is a range of data admitting of the extremes of partisanship, either for or against the arm, according as one shall fix his eye on the seasons when it has been in abeyance, or those in which it has reached the climax of its power.

Those who have followed the course of military discussion in France, Germany and England for the past dozen years, need not be informed that there has, during that period, been a school opposed to current views of the effectiveness of cavalry, and favoring a reduction of the large ratio of this to the other arms of the service which has continued to be kept up in all European standing armies. It is claimed by these writers* that, owing to the recent improvements in firearms, giving both to foot-soldiers and rifles a range and accuracy never before dreamed of, cavalry has lost its importance, and can henceforth perform only a secondary part on the field of battle. It must be confessed that these views were very strikingly borne out by the experience of the two last European wars—that in Italy and in the Crimea, which, although it furnished examples of the splendid valor of the men in charges which, in the words of Prince GORTSCHAKOFF, were "magnificent, but not war," was yet remarkable for the lack of cavalry. In the case of the Austro-French campaign in Northern Italy, in which the cavalry was conspicuous only for its utter want of distinction.

Now, it is not a little remarkable, in view of these facts, that some one of the various Powers that have enlarged their experience during the late wars, and reorganized their armies accordingly, should not have reduced the number of its mounted regiments, and applied the large sums requisite for that purpose to better purposes. On the contrary, we everywhere find the utmost attention devoted to the improvement of this branch of the service; and while the numerical proportion of cavalry to infantry has in no case been diminished, it has, in some cases, been largely increased. France has reorganized her army, so as to raise the effective strength of cavalry from 62,798 to 100,221 men; Austria keeps its cavalry up to 40,344, to be augmented to 52,760 in time of war; Prussia has increased the cavalry from 38 to 48 squadrons (29,937 men); England retains her 28 mounted regiments, and all the minor Powers keep up a cavalry force in the proportion of from 1 to 4·8 to 1 to 6 of the infantry force.

The consideration which, in favor of all the arguments in favor of a limitation of the cavalry force, induces modern Governments to keep up the system of keeping up the full proportion of so costly an arm, is undoubtedly the very peculiarity of cavalry pointed out, which makes it impossible to tell what *might* be lost by its absence. No reader of military history will attempt to deny that, since the invention of gunpowder, every step in the development of artillery and firearms has tended to circumscribe the field of operations of the cavalry, and to bring forward the infantry—the only *complete* arm, that is, the only arm which is at once self-defending and effective. From the time when the Duke DE BOURGOGNE and his mounted companions used a hollow square of infantry as a "keep" within which to retire to rest and refresh themselves, and then sally out to renew the combat—a period signalized by DUPARC as that at which infantry touched its lowest depths of historical degradation—there is an immense step indeed. EVEN NAPOLEON, in his great battles, never dreamed of a charge of cavalry. "He used his cavalry," says WELLINGTON,* "supported by great masses of artillery, to seize positions, and he afterwards occupied them with his infantry or his artillery, to operate on the morale of his enemy by turning a flank or occupying a post in the centre of his army with a charge." The probability is, however, that, notwithstanding the causes that restrict the field of operation of cavalry, this arm will continue to keep up its present proportion—which averages about 1 to 5 of the infantry—because it is willing to lose the chances of the prodigious results which the "arm of the moment" can achieve, if it be only present *at the moment*.

The work of DE RENEN—the title of which heads the present article—is a well-considered treatise, compiled from the best authorities, on the history, management and uses in war of cavalry—or rather of cavalry in the European service. We mention it chiefly to point out that it fills wholly to touch on cavalry in our own country. An adequate work on this subject, especially with reference to the new phases opened up by the experience of this war, is a great desideratum. In the meantime, we shall gladly welcome to a hospitable reception in these columns communications from officers connected with it in a branch of the service in which so many novel and interesting problems are being raised and solved.

The predominant characteristic of the cavalry during the present war has been the limited extent of the want of "legitimate business" which it has done, and the enormous extension which it has received in what may, strictly speaking, be considered *extra*-military operations; we mean, of course, in raiding, cutting railroads, interrupting communication, liberating slaves, destroying stores, &c., &c. It is not to be concealed that, at the outset of the war, both the military authorities and the public entertained inadequate notions of the importance of the cavalry arm. The failure was, however, not so much in the want of appreciation of the amount of service which it was capable of, the want of appreciation of the *kind* required, and of the kind of service to which they should be put. A statement which has acquired a considerable currency makes GEN. SCOTT responsible for having discouraged the cavalry movement suggested on the ground that "we should not be able to use cavalry in this country." It is just as well that the story should have been put in this outre shape, for so ridiculous a statement carries its own condemnation on the face of it. The remark of GEN. SCOTT, however, if we recollect rightly, was exclusively with reference to Virginia, and with a view to limit the extravagant ideas of the amount of cavalry required. Thus limited, the statement that, in strictly military operations, we should not be able to use a large amount of cavalry "*in that country*," is undoubtedly quite correct. Notwithstanding the wild notions which have obtained of the clouds of cavalry which the rebels have had in Virginia, we have positive evidence that GEN. STUART, who commands the principal force, has never had half under him more than five thousand troopers. Every one who knows anything of the matter, knows that hilly and wooded countries are not adapted for a great development of cavalry. Even in the famous campaign of 1796, in Northern Italy, had at his disposal only twenty-five hundred horsemen. But, just as soon as he meditated the conquest of Germany, we find him devoting particular attention to this arm, which he saw to be capable of immense service to his designs. And in a memoir, by NAPOLEON, dictated at St. Helena, he estimates the cavalry force suitable for war in Italy at *one-thirteenth* the infantry, while he claimed *one-fifth* for France, and *one-fourth* for more level countries. These facts should teach those who vainly attempt to settle theoretically the proportion which cavalry should hold to the other arms that this, like all questions of war, depends on special conditions of a practical nature. There can be little doubt that the war in its present state and future prospects opens up a favorable field for the employment of mounted troops, and demands a large accession to our present strength in this arm. The nature of these operations, however, and the kind of troops best fitted for the work, will form the topic of future discussion in this journal.

OUR MILITARY COMMANDERS.

IT is a great source of complaint by politicians and others, that there is not in our army an unmistakable master mind, capable of directing the strategical movements of large bodies of troops. These cavilers complain, at one time, that our leaders are "too slow" and do not move. At another time, they are "too fast" and show themselves incompetent, by dashing men against obstacles in contravention of all the rules of strategy and military judgment. At other times, when success crowns every effort of the commanders, and the enemy is driven from his selected position, with great loss, and forced to abandon the prime object for which he had undertaken the campaign, these political critics are loud in their vituperations, because the opposing army had not been crushed, and its leaders carried in triumph to the capital, chained to the chariot wheels of the conqueror.

These opinions, heralded far and wide by a partisan press, tend too much to carry with them the judgment of the mass of our people, who necessarily know much less of what goes to form a military man and constitute a great military commander than those who are and have been at local in their denunciations of all the military leaders who have arisen since the commencement of this war.

One of the condition in which our country was found at the commencement of the war, as regards its military establishment, was fully known by those who have so mercilessly assailed the commanders, material, and movements of its armies, praise instead of censure, glory instead of disgrace, would have been the reward of every one who has had the temerity to lead our armies.

It should be understood, that a military commander, capable of ordering the movements of an army numbering from seventy to a hundred thousand men, does not spring into existence on the springs of his commission; and that the fiat which makes him a commander does not infuse him with all the requisite knowledge and experience that such an office must have.

Before the outing out of this war, our military establishment was so small, and the several portions of it so scattered, that but few of our general officers had ever drilled a brigade, much less a division. Most of our colonels had been for many years engaged in the unenlightened drill. And the subaltern officers of our army, from whose ranks a large portion of our present generals have been recruited, had but rarely witnessed the movements of a regiment, and were, for the most part, circumscribed within the limits of a sentinel's post, or the routine duties of a garrison, with a single company, in the granite walls that constitute the defences of our seaboard.

The large volunteer army, of which we have reason to be so proud, was, at the outset, officered by gentlemen, both officers and men, peacefully pursuing their ordinary vocations, little dreaming that the loud re-echoing thunder of Charleston Harbor would call them into a new existence, and force upon them a part hitherto never thought of.

These are the facts of the disadvantages under which we labored at the breaking out of the rebellion, and many more might be enumerated. It is enough, however, to say, that in every department of our military establishment there existed a lack of preparation for the emergency, and an entire inexperience both in the details and requirements of the extensive operations that succeeded.

In the face of these circumstances, the energy, perseverance and courage of our people have put armies in the field on a magnitude hitherto unknown to the civilized world. The officers and leaders of this unwilling force have, of necessity been obliged to devote to the service of their country fortitude and endurance, combined with skill in military theory and good judgment, in the room of that experience which is the result of years of study and drill. And to these, from the nature of things, we have seen it was impossible for them to possess. Every one has been forced to assume duties with which he had previously had no practical familiarity, and every one has been forced to acquire the difficult knowledge of reducing theory to practice.

In view of the circumstances in which the war found our leaders, it is no reflection upon their ability to say, that they were unlearned in the duties they were thus suddenly called upon to perform. Napoleon, Wellington and other generals who had followed his fortunes from the sands of Egypt to the snow-clad plains of Russia, and who, from their familiarity with war upon a gigantic scale have been styled the "thunderbolts of war," that not one was able to command with success, when, at Waterloo, although he had correct estimate of the ability of men, who, though well versed in the theory of war, as taught at the Military Academy and laid down in books, can, without other practical experience than that acquired in a subaltern's position, assume the command of armies requiring the experience of a Napoleon, manœuvre them in an extensive and almost impracticable country, and, in a majority of instances, defeat a foe equally as skillful, and, in most cases, far more numerous? Is it not fair to say that, under the circumstances, more has been done and only done all that could be expected of them, but have far exceeded all that the most sanguine could have desired?

The fault has not been with our generals in failing to do all that was possible, but it lies with the would-be military critics, who, without the ability to fill the most inferior military positions, heap volumes of abuse upon every commander sufficiently elevated to become a mark for their malignant vituperation. Every one has been required to leap into the field as a full-fledged Napoleon, though, I have no doubt, had that distinguished leader been in command, he would not have escaped the animadversions of the partisan press of the country.

But the transactions of the past two years have done much to add to the military intelligence of our generals—the one point in which they were deficient at the opening of

the rebellion. Experience has but developed the resources of a superior order of intellect, which has heretofore, unaided, enabled them to maintain untarnished the honor of their country. A fact which must convince the most arrogant critic, that many of our much-abused commanders are men of master minds, who only need the experience of their European compeers to rank high among the greatest military commanders of modern times. P.

WHAT WE HAVE NEGLECTED.

A RESERVE CORPS—INCOMPETENT OFFICERS.

Though engaged in one of the greatest wars the world has ever known, we have ignored, in a great measure, the knowledge possessed by the military powers of the earth, acquired by the experience of ages.

The nations of Europe most skilled in military affairs have always considered that their recruits needed much time and preparation before being subjected to the hardships of the field and the conflict of battle. And those nations have found it necessary to have reserves to supply the natural waste unavoidable in all armies, and to repair the effects of military disasters. In both these particulars we have been neglectful, and to-day we are suffering the consequences of our neglect.

Men taken from the walks of civil life, and placed in camps, are obliged to acquire new habits. They cannot expect the comforts and consideration to which many of them have been accustomed at home. It is necessary, therefore, that they should be gradually inured to this changed life in camps of instruction, and their wants can be well attended to. Experience has shown that when exposed to all the hardships of the field a large percentage of raw recruits fall a prey to disease, and death rapidly thins their ranks. More than this, they cannot be acquired that skill and aptitude which can alone render them efficient in the field. I am confident that the record of the medical department will confirm what I have said.

It is therefore, to be hoped that those conscripts from the Northern, Eastern and Middle States, now required to fill up the old regiments, will be assembled in the vicinity of Washington, and there organized and instructed.

More care also should be used in the appointment of officers. No officer should be commissioned unless he shall either have an unmistakable military reputation acquired on the battle-field, or shall have passed a board of officers, competent to judge of his merits. I think I may say, without the fear of contradiction, that no nation on the face of the earth could have turned out such a body of men as have been furnished by the loyal States of America during this contest. I mean men who possess in an equal degree the qualities that they do for first rate soldiers. This being admitted, it may be asked why they have not effected greater results in the various fields of battle on which they have been engaged? Although at times superior in number to the rebels, and with better arms and ammunition, why have we been so often repulsed, and why have our victories proved at best barren of great results?

I answer, it is owing principally to want of knowledge on the part of regimental officers. It must confess there is also a lack, in officers of a higher rank, of that knowledge which will enable them to wield masses with facility. As a consequence, in many instances, we have been deprived of that combined action which would render our large masses overpowering on the field. My experience has been that there is often great pretension where there is little merit, and unless brought to the test of an examination, ignorance frequently escapes unscathed.

I have known a regiment of a thousand men to be at the depot in the city of Washington for two days, and without a drunken man. They were generally strong, intelligent men. What could not an army composed of such men have accomplished, if disciplined and officered by men educated in the military profession? In the absence of educated officers, let us get the best we can under the circumstances.

Military men of much experience may have doubts about many other military subjects, but on this they can have no doubt—that to have good troops, you must have good officers. Let it be remembered, that well-drilled troops are not made so by newspaper puffs. Before a regiment believe themselves perfected in drill, let them get the honest opinion of men competent to decide, after closely scrutinizing their manœuvres. That knowledge of tactics which will enable a colonel properly to instruct his regiment is not easily acquired, and that quality of mind necessary to perform this well at all times, as well as to place his regiment in any position sought in the quickest time, is possessed but by a few. I have no doubt that thousands of lives and millions of treasure have been lost in this war by incompetent officers; not because we did not procure the services of men perfectly competent—for they were not to be had in many instances—but because a proper selection has not been made of the material which could have been procured.

If men of influence, who, in so many instances, determine the appointment of officers in their recommendations, would seriously consider that when, from either political or personal motives, they recommend for military positions persons who they must know are not competent, they are taking the life of the soldier, they would be more careful in the future.

The rebellion is not yet put down; and even if it were, we have other enemies. Humanity requires—and I am confident that every one who loves his country would desire it—that we have an army with which we can inflict the greatest damage on the enemy with the least loss to ourselves.

Let us be governed by the light of experience, eschew all humbug, and cling to realities. We have the material in the country, if rightly used, to put down all our enemies; to rise up a glorious republic, with its authority vindicated over every foot of the soil, and so become a light to ages yet unborn. OBSERVER.

WASHINGTON, August, 1863.

THE ORIGIN OF LIGHT ARTILLERY.

For the introduction into warfare of batteries of light field pieces, changing their position with the manœuvres of the infantry, we are indebted to Frederick the Great, who was thus enabled to so increase the mobility of his army as to triumph over superior forces, assailing him during the same campaign from the opposite frontiers of his empire. Previous to the time of Frederick, the march of armies had been tardy and cumbersome in the extreme. The heavy guns with their clumsy means of transportation, delaying the movements of the infantry and making celerity impossible. Even the Austrian artillery, then the most perfect in Europe, was mounted on awkward carriages, constructed without the slightest attention to regularity, each carriage differing from every other, according to the caprice of the mechanic who formed it and the officer who superintended the construction. The harness, too, was of the most clumsy description, manufactured in ropes after a primitive fashion only to be expected of savages.

Light artillery was introduced into the Austrian armies during the reign of Joseph II., about the middle of the 18th century, but it was still far more easy to develop its advantages, and comparatively little reliance was placed upon it. The artillery men were conveyed upon caissons or covered wagons, made in the form of an old hunting carriage, called *coach wagon*. These differed from the common caissons only in having five more staffs, which placed the gunners in the attitude of a man on horseback. France was longer availing herself of this improvement in warfare, the old officers, always more numerous in the artillery than in any other corps of the army, opposing the efforts of the younger men at innovation. It was not until just previous to the revolution, in 1791, that the experiment was made by the formation of two companies of horse artillery. Choice officers and men were selected for the new batteries, and the success of the experiment was triumphant.

Napoleon's great genius discovered the value of this branch of arms, and he did much to elevate it to its present importance. With his flying artillery, Bonaparte broke the line of the Austrians at Castiglione, decided the battle, and settled the fate of Italy. At Ettlinger General Moreau, by the help of his light artillery was enabled with an inferior force of cavalry to support his left wing against all the cavalry of the Archduke. At Wagram, too, General Moreau commanding the Army of Flanders with 4,000 men manœuvering with light artillery, sustained the attack of 30,000 men, supported by a train of artillery at least treble that of the French.

The Swedes, from the nature of their country, perhaps, had been led very early to adopt shorter calibers and a lighter metal. The Swedish calibers were three or four pounders; the length of the caliber thirteen diameters of the ball; while the Prussian were at the same period 14, the Austrians 16, and the French 18.

The change in artillery from heavy to light caliber, which was thus gradually adopted, revolutionized warfare. Artillery became indispensable in all armies, going where it never had gone before, crossing rivers and morasses, and following even the cavalry in its manœuvers, forcing its way, by rapid marches, to new points of attack, turning the enemy's positions, and opening upon his flank or rear in unexpected assault.

The improvements of the last few years, familiar to all, have given further development to the efficiency of light artillery, and necessitated a departure from the rules of the standard writers on warfare, who wrote before the days of modern ordnance.

HINTS TO CAMPAIGNERS.

No. I.

In hivouacking on the march, or a on scout, attention to the selection of a proper camping ground is of great importance. A novice is apt to make the mistake of selecting a tree for his camping place, which spreads out nobly above but affords nothing but a bare stem below. The broad shadow cast by its foliage attracts him, and as he *stands* to the leeward it seems snug and comfortable, but serious as he lies down he finds the distance between him and the foliage increased, and it proves valueless for shelter. What is needed is a bowy weather; a dense low screen, perfectly watertight, not higher above the ground than the knees. Thus, in a low turf plain a sod can be turned up, sown feat long by ten feet wide, and, if propped up on its edge, it will form a sufficient shield against the wind.

In heavy gales, the neighborhood of a single tree is a positive nuisance. It creates a violent eddy, which leaves clear evidence of its existence. Thus, in wheat fields it is common for a storm to batter the grain quite flat in circles round each tree while elsewhere no injury has been done. It must be borne in mind, that a gale of wind never blows in level currents, but in all kinds of eddies and whirls, as the form of a dust-storm, or the vagaries of bits of straw caught up in the wind will readily show. Little hillocks, or undulations, combined with the general lay of the ground, cause these eddies, and entirely divert the force of the wind from particular spots. Trees and bushes should be looked for; they are discovered by watching the grass or even the soil on the ground. As the surface be still in one place, while all around is agitated by the wind, it will be the best position in selecting that place for our bed, however unprotected it may seem in other respects. Indeed a slight mound will sometimes shelter the ground for many feet behind it.

A clump of trees yields wonderful shelter. The Swedes have a proverb, that "the forest is the purest and warmest." In the cruel climate of Thibet, Dr. Hooker tells us that it is the habit to encamp close up to some large rock, which absorbs heat all day and parts with it at midnight during the night. It is thus a great reservoir of heat when the sun is down, and the neighborhood of a large mass of rock near neighborhood of water is objectionable, for, besides having to expect to malaria and mosquitoes, the night air is sure to be felt more cold and damp. Sleeping by the side of one or two hundred yards distance from it.

Avoid valleys and low hollows in clear, still weather. The cold stratum of air pours down into them like water from the surrounding plain, and stagnates there. Spring is the season when this is more severely felt, when a broad, level plain, especially if the night be clear and calm, whole cost by night rise for an encampment. The chilled stratum of air drains off from it, and is replaced by warmer air. Horses and cattle, as the night sets in, always draw up in the highest ground they can find, as the like kinds through the sea of mist that covers the plain.

However wet the weather may be during the day, the traveler should never lie down to sleep but in dry and warm change of clothes for his bivouac at night. Hardships, in rain weather, consist in the fact that the man when he is awake and moving, and while the sun is above the horizon, but let him never forget the deplorable results that may follow a single day's exposure to the cold, rain and dampness of night. Let the campaigner, when out in trying weather, strive to make his clothing as perfectly dry and comfortable. A little forethought and an extra hour spent in making a snugger berth will prevent self-reproaches. He should not even think of lying down to bed when he is in condition to withstand the chill of the early morning air. Any omission in this preparation will be irreparable, for, in the cold of a pitiless night he has hardly sufficient resources to keep off the fire the weather, and the darkness makes it impossible for him to cope with these difficulties.

Due attention to personal comfort is no indication of effeminacy, while the lack of it is evidence either of stupidity or of an ignorance which needs enlightenment.

WASTE OF AMMUNITION.

The following is extracted from a recently published book of campaign sketches in Virginia and Maryland, by Captain George F. Noyes:

The great disproportion in our battles between the number of ball cartridges discharged and the number of killed and wounded was due chiefly, I think, to the want of presence of mind in our raw troops; but the very limited ammunition I have been enabled to make has convinced me that our troops labor under difficulties. Unnecessary waste for less ammunition than is usual in European warfare.

During the wars of the French Revolution and of the Empire—Napoleon's wars—according to Foucart, a French general of artillery, the infantry fired 3000 cartridges for every man killed or wounded. Robert states the same thing. Decker, a Prussian general, and one of the most distinguished men in Germany, estimated that not less than 10,000 cartridges were burned for every enemy killed or wounded.

In the battle of Vittoria the English are supposed to have killed or wounded one of the enemy for every 800 balls fired. An English officer states that at the battle of Chrasnoe the Menzaia killed or wounded one Russian for every 800 balls fired, and that the Americans killed or wounded a Mexican for every 125 balls fired.

The heroic Rosecrans, in his account of the bloody-contested battle of Murfreesborough, declares, "Of 14,560 rebels killed and wounded, it is estimated that 7,000 rounds of artillery hit 728 men, and 200,000 rounds of musketry hit 13,832 men, averaging 27 cannon shots to hit one man, and 145 musket shots to hit one man."

In the battle of Gainesville there could not have been expended less than 200,000 cartridges, and we cannot admit a loss of more than 1000 men, thus averaging 100 musket shots to each of the rebel killed or wounded. Of course all this ammunition was not unnecessarily wasted, but it is sufficiently clear that, great as is the waste of ammunition in our army, it is not only equalled, but excelled by those of Europe.

One trouble is that our men, in going into battle, are weighed down, overloaded with ammunition, hauling it off their pockets as well as their cartridge-boxes with the fury or eighty rounds ordered. Of course very much of this is thrown away and wasted; but this is only a trifling evil compared with the encouragement thus given to the too prevalent idea among the men that he who fires the greatest number of rounds in battle is the best soldier. I have heard men boasting of their achievements in this regard, and the result of such an idea is a hurried loading and discharge without any regard to aim; a wasting upon trees and foliage of ammunition which, if used at all, should be

used so as to defeat the enemy. I was struck with a remark made by a rebel prisoner to his captors, "We never carry more than forty rounds into action, and usually expend about ten.

"There is altogether too much of this wild, reckless, firing, the men discharging their pieces before bringing them fairly down to a level, and utterly regardless of taking aim. Of course there are periods when heavy, rapid, and continuous volleys are necessary; still it would be well if every man could be drilled as a sharpshooter, taught to shoot slowly, and always take aim, either at the enemy or his supposed locality.

"In the five battles of the late Italian campaign it was estimated that about 8 per cent. of the French and Sardinians, and 10½ per cent of their enemies the Austrians, were either killed or wounded. In the battles spoken of in these sketches the loss was not far from 20 per cent. of the whole numbers engaged, while certain divisions and brigades lost one-third of their number; and in the fearfully bloody fight at Gainesville two of our regiments lost more than one-third of their number engaged, as also did the 4th brigade.

"The proportion between the killed and wounded is as about as 1 to 5, and of the wounded about 1 in 10 never recovers. If this be even approximative to the truth, it certainly robs war of some of its presumed fatality. As I have before remarked, the escape of so large a majority of the men, under such storms of bullets sweeping and whirling around their ears, but always bear the great mystery of war."

THE POLISH INSURRECTION

It is extremely difficult to know the truth about Poland. The French and English papers are one sole reliance for news, and both are partizan, and against the Russian interest. The consequence is, that all we hear in of Polish successes on the one hand, and Russian barbarities on the other; both of which we ought to receive with much allowance. There is good reason to believe that the insurrection is not in the popular interest, but is almost, if not exclusively, an effort of the Polish nobility to gain the upper hand. The common people, or peasantry, would, in that case, as the best only exchange one tyranny for another. As in Hungary, every other man is a noble, and there are thus but two classes, the lower of which can be little else than the serfs of the upper. On the other side, from what we know of the liberal character of the Russian Emperor, and of the Russian people, composed of twenty millions of people, scarcely differing in grade from the Polish peasants, is a magnificent proof—we may infer that his treatment of Poland cannot possibly be marked by such inconsistency and cruelty as is attributed to him. The Polish insurrection has many points of resemblance to the rebellion of the Southern States, and the conjecture may not be far out of the way, that it has a similar object—the establishment of an aristocratic and a servile class. When the marked amity of the Russian Emperor towards our Government is taken into account with the fact that Napoleon, we may well expect our judgment against him. The unreasoning and consistent enmity of the aristocratic English and imperial French press, against Russia, the Emperor of Russia, and everything Russian, is not for nothing; there is an instinct in the adversaries of human rights and equality that divines them against whatever threatens their favorite institutions.

The present question, however, is not what our sympathies are, or ought to be, but what is the news. As to military movements, there is really, almost nothing to be said, so contradictory is the information. The fighting seems to be done, on the Russian side, mostly by the Cossacks, in their characteristic way, and it is probable enough that frequent cruelties are perpetrated. On the side of the Poles there is little organization, though considerable force, and that desperate energy which impels men who have staked everything on success, so that it would not be wonderful if, notwithstanding their imperfect armaments, the balance of success in a desultory warfare had been hitherto on their side. General Mouravieff (the Russian Commander) issued an order on the 18th ultimo, in which he states that the Polish peasantry are rapidly and very generally arraying themselves on the side of the Government, and offers a reward of three silver roubles for every unarmed insurgent, and five for every one armed whom they shall capture and deliver up. The Polish Secret Government, on the other hand, has not only instigations to the Russian peasantry to revolt, but has actually started an expedition over the lines. Colonel Milkowski with 400 men, very well armed, has crossed the Danube into Moldavia, having seized the English steamer at Sulina, by a stratagem, but paying the captain liberally for the transit of his men. When he landed, the authorities commanded him to go back, but he refused, and a battle of some five hours ensued, resulting in the defeat of the Moldavians. They lost 60 men, and Milkowski, 40, after which he pushed on into Bessarabia. Very little can be hoped, however, from this diversion. The force is too small, and will be too easily cut to pieces, and its leaders are probably doomed to experience the uniform disappointment of those who depend upon a popular insurrection in an enemy's country. Meanwhile, foreign negotiation with Russia on the Polish question, is very ticklish. Prince Gortschakoff, in replying to the notes of the Three Powers, has managed to pique them all, sharply, and they are now considering in what form they will rejoin—the prospect being that the three will look like a treble tone, while England will at least growl, and Austria grumble. Gortschakoff, in his late dispatch, hinted to John Bull that the matter was none of his business; he reminded Napoleon that, with his fanbourg St. Antoine, and all the rest of the Revolutionary spirit, and lastly made Count Rechberg (the Austrian minister) foam with rage by purposely misunderstanding him, and complimenting him on his friendship to Russia. This is, after all, the important aspect of the case; for, if a general European war broke out, it is on all the before the Americ, and eventually for the general interest of the world. The importance of amicable relations with Russia, even to the possible extent of an alliance, cannot fail to strike every observer, or to occupy the attention of our State Department.

FOREIGN NOTES

—The French iron-plated frigate *La Normandie's* trip to the tropics is said to have been a complete failure. A French officer says: "Iron-plated ships are coffins in the tropics." *La Normandie* has been compelled to change her crew twice.

—It seems from a letter addressed to the *Army and Navy Gazette* of London, by "A Father of a Sufferer," that the negroes employed in the British service are in some cases accorded privileges not granted to their brethren under the same circumstances. "Possibly you are not aware," exclaims the afflicted father, "that the important post of barrack master at Sierra Leone is held by a colored officer, who, in addition to his other allowances, receives the sum of 5*s.* per diem as climate pay. European officers are told, I attached to West India regiments serving on the coast of Africa, obtain no such boon, though necessarily more exposed to the baneful influence of that notoriously unhealthy climate."

—The severity with which the French authorities are dealing with the insurrection in Mexico gives evidence of the literal fidelity with which the second Emperor is carrying out the Napoleonic ideas, of which he has proved himself the faithful student. The instructions under which the French authorities in Mexico are acting would, if made known, be found, we think not to be materially at variance with those issued by the first Napoleon for the direction of his lieutenant Junot in his dealing with the subjugated Italian provinces. We have, that appear in the twelfth volume of Napoleon's correspondence, lately published in Paris, a an order to Junot, under date of "Paris, 5th February, 1806," by which he is instructed to "burn five or six villages; shoot some 60 persons; make very severe examples." "Nothing is more salutary than severity when given *opportune*," adds Napoleon, of which doctrine he gives proof in the further direction to Junot "that the village which is ordered to be burned; that the priest who is in the hands of the Archbishop of Plaisance be shot; and that 300 or 400 of the incriminated be sent to the galleys. . . . Burn some large villages, and say that it was by my order." Such are the examples of clemency traditional in European warfare, from which foreign writers presume to lecture us on our inhuman mode of dealing with rebels.

—The Parisian papers are discussing the question as to the duration of the French occupation of Mexico. It is asserted that the French regiments now in that country are to have their duplicates at home, so as not to disturb the organization of the army, and are to form a Mexican army, to be paid out of the Mexican treasury, and maintained in the country under command of French officers. How long a period a period does not appear; not less than five years, however, is intended, for the *corps d'armee* remaining in Mexico are to be considered as the basis of the occupation in the first place, are reported to be quite averse to its becoming a permanent institution, and the increasing pressure of the success of the National arms in this country is full of portents of danger to the Franco-Mexican empire. If 80,000 troops, as is estimated, are required for the maintenance of French authority in Mexico under present circumstances, what force would be needed to maintain a position there in face of a vigorous enforcement of the Monroe doctrine? The problem is a difficult one. We commend it to the thoughtful consideration of the astute occupant of the Tuilleries.

FOREIGN MILITARY AND NAVAL SCIENCE.

—As an evidence that the English do not rely upon their wooden walls or iron plates for their protection, the schedule of the fortification bill recently passed by Parliament, proposes to expend the sum of £6,220,000 in fortifying several of the principal points on the coast.

—The construction of powerful muzzle-loading rifles for the naval service has been lately improved by an Englishman named Anderson. The security of the breech-block, on which the principal strain falls, is to be ensured by having a solid block of steel bored out for the interior tube, and then a solid forging shrunk on it. It is claimed that this gives much more solidity than heretofore to the construction of large ordnance.

—The forthcoming trial of Sir William Armstrong's 600-pounder rifled gun is anxiously looked for by England, a doubt seeming to exist as to whether the metal of the casket under tube will withstand firing repeated shot and the proportionate changes of powder. It is believed, however, that it is not now intended to fire such charges, unless with round shot, so that the cast-iron shell fired will be made auxiliary to the firing of the round ball. Besides solid balls, spherical shells will also be fired with this gun, so that a very interesting series of experiments may be anticipated.

—The British Ordnance Department has ordered that brass cannon shall be proved to when only of an inch below the true calibre, and afterwards finished. This alteration has been adopted in consequence of its having been observed that the effect of the same charge upon brass ordnance, when fired with the usual windage, is in almost all cases to leave serious indentations near the seat of the shot. These indentations are caused will, by this system, be removed in finishing the gun.

—The construction of explosive shells with polyhedral heads has become an interesting considerable attention in England, as in them the same purpose is effected as in Sir W. Armstrong's segment shell, in a much less cumbersome and more economical way. The object of this construction is to determine beforehand the number and size of the fragments into which the shell shall separate on the explosion of the charge. This is effected by casting the shell upon a polyhedral cone instead of upon the usual sphere. It is manifest that the shell will be thinner and weaker at the angles of the cones corresponding to the edges of the polyhedral cone than elsewhere. It is well known that an abrupt change in the form of the mould in the casting, produces weakness along the line of this change. On this account the tendency to fracture will be greatest along the edges of the polyhedral cone. The fragmented shells the core is varied to suit the shape of the shell upon the general principle above stated.

—A new iron-plated steam Ram recently launched from the yard of Messrs. Laird Brothers, Birkenhead, and said to be constructed for the Chinese government, has excited considerable interest in naval circumstances, is described as a vessel of about 1900 tons burthen and nearly 250 feet long. She has a peculiar appearance, owing to her unusually great beam, the plates, deckbeams and ribs being of immense strength. The inside shell of the vessel, and the shell below the water line, are composed of timber six inches thick, this planking being again covered by iron plates two and a half inches in thickness. The vessel has a singular appearance in the water, being more circular than conical. The whole of the stem is composed of forging of such thickness that penetration are thought out of the question. The engines, 1400 horse-power, will be propelled are upwards of 350 horse-power. The whole of the upper deck is plated with iron. The funnel can be lowered at pleasure, and the masts are of iron and form tubes on the deck. The vessel will have two of Captain Cole's revolving cupolas.

—A code of signals prepared for the guidance of the officials and others engaged in preparing and bending the slabs of iron used in plating the vessels under construction at Chatham, has been issued by the Board of Lords of the Admiralty. The iron is to be heated before bending, and the following precautions are to be observed in the process: 1st. The heat shall not be carried to such an extent as to injure the iron. 2nd. The bending shall be done gradually, so as to heat the large masses thoroughly throughout their substance; and 3rd. The heating surface must be so arranged as to prevent fierce fire currents from impinging on the edges of the plates, so as to burn and injure the same. The committee, upon whose report the code was framed, consider that from good to brightest red are the safest limits of temperature to be used in bending the said, provided proper precautions are taken, consider that the iron will be rather improved than injured by the operation. It is considered highly inexpedient to bend thick plates cold, or only slightly heated, as there are few kinds of iron sufficiently ductile to bend cold, even if they were not liable to injure by the bending of the metal, and in large masses this attempt will be very injurious, for even if the external surface should escape injury, the process will inevitably produce undue internal strains, very detrimental to the powers of resistance under the blows of shot.

—In the recent foray upon Lawrence, Kansas, the guerrillas, in one case, drove twelve men into a house, shut them, and burned the building, and the friends of the twelve men, while standing on the banks of the river, were fired into by the guerrillas, and a number killed and wounded.

A SWISS OFFICER IN OUR ARMY.

Among the many European officers whom the vast military operations in this country have attracted across the Atlantic, we know of none who seem to have observed more carefully and judged more correctly than Lieut. Col. Lecomte, an officer of the Swiss army, sent by his Government to acquaint himself with our military system. Col. Lecomte served on the staff of Maj.-Gen. McClellan, and laboriously devoted himself to the task of examining the organization of our armies, the points of difference between them and those of other nations, and especially his own, and to the causes which led to the rise of the latter and the preference to it into which the people divided themselves. His report is brief, but it is comprehensive and intelligent, and contains much likely to prove instructive to the American as well as the Swiss Republic.

After giving a condensed narrative of the origin and growth of the civil war, and correctly describing the theatre of its operations, Col. Lecomte refers in terms of praise to the facility with which our great armies are raised, and the advantage manner in which it was organized and disciplined. But he has also something to say about

THE DEFECTS OF THE ARMY.

The general information of the men in all which concerns encampments, and the establishment of routes, bridges, and shafts, their patience and their *sang froid* under disappointments, their force of will, and their persistance against obstacles, are truly remarkable. But the inherent disparagements of discipline, the respect for authority, and the good order of the internal service, fall short of what is desirable.

There is wanting also the spirit of cheerfulness and gayety which manifests itself so quickly the moment of relaxation presents. The conduct and the character of the American soldier have something of sadness, of reserve, and of silence, which is precisely the opposite of what we see in the men of the European armies. The song and the laugh there are the exceptions. It is true that the soldier is at the same time a citizen. He thinks of his wife and children, of what he talks politics; he reads almost every day the gazettes brought to the camps by intrepid newsmongers; he has family cares; he receives and writes many letters; he often sends a correspondence to the journals; he communicates military experience to the Senate or to the House; he explains of campaign to which the most elevated in grade. Few examples of the patient American soldier were to be found, with a complete apparatus of secretary, paper and envelopes of different sizes, collections of postage-stamps, blottingpaper, etc. It is often borrowed from the officer to corner the materials for my correspondence.

If the American soldiers are not gay in their disposition, it is not, however, through contempt of alcoholic stimulants. Intoxication is a vice too common, and so excessive in their ranks that many things in it seem to be carried to excess on the spot by the side of their guns. Whence arises this injurious consequence, that from four of the abuse of spirituous liquors? It becomes necessary to attribute it to moderate use, and that their sale at retail is interdicted to the canteen, as well as the stores of the sutlers.

Amongst the qualities which are also wanting, ought to be mentioned that sentiment of fidelity and of fraternity in arms which contributes so much to give consistency and stability to the character of an army. Individuals and corps live from a little too much for themselves, seeing, often, only a rival where it would have been necessary to find a friend and a brother in arms. This defect can be easily comprehended and excused in a country where the entire development of its approximation to a military career, and where all the institutions and the habitudes of civil life have hitherto operated on the largest advantage of individual liberty.

He is surprised at the facility of the military authorities in taking advantage of

RAILROADS, TELEGRAPH LINES, AND PRESSES.

Every road which (the railroads) in the South for skilful strategic combinations, and, on both sides, they have daily employed plans for tactical movements of the greatest boldness, sometimes for transportation under fire of the enemy, for *subsistes*, and even for reconnoissances and scouting expeditions.

At the time of the recent evacuation of the White House, the 5th Corps, under the Fabius Maximus, commander-in-chief of the cavalry, advanced by way of exploration and as a scout on a locomotive, in the direction of Richmond, in order that he might be able to communicate directly and promptly the signal to fire the provisions which there was no longer time to carry away. In another reconnoissance of the same adventurous character, made on a railroad, two officers, as brave as intelligent, of the staff of General McClellan, left the camp at the head of the advanced force, requested, on the route, a locomotive, and, climbing upon it, they were able to explore promptly the country, and to bring back in one morning a plan of the enemy's camp at the distance of fifteen leagues from headquarters. The construction of new railroads, their destruction and their repair, play a very grand part in this war.

The telegraphs are managed with not less boldness and activity. In the army of the Potomac, the telegraphic staff of the general in command rarely stops more than two or three days without being connected with all its divisions, and with the Government at Washington. Wires are thrown on the bank at anchor in the bays, or in the midst of the sea of the mouth of Yorktown, or in the bosom of thick forests, while the routes were not even traced for the wagons, one could see rising all around him the network of wires with wondrous rapidity. More than one officer of the staff has recovered his direction in the forests of Virginia by means of the pole, or the trees truncated for this purpose, of the telegraphists—and the latter have often unrolled their wires as rapidly as the army marched.

Field printing-presses, operating with great celerity, are also attached to various staffs. As for any thing further on this head, the printing-press is more connected with the manners and customs of the American people than with those of any other. There is not a village which has not its printing-press and its journal. A headquarters, as populous as many a village, might well purport to the same privilege. I subjoin here, Mr. Counsellor, a specimen of the elegant paper published by the organization of one of the nearby woods of the environs of Yorktown. I should add that these pamphlets, and the telegrams, simplify greatly the labor of the chief of the police.

But all these improved engines are, after all, but accessories; and if the discipline of the operations is not up to the height of its task, they only complicate it for him. The facilities of execution aggravate the faults of conception more frequently than they do the correcting them. In many circumstances, it would have been very desirable for the army to have had a single command, and to be more independent of the political ductastion of Washington.

A very interesting portion of the book is that in which the author draws a comparison between the American and Swiss armies, and states some of the disadvantages which each suffer under from the democratic character of their institutions:

CAUSES OF INFERIORITY.

As to what concerns the American Federal Army, the principal causes of inferiority are, in my opinion, the following:

1st. From lack of authority in the generals, in consequence of the exigencies of the popular democratic institutions, which protect all the restraints upon the vigorous and wise conduct of the war—intrigues of parties in the government, the want of unity in the operations, cordial flattery of the soldier-voters; the systematic sparing or accommodation by the chiefs of the small generals, according to the party to which they belong; exaggerated fears on the part of the government of seeing the rise of future military dictators in the victorious generals, of journals, of tribunes, which, without wishing it, furnish valuable information to the enemy, and facilitate, in a singular manner, his military operations.

2d. The defective mode of forming the army. The system of voluntary enlistments, the first impulse of the people to the stimulation of political passions, furnishes a great number of individuals more or less depraved, or inept for military service, who, in the end, are to be sustained, to make up the number. The rest of the nation, thinking they are doing enough in filling its ranks for the present war, fail themselves too little interested in events. It does not feel sufficiently their burden, and do not take in the war an interest sufficiently active and permanent. Meetings, in the great cities, at New York, Philadelphia, Boston, and even in the face of the enemy at Washington, announced with a great deal of noise, manifested the desire, they declare, to carry on hostilities, bout loudly, and, what is more serious, they know not how to sustain them. The rest of the country is in danger, any rancor, or any political purpose. The contest of parties and of cliques pursues its ordinary course, and the Democrats, who, in the beginning of the Republican abolitionist of the North rejoices more over the reverses of a Democratic general than over the victories of one of his success. The Democrats do the same as regards the anti-abolition generals, as, for example, Fremont. If the army were recruited by conscription, by each citizen, subject to service, were held to military duty, as in Switzerland, the various classes of society would be more equally and more correctly identified with the army, and better comprehend the necessity of the sacrifices which it demands.

3d. The mode of nominating officers is a great number of bad officers, having sometimes no other title to their commission than having known how to entice a few recruits to join the ranks. A bad officer is worse than a bad rank and file, as it too often does, also! in regard to the positions of the superior officers. For two good officers taken thus from the ranks of the enemy, there are, frequently, five, six or five or six of them completely incapable in the face of the enemy. Besides, from just fear of this, the secret that ordinary knowledge is not the first condition to obtain an officer's commission, every influence is brought to bear to effect the nomination. Thus, by the favoritism, by friendship, of party, of considerations of speculation even, care to be named to the command of companies, and quite incapable of filling them. When that happens in the staffs, in the service, necessarily indeterminate and not susceptible of being regulated as a matter of law, what terrible is the capacity of the officer until after the act, the hurtful consequences which may ensue may be easily understood. I do not say, Mr. Counsellor, that the rule would not work in my end; but it would be easy for me to prove what I advance, by facts which I have seen. All that, owing to the intrigues of parties, and the compliance of the press, it is often difficult for the public, even for the Government and the commander-in-chief, to distinguish from an officer of a pretender, an atheist actor, or a man of merit. The conscription would give better men for the troops, and would avoid the serious inconveniences of military life.

4th. The military zeal of the army is not excited by any adequate penalties for the dangers, the inconvenient distinctions, no decorations or pensions, not even retiring pensions, are assured to the wounded, or to the widows and children of those who have fallen on the field of honorable glory; no destruction of brandy; and a severe prohibition against gambling. Thus, in a military patriotism and the pay to stimulate the boldness of the combatants. But this is not enough in the present case to lead men resolutely to death. As for the pay, that is gained in advance, and if one is thrown out of service, the pay is lost for himself and his heirs. As to patriotism, it is that of a civil war, and the sad struggle of the parties which we have mentioned in the very camp of the North, blunts, or gives it a false direction. If it has its moments of death, it has more often still its fainting-fits.

5th. The very organization of the discipline is fundamentally defective, as it transfers too much to the military service, where obedience above every thing ought to reign, the individual privileges of the citizen, who prides himself essentially on being free. Courts of inquiry and courts-martial, for example, are multiplied to infinity, diverting, at every turn, a good number of soldiers from active service, without aiming, most frequently, at any result. Veritable lawsuits, bristling with incidents of every kind, are always pending by the dozen in each division, in which the question, in the greater part of the cases, remains unsolved, would be one of the simple competence of superior or general officers. Heaps of pamphlets, bonds, result from them, which there is a custom of sending to all the corps, and the transportation and dispatch of which by the officers, is done sometimes to the detriment of important service.

We had marked several other interesting passages in this book for extract, but we are encroaching too far on our space, and must desist.

NEW MILITARY PUBLICATIONS.

A Field Manual of Courts Martial, by Capt. Henry Coppée, is from the press of J. B. Lippincott & Co. It contains forms of preceding of Courts Martial, together with an explanation of the duties of all persons in any way connected with military tribunals. To which are added the modes of procedure in Courts of Inquiry, Military Commissions, and the various Boards upon which officers are required to serve. It will prove a valuable assistant to all newly-appointed officers, as it contains the latest interpretation on points which have heretofore required the experience alone.

The Army Pay Digest, by Major Ezra Webb, published by D. Van Nostrand, contains all the acts of Congress now in force relative to the pay and mustering of the Army, together with the decisions of the Army Department and rulings upon those points. The pay tables are admirably arranged for ready calculation. It is an invaluable book for paymasters and all officers charged with the duty.

Manual of Instructions for Enlisting and Discharging Soldiers, by Robert Bartlehow, A. M., M. D., is published by J. B. Lippincott & Co. This is a work which has been adopted by the Surgeon-General for issue to medical officers of the army, and contains the real and pretended disqualifications for military service. It is a necessary information relative to the enlisting and discharge of soldiers. It is a work of much value and interest.

The Company Clerk, by Capt. August V. Kautz, Sixth U. S. Cavalry, from the same press, shows how to prepare the rolls, returns, and other papers which are to be made out, and to whom they are to be sent, and is a very useful book.

Our Soldiers' Book; a Pocket Diary for Accounts and Memoranda, by Robert N. Scott, Fourth U. S. Infantry, is published by D. Appleton & Co. It is seldom we see an article, however valuable and well conceived, which we would recommend in addition to the never-to-be-forgotten "marching order" can attest the fact that every unnecessary shred or atom should be dispensed with. But to this little book no such objection can be urged—each one, in these well-arranged tables of the value of a soldier's accoutrements, will find a blank where memoranda can be received by him; a page on which are registered six "important articles of war" which all should know who would avoid the consequences of ignorance; a blank-book wherein to keep a record of some capital directions for cooking (by Dr. Letterman); and, most important, a page for the record of the "Military History" of its owner. To this page we would add, after the insertion of a full personal description—name, regiment, birthplace, name of wife to whom any desired allotment of pay is to be made, etc. Any one will see the value of this, who reflects upon how many hundreds of bodies are buried unrecognized, while if might have been placed in the hands of anxious friends if such a record had been found upon them. There are also four blank pages for memoranda, useful for the inscription of an essay a note which may recall pleasant incidents of camp life, or thoughts which would otherwise escape us. Altogether it will only add to the size of a thin pocket book. We are convinced that every soldier would find it invaluable.

ITEMS AND INCIDENTS.

—The rebel General Price has resigned his commission as Brigadier-General in the rebel army, and is now among the gauntlet of fire when Major Anderson was being bombarded at Sumter, in order to carry a flag of truce.

—Lady Franklin and Miss Sophia Cracroft are here. She was absent from home when the enrolling officer called, and the only guide he had to the name of the occupant was B. Sophia upon the door. Miss Sophia, with Miss B. was "slack" enough to have placed there.

—Sawyer and Flinn, who were ordered for execution by Jeff. Davis for the execution of the two officers of the rebel recruiting officers by General Burnside, had not been executed at the latest accounts. It was hoped that they will suffer while General W. H. Lee and Captain Winder are held as hostages for them.

—The Richmond Whig, of August 20th, says—"The loss of Vicksburgh and the failure at Gettysburgh are the two events of the year, which seem to render highly probable a speedy and successful termination of the war. Apart from the victories we may obtain in the field, there are but two means of ending it—the forcible effects of those events and bringing hostilities to an early close. These are, either foreign intervention, or a determined and successive opposition by the conservative masses of the North to the Abolition faction which has the control of the Government at Washington. A long and protracted war would prove a great evil, wholly unmixed with good, for the longer the war continues, the more thoroughly saturated the whole Southern heart would become with hatred of the whole Yankee race and Yankee institutions. We want the aid of France. We are able to pay for it. Let us do it. We shall then have peace, or the power to wreak a rich revenge on our foolse."

CHANGES IN THE REGULAR ARMY.

In advance of the issue of the Army Register for 1903, we note the principal changes, by promotion, etc., for the month of August, 1903 (so far as reported officers—Generals Sumner and Merritt—have died, Generals Hooker and Meade being appointed to fill their places; and two have been retired—Major-General Wood and Brigadier-General Barnes; their places have not yet been filled. Major-General Grant, of the volunteer army, has been appointed a Major-General in the regular army, to fill the old grade vacated by the retirement of one of the four retired on the general list. One Major-General of the line retired and there are two Brigadier-Generals (one vice Wood, Army retired) and two Brigadier-Generals (one vice Barnes, retired) to be appointed, as they stand now, are—George R. McClellan, Colonel 6th Cavalry; Robert H. Hall, Colonel 2d Cavalry. Brigadier-Generals—Irvin McDowell, Robert Anderson, Wm. S. Rosecrans, Philip St. George Cooke, John Gibbon, Wesley Merritt, Colonels 5th Cavalry.

In the Adjutant-General's Department, Colonel Garesche was killed at the battle of Murfreesboro', and Colonel Colburn died. Lieut.-Colonel Jones, 4th Artillery, and Major Appleby, 2d Cavalry, Samuel E. Chollar, 23 Artillery, have been appointed Assistant Adjutants-General and are now on duty in the Department. In the Inspector-General's Department there was one irregular vacancy, which has been filled by the appointment of Lieut.-Colonel Joseph C. Breckinridge, 11th U. S. Infantry, who vacated his regimental commission. In the Quartermaster's Department the changes have been the appointment on the death of Colonel Tompkins, Assistant Quartermaster-General, and the detail and promotion of Lieut.-Colonel and Assistant Quartermaster Kilbourne, which led to the promotion of Lieutenant-Colonel George H. Crosman, Major Charles F. Humphrey, Major Ralph W. Hoyt, Paymaster Frederick T. Dent, and John C. Redfield, assistant surgeon. To the Subsistence Department there have been added (Act of February 8, 1903), eight Brigade Commissaries with the rank of Captain. Pay Department.—The following officers have accordingly been appointed Paymasters with the rank of Major to fill vacancies in the Lieutenant-Colonel and Assistant Pay Eaton to be Colonel; Major Alexander R. Shiras to be Lieutenant-Colonel; Captain Charles H. Clark, 2d Cavalry, to be Lieutenant-Colonels; Captains J. McL. Taylor, 8 Cavalry, R. Murphy, 3 Artillery, and T. J. Lloyd, 4 Artillery, to be Majors.

In the Medical Department, there has been an increase of eight Medical Inspectors, with the rank of Lieutenant-Colonel (Act of 1902). Several officers have been retired from active service, and others detailed as members of the Examining Board at Washington, and Dr. J. K. Barnes succeeds him. In the Pay Department, the death of Paymaster-General Tompkins has led to the promotion of Paymaster-General Andrews. Major Leonard was promoted to be Deputy Paymaster-General, and Lieutenant-Colonel Dent to be Major. Engineers and Topographical Engineers have been amalgamated—a necessary result of the Act of 1901, providing for a corps of Engineers. The U. S. Engineers now consist of one Brig. Gen., four Colonels, ten Lieutenant-Colonels, twenty-five Majors, fifty Captains, fifty-five Lieutenants, ten 2d Lieutenants, and seven hundred enlisted men, making an aggregate of seven hundred and eighty-four. The Chief Engineer of this corps has been appointed Brig. Gen. Wilson, and Lieutenant-Colonel Mills has been promoted Colonel. Captain Gross having been killed at Santiago, Major Black succeeds him. Major Gillespie has been appointed 1st Lieutenant of Engineers.

Major-General Leonard Wood, U. S. A., has been retired to-day accordingly vacated his commission as Major of Engineers. Eight Lieutenants were promoted to be Captains, and Lieut. Frederick Mears has been appointed 1st Lieutenants in this corps.

By the Act of February 2, 1901, there is to be an increase of nineteen officers, viz.: one Lieutenant-Colonel, two Majors, eight Captains, and eight 1st Lieutenants, to be added to the line of the Army, and enlisted men of the department to 864. Colonels Long and Hughes have been retired, and Lieut.-Col. Wm. H. Carter, Assistant General of Volunteers, died on the 22th of July, 1903, of wounds received at Santiago, July 1, 1898. Seventy-five Majors (Act of 1903), have been appointed 1st Lieutenants of Cavalry.

Two of the W. Wood, Army retired, have been retained to cavalry regiments. The changes among the field officers of artillery have been very numerous. Lieut.-Col. Alexander Piper, 4th Artillery, to Captain and Lieut.-Col. Burke of the 5d, Col. Merchant and Lieut.-Col. Wyse of the 6th, Col. Hasbrouck and Lieut.-Col. Hall of the 7th Artillery, no longer appear on the regimental rolls. Lieut.-Col. Wyse resigned his commission on the 31st of March, 1903, and Col. Hasbrouck retired from active service on the 1st of April, 1903. Col. Merchant died on the 5th of May, 1903. Three lieutenant-colonels, Colonel Greenleaf, Colonel Kingsbury, and Colonel Hall, have been appointed to the vacancies caused by these promotions. Of the twenty-seven majors, seven Majors become Lieutenant-Colonels; and seven Lieutenant-Colonels become Colonels. Of the twenty-one graduates last June, six were appointed Second Lieutenants of artillery.

Among the changes in the infantry regiments are the following: Brevet-Lieutenant-Colonel Hoppin, Major 25th Infantry, vice Major Drake, 24 Infantry. Died or killed in battle—Colonel John F. Reynolds, 14th Infantry; Major Jos. S. Conrad, 19th Infantry; Major Geo. L. Willard, 10th Infantry; Major Jos. B. Plummer, 6th Infantry; Captain Wm. H. Powell, 2d Infantry; Capt. Wm. H. Wharton, 6th Infantry; Captain Wm. W. Foote, 6th Infantry; Captain Jas. Kennedy, 6th Infantry; Captain Wm. H. Bisbee, 9th Infantry; Captain Chas. B. Watson, 14th Infantry; Captain W. W. Chamberlain, 14th Infantry; Captain Wm. Weigel, 15th Infantry; 1st Lieut. Major William Williams, 24th Infantry; Captain Samuel M. Swigert, 24th Infantry; Captain Wm. Weigel, 15th Infantry; Captain Robert F. Mosley, 11th Infantry. Dismissed—Major-General Leonard Wood, appointed Major 25th Inf., vice Major Davidson, 4th; and Captains Beall, 23d; Stivers, 7th; Myer and Williamson, 25th; Lieut.-Col. Hall, 7th Artillery, vice Piper, 4th; Major Hall, 7th Artillery, vice Piper, 4th; Major Hall, 7th Artillery, vice Piper, 4th; Major

UNITED STATES
ARMY AND NAVY JOURNAL;

A WEEKLY NEWSPAPER, devoted to the INTERESTS of the ARMY AND NAVY, and to the DISSEMINATION of CORRECT MILITARY INFORMATION.

On Thursday, the 27th of August, the undersigned will commence the publication, under the above title, of a weekly newspaper, devoted to military and naval affairs and to the discussion of subjects relating to the interests of the United Service. The ARMY AND NAVY JOURNAL is established in the interest of no party; it will not be controlled by any clique. Its independence will be absolute. Avoiding all personalities and political bias, it will devote itself solely to the inculcation of sound military ideas, and to the elevation of the public service in all its departments. Its pages will be open to the impartial publication of every competent authorities, to the dignified discussion of every important question affecting the service, and to a full and reliable record of all subjects of interest to those in any way connected with military or naval affairs, or interested in the right use of war. The Department of Engineering, which now has so intimate an association with warlike operations, will receive adequate attention in this connection, and the interests of our Commercial Marine will also have an appropriate share. Matters affecting especially the welfare of the JOURNAL will continue from week to week:

1st. Full official lists of all appointments, promotions, changes of stations, resignations, dismissals, and other changes in the personnel of the two services.

2d. A full and reliable record of all active operations by the Army and Navy.

3d. A summary of all official orders proper for publication.

4th. A full account of the operations of the Coast Survey and Light-House Board, and of changes made among the officers of these two departments.

5th. Original articles upon military and naval topics, with matters relating to military hygiene, surgery and engineering, of interest to the Army and Navy.

6th. Descriptions of inventions and improvements relating to the Art of War, and of experiments and theoretical discussions of military questions in this country and abroad.

7th. Reviews of military and naval exploits and adventures; correspondence from members of the two services. Correspondence relating to official matters or disputed tactical matters, or other subjects suggested by correspondents.

8th. An account of important movements of foreign armies and navies, and a review of the military and naval power of the services of foreign nations.

9th. Criticisms upon military literature and art, of interest to the Army and Navy.

10th. Articles upon military and naval engineering.

11th. Station of the Naval vessels in commission; report of Navy Yards, and of vessels fitting out or repairing.

12th. Editorial discussions upon subjects of interest to our soldiers and sailors.

A summary, in short, of whatever occurs in all parts of the world of value to our Army and Navy. No effort will be spared by the Editor to secure competent aid in its parts, and communications on any matters of interest to the service will be welcomed from those familiar with the Art of War. It may be said that the aim of the Proprietor to make it not only a complete Military and Naval paper, but the best paper to be published, reliable, freely journal, which will be read with interest by the whole country, and will be connected with the public service and by the great body of the intelligent public.

The important which Military and Naval affairs have taken upon the United States Government, the demands that they should have in the press an adequate representative, which, by the ability of its conductors, by fidelity to the discussion of subjects coming under its notice, by liberal recognition of the claims of merit, and to the National Union, shall command itself to the public and to the Army and Navy, and become necessarily in every test, barrack, hospital and ward-room. That it has established a position which we see as demand, and it shall be the purpose of the proprietor to realize and to maintain. Every exertion will be proud to recognize as their organ and which shall be accessible to every officer and soldier by any of its cities in the world. Arrangements for official and have been made with the most competent persons, and with Naval affairs in the country, and with official and diplomatic sources since we will secure to the JOURNAL early and complete information of all movements. The Editor will devote all consideration to arrangements for the publication of the JOURNAL has the valuable co-operation of many experienced officers of the Army and Navy, and the gentlemen outside of military life. With their earnest sympathy and co-operation, it will be able to establish the paper upon such a basis as will ensure its success. As far as it has been practicable to make the JOURNAL perfect for the establishment of the JOURNAL has been tasked with the greatest care. Officers of the Army and Navy. Already, in advance of publication, numerous expressions of the utility of such a publication. With the enterprise have been received from officers high in command; and, in addition to the large subscription list, has received abundant assurance that the JOURNAL will be commended by the whole of the two services.

The terms of the paper will be FIVE DOLLARS A YEAR, PAYABLE IN ADVANCE. It will be published in a large-size newspaper form, with convenient form for binding, and printed in the best manner on fine book paper. They will furnish a yearly volume of over 400 pages, filled with information of indispensable importance to every soldier or sailor, and evidence of improvement in his profession, as well as to every man desirous of taking an intelligent view of the military operations now absorbing universal attention. Subscriptions and communications should be addressed to the UNITED STATES ARMY AND NAVY JOURNAL, New York.

SMALL STORES, &c., for 1863-64.

NAVY DEPARTMENT,
BUREAU OF PROVISIONS AND CLOTHING,
AUG. 15, 1863.

Proposals, sealed and indorsed "Offer for Small Stores," &c., will be received at this office until noon of Monday, the 14th day of September next, at which time and place they will be publicly opened in presence of the Inspectors of Provisions and Clothing at each of the Navy Yards in Charlestown, Massachusetts, Brooklyn, New York, and Philadelphia, for furnishing the annual supplies of the following articles of Small Stores, Soap and Candles, named and specified in the following classes, to be delivered in such quantities as may be required, from time to time, by the Chief of that Bureau, or by the commandants of those yards respectively, during the fiscal year ending June 30, 1864, viz.:

CLASS NO. 1.

300,000 lbs. Salt-water Soap.

The soap must be manufactured from cocoa-nut oil, and be of the following description: "Navy Mottled Salt-water Soap," and be delivered on thirty days' notice, in full boxes, containing twenty-eight pounds each, and, after inspection, to be weighed at such end at the expense of the contractor.

CLASS NO. 2.

15,952 Jack Knives.
19,000 Brooms.
19,000 Forks.
5,000 Razors (in single cases).
5,000 Razor Straps.
5,000 Scissors.
250,000 Needles, Sewing, Nos. 1, 2, 3, 4, drill-eyed, assorted.
20,000 Thimbles, 8-10 and 9-10 in diameter.
20,000 Spoons.
20,000 dozen D. K. Buttons.

CLASS NO. 3.

2,000 dozen Gilt Eagle Coat Buttons.
3,000 dozen Gilt Eagle Vest Buttons.
2,000 dozen Gilt Eagle Vest Buttons.

CLASS NO. 4.

19,000 Fine Combs, India Rubber or Gutta Percha.
19,000 Coarse Combs, India Rubber or Gutta Percha.

CLASS NO. 5.

19,000 Scrub Brushes, 4-12 Scrub.
10,000 Shoe Brushes.
10,000 Hair Brushes, for Mantels.
2,000 Whisk Brooms.

CLASS NO. 6.

5,000 Hands Grass, for hats.
5,000 Hat Bands, for tarless pure.
20,000 extra Shaving Soap, not less than two ounces each.
20,000 boxes Blacking.

CLASS NO. 7.

15,000 spools COTTON, of Nos. 12 and 16, 200 yards each, 3 cords, 6 ply, soft finish.
5,000 pounds THREAD, black and white, in quarter-pound balls, equal to Marshall's Nos. 8 and 9 quality, and in such proportions as may be required.
1,000 pounds TAPE, sewing, blue black, pure silk, in quarter-pound balls, assorted widths, by the yard or ounce, in quarter-pound packages.
10,000 pieces LINEN TAPE, one-eighth black, 12 yards to the piece, width 1/4 inch, texture 30 by 8 coarse thread.
10,000 pieces TAPE, white linen, four yards in length, width 1/4 inch, texture 30 by 8.
10,000 pieces TAPE, black twilled cotton, six yards to the piece, width 1/4 inch.
20,000 POCKET HANDKERCHIEFS, cotton, 36 by 38 inches, hemmed, 1/2 inch, having 9 cotton cords, texture 8 by 8 to one-half inch.

CLASS NO. 8.

26,000 lbs. Mustard Seed, American brown.
1,000 lbs. Pepper, Black.
1,000 gross Bottles, octagon, for mustard and pepper, each one pint.

CLASS NO. 9.

150,000 lbs. Stearine Candles.

The candles must be "sizes," of prime leaf lard stearine, full weight, thoroughly pressed, of 12 to the pound, and no excess of any article will be received under this contract.

All the articles named in this class must be best of their kind, and to be delivered in packages of 100 pounds each, and no excess of any article will be received under this contract.

All the foregoing articles must be of the best description, manufactured from the purest stock, and samples deposited at said Navy Yards, and subject to the inspection of the Inspectors of Provisions and Clothing, and the Chief of that Bureau, or the inspecting officer to be appointed by the Secretary.

All the articles to be delivered free of any further expense to the Government, in proper vessels or packages, and in such place or places as may be the same at the respective places of delivery. Packages to be marked with the name of the article contained, marked with their contents and the name of the contractor, and the Navy Yard to which they are consigned, safe-keeping.

The contractor must establish agencies at each stations other than the residence, that no delay may occur in the delivery of articles. The bids must state the contractor or agents fully promptly to comply with the specifications. The Chief of the Bureau of Provisions and Clothing shall be authorized to direct purchases of articles, and the contractor shall not be relieved from liability to be expressed in the contract; the record of a contractor's failure to duplicate upon the Chief of the Bureau of Provisions and Clothing, or at either of the Navy Yards specified in the contract, shall be considered as if it had been made and received.

In case of failure to make a tender, in a sum equal to the estimated amount of the contract will be required, and twenty per cent. upon the amount, to be deducted from the amount of all payments on account thereof, as collateral security for the due fulfilment thereof, not in any event to be paid until it is in all respects completed, and the Chief of the Bureau shall certify to the Secretary of the Navy that the Navy Agent within ten days after warning for the same, and the sum bonds passed by the Secretary of the Navy.

Blank forms of proposals may be obtained on application to the Navy Agents at Portsmouth, New Hampshire; Boston, New York, Philadelphia, Baltimore, and this Bureau.

A record, or duplicate of the letter informing a bidder of the acceptance of his proposal, will be deemed a notification thereof, within the meaning of the Act of 1846, and his bid will be made and accepted in conformity with this understanding.

Every offer made must be accompanied (as directed in the Act of Congress making appropriation for the service of the year ending June 30th, 1864, approved July 5, written guarantee, signed by one or more responsible persons, stating the sum for which they will undertake that the bidder or bidders will, if his proposal be accepted, enter into a contract within ten days, with good and sufficient sureties, to furnish the supplies proposed. The Bureau will not be obligated to consider any proposal for less quantities than the guarantee required by law: the competency of the sureties to be approved by the Navy Agent, District Attorney, or the Collector of the Port, and by satisfactory evidence of the same. The bond must be executed by the Act of Congress of March 3, 1863.

The attention of bidders is called to the samples and description of articles required, as will be required before acceptance, a just and equal compliance will be made between the articles offered and the samples and contract, receiving more than full before their delivery. Each bidder is also particularly referred to the last resolutions of the 27th March, 1854, and to the Act of August 3, 1861.

SOLDIERS!

BOTH CONSCRIPTS AND VOLUNTEERS!!!

Did you know that the use of Wines and Ale Army is a source of Enormous Profit? Are you aware that the Army Canteen is the best place to purchase Pure Wine, one of ordinary business tact? And, finally, that the Army Canteen is the most valuable institution for the benefit of the men? Wallace Watches in the American Market, at Prices baffling all competition! Call and examine before deciding attention at this time is our Celebrated

RAILWAY TIMEKEEPERS,

Of Every Variety Sterling Silver Cases,

Especially adapted for army sales. From $20.00 to $75.00. Also, Watches in 18 Kts. Cases.—HERMAN'S TIMEKEEPERS are becoming proverbial for their accuracy and reliability. They are particularly valuable for officers in the army and navy.

The Jersey and Navy Gazette, of Philadelphia, in its number of Nov. 1, 1862, says: "Messrs. Herman & Co. We are pleased to see that the importations of the Hermann Brothers, of Philadelphia, have met with such extraordinary enterprises as theirs so richly merits. These watches are not to be surpassed by no other house, for excelling other manufactures in point of accuracy and elegance. Fidelity and promptness to their patrons render the house a desirable medium for business with the army."

Sent by Mail, Safely, on receipt of Price. Address, HERMAN BROTHERS, 64 South Second St., Philadelphia. Also, Herman Brothers, 64 South Second St., Philadelphia.

THE RAILWAY TIMEKEEPER is also furnished to Railroad Companies, and to all other persons requiring the same as the silver cases, while in appearance they are fully equal to Gold. Price $20, per dozen. Postage, $1.25. Registering 20 cents. Sold only by the trade.

MAGIC TIME OBSERVERS!

THE PERFECTION of Simplicity and Beauty!

Being a Hunting, or Open Face, or Lady's or Gentleman's Watch, Stem Winding, Stem Winding, Improvement!!!

The *N. Y. Observer and Chronicle*, issue of Jan. 30, 1863, on page 47, voluntarily says: "We have been favored with a specimen of the Magic Time Observer, made by Messrs. Herman & Co., of Philadelphia. It is a double-case Hunting, or Open Face Watch combined. One of the prettiest, most convenient, and reliable watches we have seen, and cheapest timepiece for general and reliable use ever offered to the public. It is constructed with the machinery its own winding attachment, rendering a key entirely unnecessary. The cases of these watches are composed of two metals, the outer one being the finest 18 carat Gold, and the inner one of the finest silver movement, and is warranted an accurate timepiece. The Magic Time Observer is sold by Messrs. Herman & Co., of Philadelphia, to most numerous houses, for those who wish to purchase a watch, can do so by making application to the above firm. Postage to be credited on the bill.

Sutlers, and others in the delayed States, or any parts thereof, must send payment in advance, as the Express Companies refuse to collect, thus making collections in such precarious localities. Money can be sent by Express, which is the safest way, and is a registered letter, at our risk. Our Patrons are respectfully invited to peruse, and consult for them to do so.

J. B. LIPPINCOTT & CO.,

PHILADELPHIA.

I.

INSTRUCTIONS FOR ENLISTING AND DISCHARGING SOLDIERS: A Manual of Instructions for Enlisting and Discharging soldiers, with special reference to the medical examination of recruits, and the detection of Disease, Injury and Feigned Diseases. By Roberts Bartholow, A. M., M. D., Asst. Surgeon U. S. A. 1862. 12mo. 12 cts.

☞ Adopted by the Surgeon-General for use in Medical Officers of the Army.

II.

COPEE'S FIELD MANUAL OF COURTS MARTIAL.—Field Manual of Courts Martial, containing the form of process, duties of officers, and Military Law, and an explanation of the duties of all persons connected with military courts. By Lieut. Col. Copee, which are added the modes of procedure in Courts of Inquiry, Military Commissions, Retiring Boards, Boards of Survey, Inspection Reports, and Muster-in Rolls. With an Appendix, containing the Articles of War, Supplementary Acts of Congress, and such portions of the Revised Regulations as bear upon the subject. By Capt. René Copee, late Inspector-General U. S. Military Academy at West Point. 18mo. 75 cents.

From Brig.-Gen. J. W. Palmer, U. S. V.

"I have carefully examined your 'Digest Manual of Courts Martial,' and I think it one of the most useful works an officer can possess. It contains a vast amount of useful information in a small space, and all 'should be in the pocket of every officer. It is very "complete, and will be extensively called for, I think."

III.

HAMMONDS MILITARY HYGIENE: A Treatise on Hygiene, with special reference to the Military Service. By William A. Hammond, M. D., Surgeon-General U. S. Army. 1 vol. 8vo. Illustrated. $5.00.

IV.

THE MILITARY SITUATION.

THE operations against the defences of Charleston have, to the outward observation, advanced little beyond the point at which our review of the situation last week left them. In the mean time, we have had more diplomacy than war—protests from BEAUREGARD protests from the foreign consuls, and replies from Gen. GILLMORE. There is no doubt, however, that engineering operations have meanwhile been industriously pushed forward, the results of which will eve long be made apparent.

The Union flag does not yet wave over Fort Sumter, and, indeed, cannot wave over it as a sign of an achieved conquest from which further advance may be made until Gen. GILLMORE succeeds in reducing the batteries on Morris Island, and obtains possession of Cumming's Point, or Admiral DAHLGREN enters the harbor with his fleet.

Our direct advices from Charleston harbor only come up to the 24th ult.; but the Charleston telegrams to the Richmond papers furnish indications of what has been going on. They announce a heavy bombardment of Fort Wagner on Tuesday, 25th, followed by an assault, in heavy force, which they claim to have repulsed. On the 28th they report the bombardment of Fort Wagner as still going on slowly. Our forces are said to be still working hard in the trenches in front of Fort Wagner. This task is attended with great material difficulties, as the working parties, after digging a few feet, strike WATER.

The latest rebel dispatch received from Charleston is under date of August 31st. In this they announce that Fort Sumter, though seriously breached in the wall, will not be abandoned, and that Gen. BEAUREGARD has expressed his determination to hold it "to the bitter end." The bombardment of Forts Sumter and Wagner was still continued.

THE Army of the Potomac still continues inactive, although the daily papers publish reports, which have in them no elements of probability, that Gen. LEE still meditates a new advance. A dispatch from Washington even rumors that a large force of the rebel army on the 31st of August crossed the Rappahannock at Port Conway (about twenty miles below Fredericksburg), for the purpose of flanking Gen. MEADE. Gen. MEADE's army is advantageously posted at the head waters of the Rappahannock, ready for any movement that may become necessary.

The best attainable information locates Gen. LEE in Richmond, and his army scattered from the line of the Blue Ridge on the west, to Port Royal, opposite Port Conway, on the east, and south as far as the Virginia Central Railroad. Gen. WISE has the left: A. P. HILL the centre, lying on the railroad from Culpepper to Orange Court House; while Longstreet holds the extreme right, occupying the line of the Fredericksburg and Richmond Railroad. COOK's brigade of North Carolina troops occupies Fredericksburg. JONES' brigade of cavalry is said to have gone back to the Shenandoah valley, and ROBINSON to Richmond.

The Richmond papers of the 29th ult. contain telegraphic dispatches from White Sulphur Springs, Va., under date of 27th, announcing a fight near that place between a brigade of rebel cavalry under Gen. PATTON and three thousand Union cavalry under Gen. AVERILL. They claim that the latter was badly beaten, and that they captured one hundred and fifty prisoners and one piece of artillery. The whole affair is probably a canard, as not a word touching any such fight has been made public.

A cavalry expedition, which caused considerable fluster in Richmond, was made last week on the peninsula, to Bottom's Bridge. The force was under command of Col. WISTAR, and consisted of parts of the First New York Mounted Rifles, Col. ONDERDONK, and the 5th Pennsylvania Cavalry, Lieut.-Col. LEWIS. It left Williamsburg on the 26th ult., and pushed through New Kent Court House, directly to Bottom's Bridge. Here a rebel regiment (rebel accounts say a hundred men) of infantry in rifle-pits was found, supported by a squadron of cavalry. A charge was made, the rifle-pits carried, and the enemy driven across the bridge. It was however rendered impassable, by the rebels having taken up portions of it, and as the expedition was merely designed as a reconnoissance, it returned with much valuable information as to the enemy's force and movements in the vicinity of Richmond. The Richmond papers report that on hearing of the advance, the citizens of that place suspended their daily occupations, and reported armed and equipped in the proper officer in the field. Our loss was one killed and one wounded.

THE progress of Gen. ROSECRANS' advance towards Chattanooga is shrouded in thickest obscurity. The latest announcement is in a dispatch from Stevenson, Ala., under date of Aug. 30th (Sunday), stating that the Army of the Cumberland had that day crossed the Tennessee river, with infantry and cavalry. Previous dispatches had been of a nature to cause public anticipation to outrun the actuality of operations and even the possibility of operations. The bombardment of Chattanooga, of which we had intelligence ten days ago, turns out to be no more than a few shells thrown across the river by Col. WILDER, whose light moving column of mounted infantry is no criterion for the movements of the main body of the army, which are strictly dependant on supplies, roads, trains, and communications.

The points at which Gen. ROSECRANS on Sunday last threw his army across the Tennessee are not indicated, so that we have no clue to the character of his manœuvres. The indications are, however, that he is well west of Chattanooga, in the vicinity of Bridgeport and Stevenson, Ala. Difficult though the country be in which Gen. ROSECRANS is operating, he has yet had time to reach Chattanooga; and, indeed, our latest advices claim that the town is now well invested. A heavy cavalry force has been sent to cut the Georgia Railroad at Dalton Junction, the apex of the triangle formed by the two branches of the Western and Atlantic, and the Virginia and East Tennessee Railroads. If this shall have been successfully done it will sever BRAGG's Southern communications, and leave him none except the road through East Tennessee, which Gen. BURNSIDE is expected effectually to cut.

The reports from the latter General indicated that his co-operative column is pushing on with great vigor. The latest intelligence states that he had passed Jamestown, through the gaps to Kingston (at the junction of the Clinch and Tennessee Rivers), and thence was marching on KNOXVILLE, which his advance had already almost reached. Gen. BUCKER, with a force of about twelve thousand men, holds the region from KNOXVILLE up to the Virginia line.

In regard to the distribution of Gen. BRAGG's forces, statements are so doubtful that it is vain to attempt to indicate his present line with any precision. Roughly, however, he seems to cover from Chattanooga down to Dalton and Rome. The rebels in Chattanooga were said to be in force, digging like heroes, and making boats with the intention of giving General ROSECRANS battle there. The CHATTANOOGA correspondent of the Richmond *Enquirer*, in a late letter, says: "I cannot give you the exact strength of this "army: it is, however, considerably inferior to that "of ROSECRANS. I understand reinforcements are ar"riving from Mississippi." He adds a passage which reveals the general state of feeling toward Gen. BRAGG, the hero of so many "brilliant" retreats. "Gen. "BRAGG has given up just about enough of Tennessee; "and with the army that he now has, and in such con"dition, and driven to buy as he is, too, in the very "heart of the Central Mountains, it is time that he "should turn upon the Yankees who thus beard us in "the fastnesses of our hills."

Stevenson, Ala., which Gen. ROSECRANS holds as his temporary base of operations, is located at the base of a spur of the Cumberland Mountains, two and a half miles from the Tennessee River. It is the intersecting point of the Memphis and Charleston and the Nashville and Chattanooga Railroads.

OF operations on the Mississippi and in the trans-Mississippi region there is little to record. The large and magnificent army with which Gen. GRANT was lately operating in the rear of Vicksburg has been much sub-divided. The Thirteenth and Eighteenth Army Corps, under Generals HERRON and ORD, are at New Orleans; RANSOM's command is at Natchez; the force which Gen. BURNSIDE sent out to aid Gen. GRANT has mainly returned to him, and other smaller bodies are located at various points keeping down guerrilles. The only activity in GRANT's army has been the movement of Gen. STEELE toward Little Rock, Ark. It is reported that Gen. PRICE's forces were driven across the Arkansas on the 29th; that the rebels were in full retreat, and that Generals STEELE and DAVIDSON were in hot pursuit. MARMADUKE's cavalry command was completely routed and scattered, and Little Rock within the grasp of the National force.

The concentration of so large a military force at NEW ORLEANS, mentioned by all the journals, gives rise to much speculation as to the object for which this force is designed. One theory has it that it is intended for a movement into TEXAS for the purpose of occupying BROWNSVILLE, and endeavoring to stop the contraband trade on the line of the Rio Grande (while at the same time keeping an eye on the south side of the river); another theory asserts that the troops are meant to be used as an advance into the Tache and Attakapas country, to recover the lost region; and still a third theory assigns it a mission toward Mobile. Each of these theories is plausible, as each object named is undoubtedly desirable; but they do not go beyond speculation, whereas we have to do only with accomplished facts.

THE United States steamer *Vanderbilt* was at Rio de Janeiro on the 16th of July. A rebel report of her having been sunk by the *Georgia* is therefore a humbug. It pretends to come from NASSAU through passengers, but direct advices from NASSAU to the 13th ult. say nothing about the matter.

We publish elsewhere in this paper, the rules regulating admissions to the National Military and Naval Academies.

MILITARY HYGIENE.

IT is a well-known fact that the loss of life in any war depends only, in a slight degree, upon the engines employed. Whether we go back to the days of catapults and balistæ—crossbows or chariots—or come down to the days of Marlborough—Armstrong or Lancaster—revolvers or muskets—we shall equally find that the actual loss of life in engagements is only about *one-fifth* of that arising from all other causes. For, terrible as may be the idea of the destructive power of modern projectiles, and hopeless as may seem the chances of escape from their reach on battle-fields, it is, nevertheless, true that their effects in swelling the mortality tables of any campaign are in singular disproportion to what would, generally speaking, be expected. In popular estimation the greatest risk to be encountered by the soldier is on the battle-field and from the missiles of the enemy —in scientific estimation the greatest risk encountered, because the most constant and unavoidable, is from the assaults of disease. On the battle-field he may be under fire for one hour or three, or even five, though generally with some intervals of intermission. He may be killed, or wounded, or escape altogether, for these are the hazardous risks to life which the battle-field presents. But before battle, after—in camp, or on the march—in tents, or huts, or while bivouacking, the soldier is perpetually surrounded by influences which fly thicker than grape or canister, and, with surer aim than either shells or round-shot, are assaulting the citadel of his health and life. The visible enemy in front gives notice of his approach, and attacks openly and defiantly, and when well beaten is not apt to return. On the other hand, the invisible enemy, being twin-brother to pestilence, walks in darkness, bends his bow, and discharges his arrows as unerringly by night as by day, and however often baffled or defeated, is ever returning to the onset.

The great enemy to be feared in military life is not, therefore, as erroneously supposed, the occasional battle-field, but the constant and ever-attacking hand of disease. Two illustrations, taken at random from the many before us, will suffice to make this plain. Others might be cited but we have preferred to select these, because they are recent, well authenticated, and are associated with the records of two of the greatest military nations of Europe. During the Crimean war, the English army of 23,775 men, lost, in the six months between October, 1854, and April, 1855, 608 by *wounds*, and 13,240 by *sickness*—or fifteen times as many: while the French, during the last six months of the campaign, which include the assault on Sebastopol, lost 21,957 by wounds, and had 101,128 cases of sickness.

These facts, if they prove anything, show the constant danger of decimation to which every army in the field is more or less exposed, and the overwhelming importance of all measures which can effectually put a stop both to the development of disease as well as to its spread.

It is here that the great science of Military Hygiene comes into play with its preventive measures, and acts as the right-hand to conservative surgery. Far-sighted enough to read in the surroundings of an army, in its dietary—its compulsory duties—and its materiel, the sources of disease which must immediately threaten men composing it, it devises and executes preventive measures, which laymen, not understanding, may sneer at—which even military men may cannot often be made to see the importance of, but which tell the story of their own efficiency in the reduction of the sick list, and the maintenance of an army up to the maximum standard of efficiency.

Since the beginning of the present war—thanks to the very efficient labors of the United States Sanitary Commission—the science of Military Hygiene has received a public impulse, and been elevated to a degree of importance in the eyes of army officers which it never before enjoyed in this country. Having erected for it an altar, and ordained a priesthood, whose labors and beneficent officials exceed wherever a Union soldier goes, it has opened the eyes of the world to the fact that sickness in armies is in a great measure preventible; that officers who do not know this are only half-qualified to command, and that the healthiest army is always the cheapest. Through its very efficient corps of inspectors, and the valuable suggestions and tracts published under its auspices, the Commission has succeeded in keeping the sickness rate of our army below that of any army of equal size that was ever in the field. And while doing this it has neither interfered with, nor hindered a single forward movement, thus showing the entire compatibility of the principles of Military Hygiene with the sternest necessities of war.

It is not too much to say, therefore, that a knowledge of Hygiene is indispensable to the perfect education of army officers, and that without some acquaintance with it, they will, however otherwise well qualified, be perpetually exposing their commands to sources of ill-health and disruption which might otherwise be removed. If there be anything annoying to an officer, it is surely the fact that his regiment is dwindling away, and into hospital, and his ranks growing daily thinner. The realization of this, although unpleasant enough, becomes doubly so when a medical officer informs him that certain omissions in the table of subsistence—drilling at improper hours—ill-selected camping grounds or inefficient police, have for some time been working a physical mischief among his troops, and allowing them to become a prey to those elements of disease which ever accompany congregations of men. Then he besairs himself—brooms are brought out—streets swept, tents sired—sailors punished—the ration table overhauled and its wants supplied—the sinks deepened—the offal more carefully buried—the kitchen oftener inspected, and the whole field of administration gone over with a critical and unsparing precision of details. It is never too late to do good, surely, and in this sense, when the improvement comes, it benefits some one; but had it only been a day or a week earlier, the number benefited would have been greater, the sick would have been fewer, the evening parade more consequential in point of numbers, and more satisfactory to all.

It is the part of wisdom to foresee as likely to happen to us, what has occurred under similar circumstances to others. The Bible has told us as much, and the books of Moses are not devoid of suggestions, even upon Military Hygiene. An infusion of this new element into our military education becomes, therefore, something more than a merely ornamental branch of study, and it is one, too, which should not be exclusively restricted to medical officers; for, as all are affected by a neglect of its laws, so all are interested in understanding those laws, and helping to carry them into execution.

A NATIONAL, NOT A STATE ARMY.

THE Army of the Union is in every sense of the word a National Army. It is the Army of the United States, and not of any individual State. The theories concerning State Rights have been fatal to the peace of the Nation, and the notions concerning State troops have interfered with the efficiency of our Army, and have created real dangers to the Commonwealth. The rebellion should have taught us the worth and the meaning of National existence and national character. It has done so in part: the East and the West are bound closer together by the very efforts of our enemies to separate them. Each State has learned that its power, its glory, and its hopes, lie not in emulous and jealous rivalship with other States, but in the cordial, sympathetic relations of an indissoluble Union. And if this be the lesson learned by the people, still more should it be the lesson learned by the Army. The regiments of New England men are not the soldiers of New England, but of the Union. Minnesota troops charge side by side with troops from New York and Maryland, and the flag that leads and inspires them is as much the Star of Minnesota as the Excelsior banner of New York, but it is the flag of the Union—the Stars and Stripes—the symbol of National honor and National life. That the Army generally has the right feeling in regard to this matter we do not doubt. One of the gallant soldiers in GRANT's army, writing a few months since, expressed the sentiment of his companions in simple and vigorous words. "After a service of twenty-two months," said he, "I can say that any reference as to what particular district has done more or less is earnestly deprecated among the troops. We know that each regiment here in the West represents the East as well. *We know that this is not a State, but a National fight.*"

That is the true spirit and the right expression. It is indeed not a State, but a National fight: it is not a State, but a National Army, and the cause for which this Army is fighting is not a State, but a National cause.

And this fact makes the comparisons which have been put forth on partisan purposes between the numbers of men furnished by the different States, not merely odious but in the highest degree unpatriotic. Suppose New York has furnished more than her share of men according to her population to the Armies of the Nation; suppose New England has furnished far less than her share; is this a reason why New York should hesitate and quibble about furnishing more still when called upon to do so? Were the supposition a true one, should New York then excuse herself from further service? Will she say the National cause is not mine? Will she declare that she has done enough for the Nation, for the Union? There is not a citizen in the Union who is not bound by the fact of his being a citizen to serve the country which gives him all that makes citizenship worth having. The Nation has a right to all her sons and a claim upon their services, and what has New York, or any other State to answer to this original and fundamental claim? It is the highest and happiest privilege no less than the absolute duty of the citizen to serve his country when she needs his service. The New Yorker is not to ask if New York has filled, or more than filled her quota; all that any man with a fibre of patriotism in his soul needs to know is that his country calls for him, not as a New Yorker merely but as one of her sons; and that he forms part, not of the Army of New York, but of the Army of the United States.

Local pride and local associations may touch the heart, but they will not supply the place of the deeper emotions and nobler motives excited by the idea of the country. "Stonewall" JACKSON called O'BRIEN to his men, wavering under the terrible fire at the assault of Port Hudson. "Forward, boys; is Old Massachusetts dead?" and in the same breath, as he fell struck by the fatal bullet, he cried, "It is sweet to die for the country."

TREATMENT OF NON-COMMISSIONED OFFICERS.

Upon no class of men is the army more dependent for its discipline and efficiency than non-commissioned officers. And yet every officer knows how often this instrument is so used as to become a chief source of demoralization. Non-commissioned officers stand between the company officers and the men as the representatives of authority, and it is only by giving them their proper position that they are able to exert the necessary controlling influence in the company.

It is well known that intimate association is subversive of authority. It is therefore essential that non-commissioned officers should hold themselves aloof from the men, and maintain the dignity and self-respect due to their position. It is impossible for them to do this unless they are properly treated by their officers. By proper treatment is not meant association —for that always tends to bring the officer into contempt, and to weaken his authority, without elevating the non-commissioned officer whom he desires to favor.

But he may be treated with respect. He must never be reprimanded in the presence of the men; and when ordered to do anything he should be made to feel that the responsibility of execution rests with him alone. Such a course will teach self-respect, and when that state of feeling exists, there is little danger that he will make the men respect him, cheerfully obey his orders, and shun his reproof.

The position of a non-commissioned officer is an arduous one when its duties are fully and faithfully performed. He is in immediate contact with the men, and the source of them. He is to check, by his presence, tendencies to insubordination and disciplne, which, if not promptly suppressed, would soon lead to demoralization. He is, in fact, the only representative of authority who can take cognizance of the details of discipline, and avoid the company as he may be inclined.

It is a well-known fact that a good company cannot exist where the non-commissioned officers are not efficient; and yet how few officers are there who believe the necessary thought upon the way to make them so. In many cases the men and officers of a company come from the same neighborhood, and were associated in civil life. It thus becomes a difficult matter for officers and men to fall into the parts imposed on them by the new regulations.

To doing this the example must be set by the officers, and it will quickly be followed by the non-commissioned officers and men. If an officer does not set the example of maintaining his official dignity, and treating his non-commissioned officers with official respect not akin to intimacy, how can he expect that the latter will be able to sunder the more intimate relations existing between himself and the men with whom he is in daily contact? As a result, the making of good non-commissioned officers rests alone with the commissioned officers of the company.

ITEMS AND INCIDENTS.

THE Nashville *Union* urges that Vicksburg be garrisoned with negro troops, on the ground that the white soldiers are rapidly falling a prey to malignant typhoid fever.

JOHN L. PUGH was arrested in Chicago on Saturday last, on the charge of forging.

AUGUST 30, was the first anniversary of the battle of Richmond, Kentucky; also of the second Bull Run battle, under Pope.

BELLE BOYD, the notorious female rebel spy was arrested at Martinsburg Va., last week, and she is now in the old capitol prison.

THE Charleston papers publish a notice recommending that a contraband be kept in hand to enforce a resolve to crush the fire of General Gillmore's "incendiary" shells exploding in the city.

THE most effective laws ever made to the War Department this week, one being to furnish *sour kraut* to the Army, and another to pick up the rags in the Army, for which a fixed price will be paid.

MCCARTER, the Clerk to Paymaster McFarland, who recently stole $40,000 from the latter, but which money was soon recovered, has been tried by a Military Commission, found guilty, and sentenced to five years imprisonment in the Albany Penitentiary.

DR. SIMUS, Surgeon of the 54th Massachusetts (Volunteers), writes that the wounded black soldiers who are prisoners in the hands of the Rebels, were cared for in the hospitals with the white soldiers, and that he has no fund no authentic or trustworthy account of any outrage or indignity offered to any of our wounded, either in the attack on Wagner or on Morris Island.

THE difficulties in the way of arrangements for exchange of prisoners are very much increased by the refusal of the rebels to recognize the right of the United States to the officers of war, and the continuance of the release on parole or exchange of prisoners of war and of civilians may be entirely suspended. The Government will not yield to it for the very heavy excess of prisoners in our hands.

THE Seventy-Ninth N. Y. Regiment is to receive a stand of colors from New York city presented by the ladies in honor of the principal battle-fields in Virginia, from Blackburn's ford, July 18, 1861, to Fredericksburg, December 11, 1862, and including Yorktown, Va., in April last. In addition the regiment was engaged, will be inscribed on the banner.

THE Marine losses reported here for the month of August show an aggregate of twenty-eight officers and men in the American. There were three steamers, and a proportion of ships, barks, brigs and schooners. The ship *Talisman* and the bark Conrad were destroyed by the rebel cruisers. The aggregate estimated losses are one million five hundred thousand dollars for the month.

A RECENT Naval expedition up the White River destroyed, besides several rebel steamers, Marmaduke's pontoon bridge, thus cutting off communication between two portions of his forces. The boats which were captured by the expedition were the only means of transportation the rebels had. The rebels have only one train on the river, and if it ventures out it is likely to be captured.

WHEN COL. Sorrell was mounting the "Marsh Angle" on Morris Island in the recent attack on Wagner, he left his mule and was over the heads of the men and the gun could not be mounted. The colonel insisted that it could, and directed the officer in charge to call out a detail to mount the gun. The lieutenant immediately made a formal requisition as follows:

"I want twenty men, eighteen feet long, to cross a swamp fifteen feet deep." The colonel caused the arrest of the joker for disrespect to his superior officer.

JOHN S. MOSBY, the noted guerilla chief, whose activity and daring have long rendered him prominent above among the rebels operating in Virginia, is reported to have died at or near Dranesville, on Aug. 28th, of wounds received in a skirmish with Federal cavalry on the 24th of last month. He was known to the soldiers of the Potomac Army as the most successful, perhaps, of the class of raiders to which he belonged.

THE Richmond *Inquirer*, referring to Beauregard's threatened "retaliation" on Gen. Gillmore for bombarding Charleston, says: "Gen. Gillmore has in his hands 1,000 of the retaliation; but we believe that Charleston can be protected from another shelling by the shelling by transporting from Libby and Belle Isle a few thousand Yankee prisoners and confining them in the warehouses of Charleston. They can be as easily fed there as in Libby, and the fear of starvation will cause them if they believed their confinement would enable them to remain with safety at their houses.

"Fill as many warehouses as possible in different parts of the city; distribute the Yankee prisoners well over the city, and then inform General Gillmore that Charleston invites his shells. He can get into the lower harbor he would not fire into the city."

THE Boston *Traveller* says it will not be long before the fortifications of Boston Harbor will be prepared to repel attacks from iron-clads and other vessels by the mounting of a large number of fifteen inch Rodman guns. The Government agents are now hard at work in the foundries, and the mounting these guns, a number of which have already been landed on the forts of the harbor, will be pushed with the view of mounting one of these monstrous masses of iron upon the carriages will be between four and five hundred dollars.

A BOARD of officers has met at Georgetown, D. C., for the purpose of examining civilians who have applied for commissions in the Army Signal Corps, organized by an act of the last Congress. The Board is established to serve as an auxiliary to the board of which Colonel Thom, Engineer Corps, is president, and with the view of relieving it of some of its arduous duties. It is composed of the following officers of the regular army: Capt. W. J. Nicodemus, 12th U. S. Infantry and acting Signal officer, president; 1st Lieut. Amos M. Thayer, signal officer, U. S. A.; 1st Lieut. Richard P. Strong, signal officer, U. S. A.; 1st Lieut. Charles McCormick, 4th Infantry, recorder.

THE working of the Bureau of Deserters, in the office of the Provost Marshal-General, has had a most beneficial effect in reducing desertion throughout all the armies of the Union. Through the instrumentality of this Bureau, two thousand deserters were arrested the first month it was in operation, four thousand the second, and during July, six thousand were arrested and returned to duty with their regiments. The almost certainty of arrest and punishment through the agency of the Provost Marshal-General's Department, has become known throughout the army, and has resulted in a decrease of over thirty-five per cent. in the number of desertions, as appears by the returns furnished monthly to the Provost Marshal-General from regiments in the Army.

THE five substitute deserters from the Union Army, who were sentenced to be executed in General Orders No. 84, were shot in the rear of the headquarters of the Army of the Potomac, on Saturday last. The scene excited unusual interest, and about twenty-five thousand persons were assembled to witness it. Five of the number were Protestants, two Catholics, and the fifth of the Hebrew persuasion. Religious consolation was afforded them, and when the clergymen retired, a volley from the firing party, composed of thirty-six muskets, produced instant death. The bodies were then interred, the clergy performing the last religious rite. Two of the men were sons of Provost-Marshal Provost of Prussia, and one of Italy. On the 28th inst. two deserters of the 20th Maine, and the husband of a woman who attempted to kill her while he had been sentenced was reprieved, his extreme youth, the request of the officers that his life might be spared, his previous good character, and the peculiar circumstances attending his crime, deciding General Meade to suspend the execution of his sentence until the will of the President should be known.

JOHN B. Floyd died at Abington, Virginia, on the 27th of August last. He was born in Montgomery, (now Pulaski) County, Va., in 1807. He graduated at South Carolina College, and admitted to the bar in 1828. In 1836 he removed to Helena, Ark., and there practiced law for two or three years. He returned to Va. in 1839, to reside in Washington County. In 1847 and again in 1849 he was chosen to the House of Delegates in the Virginia Legislature. His election as Governor of the State was for the term ending January, 1853. In 1855 he was again chosen to the Legislature. In 1856, he was the Buchanan electoral ticket of Virginia, and by James Buchanan was appointed Secretary of War in March, 1857. His conduct while in this last position is well known to the public and to history. Upon resigning espousing the rebel cause he was rewarded with the rank of Brigadier-General in the rebel army, and undertook a campaign in Western Va., which brought him only defeat and disgrace. His retreat from Gauley covered his soldiers with shame, and was described by Rebel papers as the most disgraceful rout of the war. Early in 1862 came the siege of Fort Donelson, where Floyd was in command again of brigade. Finding himself in a critical position, he left his comrades, and Floyd finally ran away at night, leaving his comrades to their fate. From the brand of this cowardice he never recovered, and his death occurred at the head of a subsequent time under State authority reunited in no practical success, and he died in retirement.

ARMY PERSONAL.

GENERAL Meigs, Quartermaster-General, has been ordered to the Army of the Potomac.

IT is said that Brig.-Gen. Robt. Anderson will probably have command of Fort Adams, at Newport, R. I.

GENERAL G. R. Paul, who was severely wounded at Gettysburg, arrived in Washington last week.

MAJ. General Silas Casey is in New York at the Astor House.

MAJOR-GEN. Philips St. George Cooke was at Milwaukee May 15th.

GEN. Rousseau arrived at Cincinnati on the 28th ult, on business connected with mounting Kentucky regiments.

GENERALS Hurlburt, Webster, and Grierson were at Memphis on the 20th ult.

GENERAL Grant had a public reception at Memphis on the 26th ult. He left on the 27th for below.

THE children of the public schools of New Orleans gave General Banks a magnificent testimonial, consisting of silver plate, on the 15th ult.

LIEUT. W. C. Crafts, of Company E, Eighth New York Cavalry, committed suicide at Memphis on the 28th ult, by stabbing himself. No cause is assigned.

COL. W. R. Pease, of the One hundred and Seventeenth New York Regiment, has received Col. Chauncey McKeever in the Bureau of Deserters.

COLONEL Berdan, of the United States Sharpshooters, is now in New Hampshire, endeavoring to fill up his two regiments from the conscripts of that State.

BRIGADIER-General Shipley, Military Governor of Louisiana, sailed for New Orleans on Tuesday, in the steamer Columbia.

AMONG the arrivals at Philadelphia hotels, during the week, were Major Llewellyn Jones and Major-General Sweitzer.

CAPTAIN Johnson, one of the personal aids of Major-General Heintzelman, has been promoted to the rank of major. He is now on duty at the headquarters of the army.

COLONEL Charles Thomas, senior Assistant Quartermaster General, is discharging the duties of the Quartermaster General's office in the absence of Gen. Meigs, who is on a personal visit to the armies in the field.

BRIG.-GEN. J. H. Martindale was re-assigned to Washington on the 31st ult, by order of the War Department, to the command of the Second District of Columbia and the 178th New York Regiments.

LIEUTENANT-Colonel Halpine, formerly Assistant Adjutant-General to General Hunter and Halleck, has been temporarily assigned, by special order of the War Department, to duty with Major-General Dix.

ON Wednesday, the 26th inst., Major Warrenton, Va., Major-General John Sedwick, commanding the 6th Army Corps, received a sword, saddle, harness, and horse, from the officers of the Second Division, 2d Corps, who formerly served under that General. Meade, Warren, Hunt, and Humphreys, and other generals were present.

BRIG.-GEN. Edward Gershom Mason left his home in New Jersey last week to resume command of his brigade in the Army of the Potomac.

SURGEON J. M. Cuyler, Medical Inspector United States Army, is at present on a tour of inspection through the military hospitals in the vicinity of Harrisburg.

LIEUTENANT Neil Dow has been turned by the rebels over to the civil authorities. Brigadier-General Neal Dow immediately he placed, by our Government, in close confinement as a hostage for him. It is not yet ascertained who it shall be.

IT is stated that the official report of General McClellan, which was received at the Adjutant-General's office about a month ago, is very voluminous, comprising from 700 to 900 folios foolscap, and the accompanying documents cover many others thousand more pages.

GENERAL Gillmore, in a letter to General Saxton, desires him to convey to the friends of the late Colonel Robert E. Lee Shaw, of the 54th Massachusetts (Colored) Regiment, assurances in his Department, the assurance of his high appreciation of his transcendent patriotism and valor.

IT is stated in a letter from Richmond on the 24th ult, that Col. Streight and his party will now be regarded as prisoners of war, and it is thought that John Morgan and his men, who are now confined in the Ohio Penitentiary, will be put by our Government on the same *status* in return.

CAPTAIN E. R. P. Shasly, 26th N. Y. V. has been appointed a major in the 8th Rhode Island Regiment. Shasly was severely wounded in the thigh at the battle of Fredericksburg, and will probably never entirely recover the effects of his wound.

CAPTAIN J. P. Hawkins, late of the Commissary Department, has been promoted to Brigadier-General of colored troops, and is now in the headquarters at Goodrich's Landing, Louisiana. General Hawkins is the first brigadier appointed over negro troops. He is a graduate of West Point.

GEN. D. M. Bradford, of Huntsville, Ala., has arrived in Nashville. He is a native of Tennessee, and one of the survivors of the war of 1812, in which he served under Gen. Jackson, and participated in the memorable battle of New Orleans. He love for his country and her institutions has never faltered, and he has borne the faithless, in the hour of trial, he remained firm and unshaken.

"THE Annual Cyclopedia for 1862" has a brief obituary of Col. F. W. Lincoln, of Bangor, Maine, according to which he was killed at the battle of Antietam. This is incorrect. He has been made a Brigadier General of Volunteers since, has been exonerated by a Court of Inquiry, and at this date is now engaged in overseeing the drafting at Concord, N. H.

A Mobile paper states that a captain in the 23d New York Volunteers, by the name of Billings, was tried by the rebel court, and is alleged to have been spying in the Confederacy for several months, was sentenced to death by a court-martial, and was shot on the 21st inst. at 10 A. M. in the rear of a platoon of Forts Gaines and Morgan, near Mobile, giving the strength of the fights and the number and size of the guns, was found upon his person.

THE Nashville *Union* says General Rosecrans captured, at or near Winchester, the celebrated horse Commodore, formerly the property of Col. H. M. Botts, of Va., confiscated and sold to Major General Pelz for 16,000, and he presented the horse to General Rosecrans, in the name of the noble animal. The Secretary of the Treasury has directed Dr. Brownlow to take charge of the horse, take good care of him, and if he should ever forward him to Kentucky or Ohio to be sold, and if Mr. Botts is entitled to the proceeds the law provides a method of recovering them through the Court of Claims.

THE PRESIDENT TO GENERAL GRANT.

EXECUTIVE MANSION,
WASHINGTON, July 13, 1863.

To Major-General GRANT:

MY DEAR GENERAL—I do not remember that you and I ever met personally. I write this now as a grateful acknowledgment for the almost inestimable service you have done the country. I wish to say a word further. When you first reached the vicinity of Vicksburg, I thought you should do what finally did—march the forces across the neck, run the batteries with the transports, and thus go below; and I never had any faith, except a general hope and trust you knew better than I, that the risk was a prudent and the like could succeed. When you got below, and took Port Gibson, Grand Gulf, and vicinity, I thought you should go into Vicksburg; but Gen. Banks' call, and when you turned northward, east of the Big Black, I feared it was a mistake. I now wish to make a personal acknowledgment that you were right and I was wrong.

Yours very truly,
A. LINCOLN.

TEN rebel steamers on the YAZOO River have all been destroyed. A recent official dispatch from Admiral Porter says: "Capt. Phelps has received information to be relied on that, besides the five steamers at or near the City of Yazoo, Isaac Brown, late Lieutenant in the United States Navy, is afloat, and for fear they would fall into our hands, set fire to and destroyed fourteen others, among them the largest and most powerful battery of which he intended to beat to Selma, Ala., for the gunboats building there. There are no more steamers on the Yazoo. The rebels have destroyed everything there as they have done in rebeldom have been destroyed."

THE rebel steamer *R. E. Lee* arrived at Bermuda Aug. 23. She had been chased by a gunboat, and threw overboard two hundred bales of cotton.

THERE were at Key West on the departure of the prize steamer *Delphin*, which arrived here on the 31st, the U. S. steamers *Octarara*, *Sagamore*, *Tahoma*, *Hendrik Hudson*, and *Sea Jennie*, the sloop-of-war *Dale*, and as prize steamers

Lieut. Commander Crosman, stationed on board the *Dale*, the crews of the Monitors at work before Charleston have, by direction of the Secretary of the Navy, been allowed an advance of pay of one-fourth.

ARMY GAZETTE.

GEN. GILLMORE'S DISPATCHES.

HEADQUARTERS, DEPARTMENT OF THE SOUTH, / MORRIS ISLAND, S. C., August 24, 1863.

Major General H. W. HALLECK, General-in-Chief United States Army, Washington, D. C.

GENERAL—I have the honor to report the practical demolition of Fort Sumter, as the result of our seven days' bombardment of that work, including two days of which a powerful northeasterly storm most seriously diminished the accuracy and effect of the fire.

Fort Sumter is to-day a shapeless and harmless mass of ruins.

My chief of artillery, Colonel J. N. TURNER, reports its destruction so far complete that it is no longer of any avail in the defence of the harbor. Its walls, though, but by a longer fire it could be made more completely a ruin and a mass of broken masonry, but could scarcely be more powerless for a defence of the harbor.

My breaching batteries were located at distances varying between 3,339 and 4,240 yards from the work, and now remain as effectual as ever. I deem it unnecessary at present to continue the fire upon the ruins of Sumter.

I have also, at your latter and order to bear my fire from James Island, established batteries on my left, within effective range of the heart of Charleston, and have opened with them, after giving General BEAUREGARD due notice of my intentions to do so.

My notification to General BEAUREGARD, his reply thereto, with the threat of retaliation, and my rejoinder, have been transmitted to the army headquarters.

The projectiles from my batteries entered the city, and General BEAUREGARD himself designates them as the most destructive missiles ever used in war.

The proper use of my artillery, and an accurate sketch of the ruins of Sumter, taken at 12 M. yesterday, six hours before we ceased firing, are herewith transmitted.

Very respectfully your obedient servant,

Q. A. GILLMORE,
Brigadier General Commanding.

COL. TURNER'S REPORT OF THE OPERATIONS.

OFFICE OF CHIEF OF ARTILLERY, DEPARTMENT / OF THE SOUTH, MORRIS ISLAND, S. C., August 23, 1863.

GENERAL—I have the honor to report the effect that our breaching batteries have had upon Fort Sumter since the condition of that work to-night.

At the close of the seven days' bombardment the gorge wall of the fort is almost a complete mass of ruins for the distance of several casemates. About midway on this face the rampart is removed down to the top of the arches, and but for the sandbags with which the casemates were filled, and which have served to sustain the broken arches and answer also for traverses, would have long since been entirely cut away, and with it the arches to the floor of the second tier of casemates. The right face on this front now forms a remarkable angle as high as the floor of these casemates. The parapet wall of the two northeasterly faces is completely carried away, and the portion which forms the left of the angles made in the gorge wall, and the ramparts of these faces are also a total ruin.

Quite one-third of our projectiles seem to have struck the parade and parapet of these two faces, and, judging from the effect they have had upon the gorge wall within our observation, the destruction of the parade and the parapet must be very great, and I am of the opinion that nearly every arch of these faces must be broken in. But one or two casemates in position on these two fronts, and this is in the angle of the gorge, and, I think, unarrivecable. The ruin extends around, taking in the northeasterly face as far as can be seen.

A portion of the face, adjoining the angle, it makes with the southeasterly face, is remarkable in fact, from the great number of missiles which have struck in this angle during the last two days, it seems to be almost entirely greatly damaged, and I do not think any guns can be left on this face in a serviceable condition. The remarks in this angle, as well as in the southeasterly face, must be ploughed up and greatly shattered.

The parapet on this latter face is torn off in many places, as we can see from the flank the pilasters of the casemaining guns on this face could have escaped.

With the assistance of a powerful glass I cannot determine that any guns on the gorge guns can be used, and it has been dismounted once. The carriages of the others are evidently more or less damaged, and the guns are buried in the parapet and parade in the immediate vicinity of this gun, that it probably could not be served for any length of time.

In fine, the destruction of the fort is so far complete that it is to-day of no avail in the defence of the harbor of Charleston.

By a longer fire it can be made more completely a ruin and a mass of broken masonry, but could scarcely be more powerless for the defence of the harbor.

I therefore respectfully submit my opinion that a continuance of our fire is not necessary, and that nothing is so well adequate for the consumption of our resources.

Very respectfully, your obedient servant,

JOHN. TURNER, Colonel and Chief of Artillery.

To Brigadier General Q. A. GILLMORE, commanding Department of the South, Morris Island, S. C.

DEPARTMENT OF THE SOUTH, / HEADQUARTERS IN THE FIELD, MORRIS ISLAND, S. C. August 24, 1863.

GENERAL: I have the honor to transmit herewith copies of letters from General BEAUREGARD, commanding confederate forces at Charleston, and from H. B. M. Acting Consul and the Spanish Consul at that city, relative to the throwing of shells into that city from my batteries; also duplicates of my answers thereto.

I have the honor to be, General, very respectfully, your obedient servant,

Q. A. GILLMORE,
Brigadier General Commanding.

Maj. Gen. H. W. HALLECK, General-in-chief, U. S. A., WASHINGTON, D. C.

HEADQUARTERS DEPARTMENT OF THE SOUTH, / MORRIS ISLAND, S. C., Aug. 22, 1863.

GENERAL—I have the honor to demand of you the immediate evacuation of Morris Island and Fort Sumter by the Confederate forces. The present condition of Fort Sumter, and the rapid and progressive destruction which I am engaging from my batteries, seem to render its complete demolition within a few hours a matter of certainty. All my subsequent guns bear on yet your city.

Should you refuse compliance with this demand, or should I receive no reply thereto within FOUR HOURS after it is delivered into the hands of your subordinate at Fort Wagner, for transmission, I shall open fire on the city of Charleston from batteries now completed, within easy and effective range.

Your obedient servant,

(Signed,) Q. A. GILLMORE,
Brigadier General Commanding.

Official—E. KEARNY, A. A. G.

HEADQUARTERS DEPARTMENT OF SOUTH CAROLINA / GEORGIA AND FLORIDA, CHARLESTON, S. C. Aug 22, 1863.

SIR—Lieut. Hartstene has delivered in my absence on a reconnoissance of my fortifications, a communication was received at these headquarters dated Headquarters Department of the South, Morris Island, S. C., Aug 21, 1863, demanding the "immediate evacuation of Morris Island and Fort Sumter by the Confederate forces," and alleged "the present condition of Fort Sumter and the rapid and progressive destruction which it is undergoing from my batteries seem to render its complete demolition within a few hours a matter of certainty;" and that if this demand were "not complied with, or no reply thereto was received within four hours after it was delivered into the hands of your (my) subordinate commander at Fort Wagner for transmission," a fire would be opened "on the City of Charleston from batteries now established within easy and effective range of the heart of the city." This communication to my address was without signature, and was of course returned.

About 11 o'clock one of your batteries did actually open fire, and threw a number of shells into the city, the inhabitants of which, of course, were asleep and unwarned.

About 9 o'clock this morning the communication alluded to above was received at these headquarters, bearing your recognized official signature, and it can now be noticed as your deliberate official act.

Among nations which barbarous the usages of war prescribe that when a city is about to be attacked, timely notice shall be given to the unoffending citizens, in order that non-combatants may have an opportunity for withdrawing beyond its limits. Generally, the time allowed is from one to three days, but in very few cases has a less period than that of at least the women and children. You, sir, give only four hours, *knowing* that the present, under existing circumstances, could not reach the city in that time, and that not less than the same time would be required for an answer to be conveyed from this city to Fort Wagner. With the knowledge that it was impossible to open fire on this city, not to oblige its surrender, but to force me to evacuate these works, which you admit can only keep a great force, have been attacking in vain for more than forty days.

Batteries Wagner and Gregg and Fort Sumter are nearly two miles nearer to Charleston than Morris Island, and in distance therefrom varying from half a mile to two-and-a-quarter miles. This city, on the other hand, is to the northwest, and your batteries on Morris Island, in directing your guns against the old men, the women and children, and the hospitals of a sleeping people, a defenceless boundary hitherto from your own *confessed* point of sight, inasmuch as you allege that the complete demolition of Fort Sumter within a few hours has been your object, have fired into the darkness.

Your omission to attach your signature to such a grave paper must show the recklessness of the step upon which you have entered, and to the facts that you knowingly fixed a limit for receiving an answer to your demand, which made it impossible for the possibility of receiving any reply within that time, and that you actually did open fire and throw a number of the most destructive missiles ever used in war, into the midst of a city full of unarmed, and filled with sleeping women and children, will give you a bad "eminence" in history, even in the history of this war.

I am only surprised, sir, at the moderation set to your demands. If in order to attain the abandonment of Morris Island and Fort Sumter you have determined to fire on this city, why did you not include the works on Sullivan's and James' Island—nay, even the city of Charleston, in the same demand?

Since you have felt warranted in inaugurating this method of reducing batteries in your immediate front which were found otherwise impregnable, the code of warfare which I confidently declare to be atrocious and unworthy of any soldier, I now solemnly warn you that if you fire upon on this city from any of your batteries, I shall, without giving a somewhat more reasonable time to remove non-combatants, I shall feel compelled to employ such means of retaliation as may be available during the continuance of this attack.

Finally, I reply that neither the works on Morris Island nor Fort Sumter will be evacuated on the demand you have been pleased to make. Already, however, I am taking measures to remove all non-combatants, and they are fully aware of and alive to what they may expect at your hands.

Respectfully, your obedient servant,

G. T. BEAUREGARD,
General Commanding.

DEPARTMENT OF THE SOUTH, / HEADQUARTERS IN THE FIELD, MORRIS ISLAND, S. C., 9 P. M., Aug. 22, 1863.

SIR: I have the honor to acknowledge the receipt of your communication of this date, complaining that one of my batteries has opened upon the city of Charleston, and throwm a number of heavy rifle shells into the city, the inhabitants of which, of course, were asleep and unarmed.

My letter to you demanding the surrender of Fort Sumter and Morris Island, and threatening in default thereof to open fire upon Charleston, was delivered near Fort Wagner at 11½ o'clock A. M. of the 21st inst., and should have arrived at your headquarters in time to have permitted your answer to reach me within the limit assigned, namely, four hours. The fact that you were absent from your headquarters at the time of its arrival, may be regarded as an unfortunate circumstance for the city of Charleston, but it is one for which I clearly am not responsible. This letter bore date at my headquarters, and was duly delivered by an officer of my staff. The inadvertant omission of my signature doubtless affords ground for special cavil. But it is to the last degree incomprehensible solicitous only for the safety of sleeping women and children, and unarmed men. You threaten a retaliation for an acts of mine when you do not allege to be in violation of the usages of civilized warfare, except as regards the length of time allowed as notice of my intention to bombard by without comment. I will, however, call your attention to the well-established principle that the command of a place attacked, but not invested, having the means of doing so open and practicable, has no right to a notice of an intention of bombardment other than that which is given by the threatening article of his batteries. Even had not this letter been written, the city of Charleston has had, according to your own computation, forty days notice of my danger. During that time my attack upon her defences has steadily progressed. The ultimate object of that attack has at no time been doubtful. If, under the circumstances, the life of a single non-combatant is exposed to peril by the bombardment of the city, the responsibility rests with those who have first failed to remove the non-combatants, and to secure the safety of the city after having held control of all its approaches for a period of more than seven weeks, and in full possession of a threatening force, and who afterwards refused to accept the terms upon which the bombardment might have been postponed. That notice was given, and duly and otherwise, I am led to believe that most of the women and children of Charleston were long since removed from that city. But upon your assurance that the city of Charleston will fall of which suspend the bombardment until 11 o'clock P. M. to-morrow, thus giving you two days from the time you acknowledge to have received my communication of the 21st instant.

I have respectfully, your obedient servant

Q. A. GILLMORE, Major-Gen. Commanding.

Gen. P. T. BEAUREGARD, Commanding the Confederate Forces, Charleston, S. C.

BRITISH CONSULATE,
CHARLESTON, AUGUST 24, 1863.

GENERAL—On behalf of the great number of her Britannic Majesty's subjects now in this city, of whom the greater number are women and children, I have the honor to solicit of you an interview.

I have the honor to be, General, your most obedient servant.

H. PINCKNEY WALKER,
H. M. Acting Consul.
Brigadier General Q. A. GILLMORE, U. S. A.
Com'g forces of U. S., for the Dep't of the South.

DEPARTMENT OF THE SOUTH,
HEADQUARTERS IN THE FIELD,
MORRIS ISLAND, S. C., 9 P. M., Aug. 22, 1863.

SIR: I have the honor to acknowledge the receipt of your communication of this date, soliciting an interview on behalf of the subjects of Her Britannic Majesty in Charleston.

It is presumed that your object in seeking this interview has reference to the recent throwing of shells into the city of Charleston from my lines, and that you desire to obtain a suspension of the bombardment in favor of British subjects to leave the city.

As a compliance with your request at this time would materially interfere with operations in which I am engaged, I must respectfully decline to grant it, but shall endeavor to secure to Her Majesty's subjects in Charleston *full opportunity* for such an interview by suspending the bombardment of the city until 11 o'clock, P. M., to-morrow, until which hour no further fire will be opened by me upon the city.

I have the honor to be, sir, very respectfully, your obedient servant,

Q. A. GILLMORE,
Brigadier General Commanding.

H. PINCKNEY WALKER,
H. M. Acting Consul, Charleston, S. C.

(Translation.)

CONSULATE OF SPAIN AT CHARLESTON. }
CHARLESTON, AUG. 22D, 1863. }

GEN. P. G. T. BEAUREGARD, military commander of this place, has transmitted to me a copy of the note in which you demand the surrender of Fort Sumter and Morris Island, in default of which you will bombard the city of Charleston.

General, I have the honor of addressing this communication to you to call your attention to the circumstance that the fact that time to which you limit your notification is not sufficient for the removal of the subjects of Her Catholic Majesty, who are numerous and regular.

The largest portion of the city has not yet been deserted by its inhabitants, nor can it be so completely vacated before you have fired upon women and helpless infants.

This being the case, I request of you, in the name of my government, as well as in the name of the subjects in my representa, a delay of twenty-four hours from the transmission and receipt of this present communication.

I hope, general, that you will accede to a petition which is in accordance with humanity and justice, as permitting the quiet removal of the subjects of Her Most Catholic Majesty, resident in the city of Charleston.

I improve the occasion to extend to you the assurance of my highest respect.

The Consul of Her most Catholic Majesty,
J. A. MUNOZ,
In Monsada.

To Brigadier General Q. A. GILLMORE, Commander of the Federal forces on Morris Island.

DEPARTMENT OF THE SOUTH,
HEADQUARTERS IN THE FIELD,
MORRIS ISLAND, S. C., 7 P. M., August 22.

The Spanish Consul, Charleston, S. C.

SIR:—I have the honor to acknowledge the receipt of your letter of this date, desiring of me a suspension of the

bombardment of Charleston for twenty-four hours, to allow the subjects of the Spanish Government to depart from the city.

I had supposed that ample time had been given for this purpose. The commencement of the attack on the defences of Charleston, some forty days ago, is regarded as having given plain and emphatic warning that the city might be fired on at any time.

Nothing, however, is further from my wish than to endanger the lives or property of subjects of this Government which you represent, and I cordially accede to your request. No further bombardment of Charleston need be apprehended until 11 o'clock A. M. to-morrow.

I have the honor to be, Sir, very respectfully, your obedient servant, G. A. GILLMORE, Brig.-Gen. Comd'g.

CAPTURE OF JEFF. THOMPSON.

ST. LOUIS, MISSOURI, AUG. 26, 1863.

Major General HALLECK, General-in-Chief:

The Notorious General JEFF THOMPSON, with all his staff and 160 officers and men, were captured at Pocahontas on the 24th.

J. M. SCHOFIELD, Maj. Gen.

OFFICIAL GAZETTE.

APPOINTED.

The following additional Paymasters have been appointed during the month of August: Robert Murray, James P. Downes, John L. Miller, William G. Lupton, Edward G. Fahnestock, George Trenchard, Benjamin H. Hoxie, Richard Irvine, Jr., Charles H. Berrien, Berrien, John W. Wilder.

Charles Hale, of New York, N. Y., Commissary of Subsistence in the Army.

Captain E. R. P. Sharpe, 20th N. Y. V., a Captaincy in Invalid Corps.

DISMISSED.

Capt. B. C. Kittle, 43d N. Y., for misbehavior in the face of the enemy.

Lieut. Charles C. Savage, 57th N. Y., for misbehavior in the face of the enemy.

Lieut. Wm. Robinson, 1st Michigan, for drunkenness.

Major A. W. Bell, Quartermaster, Volunteer United States Army, for incompetency and being an unfit and improper person to hold a commission in the United States Army.

Second Lieut. Conrad wurst, 5th United States cavalry, for disobedience of orders, deserting his command in face of the enemy, and breach of arrest, to date August 27, 1863.

Second Lieut. Stanley Smith, 2d United States infantry, for drunkenness, to date August 27, 1863.

Colonel A. N. Duquesne and Lieutenant and Adjutant E. K. Prouty, 2d Regiment of Infantry, Corps d'Afrique, dismissed in Special Orders No. 194, Department of the Gulf, by direction of the President, to date August 11, 1863.

Major Henry D. Washburn, 1st Pennsylvania cavalry, for drunkenness, conduct prejudicial to good order and discipline, breach of arrest, and absence without leave, to date August 27, 1863.

Major Martin J. Byrne, 11th Pennsylvania cavalry, for allowing his command to be surprised and captured, disobeying his rank and allowing himself to be paroled as the Colonel's orderly, and for desertion, to date August 27, 1863.

Captain W. W. Lloyd, Invalid Corps, to date August 25, 1863.

Captains Thomas Browne and W. H. Rhodes, 102d New York Volunteers, dismissed by order of Major General Meade, Department of the Gulf, confirmed by the President, to date April 1, 1863.

First Lieutenant Charles Hamilton, 102d New York Volunteers.

Lieutenant Theodore Geyer, 2d Delaware Volunteers, for absence without leave, to date August 27, 1863.

Lieutenant M. Town, 7th Iowa cavalry, for disobedience of orders and conduct unbecoming an officer and a gentleman, to date August 27, 1863.

Second Lieutenant Wilson S. Lafferty, 56th New York Volunteers, for desertion, to date January 31, 1863.

HONORABLY DISCHARGED.

First Lieutenants William D. Wickham and William Forrest, 88th Indiana Volunteers, upon the recommendation of Major General Hooker, Headquarters Department of the Cumberland.

Lieutenant Thomas Hall, 1st Missouri cavalry, commanded by the President to "forthwith dismiss the service."

CONDITIONAL DISMISSALS.

The following officers having been reported at the Headquarters of the Army for absence without leave, and having been informed by letter that they will stand dismissed the service of the United States, unless they report in person or show cause to the contrary appear before the superintendent in relation to Washington of which Brigadier General Ricketts, U. S. Vols., is president, and such voluntary defence to the charges against them:

Absent Without Proper Authority.

Captain Jeremiah Schinski, One Hundred and Tenth Pennsylvania Volunteers.

Lieutenant J. H. Livingston, Seventh New York Volunteers.

Captain A. B. Nichols, Eighty-Fourth New York Volunteers.

Desertion.

First Lieutenant Tim. P. Strong, Twenty-First Wisconsin Volunteers.

Second Lieutenant, Rollin S. Goodenough, Twenty-Fourth New York Volunteers.

Conduct prejudicial to the interests of the service, persuading an enlisted man to desert and to enlist elsewhere.—Captain Remy Gibbon, Second New York Cavalry.

MISCELLANEOUS.

Dr. John S. Delvan, of Albany, N. Y., has resigned his office as Pension Examining Surgeon, and Dr. Lewis Balloch appointed in the 38th Regiment, New York Volunteers.

The Surrogate of New York has decided that under the third section of the Pension act of July 14th, 1862, illegitimacy of the son is no bar to his receiving a pension. The law gives the widow as much of the instruction and forms of the Pension Office hitherto in force, as relates to proofs of marriage. The mothers' claims has been annulled.

RENDERED TO COMMISSION.

The following officers, heretofore dismissed, are restored, with pay from the date they were dismissed, to their commands, should the vacancies have not been filled by the Governors of their States:

Surgeon R. H. Thomas, 1st Maryland, P. H.

Second Lieutenant H. H. Macquillen, 8th Pennsylvania Reserves.

Second Lieutenant Frank Lamb, 130th Pennsylvania Volunteers.

ASSIGNED.

Captain J. O. C. Lee, Assistant Quartermaster of volunteers, is assigned to duty in the Quartermaster General's office, in the division of Reports, Claims, and Accounts.

Captain A. G. Robinson, is assigned to duty in the Bureau of Clothing, Camp and Garrison Equipage of the Quartermaster General's office.

RELIEVED.

Captain Fielding Lewis, Assistant Quartermaster of volunteers, from duty in the Quartermaster General's office, and ordered to report in person to Lieutenant Colonel C. G. Sawtelle, Chief Quartermaster of the Cavalry Bureau, Washington City, D. C.

Captain T. H. Harris, A. A. G. to General Ashoth, by Capt. J. Howard Smith, Assistant Quartermaster.

First Lieut. Edmund W. Kenyon, in charge of Bureau of Deserters, Gen. W. H. Penn, of the One Hundred and Seventeenth New York Volunteers, is ordered to the field.

CADETS OF THE UNITED STATES MILITARY ACADEMY.

The following is a list of the graduating class of 1863:

*1. John M. Wilson, assigned to Corps of Engineers.

*2. Peter S. Michie, Ohio, assigned to Corps of Engineers.

*3. William H. Harrison, Indiana, assigned to Corps of Engineers.

*4. William H. Trotting, Indiana, assigned to Corps of Engineers.

*5. William H. Bixby, Ohio, assigned to Corps of Engineers.

*6. William H. H. Benyaard, Pennsylvania, assigned to Corps of Engineers.

7. Charles W. Howell, Indiana, assigned to Corps of Engineers.

8. Asa H. Holcomb, Ohio, assigned to Corps of Engineers.

9. Jos. H. Alexander, Ohio, assigned to the Ordnance Department.

10. George W. Cullum, New Jersey, assigned to Ordnance Department.

11. Frank B. Phipps, Pennsylvania, assigned to Ordnance Department.

12. J. W. Reilly, Pennsylvania, assigned to Ordnance Department.

13. J. H. V. Field, "at large," assigned to Ordnance Department.

14. Charles F. Rockwell, Vermont, assigned to Ordnance Department.

15. Wm. S. Beebe, "at large," assigned to Ordnance Department.

16. Thomas H. Barry, "at large," assigned to 1st Regiment Artillery.

17. Jacob H. Conseelman, Maryland, assigned to First Regiment Artillery.

18. George D. Ramsay, Jr., "at large," assigned to First Regiment Artillery.

19. Henry C. Dodge, New York, assigned to 2d Regiment Artillery.

20. J. G. Butler, Pennsylvania, assigned to 2d Regiment Artillery.

21. Robert Catlin, Washington Territory, assigned to Fifth Regiment Artillery.

22. Charles H. Lester, Connecticut, assigned to Second Regiment Artillery.

23. Kendrick Robbins, Massachusetts, assigned to Fifth Regiment Cavalry.

24. James V. Chance, New York, assigned to 8th Regiment Artillery.

25. James R. Reid, New York, assigned to 10th Regiment Infantry.

In connection with a letter from the Secretary of War to the United States Military Academy, the names of the five most distinguished cadets of each class, graduating at the end of the academic year, are attached to the Annual Army Register. The following is the list of those distinguished cadets for 1863:

First Class—John R. Meigs, "at large;" Peter S. Michie, Ohio; James B. Fry, Illinois; John M. Wilson, Indiana; William H. King, New York.

Second Class—Arthur H. Burnham, Massachusetts; Amos Stickney, New York; Garret J. Lydecker, New York; Oswald H. Ernst, Ohio; James W. Lowe, Indiana.

Third Class—Charles W. Raymond, New York; Alexander Mc-Cook Miller, Ohio; Alexander Rives Hamilton, Pennsylvania; Lewis C. Overman, "at large;" William H. Chase, Pennsylvania.

Fourth Class—Edward Burr, Connecticut; Benjamin D. Greene, Maine; George N. Wheeler, Colorado; Charles E. L. B. Davis, Connecticut; Henry M. Adams, Massachusetts.

MEDICAL DEPARTMENT.

EXAMINATIONS FOR THE COLORED REGIMENTS.

SURGEON-GENERAL'S OFFICE,
WASHINGTON CITY, August 18, 1863.

An army medical board, to consist of Surgeon John B. Hammond, U. S. A., Surgeon Charles H. Crane, U. S. A., and Surgeon Edward W. S. Gourley, U. S. A., will assemble in New York city immediately after the draft, for the examination for appointment of surgeons and assistant surgeons to regiments of colored troops.

The examination will be conducted in writing and practical, as it is considered necessary that medical officers of colored troops should be as efficient as those appointed for white troops.

Candidates will be invited from this office to appear before the Board for examination.

The Board will determine whether candidates are fit for the appointment of surgeon or assistant surgeon, and will report the effect the result of each examination at the date thereof.

By order of the Secretary of War.

WM. A. HAMMOND, Surgeon-General, U. S. A.

In view of the fact of the sanitary condition of the Department of the South and Gulf requiring special care and attention at the time, the following officers will report to Surgeon-General Hammond, New Head, Key West, and new Orleans, for the purpose of giving his friend any information relative to the management of the service in those Departments, and for securing the adoption of the necessary sanitary measures required for the preservation of the health of the troops thereto stationed.

RESIGNED.

The resignation of Medical Cadet Edward F. H. Hamilton has been accepted, and Surgeon John Le Conte has been appointed his successor. Surgeon G. W. VARIAN, U. S. A., has resigned.

ORDERED.

Assist.-Surgeon F. Floyd to the Department of Tennessee.

Assist.-Surgeon Marcus Benjamin, U. S. A., and Surgeon Morrison, U. S. Vols., to Charleston.

Assist.-Surgeon Wm. H. Forwood, U. S. Vols., to Department of the Gulf.

Assist.-Surgeon G. S. Cortwright to the Department of Ohio.

Assist.-Surgeon J. R. Rodgers to the Department of the South.

Surgeon Robert Murray, U. S. Vols., appointed surgeon for volunteer officers at Washington, temporarily relieving Surgeon Charles H. Crane, U. S. A., Dr. W. Hunt, who has declined to take charge of the office.

Surgeon Britton, U. S. Vols., appointed Inspector of the examining board, in place of Surgeon Gourley, ordered to Baton Rouge.

DISCHARGED.

Hospital Steward John W. Griffiths is discharged the service and appointed to a clerkship in the Surgeon-General's Office.

NAVAL ORDERS.

ORDERED.

Lieut. Commander A. P. Cresman, from the command of sidewheel steamer Rhode Island, to the Navy Yard, Boston.

Lieut. Commander Francis M. Roe, from ordnance duty at New York and ordered to the command of steamer Nyanza.

Lieut. Commander John S. Barnes, from the command of the *Pearl* and ordered to the command of the *Rhode Island*.

Lieut. Commander Daniel L. Braine, from ordnance duty at New York and ordered to the command of steamer Nyanza.

Lieut. Commander Wm. S. Thaxton, from the command of the *Seneca*, and waiting orders.

Lieut. Commander J. C. P. De Krafft, from the Navy Yard at Washington, to the *Seneca*.

Lieut. Commander S. L. Breese, from the *Sumpter*, and preparatory to examination for promotion.

Lieut. Frederick Rodgers, from the *Kiowa*, and ordered to the *Sumpter*.

Lieut. Gilbert C. Wilcox, from the *Richmond*, and ordered to the *Seneca*.

Chief Engineer Alex. Henderson, from special duty at New York, and ordered to the *Rhode Island*.

Chief Engineer John Faron, from the *Onondaga*, and ordered to the *Richmond*.

Second Assistant Engineers Alex. W. Fraser and James Aikins, and Third-assistant Engineer Wm. Hunter, from the *Onondaga*, and from the *Brooklyn*, and ordered to examination.

Third-assistant Engineer Wm. Hunter, from the ship *Princeton*, and ordered to the *Niagara*.

Second Assistant Engineer B. B. Brooks, from the *Brooklyn*, and ordered to special duty at New York.

Assistant Engineers John H. Clark and Joseph E. Coghlan, from the *Susquehanna*, and ordered to the *Brooklyn*.

Ensigns Albert B. Baker and Morton W. Sanders, from the *Brooklyn*, and ordered to the *Susquehanna*.

Ensign B. F. Hoskin, from the *Richmond*, and ordered to final examination.

Assistant Surgeon E. D. Pope, from the Naval Rendezvous, Chicago, Ill., and ordered to the *Minnesota*.

Acting Assistant Surgeon J. F. Fish, from the *Wyandank*, and ordered to the *Rhode Island*.

Acting Master James McDonald, from the *Massachusetts*, and ordered to the *Antona*.

Acting Master T. H. Sears, from the *Ethan Allen*, and waiting orders.

Acting Ensign R. P. Pruet, on leave.

Commander Wm. Rogers, from the *Tioga*, and ordered to return North.

Commander E. Carrington Bowers, from the Naval Rendezvous at Portsmouth, N. H., and ordered to command the receiving ship Franklin.

Lieut. Commander S. P. Williams, from the *Pembroke*, and ordered to command the *Seneca*.

Lieut. Roderick Prentiss, from the *Pembina*, and granted two weeks leave of absence.

Lieut. Commander Robert Boyd, from the receiving ship at Boston Harbor to the *Pembina*.

Midshipmen James Walker, from the *Hartford*, and ordered to the Navy Yard, and waiting orders; Benjamin Wm. Enck, detached from the Navy Yard, and waiting orders.

Acting Master's Mate Robert Hubbell, from the Kanawha, and ordered to the Naval Rendezvous, Philadelphia.

Lieut. Robert B. Riell, from the *Niagara*, and waiting orders.

Lieut. John V. Quackenbush, from the *Niagara*, and waiting orders.

Naval Constructor Isaiah Hanscom, at Norfolk Navy Yard.

Lieut. Wm. Gibbons, from the *Sumpter*, and waiting orders.

Lieut. Commander G. A. Steezle, from the command of the *Huron* and waiting orders.

Second Assistant Engineer E. J. Brock, from the Prize steamer Circassian, and ordered to the *Susquehanna*.

Second Assistant Engineer Louis J. Allen, from the *Connaugh*, and ordered to return to examination.

Carpenter John Macfarlane, from the *Rachel Seaman*, and waiting orders.

Acting Ensign W. H. Crandall, from the *Pembroke*.

Acting Ensign Wm. H. Wood, from the *Connaugh*.

Acting Ensign Edwin Jarvis, from the *Rachel Seaman*.

Acting Master Wm. W. Cheney, from the *Tioga*.

ORDERED.

Commander Thomas J. Crowen, to command the *Niagara*.

Commander John Guest, to duty at Navy Yard, Washington.

Commander Edward P. Bushnell, to command the *Sumpter*.

Commander S. D. Nichols, to command the *Resolute*.

Assistant Surgeon A. W. Harrison, to the Naval Hospital at New York.

Surgeon Henry L. Johnson, John J. Reed, John H. Rand, and John C. Hartlett, to the South Atlantic Blockading Squadron.

Third Assistant Engineer Albert J. Sargent, to the *Niagara*.

First Assistant Engineer Peter C. Reilly, C. Wallbonsed S. F. Wood, to examination.

Second Assistant Engineers Edward R. Fulton, Charles M. Barnard and Isaac De Groff, to examination.

Acting Assistant Surgeon Edward Shippen and Eldridge McLaughlin.

Edward Guy, Charles McConnell, and Rear. C. Hilliard Boardman.

Second Assistant Engineer Wm. Hunter, to the *Susquehanna*.

Commander Daniel Ammen, to duty in the South Atlantic Blockading Squadron.

Lieut. Commander John Irwin, to temporary ordnance duty at New York Navy Yard.

Lieut.-commander Bancroft Gherardi, to command *Chenango*.

Lieut. Commander Wm. Gibbons, to the Navy Yard at New York.

Lieut. Commander Watson Smith, to command the *Fatal Jean*.

Lieut. Roderick Prentiss, to command the *Pembina*.

Chief Engineer John W. Moore, to special duty at New York.

Acting Master Wm. Cheney, to the *Tioga*, to the command of the *Arbenia*.

Acting Master C. A. Burdette, to the *Seneca*.

Acting Master John J. Rodgers, and Acting Ensigns N. Boughton and Edward Lyon, to the *Pembina*.

Acting Volunteer Lieut. J. D. Warren, to the command of the *Fuchsia*.

Lieut. H. Rooney, to relieve Commander Parker, as commander of the Naval Station at Port Royal, S. C.

Ensign David D. Wemple, to the *Ronaldo*.

Acting Master's Mate Wm. Hall, to return to and to command the *Sagamore* and waiting orders.

Third Assistant Engineer John H. Hinsley, to examination.

Acting Ensigns Wm. Hall and Edward Gall Blockading Squadron, to command the steam frigate Colorado.

Acting Ensign Wm. Hall, to command the steam-tender *Gentian*.

Lieut. Commander Charles E. Fleming, to the receiving ship Ohio, on return to examination.

Acting assistant Paymaster Edward G. Bishop, to the *Arbenia*.

Acting Master's Mate Wm. Hall, to the *Tioga*, to the command.

Acting Third Assistant Engineer S. W. King, to the *Metamora*.

Acting Ensign Wm. Hall, to the steamer *Grand Gulf* received and awaiting orders.

APPOINTED.

Wm. Harkness, a Professor of Mathematics in the U. S. Navy, vice Prentiss, A. M., deceased. Appointment dates from Aug. 29. Appointment dates from August 28th.

Acting Master's Mate Wm. H. Thornton, Acting Assistant Paymasters; C. H. Lester, Acting Ensign; Neil Martin, Acting Gunner; J. M. Sutton, Acting Master's Mate.

Lysander C. Tripp, of New Bedford, Acting Assistant Paymaster.

Charles H. Lester, Acting Ensign; Arthur Agnew, Acting Master's Mate; Gustavus A. French, Acting Ensign; Josiah B. Aiken, Acting Boatswain; Neil Martin, Acting Gunner; Wm. Sutton, Acting Master's Mate and Charles Arnberg, Acting second Assistant Engineer; George W. Hall, Acting Master's Mate; Wm. Agnew, Acting Master's Mate; Wm. Hall, Acting Third Assistant Engineer; John Bowman and Marcus Beloit, Acting Ensigns; Wm. Harkness, Acting Second Assistant Engineer; Richard Carroll, Carpenter.

PROMOTED.

The appointment of J. A. Hawley as Acting Ensign; that of Isaac Sloat, Acting Master's Mate; that of C. W. Nelson and C. B. Simpkins as Acting Ensigns, and W. H. Alger as Acting Master's Mate.

The appointment of Second Assistant Engineer Marcus Gurney A. Winslow, Charles Tracewell, H. D. Sherman, Gustavus A. Fistick, Thomas F. Parker, Frederick Hall, and Wm. Hall.

The appointment of Smith R. Hopkins and William Boyd, as Acting Ensigns.

PROMOTED.

Captain Thomas T. Craven, to Commodore, to rank from July 16, 1862.

Assistant Paymaster Levi S. Starkwell, to a full paymaster.

Thomas Fredericks, to Acting Volunteer Lieutenant.

Acting Master's Mate Wm. Bedford, has been a quinee on board iron-clad steamer *Mound City*, to Master's Mate.

DETACHED.

Commander F. A. Parker, who has been on Morris Island in command of the Naval detachment, has been relieved of his command in consequence of sickness.

DISMISSED.

Third Assistant Engineer R. J. McGurran has been dropped from the rolls of the Navy for absence from the Navy Yard at New Orleans Steamer Crescent, at Philadelphia, on the 22d inst.

ARMY TEST.—Colonel Thomas Henderson.

DIED.

Eleven deaths are reported to the Department for the week ending August 29. The only officer named among them is James McCurdy, Acting Master's Mate, who died of diarrhœa August 3, on board the *Stepho Hopkins*.

A CAVALRY expedition under Gen. Kilpatrick, sent for the destruction of the railroad guarding the rear of Bragg's army, the *Reforma*, has proved successful. The ferocity was sunk, and the latter rendered worthless, being well riddled with shot and shell.

GEN. FRANK P. BLAIR, GEN. T. CADWALADER and Brig.-Gen. H. Haupt arrived in New York on Thursday.

LIEUT.-COL. MCGILVERY, who ordered the army as captain of the 5th Maine battery, has been promoted to a colonelcy.

MAJOR LOUIS H. POLOUE, A. D. C., has been ordered to report for duty in the Adjutant-General's Office.

MAJOR JAMES W. ABERT, of the Engineer Corps, has been ordered to the U. S. Military Academy.

CAPTAIN GRANVILLE JOHNSTON, A. D. C. to Gen. Holmtselman, has been promoted to the rank of major.

MAJOR J. P. HAWKINS has been made brigadier-general of colored troops, with headquarters at Goodrich Landing, La.

LIEUT. J. P. SANGER, 1st United States Artillery, has been made Acting Assistant Inspector-General under Gen. Gilmore.

UNITED STATES NAVAL SQUADRON LIST.

The following comprises the squadron list of the United States Navy. It is the intention to add each vessel to the list as she goes into commission, and to note changes as they occur, from week to week. There may be errors in the list, but they are sorted to the limited space of time allotted to us to prepare it. In future it will be found to be considerably more reliable.

We shall deem it a favor if officers attached to the vessels will inform us of any changes in the stations of their vessels or in their list of officers.

CORRESPONDENCE.

"FORMING FOURS."

To the Editor of the Army and Navy Journal.

SIR:—The fact that much ignorance prevails in the Army with regard to the proper manner of forming four, when firing by flank, and of again forming two when firing to the front or rear, has of late been forcibly brought to my notice. I will endeavor briefly to set forth the principle of their formation in order, that those who see this article, and really wish to be instructed in the right way, may not be misled. It will be borne in mind that the company is always numbered with the front rank in front, and that the regular order of numbers are established in this way.

In forming fours, the following principle will be observed:

First: The formation will always be on the extreme man of the rank, whether the rear is to be to the right or left, and whether the front or rear rank is to form.

Second: The line of battle, whether the front or rear rank, will never be encroached upon. In forming twos from fours the following principle will be observed:

That, man of each file of twos, who in the greatest distance from the line of battle will always step up to the line, and in such a manner as to never change the order of the numbers. Yours respectfully,

SILAS CASEY, Maj. Gen.

WASHINGTON, D. C., SEPTEMBER 1st, 1863.

VOLUNTEER OFFICERS IN THE NAVY.

To the Editor of the Army and Navy Journal:

SIR—Under existing regulations of the Navy Department, a volunteer officer can attain to no higher grade than a lieutenancy, no matter what his ability, education or service may be. This seems to us to be altogether wrong, and should be corrected at once. The majority of commands are at present held by volunteer officers, and no one, we believe, pretends that, as a class, they have not faithfully performed the duties assigned them. We learn that some considerable disappointment exists that their ambition should be so limited, and little else than the purest love of country could keep them in a service in the door closed and bolted against promotion. If the Department is willing to admit into the regular service such of the volunteer officers as can be able to pass an examination, what objection can there possibly be to a separate line of volunteer officers of equal grade, as among regulars, giving them promotion by seniority or merit in their own line? It is manifestly unfair that the present system should continue, and we look for prompt action on the part of the Honorable Secretary of the Navy in justice to men who have, at great sacrifice, given their time and official talents to the service of the Government. We suggest this subject for the consideration of the Navy Authorities, with no view to serve the interests of individuals, but to call their attention to the interests of the service, and to the class of officers to which we refer, so many of whom have been active participants in the splendid achievements of our fleet on the Mississippi, under the command of the late lamented Admiral FOOTE, as well as Admirals DAVIS, FARRAGUT and PORTER. We trust that something may be done at once to sustain the zeal of the Volunteer officer, by opening the line of promotion in his favor, as is the case in the army, where there are two separate branches, regular and volunteer, with rank in each, and in some instances in both. We can see no objections to a similar arrangement of the officers of the Navy.

Another question has been suggested to us as one of interest to the service, especially in the West—that of prize money, resulting from captures made by the Western Flotillas, prior to the 1st of October, 1862, when the Gunboat Flotilla on the Mississippi was incorporated into the Navy. Prior to that date, we understand that the officers and men of that fleet were, with such exceptions as pertained to certain officers of the Regular Navy), paid by the Army Department. Yet they were appointed under Naval authority and sworn to obey the Navy regulations and act under Navy orders. During the years 1861-2, a large amount of rebel property, both vessels and cargoes, was captured by this fleet and turned over to the Navy Department, including several gunboats and steamers, some of these being now in commission, and it is to the distribution of the proper share of such prizes to our officers and sailors in the West, that we wish to call the attention of the Government. There can be no doubt but that the regular officers have strong claims to their share of such prizes, and we cannot see any cogent reason why volunteer officers and their crews under them should not also be entitled to the advantages resulting from the actions in which they have taken part. Such a distribution could readily adjust the principle upon which a division of prize money should be made, and thus secure justice to all, the Government included.

There is a large amount of prize money due to the officers and sailors of the Western Gunboat Flotilla, and it is to be hoped that the subjects of the promotion of volunteer and acting volunteer officers, and the distribution of prize money due them, will be brought before the next Congress for consideration and proper action. It is justly due to these gallant officers and men, and we beg leave to call the attention of the Hon. Secretary of the Navy to the subject, trusting that a reformation may be advocated by the Department and be endorsed by both Houses of Congress. A proper advancement of justly meritorious volunteer officers, showing by promotion a proper appreciation of their services, will infuse new life and valor into our growing Navy. R.

THE MILITARY ACADEMY.

To the Editor of the Army and Navy Journal:

SIR—It is with considerable satisfaction that I noticed in your first number a communication relating to the manner in which appointments are made to the Military Academy. This is a subject which I hope you will keep before the public until the mental reforms suggested by your correspondent are consummated. It is a remarkable fact that since the commencement of the war the average ability of the cadets who have entered the Academy is far in advance of what it has been at any time since the foundation of the institution. This is doubtless owing to the fact that the active operations now in progress have created a desire to enter the military profession with young men of more advanced education than had previously been appointed to the Academy. This improvement in the preliminary acquirements of the appointees has already had its influence in elevating the standard of proficiency of the institution, and renders it more desirable than ever that some method be adopted which will ensure the granting of cadet appointments to none but those having superior intellect, cultivated by at least the rudiments of a good "old field" course. This will prevent the admission of the "fools and drones" who now spend six months or a year at the Academy vainly endeavoring to acquire what should be made a preliminary qualification for entering, after which they give place to another set in no respect better than their predecessors.

The best method of effecting this reform may not be at once arrived at, and when suggested will no doubt have the strenuous opposition of the appointing power as it now exists. But if the importance of this subject can be made apparent to the people, there can undoubtedly be effected such a change as would secure to the Academy as candidates for admission a fair proportion of the best intellect of the country. A plan which has met with considerable favor from those who have given the subject attention is to have every academy in a Congressional district furnish its best scholar for competition, and award the appointment to the individual who passes the best examination on what is now the first year's course at West Point. This will have the advantage of raising the standard of admission to the Academy, whereby the course of study may be either shortened or rendered more complete, as the exigencies of the service may require. ESSAYONS.

NEW YORK, Sept. 2, 1863.

THE ORIGIN OF THE BRITISH NAVY.

THE British Navy of England, properly so called, takes its rise from the reign of HENRY VIII. At first HENRY possessed only one ship-of-war, the great ship *Harry*. To this a second was added, the *Regent*, built in 1511, from the Scottish Captain ANDREW BARTON, of his ship called the *Lion*, an incident which led, two years after, to the war between the two kingdoms, and the battle of Flodden, and the death of JAMES IV. The next year, 1512, HENRY built another ship at Woolwich, the *Record*, weighing 1,000 tons, and described as the greatest vessel that had been seen in England. From an indenture drawn up between the KING and his Admiral, Sir EDWARD HOWARD, for the building of the fleet first out this year to aid in the war against France, it appears that the *Regent* was to carry 700 soldiers, mariners and gunners. The *Harry* was to be rebuilt after this, however, is described as having been sent to sea this same year by the Scottish KING in a fleet which he equipped for the assistance of the French, and was scattered and destroyed in a storm on its way to this country. This Scottish ship, called the *Great Michael*, is said to have been built in modern times, was 240 feet in length by 56 in breadth; dimensions, however, which in the latter direction especially, are probably exaggerated, as the ten feet of planking added to protect it against shot. She carried 35 guns, all on the upper deck, besides 300 smaller pieces of artillery called "serpentines," and her crew and complement consisted of 300 seamen, 120 gunners, and 1,000 soldiers, besides officers.

But HENRY did not satisfy himself with merely building ships; he laid the necessary foundations for the permanent maintenance of a naval force by the institution of the first navy office, with commissioners, or principal officers of the navy, as they were styled, for the superintendence of that particular department of the public service. He also established by royal charter, in the fourth year of his reign, "The corporation of the Trinity House of Deptford," for examining, licensing and regulating pilots, for ordering and directing the erection of beacons and lighthouses, the placings of buoys, &c.; to which, two years after, was added the private establishment of the same kind at Hull and Newcastle.

The Navy Yards and storehouses at Woolwich and Deptford also owe their origin to this KING, who has a very good right, therefore, to the title of the creator of the English Navy. HENRY's great ship, the *Regent*, was blown up, with the 700 men on board of her, in a battle fought with the French fleet off Brest, a few months after she put to sea; for which he caused another ship to be built, which he called the *Henry Grace de Dun*. Several others were afterwards added, so that at the close of the reign the entire navy belonging to the Crown amounted to about 12,500 tons. HENRY also, about 1525, erected at a great expense the first Royal Dock-yard; and in the 1531 act of Parliament was passed for the amending and maintenance of the havens and ports of Plymouth, Dartmouth, Simmouth, Falmouth and Fowey.

GENERAL BRAGG IN DANGER.

THE well known and famous General BRAGG of the rebel army came very near losing his life during the previous war, at Walnut Springs, near Monterey, by the hand of one of his own men. He was at that time a captain, commanding the celebrated battery which gained the "little more grape" into the advancing Mexican columns of Buena Vista. On the night in question the camp was startled by an explosion, resembling the discharge of a cannon. The several officers rushed to the tent of the commander, the rear of which was found to be literally blown to bits. The bed clothing which had covered the sleeping form of the captain was perforated in a score of places, yet, strange to say, Bragg stood uninjured.

The cause of this alarm was the explosion of a heavily charged shell, in the rear of the tent within the head of the occupant. It had been placed there by a non-commissioned officer of the company, to revenge a punishment to which he had been subjected. The destiny of the captain had yet to be fulfilled, or that bright night would have been his last.

PRESENTATION OF A SWORD TO GEN. MEADE.—A magnificent sword, the gift of Pennsylvanians, was presented to General MEADE on Friday the 28th ult., with appropriate ceremonies. The blade is of fine Damascus steel, wedge pattern, handsomely ornamented, the hilt of solid silver, heavily plated with gold, surmounted with a heavily gilt eagle's head for pommel. The grip is heavily gilt chased, and set with a row of garnets. The sword has two scabbards, one for service and one for occasions of ceremony. Each scabbard is of solid silver, heavily plated with gold and finely chased. The service scabbard has "Major-General GEORGE G. MEADE" engraved on one side, and is richly chased, but contains less ornamentation than the dress scabbard. The latter bears the initials "G. G. M.," elaborately set with diamonds, on a blue enamel ground, on the side. The arms of the State of Pennsylvania are engraved on a gold plate, set in a blue enamelled circle, round which is a circlet of garnets with diamonds. Below the garnets an eagle, with the American shield, flags, and other appropriate designs, set in the same style as the Pennsylvania coat of arms, in a circle of diamonds. On a gold plate on the side of this scabbard appears the inscription: "Mechanicsville, Gaines' Hill, Malvern Hill, Second Bull Run, Chantilly, Antietam, second, South Mountain, Antietam, Fredericksburg, Chancellorsville, Gettysburg." In addition to the sword and scabbard there is a magnificent sword belt of white leather, richly embroidered with heavy gold bullion; also a yellow silk sash, with heavy tassels, and a pair of splendid silver spurs, richly plated with gold, with an eagle holding the rowels in his beak.

GEN. GILLMORE'S SHELLS IN CHARLESTON.—From the Charleston papers we learn, that twelve of the shells thrown from the Swamp Angel battery on Friday night fell in the city, or rather, early in the morning of the 22d ult., fell into the city. One of these fell at the corner of Queen and Rutledge streets, and in its flight plunged and dug a large hole in the ground. Another shot entered the warehouse of G. W. WILLIAMS & Co., at the corner of Hayne and Church streets, entered the roof and passed to the upper story, making a large opening in the brick wall of the Medical Purveyor's storehouse next door, and scattering drugs in every direction. Some loose cotton in the wake was set on fire by the explosion, which caused the alarm bell to ring out the startling cry of fire. It was extinguished with little effort before it had made any progress. Four shells fell in this locality. One large piece was picked up and exhibited at the guard-house, where it was the subject of much curiosity.

DEATH OF THE REBEL GEN. PEMBERTON.—The rebel Lieut. Gen. Pemberton, recently commanding the forces at Vicksburg, died a few days ago in Mississippi, having been shot by a rebel officer.

JOHN C. PEMBERTON was born in Pennsylvania, about the year 1814, and graduated at West Point in 1837, and appointed Second Lieutenant in the Fourth Artillery; became First Lieutenant March 10, 1842; was an aide-de-camp of General WORTH during the Mexican war, was brevetted Captain for gallantry at Monterey, Sept. 23, 1846, and Major for gallantry of Molino del Rey, September 8, 1847. He was subsequently employed in Chihuahua and Contreras, and at the capture of the city of Mexico, where he was wounded; was brevetted Lieut. Col. U. S. A., September 8, 1847, and from April 29th, 1861. He then entered the rebel army as from Virginia, with the rank of Brigadier General, and afterwards rose to that of Lieutenant General.

MEDICAL AND SURGICAL HISTORY OF THE WAR.—Dr. J. JANVIER WOODWARD, of Philadelphia, Assistant Surgeon, U. S. A., has undertaken a medical history of the war, which will embrace a large amount of matter, invaluable to the scientific world. The work will be handsomely printed by Messrs. LIPPINCOTT & Co., of that city, which includes Dr. WOODWARD's experience on the Peninsula with the Army of the Potomac, and his practice in the hospitals at Fortress Monroe, Va., 1862, has been completed. The next volume, which will bring the medical history of the war up to July, 1863, is nearly completed, and will soon be ready for press. The lithographic plates for this work will cost a large sum. Besides this work, Dr. WOODWARD has nearly completed a work on "The Camp Fevers of the Army," which will soon be issued. The work will show the relative prevalence of fevers in the different armies of the Union, from which it appears that fevers prevailed to a much greater extent in the Eastern than in the Western armies. The Surgical History of the War, by Dr. BRINTON, Assistant Surgeon and Surgeon United States Army, and will soon be completed up to July, 1862, to correspond with the work of Dr. WOODWARD. The plates for this work also cost $50,000.

NOTICES TO CORRESPONDENTS.

The Editor of this JOURNAL will always be glad to receive from officers in the two services, correspondence and general communications of a character suited to its columns. It is necessary that the name of the writer should, to all cases, accompany his communications, not for publication, but as a guarantee of good faith.

Officers are especially requested to give as early publication of all personal matters of general interest, of the movements of vessels; of casualties among officers; and military and naval events.

The Editor will, at all times, be pleased to respond, in these columns, to enquiries in regard to tactical and other matters.

From pecuniary in the medical service we shall be glad to receive communications on military subjects, practical, scientific, and reports of notable operations and novel forms of treatment.

The subscription price of the ARMY AND NAVY JOURNAL is FIVE DOLLARS a year, or THREE DOLLARS for six months, invariably in advance. The subscription price may be remitted in Gold, Bank Notes, or Quartermasters' Payments or other drafts, which should be made payable to the order of the Proprietor, W. C. Church.

All communications should be addressed to the ARMY AND NAVY JOURNAL, New York.

Subscribers who fail to receive their paper promptly, will please give immediate notice of the fact.

U. S. ARMY AND NAVY JOURNAL.

NEW-YORK, SATURDAY, SEPTEMBER 5, 1863.

THE CONSCRIPTION.

THE draft has been completed, we believe, in all the States from the Ohio River to our Eastern boundary. It has been quietly completed in New York city and environs. New Jersey was allowed to raise her quota by volunteering. The same privilege has been extended to Ohio and Illinois, as the quota due from each of these States over and above what they have already furnished by volunteering is but about twelve thousand. And the draft has not only been made, but our armies are beginning to have the benefits of it. Several thousand conscripts from here already gone to swell the thinned battalions of the Army of the Potomac. The advantages which these recruits will have by passing into veteran regiments, where they will speedily acquire soldierly habits and a military spirit, are obvious. By the time the term of service of our three years' men expires, therefore, there is good hope that the country will have in its army of conscripts a large, available, efficient force.

Every man, we think, must feel his consciousness of community in a powerful, respected and respectable body politic increased and vitalized by this act of National sovereignty. We have added to the value of citizenship. We do not discuss the *form* of the Conscription Act. It is not perfect. Certain grounds of complaint were urged against its practical application in the enrollment in our own city: this matter was promptly looked into, revised and corrected by the President. Still, in particulars, inequalities and uncertainties; and that portion of it which leaves it doubtful whether the Government will furnish substitutes for those who purchase their exemption unless interpreted in accordance with the French method, by which the Government itself puts a man in the field in the place of each man who pays for his exemption will very materially diminish the number of troops whose services the country will obtain. But these objections, though important, are, after all, but matters of form: the essential fact is that the conscription is a law; and not only a law, but now a living fact, and that its results are pouring in fresh blood and muscle to our depleted armies.

The draft was a vital, practical necessity for the recruiting of our armies in the field. This is a matter of positive certainty in spite of all the blather heard about the activity of volunteering. The official returns of the Provost-Marshal-General, show that the whole State of New York has furnished less than a thousand volunteers per month since the beginning of the present year; and volunteering was even less active in other parts of the country. It is perfectly evident that we could never sustain our armies in this way—perfectly evident that we must have some more general, delicate and reliable mode of replenishing our forces. Besides, it is worthy of remark that the conscription does not stop volunteering. On the contrary it stimulates it. And there have been quite as many enlistments, proportionally, since, as previously to the draft.

But aside from the practical necessity of the case, we believe in conscription as a *principle*—believe in it historically and philosophically as, on the whole, the best method of raising armies. It is fair and just and equitable. It is the grossest injustice to impose the whole burden of bearing arms for the country on those whose patriotism leads them to volunteer, while we leave the unpatriotic, the indifferent and the ill-disposed to stay at home. The duty of bearing arms, when called upon in defence of the Government and the laws is obligatory upon all able-bodied citizens. This is a sovereign right which the State must be able to demand. "No political society," says Gen. DIX, in his admirable address of August 17th to the citizens of New York, "no political society can be held together unless this principle is acknowledged as one to which the Government may have recourse when its existence is in peril."

The continental nations of Europe have universally adopted conscription as the method of recruiting their armies, and experience has in them found it to be the most economical and effective of all methods. England is excepted from this rule: her battles have been mainly on the sea, and to recruit her marine she has always resorted to the far more onerous method of the press-gang. And yet it can hardly be doubted that, if a great continental war were to break out, England would also resort to conscription, for, of all the astounding absurdities that have been given out by those opposed to the draft, the most astounding is the saying that "conscription is opposed to the genius of the Anglo-Saxon race." The conscription, an invention of the French armies during the revolution, only consolidated and systematized, rendered just and equitable the old method of raising armies by a universal levy. It is not a new oppression: it is a new improvement. NAPOLEON, in a passage among some critical notes on the work entitled *Considérations sur l'Art de la Guerre*, makes these instructive observations: "Several enlistments have ever been in use among Republics" as well as Monarchies, both with the ancients and "the moderns. The peasants being shaves in Poland "and Russia, men are levied in these countries as "horses are in others. In France the recruiting of the "army has always been determined by lot; under "LOUIS XIV., LOUIS XV. and LOUIS XVI it was "called drawing the Militia; under NAPOLEON drawing "the Conscription. The privileged classes were exempt "from the former; no one was exempt from the latter: "it was a levy without distinction, which rendered it as "unpatriable to the privileged classes as the former "made was to the mass of the people. The Conscription was the milder, the more equitable and the "more advantageous plan for the people in general. "The regulations respecting it were rendered so perfect under the Empire, that there is nothing to "change, not even the name, lest it should lead to "an alteration of principle." This still remains true: the French system of conscription is undoubtedly the most perfect and least oppressive that can possibly be devised, and we could advantageously import many of its peculiarities into our own method.

We design no defence of the conscription, for to intelligent and patriotic men it needs none; and the army universally has always been found in favor of it, and eager for its application. Now that it is carried out, we see many benefits, direct and indirect, that will grow out of it, some of them silently and unconsciously. It will have a tendency to recall our people to doctrines which it has been a main tendency of our political system to cause us to forget. It will give every man a sense of identity in a Nation which is an authority,—not a mere agency. We have heard a great deal about the rights of citizens. It will be well now to hear something about the duties of citizens. We have heard much of what the State owes to the citizen. It is now time to hear what the citizen owes to the State?

FORT SUMTER AND CHARLESTON.

THE present condition of what is loosely styled the *siege* of Charleston, however radely it may sheck the illusions of those who imagined that, after Fort Sumter was reduced, it would only remain for our army and fleet to make their triumphal entrance into the city, does not disappoint those who had any adequate appreciation of the forces of Charleston and the stupendous task involved in their reduction. Fort Sumter is one work in a *system* of defences on which the best engineers in the rebel service have for two years and a half lavished all the resources of their professional skill. Now, it is the advantage of a well-constructed system of defence, that each work is strong not only by its proper strength, but in the supporting strength of the others. They form an ensemble between the parts of which there is something of that same vital cohesion and correlation that bind the atoms in organic structures. An ill-contrived series of works, on the other hand, has not this strict interconnection, and when once the assailant succeeds in seizing the key-work, the rest fall by their own weight.

Fort Sumter is to-day the legitimate property of the commander whose skill and energy have made that work, in his own words, "a shapeless and harmless mass of ruins." It is not a formidable mass the Chief of Artillery officially reported the destruction of the Fort so far complete as to make it "of no avail in the defence of the harbor of Charleston," and respectfully submitted that "the continuance of our fire is no longer necessary, as giving us no end adequate for the consumption of our resources." And yet General GILLMORE has not been idle since his work by planting the old flag over the ruins he has made. On the contrary, the symbol of the rebellion still flouts defiance there. The ruins we have made are the evidence of our power; the rebel flag planted on those ruins is the evidence of the limitations to our power. Much more has to be done before Fort Sumter can be taken, in any available sense of the word. It is perfectly commanded by the batteries on Sullivan's Island, on the right side of the harbor—namely, batteries Beauregard, Bee and Moultrie; by Fort Ripley on the Middle Ground; by Fort Johnston and the new batteries on James Island, on the left side of the harbor. The line of fire from each of these works varies from a mile to a mile and a half, whereas Fort Sumter was breached by our batteries on Morris Island, at a distance of two miles and a quarter. The Fort is therefore quite untenable, and indeed *untakeable*, until these works are silenced. The reduction of Fort Sumter is a matter of the complicated chess-board, the full force and significance of which will become apparent only after other moves have been made.

The siege of Toulon, at which NAPOLEON won his maiden laurels as Commandent of Artillery, is one of the most instructive in the history of sieges, and the more so as in several of its conditions it bears a marked resemblance to the problem presented by the defences of Charleston. The harbor of Toulon was defended on both sides by an elaborate series of fortifications, of which Forts La Malque and Malbosquet, the one on the right, the other on the left, were the nearest to the city. When NAPOLEON, at that time chief of a battalion of artillery, arrived from Paris (having been sent by the Committee of Public Safety to command the besieging artillery), he found preparations busily going on for a regular siege. While they continued he spent a month in carefully reconnoitering the ground and making himself perfectly acquainted with all its localities. He soon came to the conclusion that all the propositions of the Committee of Fortifications were totally useless. He had discovered a position at the extremity of the promontory of Balaguier and L'Eguillette, which juts into the harbor with much the same relations to Toulon that Cumming's Point on Morris Island holds to Charleston; and his quick eye instantly detected how to use the key-position. According to a council, at which the instructions of the Committee of Public Safety, detailing at great length the operations necessary to recover Toulon by a regular siege, were read, NAPOLEON opened up his plan, assuring the Council that in two days after the position should be taken, Toulon would belong to the Republic. This plan of attack was much ridiculed, and the engineer officers who were present at the council were of opinion that the project of the Commandant of Artillery was a necessary preliminary to a regular siege, the first principle of all sieges being the establishment of a strict blockade. While these discussions were going on, the English had themselves become so sensible of the importance of the position that they had landed a powerful force on the promontory, intrenched themselves, and had made it a "little Gibraltar," as they called it. It accordingly became necessary to dislodge them from this position, so NAPOLEON proceeded with the work of erecting batteries. The enemy, meanwhile, were every day receiving reinforcements: the public watched the operations of the siege with anxiety. They could not conceive why every effort should be directed against Little Gibraltar, quite in an opposite direction to the town. "There has been nothing done," it was said all over the country, "but laying siege to a fort which has nothing to do with the permanent fortifications of the place. They will afterward have to take Malbosquet, and open trenches against the town." All the popular societies issued denunciation after denunciation on the subject. Finally a message was actually sent to raise the siege. It was raised in a few days, but in a quite different manner

from that meant by the Convention. In less than a week after the letter had been received, Toulon was taken. NAPOLEON, in his *Memoires*, relates the whole history of the operations with great spirit and fine shades of satire. When he was ready he opened his batteries, threw forward a storming party, seized the whole promontory, and planted his guns on the heights. The English, seeing their every position was commanded, gave up the attempt to hold the place. In the night they blew up Fort Pomé and evacuated Forts Mulgrave, La Malgue, Phaaron, and all their other works, and next day the French marched in to Toulon. From this event NAPOLEON'S reputation commenced; he was made Brigadier-general of Artillery, and appointed to the command of that department in the army of Italy.

There are doubtless many elements that differentiate the problem of the reduction of Charleston from the operations in the reduction of Toulon; but if General GILLMORE were but in possession of Morris Island up to Cumming's Point, his position would in many respects be analagous, at least, to that NAPOLEON, when he had seized the promontory in the harbor of Toulon. This secured, he would have a *point d'appui* from which he could operate against the other defences of the harbor, seriatim, and which, moreover, would enable him to plant his batteries a mile nearer the City of Charleston itself. The obstacle to the possession of Cumming's Point is, as everybody knows, the presence of the two sand batteries on Morris Island named Forts Wagner and Gregg. These forts are in a direct line with Fort Moultrie, and the remarkable phenomenon is presented of two works standing unreduced in the rear of a reduced fort. In order to take possession of Fort Sumter, it was necessary that Fort Wagner be reduced; but, per contra, in order to take Fort Wagner it was necessary to silence the annoying fire of Fort Sumter. Fort Sumter is now silenced, and it remains, in order to garner in the harvest we have reaped, that Fort Wagner be reduced. Fort Wagner mounts only five guns; but it is heavily garrisoned, and the approach to it is difficult, owing to the extensive restrictions of the ground, and, relating only of a brigade deployment. General GILLMORE is laboring assiduously, and against great material difficulties, at the preliminary operations necessary to the assault of the Fort, and in a spirit and style that inspire good hopes of his success.

With regard to the operations of the combined expedition, namely, the Navy, Admiral DAHLGREN does not seem yet to have felt prepared to attempt the task of entering the harbor and trying the iron fleet on the rebel batteries. With the characteristic impatience of our people, this delay is raising an angry clamor, and charges of incapacity fly fast and loose. We are, of course, far from sharing these sentiments, and think not that the result will fully justify the delay. It is a prime condition of ultimate success in this expedition that the army and navy shall work together. The test of the iron-clads against Fort Sumter in April last, in which five out of the nine were put *hors du combat* in half an hour, is of a nature to dispel the unwarranted illusions which had been cherished in regard to this class of vessels. It also, we think, proved conclusively the inability of the fleet, unaided, to take Charleston; but in coöperation with the land forces, the iron-clads can undoubtedly do great things. Now, should Admiral DAHLGREN resolve to take in his fleet to the attack, previously to the reduction, by General GILLMORE, of Forts Wagner and Gregg, and the possession of Cumming's Point, he would, by consequence, cut himself off from the important coöperative aid of the land forces. Admiral DAHLGREN cannot afford to be pushed by any popular clamor to a false step of this kind. In the meantime, in regard to operations against Charleston, the public must learn to possess their souls in patience.

THERE are not terms of censure sufficiently strong to apply to those officers having in charge the transportation of the Army, who, with no regard for the dictates of humanity, to say nothing of the duties of their position, turn the care of sick and furloughed soldiers over to the tender mercies of the flock of harpies always hanging on the skirts of an army. By this course they are not only fleeced of the hard-earned pittance they may have with them, but subjected to treatment which should not be accorded to animals. Major-General G. O. ORD, in command of the Thirteenth Army Corps, furnishes to a Chicago paper an account of what transpired on the steamer *Hannibal*, Captain CONWAY, on her recent passage up from Vicksburg. It seems that "Quartermaster LYMAN packed 1,200 men on board, with accommodations unfit for hogs. The second day out, *three died* from a surfeit of filth. "The wounded, sick and worn-out soldiers were "charged ten cents per glass (and more if they could "get it) for ice water, *the ice belonging to Government*." The transportation masters receive their orders direct from Washington, and cannot therefore be controlled by commanders; consequently General ORD finding he could do nothing to alleviate the sufferings of the unfortunate passengers, left the boat on the second day out.

This outrageous treatment of our gallant soldiers when returning war-worn and wounded after a successful campaign, is not to be tolerated, and deserves the immediate attention of the authorities at Washington.

FORTS OF SAND OR MASONRY: WHICH?

OUR readers are all aware that in the text books of military engineering, works of defence are divided into permanent works and field fortifications; the former being constructed with facings, walls, &c., of solid masonry, brick, or stone; and the latter of earth, riveted with fascines, gabions, and timber, but presenting only a front of earth to the assaults of the enemy. Ten years ago this was deemed of doubting the value of this division. Indeed, ever since the establishment of VAUBAN'S "first system," with which he filled Flanders, the "classic land of fortified defence," we believe it has been a matter of prescription, that permanent works should be constructed of masonry; and in opposition against it, even in gentle proposal of the chains of earth works, has been regarded as a heresy in military science. The established engineer corps of France, England, and America have adopted the system, and when an authoritative class adopt a plan and build upon it, bold indeed must the individual be who couches his lance against it. Within a few years a bolder individual has arisen.

Captain, now Brigadier-General, MORTON, who, to say the truth, has done much to vindicate his theory by the splendid fortifications of earth at Nashville and Murfreesboro, came into collision with the higher officers of his corps (the Engineers), by his report to Mr. FLOYD, the Secretary of War, in which he offered a plan for fortifying that city with earth works, and denounced the existing system of permanent fortifications. It was opposed by the chief of the corps, General TOTTEN, and did not receive the examination it deserved, in part, perhaps, because it was rather arrogantly urged. General MCCLELLAN, in his report on the Crimean war, while praising the allied earth-works at Sebastopol, was careful to say a word in favor of permanent works of masonry.

This war has, however, opened the question in a very decided manner, and the relative merits of masonry and sand must now be divested of the prejudices of corps and individuals, and discussed on purely scientific grounds. Indeed, the discussion has been going on at our very door, and the incessant chatter of talking PARROTTS, and the crumbling brick and mortar of world-renowned Sumter.

When the adventurous and self-reliant GILLMORE won his brigadier-generalship, by sending his new projectiles through and through Pulaski, from sand batteries more than a mile distant, it became evident that another element was introduced into the discussion, that of the range and precision of artillery fire. It was manifest, at least, that the prescribed dimensions of the walls of forts would no longer do.

And now we have the staring fact before us, that while Sumter was falling into ruins, under our artillery fire—the south wall a pile of rubbish and the north wall crumbling into a heap of ruins." Battery Wagner withstood two stormings, and the concentrated fire of the land batteries and the Monitors; and that, too, while over and alongside of it GILLMORE was shelling Charleston, five miles away, with his PARROTT guns. What shall we infer?

Without pretending in this brief space, to discuss the question, far less to offer a decision, the following advantages of earth works may be stated:

Their much greater cheapness; the greater ease of erecting them, earth being always at hand, when stone must be brought from a distance; the little loss, comparatively, in abandoning them, when, as is often the case, new and unforeseen circumstances render them useless. But beyond all these there is an incalculable benefit in the facility they offer for repairing damages. When a stone or brick wall is breached, however strong originally, the crumbling cannot be arrested under the enemy's fire, while, on the other hand, with harrows and sand bags, an earth-work assumes very soon its original form.

We state the question and invite discussion. Our great war has already developed more startling changes than we had dreamed of in our former philosophy. The rules of strategy are modified; the whole science of artillery—guns, powder, projectiles—has received wonderful progress, and among the many questions it is destined to answer definitely, is the one we propose in our caption: "Shall permanent works be constructed of earth or masonry?" or, another—"Will further experience present such modifications of both as will render a combination of these elements the most useful?"

A NEW scientific work, by Brig.-Gen. GILLMORE, will soon be issued from the press of Mr. VAN NOSTRAND. It is entitled a "Practical Treatise on Limes, Hydraulic Cements, and Mortars," and consists of the reports of a series of experiments conducted in New York, under the authority of the Engineer Bureau of the War Department, during the years 1858 to 1861, inclusive. The manuscript was nearly ready for the publisher two years ago, at the time of the completion of the experiments, but the active professional duties of the author made it impossible for him to devote personal attention to its issue. And even now it appears while General GILLMORE is absorbed in his great engineering work on Morris Island. It is hardly necessary to say that this Treatise is a thoroughly practical discussion of its subject, and reflects honor upon the corps of which he is so distinguished a representative.

WE have, at length, a key to the whole secret of NAPOLEON'S mysterious and Machiavellian operation in Mexico. It is at last officially announced that the Austrian Archduke MAXIMILIAN has definitively accepted the throne of Mexico for himself and his descendants; and we are told by the best authority, the *Memorial Diplomatique*, that the first overtures made to the Court of Vienna, touching the candidature of the Archduke MAXIMILIAN to the throne, date from the 9th of October, 1861! This was *three months* before the handing of the French at Vera Cruz. All his preparations about settling the payment of French debts and reparation for French injuries have been, therefore, simply a tub to catch a whale; and his solemn promises that the "autonomy" of Mexico should not be disturbed, were vows which he had never the remotest idea of fulfilling. This upshot will not disappoint any man who has appreciated the true character of the French Emperor. The policy of our Government in regard to this matter will be, if we may use a military term in such a relation, simply one of "observation." Our minister, Mr. CORWIN, remains still accredited to Juarez. Diplomatic transactions will be made only with him, and in no event will our Government recognize the Austro-Almonte rule.

GEN. GILLMORE'S reply to the whimperings of BEAUREGARD about his disregard of the rules of civilized warfare, in firing at Charleston without giving P. T. G. B. all the notice he thought proper, is one of the deftest bits of diplomatic strategy we remember to have seen. He simply calls his attention to the well-established principle that the commander of a place attacked, but not invested, having its avenues of escape open and practicable, has no right to a notice of an intention of bombardment other than that which is given by the threatening attitude of his adversary. "Even had not this letter been written," adds GEN. GILLMORE, "the city of Charleston has had, according to your own "computation, forty days' notice of her danger." This stroke of diplomatic flanking could not have been more effective.

MR. VAN NOSTRAND has in press the Life of NAPOLEON, translated from the French of Baron JOMINI, by Major-General H. W. HALLECK. It will be issued in four octavo volumes, and will be a valuable acquisition to the military literature of the country.

REBEL assertions as to the prevalence of yellow fever in Gen. BANKS' army, are without foundation. The health of the Army and of the City of New Orleans is good.

THE EDUCATION OF GENERALS.

BEFORE this war, the reading public in this country, and even those who affected a fondness for the military art, although they had read, not without great interest, the history of modern European warfare, had gained but little practical knowledge from all their reading. The strategy of Europe, well known for centuries, they studied on maps: the battles were fought on paper, with brittle black and white oblongs for the actual troops, with a few figures for reference of the result. NAPOLEON simply pulls one string at Marengo, and the great battle rages along the Fontanone; another at the moment of repulse, and DESAIX returns, with clock-like precision, from Novi, and saves the day. The centre is forced at Austerlitz with a gigantic dislocated line marks the splendid charge of MCDONALD'S devoted column at Wagram.

The troops being thus made to their hand, how little do they think of the *lieux de manœuvres*, the generals and the generalship, that move the puppet masters on the mimic field. That there were many great generals we knew, and their names we knew, and we accorded to them a vague sort of ignorant praise, but of practical generalship, we have since learned by sad experience, even the military reader knows nothing;—whether generals were like poets, born an inspired race, or whether they could be made by education and culture, and the kind of culture necessary. Such is the difference between battles on paper with black ink and real battle-fields whose lines are drawn with blood.

With this principle, let us look at the condition of our own army at the breaking out of the rebellion.

Our little army had but one major-general and three brigadiers. The entire force was less than 20,000 men, scattered and lost to sight over our vast territory. We had at no point troops enough to form a line, and any manœuvres were never dreamed of. American strategy, so much grander and more extensive than that of Europe, was a sealed book. And when that book was to be suddenly opened, by ignorant scholars, the great emergency called into the field hundreds of thousands of men, and hundreds of generals to command them. It was, at first, like calling for sailors among Mongol Tartars who had never seen the sea. Where was the stuff out of which they were to be created? First, it lay obscurely enough in the lower grades of the army among lieutenants and captains of the older officers being, by our system of lineal promotion, for the most part invalidated by age and hard service. To this indeed, let us say, in passing, there were a few notable exceptions, such as SCHENCK, HUTCHINGS, WINFIELD, and CASEY. Again, the stuff out of which generals were to be made lay completely latent in civil life, among the untried patriots in the learned professions, at merchants' desks, on farms, in great factories, among teachers and engineers, and railroad men,—and, unknown, the right stuff was sufficient of the art, as well as the developments of a painful battle experience.

Pending this experience, some of the first appointments were made according to military antecedents, and WEST Point election: but very many were made through political favor. Men who never dreamed of being called to fight, who hoped the rebellion would be ended "in sixty days," grasped at the glittering stars with their dignity, influence, and emoluments.

But a battle or two soon opened the eyes of the Government, betraying these *nous*, notwithstanding the hoe's shine. It became evident that if *ours* are the first special element in an army, *generals* are the second and equally important—generals of education, experience, valor, and untiring energy. A single retrospective glance will show that from that day to this we have been educating such generals in the only school where they can learn—the battle-field, the thousand vicissitudes of success and disaster—glory and danger. How many generals have been eliminated in this schooling process! In the very progress of things, this educating process becomes auto-plastic. Little by little, the officer in a regiment becomes, by common consent, its colonel. So the colonel, who by the fortunes of war finds himself temporarily in command of a brigade, and does his work dexterously and nobly, is made a brigadier, while the brigadier, who has handsomely outstripped his fellows in the provisional command of a division or corps—who has gallantly led his men into the thickest of the fight, showing a cool eye for positions and combinations, in the midst of danger, is exalted to the dignity of two stars, as the rank of his real merit. Such, at least, is the healthy rule; there are of course painful exceptions.

But it must be observed that there are many gradations and much variety in what we call generalship, even after they have been educated to the uttermost. NAPOLEON, who, in 1799, declared himself the only man in France capable of commanding a hundred thousand men, is said by MARMONT to have been ignorant of the details of infantry tactics, and incapable of manœuvring a single brigade, which, as he was educated an artillery officer, is not improbable; NEY, *le plus brave des braves*, and the very soul of the rear guard in the retreat from Moscow, was only a grand tactician and not a strategist, as his conduct at Quatre Bras clearly demonstrated. He was really incompetent to plan a campaign or command a separate army. MURAT, the prince of lightborsemen, was but a sorry general, and a farcical military monarch. MCDONALD, the hero of Wagram, was therefore justly beaten when he encountered Marshal "FORWARDS" on the Katzbach.

An enumeration of our own failures, and the whole experimental progress from the beginning will show us that excellence and genius of a magnificent ratio, as we say, are not to the highest rank. We have good colonels and brigadiers in plenty. We have several excellent division and corps commanders; but commanders of separate armies have been the *rara aves* for whom the nation has thus far struggled with but poor success; for they must combine God-given genius with the surest capacity for culture, and with elements of moral courage and mental and physical endurance which, measured by the multitude, are simply superhuman. We *say partial success*, but in reality every day demonstrates a more approach to this high ideal:—MEADE fighting the greatest battle of the war three days after assuming command, and winning it; ROSECRANS outwitting and scattering BRAGG's famous force; and not least, "unconditional surrender" GRANT, in his superb movements on Fort Donelson and Vicksburg.

We cannot stop to speak in special delineations. Suffice it at present to say that the great school for generals is now in most successful operation—a school in which are learned not only the details of military experience, but rare lessons of judgment in which the only ends aimed at are "our country's, our God's, and truth's;" of which the honored alumni, if they fall, will be "blessed martyrs," and if they succeed and survive, shall be registered among "the immortal names that were not born to die."

SIMPLE HINTS ON MARCHES OF INFANTRY.

BY A PRUSSIAN OFFICER.

GENERAL SUGGESTIONS.

All strategical and tactical operations depend on two factors: space and time. If large bodies of troops and their warlike materials must be concentrated at a given point in the shortest possible time, railroads offer the most convenient conveyance; wherefore, in countries often exposed to war, these lines of communication are built in such directions as to facilitate these operations. But engines, cars and railroads are liable to accidents, and, moreover, there arises the serious question whether the custom of always transporting troops on them would not materially diminish their tactical efficiency. The troops must chiefly rely on their natural means of locomotion. The following hints very well. "About the middle of March, 1855, the 2d regiment of Zouaves received an order to put two of its battalions on the war footing; which done, these two battalions were to hold themselves in readiness for embarkation on the 10th of April, with Bougie for their destination. And to break in the men to fatigue, the day of departure was, by permission, anticipated, and the battalions, instead of going round by sea, *marched* from Oran to Algiers." Of course, these two battalions did splendid service. They were able to bear any reasonable amount of fatigue, and did not suffer from bivouacks in rain and cold. Take a regiment over so well drilled on the parade ground—if it be composed of fair weather soldiers, not accustomed to carry knapsack and rifle on long marches—it will be useless. Broken down by a few miles of marching, it will be unable, and comparatively, though not absolute, privation, they cannot fight. The French troops at Buffalora suffered terribly from the fire of the Austrians. To support them, some regiments, then at Terrate, marched two leagues at the double-quick, and felt no fatigue afterwards, without much breath. The Prussians had fought and were beaten at Ligny, yet marched to Waterloo in spite of drenching rain and the nearly impassable roads, attacked NAPOLEON in the evening, and pursued him all night so vigorously that his army had never an opportunity to rally. Now, in order that the soldier may must not diminish the strictest discipline of a regiment and its cheerful readiness to go through the marching, countermarching, playing, deploying and fighting on the battlefield. They will be able to do so, provided officers and men have learned to march in a proper manner, and the commander has conducted the march in a sensible, soldier-like manner.

A raw material forms itself in the hands of the artisan to a useful implement; even so must the raw recruit be formed into a soldier by the skill and perseverance of the officer. Let him devote himself to his professional labors. On his knowledge and zeal depend the efficiency of the men intrusted to him by his confiding country. If he neglect to learn what to do and how to do it, straggling, drunkenness, marauding, disease and general inefficiency of the men will be the consequence. It is evident that volunteers require much more to be looked after and to be watched over than regular soldiers. They volunteer to defend their country, issuing from pursuits of life which are most certainly the very opposite of that of soldiers in the field. They must unlearn and learn a great deal in a very short time; they very naturally desire to be instructed by their volunteer officers. The government is right when it expects that the officers should render themselves proficient in their duties, and when it punishes them for any want of this noble ambition, which will adorn them more than shoulder-straps and lace. The devoted attachments, esteem and unconditional obedience of the men will be an ample reward for their exertions to behold of the men, and of the general cause of humanity. If they act upon this principle, every officer of the regular army will be delighted to call them comrades, brothers; otherwise not.

Let us, therefore, enter into the details of a foot-soldier's outfit, and of the laws which regulate the march of a body of soldiers. The following hints are suggestions not let out of place. The captain of a company should divide his men into two classes. The first class consisting of the clean, sober, zealous, orderly and brave men; from among them the corporals and sergeants are to be selected. The second class made up of those who have not all these qualities. If a first class man should render himself liable to a severe punishment, let him be removed into the second class, and the good conduct of a second class man should be rewarded by promotion into the first class. The first class men are employed for every service of danger, the second class men for fatigue duty. In this way many a degrading punishment can be avoided as well as emulation and the proper sense of a soldier's honor be stimulated. Now, let us see what an officer has to attend to and cause to be attended,d to besides drill, in order to bring his men into the proper state of efficiency and to keep them therein.

CLEANLINESS—CARE OF FEET.

Uncleanliness being the origin and promoter of disease, the whole body must be kept clean. But many men are apt to neglect those parts of the body which are not exposed to view—the soldier should pay at least as much attention to the cleanliness of his feet and the keeping of the nails of his toes as to those of his hands and fingers. Yet these frequent ablutions should never take place while the man is heated. A warm water, frequently used by readers the skin of the feet too soft; use therefore cold water, or now and then vinegar or spirituous liquors. If the feet have been perspiring when, used externally, however different the opinions may be about its influence upon a man who uses it internally. The boots should never be taken off immediately after a march; the feet are heated, a sudden exposure would cause them to swell —the man will become painfully aware of it next morning when he attempts to get into his boots. In most cases it is the man's fault when his feet are blistered. If you show indisposition to march, you cherish neglect and you will have a cart-load and more of men with sore duty. It is the good soldier who best must do more than his share and who is free from blisters. The negligent soldier—that is not fair. Hence, compel the sleeves to attend to themselves and make them understand why they ought to do so; if they do not, they will blister. If you have not a fold in the socks, &c., the feet should be blistered, pass a darning needle with a woolen thread through the blister and leave the latter in it. It will absorb the matter of blisters and the sore will dry, while, when you cut the blister, the wound will be exposed to pressure, rubbing and dirt, which will lay up the strongest man for some time. The socks should be knitted of woollen yarn, which absorbs the perspiration and remains soft; they are superior to cotton ones. Socks not properly darned hurt the feet. In such a case, or when there is no opportunity for washing, the following may be recommended: Take a piece of clean, soft, linen cloth, grease it on one side, fold it carefully round the foot, the greased side on the skin—this cloth is cool, and it is, if washed every day or two, the most convenient substitute for woolen socks. Every soldier should carefully select his pair of shoes from among a number; the time thus spent is saved later, a hundred-fold. Has he the choice, that which he feels not quite at ease on the march? No pity for this silly man, and let him be the last. Shoes will be in him practically the effect of paying no attention to orders. Shoes and gaiters fitting close about the ankle, or low boots with gaiters are recommended for a foot-soldier's use in boots. Try after a long march on a rainy day to get your tall boots off—well, it requires the assistance of several men to perform this operation. Keep a pair of shoes in the knapsack. March and bivouack for several days and try then whether you can put them on at all, and if so, what an amount of labor and cursing to get into them. Shoes are easily thrown off and put on under all circumstances. Of your stockings, let the heels run with long gores then and let them slowly dry; they will remain soft, while under a different treatment the leather will be so hard as to cut your feet. An American officer wounded and taken a prisoner by the French, during the late war in Italy. When brought into the camp, a captain of the cuirassiers, an orderly sergeant what he thought of that tall and deep-chested prisoner. The sergeant answered: "What splendid boots that fellow has!" Thus sergeant was a true "dragoon."

CLOTHING OF THE MEN.

Flannel shirts are the most desirable for soldiers. They absorb the perspiration and prevent colds and chills whenever the perspiration is stopped. In general, all clothes exposed to the cold freeze or to lying down when thoroughly heated. The next best material is strong cotton.

Let the men wear no stocks, but neckerchiefs or simple strips of cloth, fastened behind by hooks and eyes or by a buckle. Many English soldiers suffered much in Bulgaria and in the Crimea by the obstinacy of some superior officers, who would not allow them to go without this instrument of torture, for the sake of military discipline.

Let all parts of the dress be kept clean and in repair. Nothing can make the worse for wear—this cannot be helped—yet it must be well fitted, brushed and washed that when the men appear on duty as well as when they are off

duty. If they neglect these, they will neglect other duties—they will get sick, and lay up self-inflicted wounds; therefore, that they have sewing materials in their knapsacks and that they use them. It is not astonishing that the agence regulars look down upon a volunteer, if he be aimless and slovenly.

The haversack must be kept reasonably short; cleanliness requires it. Dust and perspiration cause filth, and if not guarded against, the plague of vermin will infest the whole camp.

THE KNAPSACK.

A very important object is the knapsack. Its shape and construction have been found to be very objectionable to a soldier; an immense amount of property is lost, and the comfort of the soldier rendered impossible, if the knapsack be too heavy, or so constructed that it will not allow the air to pass. The straps across the chest prevent the proper expansion of the lungs; they impede the breathing, and in no man who is not very deep-chested will aim give out, even when marching in quick time, to say nothing of the double quick. If he keep the strap loosened to facilitate breathe; if he open it, he must carry the whole weight of the knapsack with his shoulders, already burdened with the musket or rifle which he unwisely has had brought to him, and the load will be so even worse if the part of the knapsack which touches the back be straight; the shoulder blades and the small of the back must soon be sore. Let the straps be well padded. When the Prussian war department determined to introduce into the army a knapsack more practical and convenient than the old one just described, several officers of a regiment (marching from the Baltic to the Rhine) were appointed a committee to test the new knapsack previous to its use. In order to be able to do so conscientiously, they carried each of the six different patterns, like privates. The Prussian knapsack fatigues the less that all the weight is carried facilitly for slinging and unslinging, although cooking utensils, waistbelt, revolver-cartridges, and bayonet are also carried by it.

Some of the reformers object to the use of tobacco. Have these gentlemen ever fought during the day, taken, exhausted from fighting, a position, and then, when they were lying down into the mud to sleep, and risen in the early morning conscious that there is nothing to revive their spirits but the skirmish? If they have not, they know not the quantity of breakfast tables about the wickedness of hungry, shivering soldiers who solace themselves with a pipe of tobacco or a cigar.

DUTIES OF OFFICERS.

The officer should be as much to the soldier in all military virtues. If he attends to his duties, shows solicitude for the comfort of the men, and bears with them the fatigue and privations of the campaign, he will have their confidence and equanimity, they will obey and respect him. He cannot always prevent some grumbling, nor should he try to stop it unless it be of a mutinous character, which is in the Prussian army there is a principle which works very well. "Think of your line, but do what you are ordered to do." Grumblers are rarely dangerous, for as soon as they have eased their overloaded hearts, they will do what they are ordered to do. Mutinous characters who frequently neglect their duties, will spy out and give their ear to informers—and they make matters worse by these proceedings.

Keep your men well-disciplined, but do not unnecessarily reduce them to sing during the march, speak here and there a word of encouragement; in short, be their trusty guardian, but let them feel at the same time that it would be dangerous to trifle with you.

FEIGNED DISEASES.

DR. J. THEODORE CALHOUN, in the course of a series of "Rough Notes" of his campaigning as Army Surgeon, contributed to the *Medical and Surgical Reporter*, alludes to the facility of the men in feigning various maladies, to secure exemption from duty. The term "malingerer," always in use previously to this war to indicate one of these pseudo-sick men, has now become superseded by the word "dead beat," borrowed from the Bowery dialect. He says the use of this new term is universal; that it is heard among all classes, from Major-Generals to drummer boys, and has almost reached the dignity of "Alcibiddle," a word "which one now sees in the official language of the army in the case of a court-martial."

The doctor warns new medical officers especially to be on the look-out for these malingerers. When a surgeon fresh from civil life enters the regiment, they seize the opportunity to play their game. Every one of them makes his appearance at the "sick call," and they pour such a series of complaints into the new surgeon's ear, and detail such grevious maladies that he is almost persuaded to believe that "his predecessor has been sene heartless brute who has been unfeeling to the poor fellows; but let him order them out duty, and he will find that they pour such a series of crippled rheumatic of the morning the erect and active skirmisher of the afternoon."

Rheumatism is with soldiers the favorite disease to be "played," and some of them are so skilful in their simulation that it is almost impossible to determine by ordinary means whether the case is genuine or spurious. The only way is to find out the character of the alleged rheumatic. Noxious doses and severe medical treatment will not conquer a man who has determined to "play for a discharge."

DR. CALHOUN gives the following account of one of the most pertinacious of these impostors. He was an enlisted man in Co. B, 6th Excelsior, and a Frenchman of some forty years of age. He had been in the Zouaves D'Afrique of the French service for fourteen years, and at the time he came under the doctor's notice he was a private in the regiment of which he was surgeon:

"He presented himself at sick call while the regiment was in Maryland, complaining of rheumatism in the muscles of the back and one leg, and was not at first suspected. But as he took his medicine regularly, and as he got no better at all, my attention was directed to him by inquiries in his company from which I learned that he was by profession a juggler, or, as that class of performers now style themselves, a *prestidigitateur*—that his nights were spent in gambling, and that every thing tended to show that he was a malingerer.

At the next morning 'call' I told him that I knew all about him—that his disease was all assumed, and I directed that my surgeon to put him on knapsack drill.

He protested, begged and threatened in turn, but I was inexorable. He was compelled to go on duty, but he still persisted in his rheumatism and limped after the most approved fashion.

After a month's trial the captain requested me to try him again with medicine and see whether a somewhat severer course of treatment would not bring him to terms. I accordingly put him under purgation, blisters, and low diet, but with no effect. The rheumatism was proof against all batter, and he would wake up his comrades at night by his cries of pain. He was transferred to my hospital tent, and I myself could appear in great drops upon his brow. I watched him very narrowly and still adhered to my opinion. The officers of his company, however, found I had been mistaken, and that he really was sick.

I placed him out of the hospital and reported him for duty; but after trying various prescriptions without success, and after trying with alike ill success to get me to consider him sick, he compelled me to give him up as a case beyond their power to manage, and he did about as he pleased, occasionally doing a little guard duty or helping around the cook tent.

On one occasion he came to me, and after apologizing in the Frenchiest style of polite obsequeusness for the trouble he had unwillingly given me, inquired if I had a vapor bath was the only thing that would cure him, as that had relieved him when in the French service after long years of suffering. If I would sign his discharge papers he would go to New York, get cured by a vapor bath and immediately return to duty. I told him that there was no necessity for his doing that, as I would arrange to give him vapor baths in camp. With a sang-froid unimaginable he quickly replied, that that would not answer at all, that he must needs keep housed, and that a tent would not answer to stay in after the bath.

Shortly after this, and after he had been malingering for three or four months or more, I was one evening just about to be turning out of a tent near the color line (where I had been to visit a patient) for the night, when I heard the most troublesome rheumatic running at full speed across the parade ground.

A wagon with pies had been in camp and was about leaving; he wanted a pie and had hallooed to the driver of the wagon to stop. The driver refused to stop him, he made a run for the wagon when he suddenly confronted me.

His game was up, and with the utmost nonchalance he began to whistle and commenced to "Doctors' Row" the surgeon's him. A few days after I asked him what tempted him to play such a long and end more so many punishments. Striking his pocket as if feeling the gold, (for Government was then paying specie), he laughingly replied in his broken English, "Ah, doctor, when out of money he was very sick that he might spend his time in gambling, at which he was most expert, and from which he realized large sums.

After the battle of Fair Oaks he again commenced his malingering, but his former exposé prevented him from having much success. In fact, however, as one belligerent march he positively refused to go further, and the colonel told him that if he made a wagon, on the chance, untied himself, and fell behind, and on the appearance of an ambulance went through his terrible contortions, was picked up by the ambulance driver, and got a good lift for the night we found him quietly cooking his coffee, (the ambulance having passed us), and as we rode in he saluted us, (a quiet smile of triumph in his eye), with a polite military salute and a pleasant 'Bon jour, Messieurs.'"

Such facts as these should put the public on their guard against the stories of soldiers as to the heartlessness of medical officers; however, it is to be remembered that cases should not occur now and again where real illness fails to receive proper attention by reason of the prevalence of that which is simulated.

GYMNASTICS IN MILITARY TRAINING.

The important services rendered by the French Zouaves and other specially trained crops in the Crimean and Italian campaigns, have drawn the attention of European military men to the subject of gymnastic drill for soldiers, as a part of their regular drill. In England, where changes of any kind are but very slowly introduced into the army, the subject has been much discussed, but no thorough course of education of the bodily powers of the men has been as yet adopted. In the Continental service, however, experiments have been quick to understand the advantages of the system, and to improve their course of military training by its adoption. Gymnastic exercises are made a part of the regular drill, not only of recruits but of the older regiments. In Russia, especially, the ordinary drills are "constantly and pleasantly varied by gymnastics." Gymnasiums are attached to every regiment; regular instructors are employed, and the men are said to be exceedingly fond of the exercises, looking upon them more in the light of agreeable diversion than regular drill. Emulation is excited, and the task of the instructor is thus greatly facilitated. The moral influence of such a high development of their physical powers is spoken of as very striking. The soldier understands his bodily superiority, and gains the self-reliance that leads him to perform the most daring deeds.

In a paper on military gymnastics, read before the Royal United Service Institution of England, by Lieut.-Col. Rogerson, in which this subject is very thoroughly and very ably discussed, the advantages of gymnastic training are thus stated:

"Gymnastic training possesses the peculiar advantage of being not only exceedingly useful, but also exceedingly interesting and attractive. It is notorious that the dull, monotonous exercises of the parade ground are intolerably irksome to the men, and that, in fact, although the part of rifle instruction which consists of target practice is interesting and attractive, yet this is preceded by a tedious drudgery of position drill, which is so irksome and uninteresting that it has a strong tendency to render the whole process of instruction disgusting and unpalatable. Among the young and the healthily, with the exception of a few of the constitutionally sluggish and apathetic disposition, gymnastics are invariably popular, and there is no preliminary drudgery to be gone through. The first exercises of the novice are as interesting as the exercises of those in the most advanced stage of training. Both in their nature and in their different stages, the training process consists of efforts requiring the most energetic application of the body, and being persevered in for a greater or less number of times, are certainly followed by success producing the most delightful and animating effect on the mind. This is precisely the kind of occupation adapted to gratify that instructive impulse which renders every species of activity pleasing to the young. Practiced only by a single individual, gymnastic exercises would be attractive as an interesting daily occupation, but when practiced simultaneously and in classes of a large body of young men, the interest of these exercises is capable of being intensified to a very high degree. To render the desire of excelling in them the ruling passion of the mind of every recruit on the great majority of young soldiers, all that is necessary is to establish periodical trials of skill, so arranged as to call forth the energies of the whole party, and to afford every individual soldier the opportunity of proving himself the best man at some particular military or gymnastic exercise; first, in the company to which he belongs; then against a third, in the camp or garrison in which he may be serving; and, finally, in the whole army."

In addition to the testimony of Col. ROGERSON, we have that of many other English officers who have devoted attention to this interesting subject. An experimental gymnasium is established at Aldershot, and the results of the training have been most satisfactory. 1,800 men received during one year an average increase of nineteen pounds in weight, and the average muscular development produced by these few hours of training was, increase of measurement of chest, ¾ to 1¼ inches; of fore arm, ½ to 1 of an inch, and of the upper arm 1 to 1½ of an inch. But these results bear no comparison with those of other gymnasiums where the instruction is more systematic.

As Col. ROGERSON very justly observes, the object of gymnastic training is not to teach the soldier to do particular feats of strength, but chiefly to develope the power of his muscles, give him the command of his limbs, and increase the force and agility of his movements. If all our soldiers were picked men such training might be less necessary, but the previous life of many of them is such as to diminish muscular vigor and in no wise to prepare them for the strain the modern system of warfare makes on the endurance of an active campaign make upon their powers of endurance.

The subject is one of great interest to military men, and deserves a thorough discussion in this country.

HINTS TO CAMPAIGNERS.

No. II.

In a moderately dry climate there is but little doubt that bivouacking is superior to tenting; fresher air is breathed, and a man is more imbued with a feeling of will life when he sleeps habitually in the open air than when shut up in a tent. Besides, there is the vicinity of an enemy there can be no comparison between the hazard of a tent and that of a bivouac. In the former, a man sleeps heavy; he can see nothing, and he can hear but imperfectly. Moreover, his position being accurately known, he is at all times in danger of an attack. The first Napoleon was always in favor of the bivouac as being far more healthy than tenting.

One of the most simple methods of securing the protection of a wind-tight wall under the lee of which to sleep, is to take advantage of two or three small bushes standing near together, and interlace their branches with boughs so as to form a thick hedge. Or, a few leafy boughs may be stuck in the ground so as to incline over the bed, and wattled-in with other boughs to make the screen secure against wind. A good arrangement is to have a cross-stick supported by two upright forks driven into the ground; against this cross-bar a number of pines are made to lean, on the back of which fit or pine branches are laid horizontally; and against the branches are to be placed another set of leaning poles to secure all of their weight.

Having provided the shelter, the preparation of the bed is next in order. It is a mistaken notion that the upper covering is all a person need concern himself about; there must be clothing between him and the earth as well as between him and the air. Warmth is as much required by the under portion of the body as by the upper. Let any one try the experiment of rolling himself in a single blanket and sleeping on the ground. The undermost side on a cold night will be found by far the colder of the two, and if the ground be wet, its dampness will penetrate through a very thick substance. To prevent this,the sleeping place should

be covered with grass, leaves, rushes, bags, or anything that can change may afford for the purpose. Even small articles of clothing or home furniture that cannot be rendered available as covering should be used in this way.

The texture of the upper cover should be such as to prevent the wind from blowing through, for if it does, no thickness will be of any avail in keeping out the cold. Hence the advantage of buffalo robes and other skins. It is, however, of importance that the outer covering should have such a weight as not to be easily displaced by the movement of the sleeper, for, if it be, he will feel the cold.

When using the ground as a sleeping place, it is advisable to scrape a hollow therein, so as to be kept at a level with the position she lays will occupy, and sloping in both directions to the surface at about the places to be occupied by the shoulders and feet. This is necessary for the body to assume the position it would naturally take if recumbent upon a soft bed or mattress, and will add greatly to the comfort of the individual. To get up in the morning from the surface for a few hours, and he will think he has attained the very acme of discomfort from the soreness felt in the hips and legs. At any rate, the sleeping cavity cannot be made a little hollow should be made in the ground, just where the hip-bone would otherwise rest.

In a wet, unhealthy climate the advantages of a bivouac must be dispensed with, and the tent must be resorted to for protection against rain, dew, and malaria. In the choice of a tent the most roomy and easiest pitched should be selected. One that will stand in some shape when the pegs, or at least six, are knocked out, and may be close down to the ground without the intervention of any ropes, it is no objection that it should require more than one pole in the centre to raise it, it must be borne in mind that a tent in use weighs heavier than it does in the maker's dry shed-room.

A tent should never be pitched in the ordinary way, as it is far more roomy when properly pitched, besides presenting a better appearance. To drive tent pegs securely when the soil is loose, the surface should be cut in the usual way before they are driven in. Pouring water upon loose mould renders it more tenacious of the pegs, and the tent-ropes when dry, at least one should be driven at its back. In fact, in order that proper proficiency should be attained in this particular, every command should be frequently drilled at tent pitching.

THE MILITARY AND NAVAL ACADEMIES.

THE MILITARY ACADEMY.

Regulations as to Admission.

As frequent inquiries are made in regard to the mode of procuring admission to the Military Academy, all persons interested in the subject are hereby informed that applications should be made by letter to the Secretary of War. By provision of law candidates from the Congressional District and the District of Columbia is entitled to have one cadet at the Military Academy, and no more. The district appointments are made on the nomination of the member of Congress representing the district at the date of the appointment. The law provides that the candidate shall reside in the an actual resident of the Congressional District of that State or Territory, or District of Columbia, from which the appointment may be made. Also, appointments at "at large," not to exceed ten, are annually made. Application can be made, at any time, by the candidate himself, his parent, guardian, or friend, and the name is then placed on the register. No preference will be given to applications six months, one year, or more in advance of those entered in the register when the candidate is under or above the prescribed age; the *precise age* must be given; *no relaxation of the regulations can be granted in this case*; nor will any application be considered in cases where the age and other qualifications of the candidate are not stated. The fixed abode of the candidate, and the name of the Congressional District which he considers his permanent residence, must be set forth in the application. The age of a cadet is $16\frac{1}{2}$ years, to commence with his admission into the Military Academy, and is considered ample, with proper consent, for his admission. Admissions to the corps are made annually in the month of February or March, on the applications made within the current or preceding year. The claims of all the candidates for admission will be considered and acted upon. No certain information can be given as to the probable success of the candidate before the arrival of the period for making the examination. Therefore, making applications must not expect to receive information on this point. No candidate can be admitted who has appointed who has had a brother educated at the institution.

Qualifications.

Candidates must be over sixteen and under twenty-one years of age at the time of entrance into the Military Academy; must be at least five feet in height, and free from any deformity, disease, or infirmity which may render them unfit for the military service, and from any disorder of an infectious or immoral character. They must be able to read and write, and will be examined in the first four rules of arithmetic, and in simple and compound proportion, and in and of vulgar and decimal fractions.

It must be understood that a full compliance with the above conditions will be indispensable to admission. No candidate must write in a fair legible hand, and without any material mistakes in spelling, such sentences as shall be dictated by the examining officers; he must answer correctly, and without errors, all their questions in the abovementioned rules of arithmetic; failing in any of these particulars, he will be rejected.

It must also be understood that every candidate will, soon after his admission, be subjected to a thorough and rigid examination by an experienced medical board; and should there be found in him any of the following causes of disqualification, to such a degree as will immediately, or in all probability may, at no very distant period, impair his efficiency, he will be rejected.

1. Feeble constitution and muscular tonsity; unsound health, from whatever cause; indications of former disease; glandular swellings, or other symptoms of scrofula.

2. Chronic cutaneous affections, especially of the scalp, or of any disorder of an infectious character.

3. Severe injuries of the bones of the head; convulsions.

4. Impaired vision, from whatever cause; inflammatory affections of the eye-lids; immobility or irregularity of the iris; fistula lachrymalis, &c., &c.

5. Deafness; copious discharge from the ears.

6. Loss of many teeth, or teeth generally unsound.

7. Impediment of speech.

8. Want of due capacity of the chest, and any other indication of a liability to pulmonic disease.

9. Impaired or inadequate efficiency of one or both of the superior extremities, on account of injuries, especially of the clavicle, contraction of a joint, extenuation, deformity, &c., &c.

10. An unnatural curvature or incurvature of the spine.

11. Hernia.

12. A viscous state of the veins, of the scrotum and spermatic cord, (whoe large), sarcocele, hydrocele, hemorrhoids, fistulæ.

13. Impaired or inadequate efficiency of one or both of the inferior extremities on account of varicose veins, fractures, malformation. (flat feet, &c.,) lameness, contractions, unequal length, bunions, overlying, or supernumerary toes, &c., &c.

14. Ulcers, or unsound cicatrices of ulcers likely to break out afresh.

EDWIN M. STANTON.
Secretary of War.

THE NAVAL ACADEMY.

Regulations as to Admission.

1. Application, addressed to the Secretary of the Navy, can be made at any time, by the candidate himself, or by his parents or guardian, or any of his friends, and his name will be placed on the register. The registry of a name, however, does not give assurance of an appointment, and no preference will be given on account of priority of application. No application will be considered where the candidate is under or above the prescribed age, where the precise age and legal residence are not stated, and the law requires that the applicant should be a resident of the Congressional district from which he applies.

2. The number of midshipmen allowed at the Academy is two for every member and delegate of the House of Representatives, two for the District of Columbia, ten at large, ten appointed annually from the sons of officers, etc., of the army and navy, and none may be absent from those entitled to them who have been at least one year in the service, six months of which shall have been sea service.

3. The nominations for midshipmen, from the District of Columbia, from the enlisted boys, from the sons of officers, etc., and at large, is made by the President. The nomination of candidates from the Congressional district or Territory is made on the recommendation of the member or delegate, from actual residents of his district or Territory.

4. Each year, as soon after the fifth of March as possible, members and delegates will be informed, in writing, of vacancies that may exist in their districts. If such members or delegates neglect to recommend candidates by the first day of July in each year, the Secretary of the Navy is required by law to fill the vacancies.

5. The nomination of candidates is made annually, between the fifth of February and first of July. Candidates who receive permission will present themselves to the Superintendent of the Naval Academy on the 20th of September, and undergo a rigid examination as to their qualifications for admission. Should any candidate be found physically or mentally deficient, the member or delegate from whose district he was nominated will be notified to recommend another candidate, who shall be examined between the twentieth and thirtieth days of September following.

6. No candidate will be admitted into the Naval Academy unless he shall pass a satisfactory examination before the Academic Board, and is found (in the opinion of a medical board, to be appointed by the Secretary of the Naval Academy, and two other medical officers designated by the Secretary of the Navy) physically sound, well-formed, and of robust constitution, and qualified to enter upon the duties of officers of the navy.

7. Candidates for appointment as midshipmen must be between fourteen and sixteen years of age. They must be of good moral character, and pass a satisfactory examination before the Academic Board in reading, writing, spelling, arithmetic, geography, and English grammar, viz: in *reading*, they must read clearly and intelligibly from any English narrative work; in *geography*, they must name the capitals of the United States; in *writing* and *spelling*, they must write from dictation in a legible hand, and spell with correctness both words and figures; and in *arithmetic*, be examined in numeration and addition, subtraction, multiplication, and division of whole numbers and vulgar fractions; in *grammar*, and in the proper use of the rules of three; in *geography*, they will be examined as to the leading divisions—the continents, oceans, and seas, the principal rivers, and the boundaries and population of the chief nations, their governments, capitals, and chief cities; in *English grammar*, they will be examined as to the parts of speech and their changes, any construction of sentence, and will be obliged to write an original paragraph of a few sentences. The board will judge whether the candidate possesses in these branches is sufficient to qualify him to enter upon the studies of the Academy.

8. Any of the following conditions will be sufficient to reject a candidate, viz:

1. Feeble constitution and muscular tonsity; unsound health, from whatever cause; indications of former disease; glandular swellings, or other symptoms of scrofula.

2. Chronic cutaneous affections, especially of the scalp, or any disorder of an infectious character.

3. Severe injuries of the bones of the head; convulsions.

4. Impaired vision, from whatever cause; inflammatory affections of the eye-lids; immobility or irregularity of the iris; fistula lachrymalis, &c., &c.

5. Deafness; copious discharge from the ears.

6. Loss of many teeth, or teeth generally unsound.

7. Impediment of speech.

8. Want of due capacity of the chest, and any other indication of a liability to pulmonic disease.

9. Impaired or inadequate efficiency of one or both of the superior extremities, on account of injuries, especially of the clavicle; contraction of a joint, extenuation, deformity, &c., &c.

10. An unnatural curvature or incurvature of the spine.

11. Hernia.

12. A viscous state of the veins, of the scrotum and spermatic cord, (whoe large), sarcocele, hydrocele, hemorrhoids, fistulæ.

13. Impaired or inadequate efficiency of one or both of the inferior extremities on account of varicose veins, fractures, malformation, (flat feet, &c.,) lameness, contractions, unequal length, bunions, overlying, or supernumerary, toes, &c., &c.

14. Ulcers, or unsound cicatrices of ulcers likely to break out afresh.

10. No one can receive a commission as an ensign in the navy unless he be a graduate of the Naval Academy.

11. When candidates shall have passed the required examinations, and been admitted as members of the Academy, they must immediately furnish themselves with the following articles, viz: Four suits uniform cadets, six white shirts, four pairs of stocks, four pairs of drawers, six pocket handkerchiefs, one black silk handkerchief, or stock, one sponge-bag, one pillow, one pair of blankets, bed cover, or spread, two pairs of sheets, four pillow cases, six towels, two pairs of shoes or boots, one hair-brush, two clothes brushes, one shoe-brush, one coarse comb for the hair, one fine comb for the hair, one tumbler or mug, and one thread and needle case.

Room-mates will jointly procure their common use, one looking-glass, one wash-basin, one water-pail, one slop-bucket, and one candlestick. These articles may be obtained from the storekeeper of the Academy of good quality, and at fair prices.

12. Each midshipman must, on admission, deposit with the paymaster the sum of fifty dollars in specie, or in United States notes, for which he will be credited on the books of that officer. He will subsequently, by direction of the superintendent for the purchase of text-books and other authorized articles besides those enumerated in the preceding clause.

13. A midshipman found deficient at any examination cannot by law be continued at the Academy or in the service, unless upon the recommendation of the Academic Board.

14. Each midshipman who voluntarily resigns his appointment or who is dismissed at the time of his admission to the Academy will be required to refund the amount paid him for expenses.

15. A midshipman may be advanced to any class which he may be found qualified to join either upon his mission or at any subsequent examination; and he may be detained at any examination at which he shall be found fully qualified to pass a graduating academic examination.

GIDEON WELLES,
Secretary of the Navy.

THE recent introduction of the Prussian artillery is being actively pushed forward towards completion. Both the artillery and cavalry officers are to be furnished with Colt's revolvers.

THE new breech-loading can invented by Mr. Broadwell, has been recently subjected to a trial at Woolwich Arsenal, England. The improvement consists of a peculiarly shaped self-closing gas ring or valve, which the inventor at first placed in the wedge or breech block of the gun. This ring is now fitted behind the piece, and forms the breech bearing in the face of the breech block. The object of the recent trial was to test the advantages of the alteration, which the inventor has made in the position of the ring. The experiment has not been conducted expressly for its use. The result of the trial is pronounced exceedingly satisfactory, and according to the statements made by its friends, the defects of the system were fully established, in so far, at least, as it is applicable to guns of a smaller caliber than 18-pounder, which it had been tested. The experiment is to be further tested with the 110-pounder, or larger guns. An important feature in the invention is that the gas-check ensures the closing of the breech-block, becomes closed against the escape of gas, from which it is reasonable to conclude that subsequent trials with larger guns will be equally successful.

EXPERIENCE shows that the scarlet uniform of the English army is the most expensive, and the least durable uniform that could be given to troops. The dye is fugitive, and wear well and the dye impairs the durability of the cloth. The Austrian white is the most durable, for the cloth is made of the natural wool of sheep. But it has the disadvantage of soiling easily. The blue, used not only by our army, but also by the French, Italian and Prussian armies, is the most economical, and, finally, all things considered, the best color for uniforms. It has been ascertained by recent experiments made in England, that a dye prepare it for the dye used in the English army, diminishes its strength 20 per cent., and the dye does still further damage to the amount of 25 per cent. The rifle-green, also used in the British army, diminishes the strength of the cloth full 38 per cent. The blue vegetable dye whose use is prized to the cloth in a cold state, is found to be to little or no extent detrimental to the durability of its texture. Blue is also a better color for wear. While an old uniform looks shabby and faded another side of a new suit, an old and a new blue uniform may be put side by side without attracting much attention.

NAVY YARDS AND NAVAL STATIONS.

BROOKLYN NAVY YARD.

There have been several arrivals and departures at the Brooklyn Navy Yard this week. It is reserved, however, for the coming week to put in commission several vessels.

The work on the *Hartford*, *Richmond* and *Brooklyn* is progressing as well as can be expected. They cannot be ready for sea under two months. The U. S. schooner *R. Seaman* arrived at the Brooklyn Navy Yard on Thursday from the Texas coast, where she has been engaged for several months past. She was one of the original mortar flotilla organized by Admiral Farragut, and has been present at all the bombardment of the forts below New Orleans, and in other operations on the Mississippi River. The following is a list of her officers:

Q. A. Hooper, Lieutenant-Commanding; E. Jonvin, Acting Ensign; F. Howard, Wm. McFarland, Master's Mates.

The U. S. gunboat *Port Jackson*, 11 guns, Captain JAMES ALDEN, sailed from the Brooklyn Navy Yard on Monday for a month on the coast of Florida, and will probably will join the flying squadron, under Acting Rear Admiral LARDNER. The following is a list of her officers:

James Alden, Captain; C. S. Norton, Lieutenant-Commander; P. S. Wales, Surgeon; Clifton Hollen, Paymaster; E. S. Turner, W. B. Somerville, Assistant Surgeons; H. F. Mallet, O. N. Armstrong, Acting Ensigns; G. W. Sunvet, J. D. Moore, W. M. Mason, H. S. Sydnye, Acting Master's Mates; Chas. Lloyd, Chief Engineer; Henry Herron, J. L. Wilson, Acting Second Assistant Engineers; C. Winn, Wm. Prentiss, J. H. Rapp, Acting Third Assistant Engineers; Thomas Reese, Acting Gunner; E. S. Hotham, Paymaster's Clerk.

The supply steamer *Newberry*, 5, sailed on Wednesday for ports from the Rebel Capes to Key West with mails and stores for the North Atlantic squadron. The following is a list of her officers:—

T. A. Jenkins, Acting Volunteer Lieutenant Commanding; J. F. Cobb, Acting Assistant Surgeon; E. H. Cushing, Acting Assistant Paymaster; W. H. Bowden, Acting Engineer; Acting Masters; C. Willet, M. Webster, Acting Ensigns; O. F. Wesson, G. C. Williams, W. Long, J. P. Jones, Masters' Mates; Wm. Hall, Acting First Assistant Engineer; R. Tuttle, Acting Second Assistant Engineer; J. Quinn, F. B. Lamas, S. G. Hoffman, J. S. Smith, Acting Third Assistant Engineers.

The U. S. gunboat *Hendrick Hudson* arrived at the Brooklyn Navy Yard on Monday, having left Key West on the 25th ult. The health of the officers and crew was very good. The following is a list of the officers of the *Hendrick Hudson*:—

Chas. P. McDougal, Lieutenant-Commanding; William M. Hubbs, Alex. Wallace, Acting Masters; Albert D. Bache, A. A. Paymaster; John Lynn, A. Engineer; Acting Assistant Surgeon; Acting Assistant Engineers; Charles W. Arthur, Acting Ensign; James Ogden, Horatio M. Lilley, Acting Third Engineers; Henry C. Little, Paymaster's Clerk.

The Yard is so crowded now that a large number of vessels are at the mercy of private ship-builders. The vessels are under the superintendence of Admiral Gregory. The following is a list of a portion of this outside fleet:

PHILADELPHIA NAVY YARD.

Business is quite brisk at the Philadelphia Navy Yard. The work on the new vessels is progressing steadily, and in a short time some of them will be going into commission. The following vessels were put in commission last week from New Orleans, which place she left on the 16th inst. She comes home for repairs, having been in the actions of Forts Jackson and Hudson, Vicksburg, and at the taking of New Orleans. She has been hit a number of times. Some of the shots having entered below the water line, she has been docked, and is now ready for sea until the 1st of this month. The following is a list of her officers:—

R. F. E. Lewis, Lieutenant-Commander; Heber Smith, Assistant Surgeon; Arthur J. Pritchard, Master; David Frazier, Acting First Assistant Engineer; Henry C. Henshaw, M. Gerry, Acting Second Assistant Engineers; C. Winn, Assistant Engineer; Edmund Jones, Sylvanus Nickerson, Acting Masters; W. E. Bridges, Henry Morse, George Spencer, Acting Master's Mates.

The U. S. supply steamer *Bermuda* arrived at Philadelphia on Sunday. She was from Pensacola via Port Royal. On the voyage home she captured the rebel steamer *Corrwin* from Velasco, Texas, bound for Belize with 150 bales of cotton, and in a few hours afterwards she took the schooner *Arthur* with similar cargo, bound for Belize.

The *Bermuda* brought home over 300 discharged men, and several officers invalided. The following is a list of her officers:—

John Smith, Acting Master Commanding; George E. Thurston, Acting Master and Ex-Officer; E. H. Warren, J. A. Hamilton, H. C. Raymond, Acting Ensigns; J. P. Ackley, Assistant Surgeon; A. H. Poore, Acting Assistant Paymaster; E. J. Heaseey, H. L. Dunbar, H. Brooks, Acting Master's Mates; W. G. Smith, Mail Agent; W. H. Ogden, E. Bryan, Acting Assistant Engineers; B. F. Norman, Second Assistant Engineer; T. Lloyd, J. M. King, Third Assistant Engineers.

The gunboat *Chocura*, which returned to Philadelphia a few days since from the blockade off Wilmington, is to be refitted for sea with all convenient speed and reported ready for service at the Navy Yard. She was taken in hand at the Philadelphia Navy Yard in a few days. She is one of the twenty-three gunboats built for the Government when the war broke out, all of which have proved very successful.

BOSTON NAVY YARD.

There has been no material change in affairs at the Navy Yard during the week. An addition of over two hundred has been made to the carpenters' gang, and other departments are in a flourishing condition. The prize steamer *Britannia*, lately captured from the rebels, has been hauled into one of the dry docks, and will be thoroughly repaired for a despatch boat. She will be ready in a few days.

The storeship *Release* sailed with stores for Beaufort, N. C., on Thursday last. The following is a list of her officers:

C. H. Baker, Acting Master Commanding; E. N. Benson, P. A. Gruss, W. F. Maddock, Acting Ensigns; E. S. C. Clarke, Acting Assistant Paymaster; John Spear, Acting Assistant Surgeon; Wm. Hall, Acting Master; Acting Assistant Master's Mates; W. A. C. Stark, Paymaster's Clerk; J. A. Griffin, Surgeon's Steward.

The *Mayflower* is being rapidly fitted for sea, and will be ready for her officers about the 21st of September. She will probably be assigned to duty across the Atlantic.

The *Kearsarge* will sail in a few days from the Boston Yard, for the Wilmington Blockade. The following is a list of her officers:

W. G. Wright, Acting Master Commanding; Charles B. Wilder, Acting Master; G. P. St. John and John Dully, Acting Ensigns; Wm. McLane, Chief Engineer; D. R. Wiley, Acting Second Assistant Engineer; A. B. Fox, W. Moores, Jr., and Thomas Dobbs, Acting Third Assistant Engineer. A. R. Avery, Acting Master's Mate; E. W. Brooks, Acting Assistant Paymaster; W. H. Baker, Paymaster's Clerk.

The brig *Perry* arrived at Boston on Monday evening from Port Royal, S. C., with mail, which is to be sent to the blockade since March last. The following is a list of her officers:

W. D. Evans, Acting Master Commanding; C. B. Blydenburg, Acting Assistant Paymaster; J. F. Norton, Acting Assistant Surgeon; William B. Price (executive officer), Joseph H. Cushing, Acting Masters; Acting Ensigns; C. P. Bridges, E. H. Sands and T. H. McDonald, Acting Master's Mates; Wm. B. Swain, Paymaster's Clerk; Edward Smith, Acting Surgeon's Steward.

The new sloop-of-war to be built at the Navy-Yard is to be named after Commodore Perry. The largest vessel of that class ever built for our Navy, and will prove both formidable and fast. It will take about six months to construct her, and these will be the finest of modern machinery. She will be 345 feet in length, measure 3,000 tons, and draw about 161 feet of water. The *Assumeonse* will be the sharpest vessel ever built by the Government, being designed entirely for speed, and will be very light. Her speed, it is computed, will reach about fifteen miles per hour. Her armament will comprise seven guns—viz: three one hundred pounders and four hundside guns of eight-inch bore. Her dimensions are as follows: length over all, 225 feet; length between perpendiculars, three hundred and twenty-five feet; beam extreme, forty-four feet six inches; depth to spar deck, thirty-two feet six and a half inches. She will carry two engines; diameter of cylinders, one hundred inches; of propeller, sixteen feet. The engines are designed to develop 4,000 horse power. The boilers for two other sloops of about two thousand tons each are being built. Their length will be two hundred and seventy-five feet long, forty feet wide and seventeen feet deep, and are also intended for speed. Their building will occupy six months.

Sloop *Marion* and her tender *Amarion* sailed last week on a cruise along the Eastern coast.

WASHINGTON NAVY YARD.

We have nothing new to report at the Washington Navy Yard of importance. A substantial Belgian pavement is being laid from the offices in the yard to the wharves on the west side. This will be a convenience to the busy day and night in the different branches of business. The work on the new marine barracks is proceeding slowly. It is being erected on piles. The six large furnaces are completed, and the stacks raised to a height of eighty feet. The extreme height is one hundred and ten feet. The stacks are erected so that any number can be used at one time. One hundred thousand pounds of metal can be melted at once. The plan, though original, is considered a good one. The completion of bricks have been used in the completion of the furnaces. Fourteen smaller furnaces are built in the western part of the structure. Altogether, the affairs at the yard assume quite an interesting aspect at present time.

The gunboat *Aroostook* is rapidly approaching completion and will soon join the blockading fleet.

The new boiler of the *Ino* is now being completed. The vessel has received new boilers, and the other repairs are being completed upon her. The *Anacostia* will be placed upon the ways about the 1st of October next. The dry dock has been thoroughly repaired and fitted up, and is now ready for a trial trip.

The steamer *Estrey*, which now lies at one of the piers of the Navy Yard, experimented with her boilers and machinery last week. The machinery went very satisfactorily. This vessel is one of the double-bowed steamers ordered to be built last fall by the Secretary of the Navy. She will carry four guns and will be ready nearly ready for sea.

BALTIMORE NAVAL STATION.

There are nine vessels being repaired at this station, and the work is being hurried forward with all possible despatch. The screw steamer *Winona*, Lieutenant John G. Walker commanding, arrived at Baltimore on Tuesday, the 25th inst., accompanied by screw steamers *Kiowa*, 6, and *Tioga*, 4, which had towed her from Port Royal, S. C. The *Winona* left Port Royal, but not New Orleans on the 15th, and experienced fine weather and a smooth sea all the way. The *Winona* has lately been fitted with a new bully and her funnel or chimney is so disordered that she cannot make two miles an hour. Fears were entertained during the passage that she could not be brought into port. The *Kiowa* is to be sent to Baltimore; the *Tioga* will remain at Philadelphia.

VARIOUS NAVAL MATTERS.

The fine steamboat *Jean A. Dix*, it is stated, is to be sold to the Government.

The frigate *Sabine* sailed from New London on Tuesday for Provincetown, Mass.

The rebel steamer *Florida* was seen on the 26th ult. towing in Kingsport.

ADMIRAL David G. Farragut visited the Brooklyn Navy Yard on Wednesday.

A Detachment of marines was sent from the Brooklyn Navy Yard on Tuesday to the Boston Navy Yard.

The rebel steamer *Gladiator* arrived at Bermuda on the 24th from Wilmington, N. C.

The ship *Eagle* reached Liverpool from Bermuda with nearly 90,000 ounces silver bars, supposed to have been taken from the ship *El Dorie*.

Messrs. Walden & Willard, New York Claim Agents, have paid $78,000 prize money to officers and men during the month of August.

The United States steam sloops *Lancaster*, *Narragansett* and *Saginaw* and coalship *Golden Rule* were at Acapulco, July 30, all well.

The United States ship *Farrallan* was spoken at sea July 28th by the United States mail steamer *Constitution*, bound to Acapulco.

CAPTAIN JOHN L. BROOME late of the Flag Ship *Hartford*, and senior Marine officer of the West Gulf Squadron, has been ordered to duty at the Brooklyn Navy Yard.

A steamer from Cork at Liverpool reports the *Florida* lying to off Queenstown on the afternoon of the 19th. Two hours and a half later she saw a Federal merchantman from Liverpool steering straight towards her.

The steamer *Everglade*, which had been loaded by the rebels of Savannah for the purpose of running the blockade, was destroyed by her own rebel crew, while attempting to run the blockade out of Nassau Sound, by the gunboat *Mahaffe*.

The log-book of the late C. S. steamer *Atlantee* is on exhibition at the Navy Department. The following were her commanders at the time of her capture: McBlair, Arthur Sinclair, and W. A. Webb, all of whom were attached to the United States Navy.

The United States gunboat *Alabama* is still infected with yellow fever, and no hopes exist of relieving her until she is sent further North, where the early frost will purify her. The *Alabama* was the last vessel arriving at Nassau since 1857.

The captured Clyde steamer *Neptune*, which recently arrived at Washington Navy Yard, is to be fitted up for service, and in consequence will receive an immediate general overhauling. She was hauled on the ways at the beginning of last week.

The supply steamer *Bermuda* leaves the Philadelphia Navy Yard on the 30th inst., for the West Gulf blockading squadron. She will touch at Port Royal, Pensacola, and all the stations of the squadron—thus affording an excellent opportunity for the transmission of letters.

The British steamship *Dolphin*, Captain Jonathan Hayes, arrived from Key West, August 31st. The *Dolphin* was captured in 1861 by the United States steamer *Daya* off St. Thomas, with a cargo of arms and ammunition for the rebels. She was then taken to Key West, where she was confiscated.

The blockade runner, *Alice Vivien*, was captured on the morning of August 16th, with a cargo of five hundred and seventy-five bales of cotton, also a large quantity of turpentine. She was bound for Havana, Cuba, but now has changed her destination, and is going to Key West, Fla., in charge of a prize crew.

The gunboats *Catawba* and *Oneota* are now being completed at the Cincinnati Navy Yard. They will be after the style of the *Manitou*, and plated with iron. This armor will be carried to the depth of about five feet below the water line, thus rendering it impossible for a shot to enter her without penetrating her forty-three and a half inches of armor.

The United States steamer *Fort Henry* reports the capture on the 18th inst., in the English waters of the steamer *Cornwall*, for violation of the blockade at Wilmington. She had a cargo of cotton, turpentine, and rosin on board. It was learned after the capture of the Cornwall, that her chief and First Assistant Engineers and three men left her in the boat during the midst of the chase.

The Department has purchased at New York the steam tugs *Ajax* and *Force* to be used as tug vessels for the Navy. They will mount a small terrific gun, which latest improvements have been changed to the *Hunterpuckle* and *Carnation*. We have already a Violet, Daisy, Hyacinth, Rose, Dahlia, Lily, Magnolia, Zephyr, Fuchsia, Aster, Ivy and Wabash.

The sailing sloop *Jamestown* arrived at Macao, China, on the 1st of June. Her passage was very tedious from Batavia, Island of Java, the vessel having been aground at Cavite. On her way from Cape Town, coast of Africa, to Batavia, she encountered a series of storms, and on the 3d of April experienced a most terrific gale, which lasted for forty-eight hours. Officers and crew all well.

The gunboats *Satellite* and *Relance* attached to the Potomac River flotilla, destroyed by fire the rebels on the 25th ult., near the mouth of the Rappahannock River. It is reported that Ensign Warren of the *Satellite* was killed. Wounded, and that the crew of the *Satellite* was killed. The Navy Department has sent a force to retake or destroy these vessels.

It is estimated that since the 1st of January, on which date the Naval Register for the previous year was published, the Department has added to the Navy nearly one hundred vessels of all kinds, the greater portion of which have been purchased. Some of them, of course, are very small craft, but a large number are of considerable size, and a great many have been built which added to those which have been purchased must increase the number of vessels that are serviceable.

ANGLOPHOBIA.

If the vanity of Englishmen requires a correction, they have only to ascertain the feelings with which their country is regarded by neighboring and rival nations. Wise men are content to know, and, if possible, to forget, that they are subjects of conscious comment to their friends and, to strangers. Good breeding and good feeling forbid unfavorable criticism in the presence of its object; but nations are compelled to be frank with themselves, at least, never hears any good of himself. His parvenu, the American Republic, instead of swelling into an unprecedented volume, and it seems worth while to inquire why a community which seems to itself generally to be the centre of the universe, even more conspicuous than in ordinary times, the victim of universal calumniated and vituperated, should have given to Federal America to England is perhaps the most distressing instance on record of the prevailing and malignant delusion; but there is, unfortunately, no doubt that it is at present the dominant feeling of the North. The complaints which are founded on the doubtful case of the *Alabama* are mere excuses for the gratification of animosity. The American people are as hostile before a Confederate vessel had sailed from Liverpool as at its hundredth celebration of the false assertion that the laws of neutrality have been wilfully violated. From the beginning of the war the tone of the press and of the ternately taught that England was determined to assist the South, and that she was deterred by selfish cowardice from openly declaring her recognition. The EMPEROR of the French has scarcely become popular in the United States, although he has urged recognition on the English Government, and although he has taken advantage of the necessity of supporting the EMPEROR'S policy in Poland has revived the habitual declamations against English cupidity and selfishness. The fact that France and England is dismissed to permit the extension of the French empire over Mexico, and that perhaps there is a sincere disbelief in the enthusiasm of Englishmen for the independence of Ireland. In the midst of the general clamor, the text of offence is but the symbol and utterance of a long standing prejudice. For centuries French opinion has been, with few intervals, friendly to England, and the Continent habitually looks through the eyes of France. It has been lately stated that the Russians consider it natural that France should protect the Poles, but that they are hurt at England, who has, as it were, no concern. Whether this is true or not, the manner, they attributed to England their misfortunes in the Crimea, and that she was unable to suppress the hatred which they have been taught by the French press to feel for the country which is falsely accused of complicity with the infamous partitions of the last century. In an age when the progress of events recent pamphlets, the Polish writer asserts that the centre of the Russian conspiracy in London, and he represents the Russian Minister there as the worst enemy of his cause. There is too much reason to fear that the Russians and especially in Prussia, English policy is regarded with suspicion and dislike. The alliance of the two Western powers has always been unpopular among the Germans; and the government which is denounced in Paris as backward and faithless is reproached in Berlin for its zeal. Moreover for half the revolutionary designs which originate in London, the Austrian Empire and the Austrian Government to England had some excuse in the strong sympathy which had been felt for the Hungarian struggle for the independence of Italy. The official antipathy has, perhaps, recently relaxed, but the antagonism of policy and interest is not in any moment revive. In Italy, except among the orthodoxand liberal parties, England has done no good will of England to the national cause may have produced a favorable impression. Greece has received with unexpected appreciation of the English character, and the Turks can scarcely be wanting in a certain respect for their only friend and ancient ally. With these exceptions, the opinion of Europe is satisfying to patriotic Englishman. The greedy vanity which is gratified only by distinguished from consolation in the belief that hatred partakes largely of envy; but, on the whole, it would be far more agreeable to meet with good will and appreciations among foreigners.—*London Saturday Review, Aug.* 15th.

HOW FORT SUMTER LOOKS.

APPLETON & Co. have received a spirited offhand pencil sketch of Fort Sumter, as it looked after a peppering of three or four days from GENERAL GILLMORE'S Parrotts. It is a companion piece of the drawings sent to the War Department by General GILLMORE, and alluded to in his despatch, and its accuracy is certified by the General's bold signature on the margin. In studying this little picture allowance must be made for the distance of two miles or more at which it was taken. The south wall, which is the one directly under treatment, is an undistinguishable mass of sand, broken sand bags, timbers, stones, brick, and debris. The casemate of ruins extends to the water, in which the tumbling debris forms a slope, and on the right the high thin gray wall, extending apparently for the distance of a hundred feet, a sight may be had of the Moultrie House and the city of Charleston. Its level edge is jagged like the broken teeth of a saw, and gleams come through the gaps in the masonry. The nearest face, which extends at a short angle on the line of General GILLMORE'S fire, is riddled by the shot. Scores of spots may be counted where cutbreak of bricks have been knocked out, and the edge shows the fresh surface. Nothing more remains of serious damage. A wreath of smoke circling above the northeastern parapet is explained in a foot note as the effect of a "200 lb. Parrott." Looking just below this little cloud a fracture may be observed, to which the eye is attracted by the fact that it is necessary to give the artistic finish which is the chief attraction on the whole. The shots that strike on the southeast point are evidently those that miss the other. The general appearance of the fort is not unlike that of Sebastopol, stately structure, of which there is no lack of pictures. It looks like a low flat mound of sand, which has been dug into by the claws of swarms of shoveliers, only the sharp perpendicular walls of the extreme eastern and western faces rising from the sea in their original outline. Let us hope that this fort may become the symbol of peace, and that the future WILLIAMSON'S favorite line of beauty (rather zig-zag than Hogarth's line), unless the obstinate spirit of the defenders of the Union is broken by cold, and the old flag run up over the ruined walls. The flutter of the national ensign above the broken ruin is all that is needed to complete the picture.

YELLOW FEVER.—In an article on Key West communicated to the *American Journal of Science and Arts*, by Dr. JOSIAH CURTIS, U. S. Engineers, it is stated that on two repeated occasions, when there were cases of yellow fever in the U. S. Barracks, Key West, the writer saw a flock of buzzards circling over and near the roof of the hospital by the new quarters, and on the ground in the yard.

"I have never seen them do this," he says, "except when there was yellow fever in the barracks or close by. So marked is this fact, as to have produced a common belief in time, that they only come when the hospital where there is yellow fever there. I am quite persuaded that such is the fact, and can only interpret it as the effect of the sense of smell, which is not alone in them but in the air which the sick emit, and which, in some way, gives them notice of the approach of disease. The hint, thus afforded by the keen scented buzzards, may be turned to account by those who comprehend the mode of carrying and diffusing this fatal malady, and the particles secreted may be such as to be readily arrested by proper filters and so little understood, in discussing the controverted questions of contagion and communication."

—The missile that struck the *Catskill*, in the late bombardment of Wagner was a solid shot It broke into many fragments, and fell on deck. One piece, weighing about 30 pounds, struck the rifle of the death of the great and good Captain Rodgers, who had fallen. One of the unconscious had nearly a pound.

OFFICIAL DIRECTORY.

WAR DEPARTMENT.

HON. P. H. WATSON, Assistant Secretary of War, 34 Door West Fifth Avenue, New York.

Secretary of War.

Hon EDWIN M. STANTON, Washington, D. C.

General-in-Chief.

Major General H. W. HALLECK, Washington, D. C.

Adjutant General.

UNITED STATES

ARMY AND NAVY JOURNAL;

A WEEKLY NEWSPAPER, DEVOTED TO THE INTERESTS OF THE ARMY AND NAVY, AND TO THE DISSEMINATION OF CORRECT MILITARY INFORMATION.

On Thursday, the 27th of August, the undersigned will commence the publication, under the above title, of a weekly newspaper, devoted to military and naval affairs and to the discussion of subjects relating to the interests of the United States. The ARMY AND NAVY JOURNAL is established in the interests of no party; it will not be found in any clique. Its independence will be absolute. Avoiding all personal and political bias, its influence will be directed solely to the inculcation of sound military ideas, and to the education of the public service in all its departments. Its pages will be devoted to impartial military criticism by competent writers, and to intelligent discussion of topics coming within the scope of its observation, and to a full and reliable record of all subjects of interest to those in any way connected with military or naval affairs, or interested in the art of war. The Department of Engineering, which now has so intimate an association with warlike operations, will receive adequate attention in this connection, and the interests of our Coast Defences will be looked after on appropriate plans. Among other matters the columns of the JOURNAL will contain from week to week:

1st. Full official lists of all appointments, promotions, changes of station, deaths, resignations, dismissals, and other changes in the personnel of the two services.

2d. A full and reliable record of all orders issued by the Army and Navy.

3d. A summary of all official orders proper for publication.

4th. A full account of the operations of the Coast Survey and the Revenue Service, and of all changes among the officers of the two departments.

5th. Changes in the medical department of the two services, with their results in the progress of medicine, surgery and the sanitary condition of the Army and Navy.

6th. Descriptions of inventions and improvements relating to the Art of War, and of experiments and discoveries illustrative of military science in this country and abroad.

7th. Narratives of military and naval exploits and adventures; personal reminiscences of officers of the services. Answers to questions in regard to difficult or disputed tactical matters, or other subjects suggested by current events.

8th. An account of important movements of foreign armies and navies, with full and reliable notes on the record of the services of foreign nations.

9th. Criticisms on new books in literature and art, of interest to the Army and Navy.

10th. Articles on military and naval engineering.

11th. Station of the Naval vessels in commission; report of Naval Courts of Inquiry and Boards of Naval vessels.

12th. Editorial discussions upon subjects of interest to our soldiers and sailors.

A magazine devoted, of whatever course in all parts of the world of value to our Army and Navy. No effort will be spared by the JOURNAL to obtain military and Naval guests, but at the same time a high-toned, liberal, and truly patriotic tone will be read with interest by the families and friends of those connected with the service, and by the great body of citizens of the intelligent public.

The importance of both Military and Naval affairs have assumed in the United States imperatively demands that there should be a journal in which the best service can find, which, by its ability, entire impartiality in the discussion of questions coming under its cognizance, will command the thorough devotion to the National Cause that can only be secured by the public and to the Army and Navy the moral encouragement necessary in every time, barrack, hospital and vessel. The Army and Navy Journal will be conducted with such a demand, and it shall be the purpose of the projector to make a paper of the highest order of excellence will be proud to recognize as their organ, and which shall by merit be the acknowledged authority in any of its class in the world. Arrangements for official and home news, and for the services of competent writers on Military and Naval affairs in the country, and in Europe, have been completed, and every care and will secure to the JOURNAL early and complete priority of information. The publication will be commenced by the immediate issue of the JOURNAL as the valuable and experienced officers and of a large number of patriotic gentlemen and ladies of the country. The cordial sympathy and conduct support be able to establish for great work, and the publication will be issued every week for $5 as it has been commenced to them, the publisher has the satisfaction to announce that he has associated with the greatest satisfaction to the Army and Navy, and with the public generally, the following corps of correspondents, the most correct sympathy with the enterprise have been secured, and the publication will be issued every week for $5 as it has been commenced to

UNITED STATES INTERNAL REVENUE, COLLECTOR'S OFFICE, 3d Dist., NEW YORK—Notice is hereby given to all persons concerned that the Assessors appointed to assess the enumerations made since the 1st of May, 1868, within the above mentioned District, consisting of the Seventh, Thirteenth, and Fourteenth Wards, will be open for examination at the office of the Assessors, No. 362 Broadway, for the space of fifteen days from the date thereof, that the Assessors will be in attendance at the office above named, after the expiration of said fifteen days, until the 1st day of October next, from the hours of 10 A. M. and 4 P. M., relative to any appeals or complaints that may be made against them to the Assistant Assessors. Provided, That the question to be determined is the correctness of the enumeration as to the valuation or enumeration of property, or otherwise, and not as to the liability to taxation, or the relative exemption of the same, or as to not in a just proportion to other valuations in the Assessment District, and that no other enumerations be or be not correct. And all appeals not made as aforesaid shall be and are barred. And that all appeals for the particular cause, matter or thing not specified or shown in a request, shall be deemed to be waived, ground or principle of insolvency or error complained of. E. C. FELLOWS, Assessor.
Dated New York, Aug. 31, 1868.

TREASURY DEPARTMENT, OFFICE OF THE COMPTROLLER OF THE CURRENCY, WASHINGTON, 22D, 1868.—Whereas, it appears by satisfactory evidence presented to the undersigned, it having been made to appear to the undersigned, that it is the duty of NEW YORK, in the County of NEW YORK and State of NEW YORK, to commence the business of Banking under the act entitled "An act to provide a National Currency, secured by a pledge of United States stock, and to provide for the circulation and redemption thereof," approved February 25, 1863, and has complied with all the provisions of said act required to be complied with before commencing the business of Banking:

Now, therefore, I, HUGH MCCULLOCH, Comptroller of the Currency, do hereby certify that the said Second National Bank of the city of New York, county of New York, and State of New York, is authorized to commence the business of Banking under the act aforesaid.

In testimony thereof, witness my hand and seal of office, this thirteenth day of July, A. D., 1868.
[SEAL.] HUGH MCCULLOCH,
Comptroller of the Currency.

THE MILITARY SITUATION.

THE record of the operations of the week is crowned by two victories, each of prime importance—the capture of Chattanooga by General ROSECRANS, and the possession, by General GILLMORE, of Morris Island and all its works. The latter has its importance from the fact that it is the key to Charleston; and though it does not actually necessitate the fall of the city, it yet advances operations very greatly. The former is one of those solid and permanent triumphs which, for greater than a victory, affects the whole theatre of war and the entire character and complexion of military operations.

The announcement of the capture of Chattanooga comes by way of Cincinnati, in a dispatch under date of Wednesday, the 9th, stating that "General CRITTENDEN'S division, of General ROSECRANS' army (it should be General CRITTENDEN'S *Corps*, or one division of General CRITTENDEN'S Corps), occupied Chattanooga to-day." We were ourselves in receipt of a private dispatch from General ROSECRANS on the morning of the same day, dated at headquarters, Trenton, Ga., which will be observed to be about fifteen miles southwest from Chattanooga, and on the direct line between the points at which the main body of the army crossed the Tennessee river and Chattanooga. The occupation of the place, therefore, must have taken place at an hour subsequent to the transmission of the dispatch referred to; and, in fact, it did take place on a subsequent hour, and by a column of General ROSECRANS' army operating on a different line from that just mentioned.

In order to appreciate the strategic movements which have led to the evacuation of Chattanooga by the rebels, and its occupation by the Union forces, a careful study of the map is necessary; for the region in which these operations have been carried on may be almost said to be a *terra incognita* to the public generally. The plan of campaign adopted for the capture of the entire upper mountain region of East Tennessee was on advance in double exterior lines, concentric on the enemy. The main column, under General ROSECRANS, to move from the front of operations at Tullahoma and Winchester, on Chattanooga; a coöperative column, under General BURNSIDE, to move from Lexington, Ky., on Knoxville, and thence on Chattanooga. It will be observed that General ROSECRANS' line of advance was almost due East—about eighty miles—while General BURNSIDE'S line of advance was almost due South about two hundred miles. Each held aimed at one common objective point, and moved on it from opposite points, with the enemy lying between them, the lines of advance were, as we have named them, exterior and concentric toward the enemy.

Our last summary brought the advance of the two columns, the one, under Gen. BURNSIDE, to Kingston, at the junction of the Clinch and Tennessee rivers; the other, under Gen. ROSECRANS, to the Tennessee, which he had crossed on the 31st ult. A glance at the map will show, that the Tennessee river, after running due westward from Chattanooga for twenty miles, turns abruptly, and takes an almost due *southerly* direction, and the line of advance of Gen. ROSECRANS' army eastward, meets it almost at right angles. The river was crossed on the last day of August at three points—Bridgeport, Stevenson, and Shell Mound—the passage being effected by the fords and one pontoon bridge. While, however, the main body of the army—comprising the right (McCOOK's Corps, the 20th), and the centre (THOMAS', the 14th), were thrown over the river at the points indicated, for a flank march on Chattanooga, by the south side of the river, the left wing of the army (CRITTENDEN'S Corps, the 21st) was swung round the head of the river on the North side, for a direct attack from that side. The task before the two columns of the army, therefore, was, for the first, an advance over an interval of thirty miles, between the points of crossing the Tennessee and Chattanooga (country exceedingly rugged and mountainous); and, for the second, a swinging movement by way of the Sequatchy Valley, on the front of Chattanooga. After effecting the passage of the river, on the 31st, Gen. ROSECRANS appears to have halted his columns, for some days, for the purpose of allowing the part of the programme of combined operations assigned to Gen. BURNSIDE to be further developed. From Kingston, at which point Gen. BURNSIDE made the passage of the river, with very slight opposition by the enemy, he advanced direct on Knoxville. Gen. BURNSIDE, who, with a force of from eight to twelve thousand men, had been guarding this point and observing the railroad line and the gaps, fell back as the Union force advanced, evacuating KNOXVILLE, and retiring, doubtless, on the main rebel force at Chattanooga. Gen. BURNSIDE took possession on the 3d inst.

Gen. ROSECRANS now began pushing forward his columns. The roads across the mountain ridges between the Tennessee and Chattanooga had to be made practicable, and it was only after prodigious labor that he succeeded in reaching the valley bordering the southern slope of the first ridge on the 7th inst. Gen. ROSECRANS, "writes a correspondent," established his headquarters at Trenton, eight miles south "of the river, on the same day, and reconnoitered the "position around Chattanooga in person." Meanwhile the left wing was swung around toward Chattanooga, on the north bank of the river. The perilous position in which the rebel army at Chattanooga, unless huge, was now placed, is evident. Their only line of communication with the east is severed. Gen. ROSECRANS' main body at Trenton is on the flank of Chattanooga. Their only line of retreat, and of communication, the Western and Atlantic Railroad, is seriously threatened. At the same time, a body powerful enough to take care of itself, threatens Chattanooga from the South, places himself thus in danger of being completely cut off, concluded to abandon Chattanooga; and the left wing, which had in the meantime moved up close to the city, passed the river into Chattanooga. BRAGG's retreat is stated to have been eastward and southward, doubtless towards Cleveland and Dalton, points of the triangle of railroads formed by the two branches of the Western and Atlantic, which diverge at Dalton and strike the Virginia and East Tennessee railroad. This is the point of junction of Chattanooga Junction. If BRAGG gives up this line, with the present demoralized condition of his army, he will be cut off from all the rebels to make a stand at any other point, or even hold his army together.

The rich valley between Chattanooga and Knoxville, with its abundance of forage, is now in possession of the Union forces, and the utmost efforts are being put forth to repair the bridge on the Memphis and Charleston Railroad, which will soon be completed, and which, when done, will give Gen. ROSECRANS two lines of railway by which to supply his army.

The whole of the rich valley up to the Virginia line, also falls into our hands, and, by consequence, all the mountain gaps. Indeed the occupation of Cumberland Gap by the enemy is now a matter of time.

The announcement of the capture of Morris Island by Gen. GILLMORE reaches us through a dispatch in the Richmond *Inquirer* of the 8th inst. It states in substance, that the Union force had advanced their sappers to the most of Wagner, "and it being impossible to hold it, BEAUREGARD ordered its evacuation," which took place at noon on the 7th. We hold Cumming's Point, in full view of the city. There is also a subsequent dispatch of the same day, stating that a message from Major-General ELLIOTT, commanding at Fort Sumter, announcing that a flag of truce demanding the immediate surrender of that fort, had just been received from Admiral DAHLGREN. Gen. "BEAUREGARD," it is added, "has telegraphed to "Major ELLIOTT to reply to DAHLGREN that he can "have Fort Sumter when he takes it and holds it, and "that in the meantime such demands are puerile and "unbecoming." The latest tidings are up to 8 P. M. of the 7th, and are to the effect that the iron-clads had approached Fort Sumter closer than usual, and opened a heavy fire upon it, and that a hot engagement was going on between the fleet and the batteries on Sullivan's Island. These batteries are Beauregard, Bee, and Moultrie.

Our latest direct advices from Charleston harbor are dated the 6th—Sunday. At that time the evacuation of Morris Island had not taken place, which event having occurred, as reported in the rebel dispatches, on the following day—Monday, the 7th. This step, bitter regrets though it must have cost BEAUREGARD, who, as an engineer, must appreciate all the advantages it gives the assailant, was the necessary result of GEN. GILLMORE'S energetic preparations, which had now completed the line of approach to within a few yards of the works. The engineering operations had been carried on for the past week at a fortnight, had at length been brought to such forwardness that, by the close of last week, the sappers had ordnance to the front of Fort Wagner. Accordingly on Saturday, the 5th, the bombardment of Wagner by the land and Navy batteries was begun, preparatory to an assault. At daybreak all the batteries, breaching and defensive, opened on the obstinate sand fort. A perfect *feu d'enfer* was poured upon the work. "The rebels," says a letter writer, "attempted "to make some defense in the early moments of the "bombardment; but they could not stand to their "guns. * * * In half an hour the fort became silent. Not a shot was fired from it again during "the day, and not a living being showed himself above "the parapet, or, indeed, outside the bomb-proof." During the night of Saturday partial firing was kept up, the artillerists being guided in their work by the powerful light thrown on the fort by Prof. GRANT'S calcium lights.

At daybreak of Saturday the bombardment was again resumed. Before seven o'clock all the *Monitors* and the *Ironsides* took up position to fire before the rebel work, and showered it with the titanic missiles from the huge 15-inch guns. At the same time all of Gen. GILLMORE'S batteries once more opened their fire. The effect of the previous day's work had been very marked, ploughing the parapet into great irregularities of mountain, and steadily wearing away toward the bomb-proof magazine. We have not the detailed results of the bombardment, as the steamer sailed during the forenoon; but the rebel dispatches state that the firing was kept up without intermission all day and far into the night, and they acknowledge a hundred men to have been killed within the work. The winding up of the wondrous drama is thus told: "It being impossible to hold the island longer, Gen. "BEAUREGARD ordered its evacuation, which was executed between 8 P. M. and 1 A. M. with success. "We spiked the guns of Wagner and Gregg, and "withdrew the garrisons. Every bargeon Only one "barge, containing twelve men, was captured."

The position which Gen. GILLMORE has thus gained on Cumming's Point will enable him to advance his siege batteries nearly a mile nearer to the city, and render the iron-clad fleet the most efficient assistance by reducing the distance to their right and left of the work, and enabling it to pass up to the city. Subsequent returns show, however, that we captured seventy-five prisoners and twenty-one guns.

THE CIVIL WAR IN GREECE.

THE acceptance of the vacant throne of Greece, by GEORGE of Denmark, has not put an end to the civil war which commenced at Athens; nor will they cease with his coronation, unless he takes hold of the prevalent legislative abuses with an iron hand. The source of all the trouble is in the National Assembly, which, though professing to be a representative body, has none of the elements of a popular or patriotic assembly. It is composed of deputies from Syria, Wallachia, and even from Alexandria, in Egypt, and Manchester, in England, as well as from the Grecian districts; and while it is composed of Greeks, or persons representing Greek interests, it is encumbered by no constitutional principle, or dictate of common sense. The Chamber, finding that personal gain paid better than the patriotic up-hill work of reconstruction, joined with the late KING OTHO, in plundering the flock of which they had made themselves overseers. The government soldiers, growling about Athens and its vicinity, and serving the greed of the KING and the Chamber, committed fearful excesses for many months, which were borne by the people patiently, until no unspeakable outrage upon the person of a popular and favorite actress, overflowed the cup of endurance, and the revolt broke out which resulted in the revolution and flight of OTHO. Then, during the canvass for a new KING, there was a lull; but when Prince ALFRED of England, who was the choice of the people, refused the crown, the excitement broke out anew, and has since, by the shameful wrangling of the Chamber, been forced into the dimensions of a civil war. The Assembly, with numerous lesser factions, is divided into two leading cliques, called, after the French, the Mountain, and the Plain; and the question is, which shall control the new KING and divide the offices. Happy will it be for the nation if King GEORGE proves a CROMWELL to his Parliament. On the 29th of June, the Mountain, which is the more liberal and revolutionary party, elected, as Minister of War, Col. KORONAIOS, one of the leaders of the Nauplia revolt last year. The very same day, the Plain, which embraces the worst part of the Otho-ists and office hunters, let loose, as an offset, a brigand chief, whom they had been concealing in the mountains as an emergency. This outlaw instantly assembled his followers and attacked the village of Liupesi, a few miles from the capital; acting, it would seem, on general principles, rather than in any particular interest of his employers. The villagers, however, repulsed him, and he took refuge in the monastery of Asomatos, close by the Royal Garden, which was controlled by his patrons of the Plain, and where they rallied to help him.

This Col. KORONAIOS, the new Minister of War, representing the popular party, and elected by the preponderance of the Mountain, commenced his administration by several arrests and radical changes in the officers commanding the army—whether sane by him to be necessary, or from caprice, it is impossible at our distance from the scene to determine. But the immediate effect was a revolt in the army; for some of the officers removed were much beloved, both by the soldiers and citizens, and were as true patriots as KORONAIOS himself. A considerable number of these soldiers joined the brigands, and, on the 1st of July, a battle occurred; the Mountain or patriotic party, which, the day before, had held the Palace, controlled the Government, and were masters of the situation, being driven out, and the Plain, with its illicit force, remaining triumphant. Negotiations were then opened and various personages, who had been exiled by the Otho-ists were released; reciprocal concessions were made, the entire ministry resigned their places, and KYRIAKOS, President of the Assembly, a man respected by both factions, was invested with the executive power. A truce was thus obtained, but both sides held to their arms.

KORONAIOS, however, who seems to have hardly prudence enough for revolutionary times, set them all by the ears again, by an attack on the National Bank, alleging that the sentinel on duty there fired at him as he was passing. This attack was repulsed, however, though a general fight ensued and a number of citizens and soldiers were killed. At this juncture, the English, French, and Russian ministers interfered, and declared that if order was not immediately restored they would embark and leave the country; in consequence of which the Greek troops, by consent of both parties, were sent out of the city, the National Guard called in, and the Bank, which contained much valuable foreign property, was protected by marines from the ships of the allied powers. This was the state of affairs early in July. While these things were transpiring at Athens, there was fighting going on in various rural districts, though on a lesser scale; but the fact seemed little regarded at the capital, as it was said that the revolutionary party could muster 20,000 in the Otho-ists in the event when the city was secured. If King GEORGE proves a true constitutional ruler and disperses the bogus Parliament, there seems little doubt that he will be supported by the people and may reign prosperously.

THE MEDICAL STAFF OF FOREIGN ARMIES.

WITHIN the past few years nearly all the European armies have re-organized their medical staffs. The necessity for this change had long been apparent; but as no important war had occurred since the days of the First NAPOLEON, the matter was allowed to slumber, down to the year 1848, when the attempted revolutions in all directions, and the threatened continued war which flowed out of them, gave a new impulse to the organization of the medical staff of most nations. The occurrence of the war in the Crimea, soon after, afforded a most striking proof of the wisdom of this new course, and showed how much had not already done so, hesitated no longer, and the work of re-construction was every where begun in earnest. The following is a brief sketch of the most noteworthy of these changes as far as they have been perfected:

AUSTRIA.

In the year 1850 the medical service of the Austrian army was completely re-organized. Previous to that time the system adopted appears to have been so far incomplete as to have warranted the introduction by Marshal RADETZKY, in 1848, of *sanitary companies*, auxiliary to the regular staff. This idea, borrowed from the Prussian service, has been incorporated into the new organization, and although apparently encumbering an already a needless number of non-combatants, is found to work well, wherever extensive and immediate demands are made for surgical assistance after great and destructive battles.

The new organization begins by annulling the distinction between physician and surgeon, and bringing both classes under the designation of *Health Officers*. Besides this, there is an inferior grade of medical officers, still retaining the titles of *Surgeons* and *Assistant Surgeons*; but it is so far an empty title, that the holders, whatever their merit, can never be promoted to the rank of health officers. These surgeons and assistants act as aids to the latter, and continue without advancement of rank. They are attached to companies and squads; are detailed for duty during drills, parades, and wherever accidents are likely to occur; attend upon the infliction of corporeal punishment, having also the care of the punished assigned them; act as a sanitary police in making inspections, and are generally employed in the duties of minor surgery alone, when in the field.

For the grade of *Health Officer*, the candidate must have studied at the Military Medical College *Josephinum**, at Vienna, for a course in surgery, and have passed successful examinations in *obstetrics*,(?) and *ophthalmic* surgery.

The following table exhibits the grade, pay, and assimilated rank of the Medical Staff:

GRADE.	NO. IN GRADE.	ASSIMILATED RANK.	PAY. IN FLORINS.	PAY. IN U. S. GOLD.
Surgeon-General in Chief.....	1	Maj.-General.	$1,056	[illegible]
" " 1st Class.....	4	Colonel.	528	244
" " 2d "	8	Lieut.-Colonel.	422	1,040
" " 3d "	24	Major.	316	304
Regimental Health Officer.....	1			
" " 1st Class.....	72	Captain, 1st.	630	605
" " 2d "	72	Captain, 2d.	420	403
Battalion Health Officer.....	1			
" " 1st Class.....	336	Lieutenant, 1st.	315	303
" " 2d "	335	Lieutenant, 2d.	260	250
Surgeon.....	207	Cadets.	207	199
Assistant-Surgeon.....	259	"	155	149

The Surgeon-General in Chief is *ex officio* a member of the Aulic Council, receiving therefor an additional annual salary of $520; he also draws $312 for rent of quarters. The other health officers are not entitled to draw rent for quarters, unless no provision has been made for them in the barracks or hospitals where they may happen to be stationed, and then the allowance varies according to the post. In time of war, the allowance for rent ceases, and in its stead a compensation in the form of extra rations is granted.

Health officers are paid the same honors as officers in the line, of corresponding rank. They wear the same uniform, and receive the same pension when placed upon the retired list. If they die from wounds, or disease contracted in the line of their duty, their orphans draw a pension equal to *two-thirds* of their salary. If they die from causes unconnected with the service, the widow's or children's pension is then only *half* the original salary.

The Surgeon-General in Chief is selected from among the Surgeon-Generals of the first class. In all other ranks the promotions are based on seniority in service.

The Surgeon-General in Chief has the superintendence of the whole medical service of the army; and in the details of his administration is assisted by an advising council, composed of the professors of the *Josephinum*. But the decisions of this Board do not take effect until ratified by the Aulic Council of War, which also possesses authority of confirmation or rejection of all nominations or promotions presented to it by the Surgeon-General in chief.

The sanitary companies introduced by Marshal RADETZKY in 1848, are an organization entirely separate from the regular medical staff. They act under the direct control of the regimental staff officers, and perform the subordinate medical duties of affording provisional succor to the wounded in the field, and transporting them to the various hospitals; where also, as necessity may require, they are detailed to act as nurses.

There are fourteen of these sanitary companies, or one for each of the fourteen *corps d'armée*.

Each company numbers 250 men—divided into four squads—and subdivided into sixteen patrols. Accompanying them are one covered spring wagon, accommodating eight men inside—six outside—known as the Hungarian pattern: one spring wagon, accommodating eight inside—French pattern: one ordinary wagon, carrying eight inside, and one for transporting tents, instruments, bandages, &c. Forty field stretchers are allotted to each company, and the wagons are drawn each by two horses.

Great as was the service rendered by these companies during the late war in Italy, it was still thought by the Austrians as little as Suffering, that they altogether insufficient to meet the overwhelming demands made upon them for surgical assistance. This is a contingency likely to happen in any army, nor can it ever be fully provided against, since no previous calculation can correctly inform us what the number of wounded will be in any approaching combat.

Apothecaries in the Austrian army, although under the command of the Surgeon-General in chief, have no military rank, and do not wear a uniform. They are only employed in the central laboratory at Vienna, and in the district hospitals. In the field hospitals their duties are discharged by one of the *surgeons*.

APPORTIONMENT.—Each *infantry* regiment of — men, has fourteen surgeons and assistants (majors and aides).

Each *cavalry* regiment from seven to nine, of both grades.

---

* The *Josephinum*, or Military Medical College of Vienna, is a Government institution founded by the Emperor JOSEPH II., A. D. 1785. It contains about 200 students and cadets, who graduate in three years; if studying physic—two years, if studying surgery.

The English army will hereafter adopt many of the admirable arrangements of the French army in providing for the comfort of soldiers. In the matter of boots, especially, improvements will be introduced. Hitherto they have had nine sizes in length, but only one in breadth, so if the difference between the feet consisted only in length. But hereafter the French plan of four varieties in width and shape, in addition, will be adopted, and then, it is said, the British army will be fewer hobbling and foot-sore soldiers. A comfortable covering for the feet of the men is recognized as the first requisite for the first impediment. It is related of the Duke of Wellington that, on being asked what he considered the most essential thing for a soldier, he replied "A good pair of boots." And on being asked what was the next most essential thing, he said: "Another good pair of boots," and when the questioner still persisted and asked, what might be the next most essential thing, the Duke replied: "A good pair of boot-soles in his knapsack!" No experienced soldier will gainsay this opinion.

THE Parisian journals state that among the Mexican prisoners who have arrived in France, is a young Indian woman, twenty-three years old, who was Lieutenant-Colonel of the regiment of Zacatecas. She has in seven years gained all the grades at the point of the sword. When her husband was called upon to serve she followed him as a volunteer, and having distinguished herself in battle, received the rank of lieutenant. Her husband was killed in the affair at Guadalcazar in 1860, and the lawyer on that occasion asked for her the rank of second in command of a regiment, at the head of which she rendered herself conspicuous in the defence of Puebla. She is said to be very expert in the use of the sword, and was considered by her men as a very Joan d'Arc. She has, as a prisoner, all the privileges of an officer of superior rank.

THE shunt principle of rifling adopted by Sir WILLIAM ARMSTRONG consists in having two series of grooves, one deeper than the other. The shot enters loosely and easily by the muzzle down one series of grooves, when it passes to the other series along which it comes out when the gun is fired; the grooves of exit being shallower than those of entrance, they, as it were, squeeze the shot with sufficient force to make it take the form of rifling, and give it the requisite rotation on its axis.

CORRESPONDENCE.

THE CAVALRY SERVICE.

To the Editor of the Army and Navy Journal:

A most interesting item, and one strikingly illustrative of the service performed by our cavalry during the past six months, is the official report of the losses sustained by the Cavalry Corps of the Army of the Potomac, in their late campaigns. These figures show the surprising fact (surprising because it will be new to many), that the cavalry have done as much fighting, and sustained as heavy losses, as any body of infantry of like numbers during a like period.

Maj.-Gen. Hooker had the wisdom to consolidate into one corps the cavalry strength of the Army of the Potomac. From that day dates its usefulness. First, the Kelly's Ford fight under Averill, then the Stoneman raid upon the enemy's rear; and, coincident with the same, the efficient operations of one brigade under Pleasanton, at Chancellorsville; again the great fight by the whole corps—then but two divisions—at Beverly Ford and Brandy Station, 9th of June, followed June 17th, 19th, and 21st, by the severe engagements at Aldie, Middleburg, and Upperville. Increased then by the division of Gen. Stahl, transferred to Gen. Kilpatrick, the corps began its Maryland and Pennsylvania campaign, and, from the time we struck the enemy's trail at Hanover, Pa., until our pursuit of Lee was arrested on the last retreating rebel at Falling Waters, there was not a day in which the cavalry did not add new laurels to its reputation; sometimes fighting the enemy in front, sometimes on both flanks, or rampaging among his trains in the rear; ravaging not only the country, but the enemy's rear in field of pitched battle, but, finally, breastworked rifle-pits, with infantry behind and in them, and numbering their prisoners, not by the pitiful squad, as was once the case, but by the regiment and brigade, at a single charge.

When the wounded enemy had regained the soil of Virginia, the work for the cavalry, instead of ceasing, continued with still greater severity, and down the Loudon Valley to Chester Gap they went, successfully heading off the enemy as they attempted to file through one gap after another, and only resting from their labors briefly after again combating the enemy on the three-hundred-foot ground of Beverly Ford, to be again aroused from their repose of picket and patrol duty, to rush off on a gallopade of sixty miles *and capture gunboats!*

The total losses in the several engagements, at Aldie, Middleburg, and Upperville, June 17th, 19th and 21st, were as follows:

	Officers.	*Men.*	*Total.*
Killed	51	92	143
Wounded	35	204	239
Missing	18	410	428
Total casualties			809

The total losses in the campaign from June 28th, the day the army left Frederick, to July 31st, inclusive, are as follows:

	Officers.	*Men.*	*Total.*
Killed	21	199	220
Wounded	61	739	800
Missing	28	1137	1165
Total casualties			2185

The casualties of the Beverly Ford fight, on the 9th of June, reached about 900; those in Gen. Buford's division, during a successful reconnaissance over the same ground early in August, reached nearly three hundred; so that the grand total of casualties in the cavalry corps, from the 9th of June to date, exceeds *four thousand.*

The Regular Cavalry, though few in number, has done its full share of this service, and at the same time sustained an immense draft upon its commissioned officers to fill higher positions in the ranks of the volunteers, and on important staff or detached service. To illustrate how severe this demand has been, the following roster of the Sixth Regular Cavalry is given, showing not only the name, but the exact position of each commissioned officer in the regiment. The Sixth, it will be remembered is the youngest regiment of regular cavalry, having been recruited in 1861:

Colonel.—David Hunter, Major-General Volunteers.

Lieut.-Colonel.—W. H. Emory, Brigadier-General Volunteers, Department of the Gulf.

Majors.—Carleton, Brigadier-General Volunteers, Departments of New Mexico; Merrill, in feeble health—absent on sick leave; Starr, lost an arm at Millerstown, Pa.—in Philadelphia recovering.

Capt. W. P. Saunders, Co. A, Colonel of the Fifth Kentucky Cavalry, Chief of Cavalry, Gen. Burnside's Department.

Capt. A. V. Kautz, Co. B, Colonel Second Ohio Cavalry, commanding brigade.

Capt. Evans, Co. C, Colonel of Cavalry, Department of New Mexico.

Capt. W. S. Abert, Co. D, Lieut.-Colonel on Gen. Banks's staff—disabled by broken leg.

Capt. D. McM. Gregg, Co. E, Brigadier-General Volunteers, commanding cavalry division, Army of the Potomac.

Capt. Tayloe, Co. F, Lieut.-Colonel and Chief of Staff to Gen. Heintzelman.

Capt. J. Irwin Gregg, Co. G, Colonel Sixteenth Pennsylvania Cavalry, and commanding Cavalry brigade, Army of the Potomac.

Capt. Craig, Co. I, paroled prisoner.

Capt. C. R. Lowell, Co. K, Colonel Second Massachusetts Cavalry, and commanding brigade, Defences of Washington.

Capt. Brisbin, Co. L, on duty commanding the regiment.

Capt. H. B. Hays, Co. M, Military Commandant at Pittsburgh, Pa.

Capt. Claflin, Co. H, absent—recovering from wounds received at Funkstown, Maryland.

First Lieutenants.—B. T. Hutchins, on duty with the regiment—late on the staff of Major-General Rousseau; H. H. McKee, at Annapolis, Md., sick leave; D. Pleasanton, prisoner of war, at Richmond, Va.—captured at Millerstown, Pa.; John Johnson, superintending the rebuilding of Carlisle barracks, Pa.; J. F. Wade, acting aide to Major-General Pleasanton; J. Augerbird, aide-de-camp to Gen. Grant, with rank of captain; Henry Tourge, on leave—recovering; acting Quartermaster Cavalry Corps, Army of the Potomac; from wounds received at Millerstown, Pa.; John Spangler, C. B. McLellan, acting Provost Marshal, Cavalry Corps, Army of Potomac; S. S. Bale, on duty with the regiment; A. N. Wood, recruiting—supposed to have been killed at Beverly Ford, June 9th; A. Coats, on duty with the regiment; Joseph Kehn, regimental Adjutant, taken prisoner at Beverly Ford, June 9th; C. Balder, killed in action at Millerstown, Pa., July 6th.

Second Lieutenants.—A. Stoll, wounded at Millerstown, Pa., and now prisoner of war; S. M. Whitside, on leave at Annapolis, late on the staff of Brigadier-General Martindale; D. Madden, wounded at Beverly Ford, June 9th, now United States mustering officer at Boston; N. Nolan, on leave, recovering from wounds received at Rappahannock Station, while acting aide to Gen. Buford; J. A. Lewis, on duty as regimental Quartermaster; Henry McQuinton, on leave, at Annapolis, recovering from severe wounds received at Upperville, Va.; T. C. Tupper, on duty with the regiment; L. H. Carpenter, on duty as acting regimental Adjutant; T. Sawyer, on duty with the regiment; A. R. Chapin, wounded at Millerstown, Pa., just returned to duty; J. Bocld, absent on sick leave; one vacancy.

Surgeons.—Assistant Surgeon Forward, acting on duty with the regiment; Assistant Surgeon Norton, on leave, recovering from wounds received at Millerstown, Pa.: one vacancy.

Total number of officers attached to the regiment 46: on duty with the regiment 9; vacancies 3.

There are now at Camp Parole, Annapolis, Md., waiting exchange, fourteen hundred and fifty cavalry men, nearly all belonging to the Cavalry Corps, Army of the Potomac.

Corporal.

Headquarters Army of the Potomac, Sept. 8th, 1863.

SYSTEM IN PROMOTIONS.

To the Editor of the Army and Navy Journal:

Sir:—The comparative inefficiency of our officers, of which we hear so much complaint, seems to me to be due chiefly to carelessness in first appointments, to the commissioning power being vested in persons not connected with the Army, and to the want of some definite system of promotion. The first gives us bad appointments, the second prevents us getting rid of them, and the third, by which I mean every one those motives for distinction which alone can induce men to exert themselves to the utmost. To have better officers, we must have a higher standard for first appointment and a regular system of promotion established by law, and, as far as possible, so framed as to exclude those cases in which the promotions or recommending power in each case, shall find their individual interests concerned in securing for the positions, to which they have the right to recommend, the very best officers.

The basis of the system of promotion in all armies is seniority, but it has always been found necessary to modify this system in order to secure young and efficient men in command, and to furnish a motive for exertion. In the English army promotion by seniority is modified by purchase, in all but the scientific corps (engineers and artillery), and by brevets in all corps. The system of brevets is very different from ours. An officer holding a regimental commission, suppose that of captain of the 10th U. S. Infantry, is recommended for distinguished service in the field for a brevet majority. He is commissioned as a major in the U. S. A., no regiment being specified. So long as he is doing duty with his regiment alone he acts as a captain, but the moment even one soldier of any other regiment or corps is quartered in the same garrison with, or brigaded in the field with the 10th, i. e., the moment any portion of the *Army* other than his own regiment is present, he acts as major by virtue of his *Army* commission. Brevet rank also necessarily brings with it extra pay.

In the French army promotion is by merit and by seniority, two-thirds by the latter and one-third by the former. There is no brevet rank, and in the field promotions are constantly made by the Generals commanding, for distinguished conduct on the spot. Promotions of this kind are common in all the armies of the world, except the English and American—and some modification of the seniority system, similar to the French, is in use in most, if not in all of the other European armies. I would suggest for the consideration of the military readers of your journal, who have given their attention to the subject of military organization, the following outline of a system based on the French:

Promotions to be two-thirds by seniority for all grades below that of Lieutenant-Colonel, one-third by merit, to be determined according to the following rule: For every merit vacancy from the ranks to a Second Lieutenancy, from a Second Lieutenancy to a First, from a First Lieutenancy to a Captaincy, or from a Captaincy to a Majority, the Lieutenants of the regiment (First and Second) nominate four candidates. This list is referred to the Captains, who reject one, the field and staff officers reject one, and the Colonel selects from the two (2) remaining candidates. Any candidate whose name is sent forward by the Lieutenants three times cannot be rejected. In the same manner the positions of Lieutenant-Colonel and Colonel to be filled by selection from all the field officers of the brigade, the company officers of the regiment nominating three candidates, the Colonels and field officers of the brigade rejecting one, and the Brigadier appointing. So for the higher ranks, for the command of Divisions, the Brigadiers of the Corps, and for the command of Brigades, the Colonels of the Division, present claims before a board composed of the Brigade commanders of the corps, who select three, one to be rejected by the Division commanders, and the Corps commanders to appoint. The appointment of Corps commanders to be by the General commanding the army, whose reputation depends almost entirely upon the energy and ability with which the corps commanders are able to execute his orders and carry out his designs. It is this community of interests which is the only safe guarantee for good appointments, and this community pervades the whole Army. Under such a system the Division commander rests greatly upon the ability of the Brigadiers, and if the rules of promotion convinced the Division commander that his appointment to a corps would depend upon his military reputation, and not at all upon the political interest he could bring to bear, it would become his direct interest to secure the appointment of the best men possible for the command of his Brigades; and so of the Brigadier with reference to his regimental commanders, and the regimental commanders with reference to their company officers.

According to the above system we may reasonably expect, therefore, that in most cases the best selections will be made from among the candidates presented—and the mode in which the candidates are selected and referred from grade to grade, I think precludes the possibility of any motive under the merit influencing any large number of cases. The stopping of seniority promotions with the position of Major, prevents any one being placed in command of a regiment without being selected for it, generally without possessing some qualifications for it, while it permits a man of good mediocrity to drift by seniority to as high a position as he can possibly hold without detriment to the service. In addition to the above, I would give power to the General commanding the Army and to the corps commanders, to promote in the field for distinguished conduct, and to all other commanding officers to recommend such persons in their respective commands to the three senior officers of the corps, other than the commander.

I cannot help thinking that some system similar to the above, introduced into our Army, would produce a very marked effect upon the energy with which officers would devote themselves to their duties, and would do much to remove the present well-founded complaints of incompetent officers.

Staff Officer

New York, September 2, 1863.

THE MILITARY AND NAVAL ACADEMIES.

To the Editor of the Army and Navy Journal:

Sir—In your issue of 29th ult., attention is justly invoked to a fact of very important bearing on the welfare of our two National Academies, and, through them, on each arm of the service. This fact, undisguised, is the *very* limited preparation of a large number of the cadets annually sent by our Hon. Representatives for admission into these institutions. Few, probably, are aware of how much the Academics have still to contend with in this respect: while, at the same time, the country expects so much *from* them. And few, perhaps, of our Hon. Representatives, nay, even of parents or guardians, are aware of the utter unfitness of the nominees, in many cases, to enter on a reasonable course of instruction, worthy of the institutions and their high purposes.

Striking instances in point could be named. Suffice it, for the present, to correct some erroneous impressions produced, of late, on the public mind, as to the *severity* of the preliminary examinations.

A local paper, within the past month, contained a false statement, which has been copied into the leading journals of Boston, Providence and New York, gravely apprising the public that, of the candidates presenting themselves at the U. S. Naval Academy, for admission at the July examination, "more than one-half were rejected on *physical* grounds." The facts would be found, on examination, that out of 119 nominees reporting, but five were rejected for physical causes. The *whole* number refused from all causes was but *one-third*, and this was an unusually large proportion.

Even that correct and concise organ, the *National Intelligencer*, contained that statement that the "examinations were very rigid, the slightest defect being cause sufficient for rejection." Now, all this is at once disproved, both by the filed written examinations of the successful and the unsuccessful candidates, and the witness of friends in attendance on these examinations.

Correction is asked, 1st: Because these erroneous impressions tend greatly to the injury of the institution; and, 2d: They needlessly alarm candidates who *are* prepared, and thus unnerve them for their own examinations.

The truth in this whole matter is, First: That the moderate standard fixed by the War and Navy Departments needs to be rigidly sustained, or, perhaps, elevated. A lower standard—the knowing, as your correspondent says, "little more than the letters"—would fill seats as an honorary nature, or lack capacity or preparation (or both), for a reasonable course of study. The ends of the Academies *could* not be secured.

Second: Deficiencies at the regular examinations should be conclusive. Permit a worthier youth to be educated by his country and for her cause. A gentleman in high position in the community, when appealed to lately for his influence to seek the restoration of an unsuccessful relative, replied: "No; they are trying, at these Academies, to fix a good standard; let us be slightly humane, but." Unfortunately, it is to be feared, he is almost alone among parents, guardians, or M. C.'s, many of whom rarely take pains to know what acquirements a youth has, and seem to seek, only, that he shall get in, and *keep* in, fitted for his country's service, or not fitted. Such a respectful hint, to the just Boards of Visitations, to the country, or to the many deserving youths whose appeals the Hon. Secretary is compelled to deny?

JUSTITIA.

VOLUNTEER AND REGULAR NAVY OFFICERS.

To the Editor of the Army and Navy Journal:

SIR: In the last number of the JOURNAL, I find an article entitled "Volunteer Officers in the Navy," stating that volunteer officers are debarred from promotion in the Navy to any grade higher than that of Lieutenant.

This statement is respectfully submitted, in almost every case where a volunteer officer has rendered meritorious service, whether under fire or on the blockade, he has immediately been complimented by the Department with a command.

Without intending to detract from the merits of the Volunteer Navy, which the rebellion called into existence, and which has furnished many brave and meritorious officers to the national cause, I would simply state, what almost every one in the service knows to be a fact (unless, indeed, such an one be blind to fact), that while the majority of regularly educated officers of the Navy is in frightful disproportion to the number of officers who have volunteered from the merchant marine, since the commencement of the war and consequent prostration of our commerce, the number of those who have distinguished service and gallantry in battle and otherwise, won claims to promotion, is largely in favor of the regular over the volunteer; almost in the ratio of five to one. I shall not attempt to discuss the causes which may lead to this remarkable difference. The real cause will possibly be found in the difference in the training of the two men. The "regular," who enters the service as a boy, is trained and educated to a habit of thought, command and discipline, which the "volunteer," who enters as a man grown (in many cases at mature age), can seldom or never acquire. There are, of course, some notable exceptions to this rule of difference; the very fact proof of such exceptions, but they prove, as all exceptions do, that the rule exists.

Yet Congress in its last session refused to consider the claims of many officers of the Regular Navy recommended for promotion, the Naval Committee having decided that the list was "too large!" and that commanders of expeditions only could be considered eligible to receive the thanks of Congress, which, by the law, signifies promotion.

Many meritorious officers of the Regular Navy were, therefore, as it were, "thrown overboard," among whom may simply be mentioned two names—MORRIS and GWIN.

The whole number of officers who received the thanks of Congress as the first step to promotion, consisted of five only, viz., DAVID DAHLGREN, HOWARD, DAVID PORTER, and WORDEN; the rest of the list was "ruled out."

Now, Mr. Editor, a plain question:—Would it be fair—would it be just—at the expense of the regular officer who has been carefully and thoroughly educated to his profession; the man who from boyhood devotes all his energies to his flag and country; who serves continuously without any higher aspiration than that of living and dying under the flag of his Government—would it be fair, I say, to promote over his head the volunteer of yesterday for a simple act of gallantry in action, when the former has unconsciously that, in the record of gallant deeds, the regulars stand ahead of the volunteers? This is no disparagement of the volunteer officer; it simply goes to prove that education and training are worth something.

The regular officer is debarred from promotion, except by seniority, or unless he commends an "expedition" and distinguishes himself. Would it be fair to give to the volunteer what is denied to the regular?

This article is in no way intended to disparage the officers of the Volunteer Navy, but to show the unpatriotic and criminal to do so. It is not written, either, with the view of drawing distinctions, except as regard merit and long service. It is simply and fairly written with a view to

JUSTICE.

BROOKLYN, September 7, 1863.

IRON-CLADS AND WOODEN VESSELS.

To the Editor of the Army and Navy Journal:

SIR—The number of your paper for August 29th contains an article entitled "Old Fogy's Opinion of Ships," in which the author—"Old Fogy"—attempts to prove that, as there is unquestionably a larger proportion of sickness in iron-clad than wooden vessels, the former must necessarily be a failure in view of the object intended in their construction. Now, so far as sickness is concerned, the advantages are undoubtedly with the wooden craft; but the great object aimed at in building armored ships was not the protection of the crew, so much as to obtain a vessel capable of successfully combating batteries of heavy artillery at short range, where in all probability a large proportion of shot would reach the object, and, if a wooden vessel, sink her in a short time.

As far as my experience extends, a large majority of seamen would prefer fighting on an open deck, with plenty of fresh air, and a sight of their work, to being confined in an almost air-tight vessel. Our mission, however, has a nobler object in view than mere personal convenience and comfort. Their ambition is fearlessly to do their duty, in an efficient and serviceable vessel, where a strong arm and stout heart may win for them a place among the acknowledged heroes of their country.

Who that saw them can forget the pride with which the crew of the *Monitor* displayed their gilt-lettered hat ribbon, bearing the name of their gallant little craft, on her return from her fight with the *Merrimac*. Would those men be likely to choose a wooden vessel, where they have a nobler object in view than mere personal convenience and comfort. Their ambition is fearlessly to do their duty, in an efficient and serviceable vessel, where a strong arm and stout heart may win for them a place among the acknowledged heroes of their country?

Who that saw them can forget the pride with which the crew of the *Monitor* displayed their gilt-lettered hat ribbon, bearing the name of their gallant little craft, on her return from her fight with the *Merrimac*. Would those men be likely to choose a wooden vessel, where they have a sailor

PARROTT GUNS.

The rifled cannon known as the Parrott gun, and which has lately acquired such popular celebrity, from the admirable effect of its large calibre employed in the bombardment of Fort Sumter, is the invention of Capt. R. P. PARROTT, of the celebrated West Point foundery. Ever since the first appearance of the gun, and the first experiments made with it, it has been growing in favor, and it bids fair now to supplant all previous inventions in the line of rifled cannon.

The Parrott rifle is a hooped gun of the simplest kind, composed of one cylinder of cast iron and one of wrought iron. It has no taper, no screw, no successive layer of hoops. The distinctive character of the gun consists in the "reinforce," which is a wrought-iron ring, or hollow cylinder, sunk around the breech at the seat of the charge. This ring is only just long enough to fill the space occupied by the charge of powder and the projectile, the inventor believing that a decided advantage is gained by making the "reinforce" no longer than is absolutely necessary to strengthen the gun at this place. When the ring is to be adjusted it is heated and placed around the breech in its proper position, the gun being laid nearly horizontally with its axis, slightly depressed; a stream of cold water is forced into the bore, which runs out freely owing to the depression of the muzzle, thus keeping the bore supplied with a constant stream of cold water. As the diameter of the cold is felt upon the iron, the wrought-iron ring is forced to cool from the interior, which, setting first, draws around it the more liquid outer layers; the entire ring thus cools in the order best calculated to produce strength. The thickness of the ring is equal to half the diameter of the bore.

The claim to the invention of the hooped or reinforced gun, has for some years been a vexed question, and still remains a subject of dispute. Both Captain BLAKELEY, of England, and Prof. TREADWELL, of Cambridge, Mass., have claimed that the construction of cannon gun with *one hoop* (termed by Capt. PARROTT, a "reinforce"). Capt. PARROTT has infringed upon their right. But Capt. PARROTT, in a pamphlet entitled "Facts as to Hooped Guns," published last year, enters into an elaborate historical investigation, in which he does conclusively that Hooped guns have been used for centuries. "Although," says Capt. PARROTT, "the shrinking of hoops upon cannon cannot be regarded as the "property of any one, the particular *manner, method or process* "of doing it may, doubtless, present points of originality, entitling them to be regarded as inventions. Indeed, I presume it is upon this principle that Capt. BLAKELEY and Prof. "TREADWELL place their claims." Indeed neither of these gentlemen claims any more than this in the specifications of patents of their respective guns. Now, the *mode* of hooping guns employed, by both is essentially different from that used by Capt. PARROTT. Capt. BLAKELEY has himself in the London *Mechanic's Magazine* for June 1860, says:—"I use "times form the outer surface of the inner tube somewhat "conical, the greatest diameter being just in front of the "trunnions and tapering both ways, *and apply the outer casing in "the form of several or more layers thereon; and, in some cases, I "apply two or more layers of such rings, according to the strength "sought to be obtained.*" Referring to the patent of Prof. TREADWELL, we find that his gun is to be constructed of a cast-iron tube—*that the entire length of the gun is covered with "hoops, one layer in front and two layers in rear of the trunnions*—that the hoops are *screwed* on the cast-iron tube, and the second layer of hoops *screwed* upon the first layer; and that the hoops are all "shrunk and screwed upon the body." It is thus seen that *successive* layers of hoops, one over the other, are designed, both by Capt. BLAKELEY and Prof. TREADWELL, essential in obtaining the full advantage of their claims. Capt. PARROTT uses but *one* hoop, and his method of applying it is different from that of either of the other claimants of the invention.

Six calibres of his gun are made by Capt. PARROTT—the 10, 20, 30, 100, 200 and 300 pounders. We give below in convenient tabular form the ranges of the different sizes of Parrott guns.

PARTICULARS OF GUNS.

	DIAM. OF BORE.	LENGTH OF BORE.	WEIGHT OF GUN.	CALIBER.
10 pdr.	2.60 Inc.	70. Ins.	880 lbs.	2 pdr. smooth bore.
20 "	3.67 "	108. "	1,910 "	3 "
30 " rifled.	4.20 "	120. "	3,200 "	4 "

8-INCH, OR 200-POUNDER GUN.

The opportunity for obtaining full ranges with this gun has not been afforded; but from partial trials it may be stated that the ranges are a little superior to those of the 100-pounder.

The charge for the 8-inch is 9 pounds. The projectiles, with very few exceptions, have been made of the weight of about 150 pounds.

The same remark holds good of the three hundred-pounder.

We trust, however, that when Gen. GILLMORE publishes his report, we shall have full *data* respecting the ranges of both of these heavy guns. The three hundred-pounder gun weighs 26,000 pounds. The charge used is twenty-five pounds, with a projectile of 300 pounds, or thereabouts.

The projectile used with the Parrott gun was designed and arranged to suit it. The groove, the twist, the calibre, as well as the heavy charge for calibre, are all founded upon the proper adaptation of the projectile to the gun. The length of the shell is equal to three calibres, and a cylindro-conical in form. A brass ring is fitted around the contraction of the base, making it cylindrical. The gas entering between the iron and the brass, forces the latter into the groove, by which the rotary motion is communicated to the projectile. The brass ring prevents the slipping of the shell by having the two surfaces in contact compressed, and by some projections on the upper edge of the ring which are jogged into the metal of the shell.

Great simplicity, great accuracy, and great strength are the three crowning merits of this excellent gun.

THE PEACE QUESTION

THE PRESIDENT and Hon. FERNANDO WOOD.—On the 8th of December, 1862, Hon. FERNANDO WOOD wrote to the PRESIDENT that he had divined by an authority which he deemed trustworthy, that "the Southern States would send representatives to the next Congress, provided that a full and general amnesty should permit them to do so. No guarantees or terms were asked for other than the amnesty referred to." Mr. WOOD says he communicated the substance of this information to Hon. GEORGE OPDYKE, the Mayor of New York, proposing through him, that if the Government would permit the correspondence, under its own inspection, he (Mr. WOOD) would undertake to procure another, definite and authorized statement in accordance with the so-called Confederate authorities. Mr. OPDYKE, he says, promised to communicate the proposition to several Senators from the New England States, who were then in the city on their way to Washington, but Mr. WOOD afterwards learned that Mr. OPDYKE had failed to see these Senators when in New York, that he (Mr. WOOD) was therefore satisfied that therefore the PRESIDENT was not in possession of it as coming from Mr. WOOD.

Mr. WOOD, therefore, suggests to the PRESIDENT "that gentlemen whose former political and social relations with the leaders of the Southern revolt would give them a hearing, may be allowed to hold unofficial correspondence with them on the subject—the correspondence to be submitted to you (the PRESIDENT). In the letter accompanied what, if any, credence may be given to those statements, and also whether a peaceful solution of the present struggle may not be attained."

The following is the response of the PRESIDENT:

EXECUTIVE MANSION, WASHINGTON, Dec. 12, 1862.

Hon. Fernando Wood:

My Dear Sir: Your letter of the 8th. with the accompanying note of same date, was received yesterday.

The most important paragraph in the letter, as I consider, is in these words:—"The South, November last, I was advised by an authority which I deemed likely to be well informed, as well as reliable and truthful, that the Southern States would send representatives to the next Congress, provided that a full and general amnesty should permit them to do so. No guarantee or terms were asked for other than the amnesty referred to."

I strongly suspect your information will prove to be groundless; nevertheless, I thank you for communicating it to me. Understanding the phrase in the paragraph above quoted—"the Southern States would send representatives to the next Congress"—to be substantially the same as that "the people of the Southern States would cease resistance, and would re-inaugurate, submit to, and sustain the National authority within the limits of such States, under the Constitution of the United States," I say that in such case the war would cease on the part of the United States; and that if within a reasonable time a full and general amnesty were necessary to such end, it would not be withheld.

I do not think it would be proper now to communicate this, formally or informally, to the people of the Southern States. My belief is that they already know it; and when they desire to make it, they can communicate with me unequivocally. Nor do I think it proper to suspend military operations to try any experiment of negotiation.

I should, nevertheless, with great pleasure, the exact information you now have, and also such other as you may in any way obtain. Such information might be more valuable before the 1st of January than afterward.

While there is nothing in this letter which I shall dread to see in history, it is perhaps, better for the present that its existence should not become public. I, therefore, have to request that you will regard it as confidential.

Your obedient servant,

A. LINCOLN.

Whereupon, Mr. WOOD, under date of December 18th, writes again to the PRESIDENT, expressing regret that the proposition had been declined, and urging it again upon his attention. Mr. WOOD closes his letter by saying he feels "that military operations, so bloody and exhausting as ours, must result in a final settlement." The letter of expension must come. The only question whether it shall be before the whole American people, North and South, shall be invoked in general terms to decide whether it is wise that there is remaining sufficient of the recuperative element of life by which to restore our once happy, prosperous and peaceful American Union.

In accordance with the request of the PRESIDENT the correspondence was not made public for some time.

The following extract from a letter addressed by Mr. LINCOLN to the Union State Convention in Illinois, and dated June 12th, 1863, affords further light to this peace question, and comes in naturally in this connection:

"I do not believe that any compromise embracing the maintenance of the Union is now possible. All the Free States heads to a directly opposite belief. "The strength of the Rebellion is its military—its army. That army dominates all the country and all the people within its lines. Any offer of terms made by any man or men within that range, in opposition to that army, is simply nothing for the present; because such man or men have no power whatever to enforce their side of a compromise, if one were made with them.

"The strength of the Government lies South of that army. Men of the North get together in convention, and frame and pass resolutions embracing a restoration of the Union. In what way can any compromise which can be reached by Lee's army out of Pennsylvania? Meade's Army can keep Lee's army out of Pennsylvania, and, I think, can ultimately drive it out of existence. But no paper compromise to which the controllers of Lee's army are not agreed can disband Lee's army. There is an effort in such compromise we would waste time, which the enemy would improve to our disadvantage; and that would be all.

A compromise, to be effective, must be made either with those who control the Rebel army, or with the people, first liberated from the domination of that army by the success of our own Army. Now, allow me to assure you that no word or intimation from that Rebel army, or from any of the men controlling it, in relation to any compromise, has ever come to my knowledge or belief. All changes and insinuations to the contrary are deceptive and groundless. And I repeat that I see no way for any opposition Northern to come, it shall not be rejected and kept a secret from you. I therefore acknowledge myself to be the servant of the people, according to the bonds of service, the United States Constitution; and that, as such, I am responsible to them."

AMONG the casualties reported on Morris Island, are the following: Capt. Fowler, Marine Brigade, wounded, severely. Capt. Goodwin, 3d South Carolina—thigh. Lieut. C. Adrience, Co. G, 7th N. H.—left arm, severe, slightly. Lieut. J. A. Perkins, Co. I, 24th Mass.—killed. Lieut. C. H. Richmond, 100th New York—contusion of shoulder.

THE wounded officers of the Third Corps are anxiously awaiting the return of General BIRNEY. The three prongs for him a magnificent reception. They have caused to be built a handsome vehicle, but floats were decorated with beautiful horses, with appropriate harness and equipments, which will be presented to him on his return. The cost of the entire gift will reach a few hundred dollars. The rest of the horses was five hundred dollars each.

THE Union citizens of Memphis, gave Maj.-Gen. Grant, the 3d inst., a grand ovation at the Gayoso House. The building inside and out was decorated with Union flags, and a-blaze with innumerable gas jets. Inside were the side of the city, and a-blaze with innumerable gas jets. Inside were the side of the city, and a-blaze with innumerable gas jets. Inside were the side of the city, and a-blaze with innumerable gas jets. Inside were the side of the city, and responded to by Generals Thomas, Hurlbut, Veatch, Grierson, Whipple, and Logan, and a host of others. Gen. Grant responded modestly to one alluding to himself.

A CORRESPONDENT sends us the following list of the officers of the Department of Covington and Newport, Ky.: Lieutenant-Colonel Thomas J. Ist Regiment O. M. A., Port Commander; Brigadier-General Tillson, Chief, Artillery Fortifications; 1st Lieutenant W. W. Deane, 12th Maine Volunteers, A. A. A. G.; 1st Lieutenant W. A. Ferry, 2d Maine Battery, A. D. C.; 2d Lieutenant E. W. S. Neff, 1st Ohio Volunteer Heavy Artillery, A. D. C.; Captain George P. Webster, Port Quartermaster, Covington, Ky.; Captain W. A. Murphy, Fort Commissary, Covington, Ky.; Surgeon W. H. Gobrecht, Medical Director, Covington, Ky.; Provost Marshal, Captain G. W. Berry, Covington, Ky.; Lieutenant C. D. Mosebel, Newport, Ky.; Captain R. S. A. Mottz, 14th United States Infantry, U. S. A., Commanding Newport Barracks.

ITEMS AND INCIDENTS.

THE report of the death of the guerrilla, Mosby, is found to be premature. He has been ill, but is not yet dead.

THERE are now 27,109 rebel prisoners in our hands. There are 11,000 at Fort Delaware, 9,000 on David's Island, and the remainder are in camps and prisons at the West.

THE streets of Cairo, a few days ago, presented an interesting spectacle. They were being cleared by a squad of gamblers, whom the Provost-Marshal had arrested and set to work as scavengers.

THE Knoxville *Register*, alluding to the proposed statue of Stonewall Jackson, says that Mr. Volck "has been authorized to proceed to Europe to superintend the work;" and adds the bewildering statement that, "after Jackson's death, Mr. V. took a very faithful *bust* of his *face*."

IN addition to the Greek-fire shells, a large quantity of improved shrapnel shells, made by the inventor of the Greek-fire shell, and containing from five hundred to one thousand bullets each, have been sent to Morris Island. These shells are fired with time fuses, and are very destructive of life.

THE Union Powder Works, in Durham, N. H., turn out two tons of powder per day for Government use. They work with three other establishments, furnish a large portion of the powder used in this war. The Dupont Works, Wilmington, Del., Hazard in Connecticut, Oriental in Maine, and Union in New Hampshire, have turned out at the rate of 600 barrels per day.

REV. A. M. Haskell, who has been settled over an Independent Congregational Church, in Salem, Massachusetts, a little more than a year and a half, has been drafted and drafted to serve in the army of the United States. On second Sunday he announced to his congregation, in a patriotic discourse, his intention of responding promptly to the call, summons, with a willingness to serve in any capacity which might be deemed most useful to the service.

IT appears that the rule of paying Sunday due deceased soldiers will be paid only by the paymaster belonging to the pay district from which the certificate emanates. When presented to a paymaster outside of the district from which they come, he will refer them to the senior paymaster of the proper district for payment. The immense number of muster certificates now being issued render this precaution absolutely necessary.

GEN. Grant, in his official report of operations in his Department, mentioned with the greatest praise Mr. Wadsworth the singular fact that every kind of artificers may be found in the ranks of the volunteer army of his army. Skilled labor is daily required, and every requirement finds a supply met. A locomotive hearing the name of W. T. Sherman has been constructed at Memphis, and is a 2,000-pounder. The trucks have been cast, and the remainder of the engine and tender gathered from the debris of other engines, by piecemeal. Just arrived from the Tennessee roads, just from Kentucky, and other parts from Mississippi To put them together, as a whole, is a good, neat, and strong locomotive, was but the work of a few days.

MR. R. P. Parrott, the inventor of the Parrott guns, commenced making them in 1836, at his own expense, continuing for seventeen years without aid from the Government till the rebellion broke out. He then began to make 10-pounders, and has since made guns of that small beginning, to 300-pounders, and if successful will make a 2,000-pounder. Over 2,500 of these guns have been made by Mr. Parrott, who furnishes them at less cost than the Government can make them at its own foundries; indeed, supplying them a trifle above cost, depending upon shells which he furnishes to the Government for his profit. Over 1,000 guns ranging from 300 to 10 pound calibre, are turned out weekly at Mr. Parrott's establishment—the West Point Foundry, at Cold Springs, New York. The demand for rifle cannon is such a great that the founders of this country are unable to supply them, and are compelled to refuse orders. The State of Massachusetts alone has ordered 70 from abroad.

MAJ.-GEN. Banks has issued a general order, dated August 21st, in which Colonel John S. Clark, Major R. Rush Plumley, and Colonel Daniel P. Hanks, are detailed as a commission to regulate the enrollment, recruiting, employment, and support of the people of color. "The Provost-Marshal-General is ordered to cause to be enrolled all able-bodied men of color, in accordance with the law of congress approved July 17th, and such as are required for the military defence of the Department, equally subjected to the different persons, will be enlisted for military service, under such regulations as the commission may adopt. Unemployed persons of color, vagrants, and camp leaders, will be arrested and employed upon the public works, by the Provost-Marshal's Department, without regard to their relation and clothing. Arrests of persons and seizures of property will be made by the provost-marshals, and will they be charged with the custody of persons or property except when under the command, and accompanied by duly authorized officers of the army. Every man of color, a penalty of one seldom, on account of his being engaged in military service, will be summarily punished."

A GENERAL order, issued by Maj.-General Banks, under date of August 19th, gives Corps Commanders, in the Department of the Gulf, authority to receive resignations of officers, and to grant leaves of absence. Commanders of Corps and separate Divisions, to give leave of absence for seven days, in case of necessity, not to go beyond the limits of the Department. Division Commanders may grant leaves of absence for twenty days, on surgeon's certificate, to go beyond the limits of the Department, to the officers of their commands, within the following rules:—At least one field officer must be present with each brigade. At least one field officer must be present with each regiment. At least one company officer must be present with each company. Applications for leave of absence, if forwarded to Department Headquarters, must invariably state the number of officers of each grade present for duty with the regiment, and, if the applicant be a field officer, the number of field officers present for duty with the brigade. Division Commanders are authorized to approve furloughs not exceeding sixty days to the enlisted men of their commands, provided that not more than four men shall be absent from the same company at any one time. During the season of active operations, no furloughs shall be granted, except on surgeon's certificate, approved by the Medical Director of the Corps.

ARMY PERSONAL.

CHAPLAIN Kempsey, of the 176th New York, has been appointed to the Colonelcy of a regiment of the African Corps.

MAJOR-Generals Schenck and Schurz were in Washington on Friday last.

MAJOR-General Doubleday has been ordered to report to General Meade.

MAJOR-General Butterfield was at the Astor House on Saturday.

CAPT. T. B. Brooks, aide-de-camp on Gen. Gillmore's staff, has received his promotion to a majority.

LIEUT. Henry G. Bragg, side-de-camp to Gen. Gillmore, is promoted to a captaincy.

CAPTAIN Oliver Cutter, 6th New York Artillery, has been cashiered for making false returns.

MAJOR-General Hunter, at his own request, has been assigned to a command in the West.

EX-GENERAL Fitz John Porter is spending the summer at Morristown, N. J.

MAJOR-General Slocum has been making a short visit to his home in Syracuse.

BRIGADIER-General Viele has been ordered to Cleveland, Ohio, where he will supersede General Mansun.

BRIGADIER-General Robert Anderson has assumed command of Fort Adams, at Newport, R. I.

GENERAL John O. Frémont has purchased the estate at Nahant, near Boston, known as the "Phillips Cottage."

EX-BRIG.-Gen. Cowdin has declined an offer of the post of Paymaster in the army.

MR. Charles Horton, of Boston, has been appointed Aid on Major General Heintzelman's Staff.

CAPT. D. A. Polsdorf has received the appointment of Major in a New Jersey Regiment.

MAJOR Gen. Schofield left Leavenworth, Kansas, on the 3d, to take command of the forces in that State.

LIEUT.-Col. Fry, 5th New York Cavalry, superseded to have been killed at Beverly Ford, is a prisoner at Richmond.

A somewhat contradictive is given to all the late reports of the removal of Generals Ripley and Meigs, and Surgeon-General Hammond.

COL. R. S. Foster, of General Frémont's staff, has resigned, having become satisfied that the General will not be assigned to another command.

CAPT. Bell, who has been placed in charge of the Quartermaster's Department of the defences north of Washington, vice Captain Levy.

MAJOR-General Wool visited Burlington, Vt., on Tuesday of last week, and was received with a Major-General's salute.

COL. Rawlings, Kirby Smith, Gens. Smith, Maltby, John Cocke, and Staff officers of Gen. Grant's army, have been made Brigadier-Generals.

MAJOR E. W. Smith, Assistant Adjutant-General to General Gillmore, has been made Lieutenant-Colonel and Adjutant-General of the Department.

GENERAL Ripley has been relieved from the Ordnance bureau, and Captain J. D. Benton has been appointed in his place.

BRIG.-Gen. Carr has been assigned to the command of the left wing of Gen. Hurlbut's army, with headquarters at Corinth.

LIEUTENANT-Colonel J. P. Sanderson, formerly in command of Fort Adams, has been appointed Colonel of the 48th Infantry, and is made Chief of General Burnside's staff.

COLONEL Burr Porter, of Newark, N. J., and recently in command of the 40th Massachusetts regiment, has resigned and returned home.

BRIGADIER-General George G. Stannard, United States Volunteers, has been assigned for temporary duty to Brigadier-General Canby, Commanding City and Harbor of New York.

GENERAL Dana has been relieved of his command at Philadelphia, and is assigned to Texas, where he will take charge of an important position.

BRIGADIER-General Z. P. Tower is still confined to his residence, at Chelsea, Mass., on crutches, slowly recovering from wounds received at the second Bull Run battle.

COLONEL Bowman, Military Superintendent of West Point, has been relieved, and Brigadier-General H. G. Wright put in his place.

MAJOR Dunne succeds Gen. J. K. Warren as chief engineer, at Headquarters Army of the Potomac. Major Duane was formerly of Gen. McClellan's staff.

GEN. James C. Rice, recently promoted, has been temporarily assigned to the command of the 1st Division, 1st Army Corps.

MAJOR James B. Page, of the late Ninth Kentucky Cavalry, has been appointed Assistant Secretary of State of Kentucky.

THE command of all the troops guarding the line from the Ohio to the Monocacy has been bestowed upon Brig.-Gen. Kelly.

CAPTAIN A. S. Nesmith has been placed in charge of the Quartermaster's Department of the defences north of Washington, vice Captain Levy.

MASSES were held in the Catholic churches of Cincinnati on Sunday last, at the request of Maj.-Gen. Rosecrans, for the success of the Federal Army.

BRIG.-Gen. Sullivan, of Memphis'ex duty, September 2, and was assigned to the command of the left wing of Brig.-Gen. Hurlbut's army, with headquarters at Corinth.

MAJOR H. L. Burnett has been appointed by the President Judge Advocate of the Department of the Ohio, under the late act of Congress. He served for two years with the army in the field, in Missouri, Arkansas, and Kentucky.

COL. Clarke, of Morgan's force, has been taken to Cincinnati, from the Ohio State Prison, by order of Gen. Burnside, to be tried by a commission for the violation of his oath of allegiance, which he took some months since.

LIEUT.-Col. Crocker, Acting Inspector-General of the Cavalry Corps, Army of the Potomac, is absent on sick leave. Major Wm. Swift, 8th Pennsylvania Cavalry, is temporarily assigned in his stead.

EX-COL. Hayman, of the 37th New York Volunteers, recently dismissed, has returned to his rank in the regular Army, Major Eleventh Infantry, and is assigned to duty as Commissary of Musters, Third Army Corps.

THE Court of Inquiry in Gen. Milroy's case was concluded on Monday. The finding of the Court, in favor of General Milroy, has prepared a review of the case, to be submitted to the President.

BRIG.-Gen. S. D. Sturgis, Chief of Cavalry in the Department of Ohio, announces his Staff as follows, viz: Captain W. C. Rawolle, A. D. C. and A. A. A. G.; Captains C. H. Hale, G. W. Lott, H. B. Scruggs and J. S. Gray, A. D. C.'s.

GEN. Martindale, Military Governor of the District of Columbia, has left for New York on thirty days' leave. Maj.-Gen. Augur, Adjutant-General on Gen. Martindale's Staff, is acting Military Governor.

AMONG the arrivals in this city during the week have been Brig.-Gen. Grover, Major-Gen. Augur, Brig.-Gen. John G. Barnard, and Lieutenant-Colonel Duncan, U. S. N. Major Gen. Ord was in Cincinnati on the 1st.

CAPT. Charles C. Duryee, 1st U. S. Artillery, has been relieved from duty in the defences of Washington, and ordered to assume the superintendence of the volunteer recruiting service in the State of Michigan, vice Lieut.-Col. Smith, relieved.

MAJOR-General Ord has just reorganized his corps. It is divided into four divisions, commanded respectively by Major-General Hamilton, Colonel A. Wetherill, Brevet-Major General Horton, of Iowa, Brigadier-General Hovey, of Illinois, and Colonel Landram, of the 19th Kentucky.

CAPT. A. S. Tibbals, recently commanding Battery A, 2d U. S. Artillery, with the Army of the Potomac for the past two years, has been promoted to the Colonelcy of the 6th New York Heavy Artillery, now in the defences at Washington.

AT the invitation of many of the officers and men of the regiment recently stationed on Morris Island, Maj.-Gen. McClellan, on Tuesday, reviewed them and made a short address, expressing his pleasure at again meeting his old comrades in arms.

CAPT. Thomas Drummond, Provost Marshal of the Cavalry Corps, has been relieved, and returns to the command of his regiment, the 1st Regular Cavalry. Captain Wm. Lelion, of Gen. Pleasanton's staff, is assigned to duty as Provost Marshal of the Corps.

BRIG.-Gen. Edward W. Hinks was married to Miss Elizabeth Nichols, of Cambridge, Mass., last week. Brevets. Major Cross of the 5th New Hampshire regiment, Major Rice of the 44th Massachusetts, and Lieutenant White of the 2d Heavy Artillery, acted as groomsmen.

DR. J. K. Barnes, Medical Inspector-General, and one of the most distinguished officers of the Medical Staff of the States Army, who has been assigned to the position of Acting Surgeon-General, is spoken of as the successor of Surgeon-General Hammond, who has been dismissed.

CAPTAIN Lewis of the Engineers, was wounded in a cavalry runner at Morris Island, on the 3d. He had occasion to adjust his field glass, and in doing so exposed his hands to the enemy's sight. A sharpshooter fired at them and cut off all of the fingers of his right hand, maiming him for life.

LIEUTENANT Colonel Edward N. Hallowell has been appointed Colonel of the Fifty-Fourth Massachusetts Regiment, in the place of Colonel Shaw, resigned. The promotion in the last assault on Fort Warter. Col. Hallowell has nearly recovered from his wounds.

COL. Dandy, of the One Hundreth New-York Regiment, was wounded recently while in the trenches on Morris Island. He was about giving an order when a shell struck and in a pile of bricks near him; a fragment of one striking his leg, caused a contusion. He lay unconscious for a few moments, then rose, received medical attendance, and returned to the front till his regiment was relieved. He was soon able to resume his duties.

BRIG.-Gen. Nickerson, formerly Colonel of the 14th Maine regiment, has been assigned to the command of General Kelly's old brigade, though it still retains the name of "Emory's Division." Brig.-Gen. McMillan, formerly Colonel of the 21st Indiana, commands Gen. Paine's old brigade—the 4th Wisconsin having been made mounted, is not attached to any brigade. The 28th Massachusetts are ordered to report to Brig.-Gen. McMillan in their place.

LIEUT.-Col. Edward Hinman, late Assistant Adjutant-General to General Hooker, and who was wounded at Gettysburg, has been ordered to Annapolis, to undergo an examination before a Board of Surgeons, previous to duty. It is feared that Col. D. may lose the use of his left hand and arm, from contraction of the cords which were injured. It will be remembered that he made one of the last charges of chain, which was driven through between the bones of his wrist.

COL. Schoolmaker, of the 14th Pennsylvania, was killed in a recent cavalry fight between the forces of Brig.-Gen. Averill, and those of the rebel Col. Jones. Capt. Wm. Parlier, of the Eighth Virginia, was shot from his horse, and severely if not fatally wounded. Maj. McKnight, of the Second Virginia, was seriously wounded. Lieut. French, of Company B, Second Virginia, was shot through the heart. Capt. Ewing (Artillery) was shot through the side. Parlier, Ewing, and McNally, were left in the hands of the Confederates, but Lieut. French was rescued.

ARTILLERY IN THE UNITED STATES.

ITS CHANGES AND PRESENT CONDITION.

When the rebellion commenced, the whole field artillery force of the United States in active service consisted of *seven batteries*, each of four guns, eighty men, and from forty to sixty horses. The guns were the old-fashioned, smooth-bore six-pounder and twelve-pounder howitzers. We had not at that time a single *rifled* field-piece in our service. These batteries were on duty in Minnesota, Kansas, Texas, New Mexico, and Oregon, and, it is now pretty well understood, were purposely thus scattered, to prevent their being available when the rebellion broke out.

The prompt action of Lieut.-General Scott prevented the success of this arrangement, and most of these batteries were hastily assembled at Washington in season to participate in the first battle of the war. Two of those which were least distant were transported by railroad, with their horses, guns, and entire equipments, more than fifteen hundred miles in less than six days.

The military reader will readily comprehend the great labor requisite to effect, in two years, the manufacture, assembly, organization, and instruction of the *materiel* and *personnel* of so magnificent an artillery as we now have in the field. This vast increase of *materiel* and *personnel* has been accompanied by an improvement in the former extraordinary as it has been valuable: an improvement that places us not merely in the front rank of the nations of the world in this respect, but really before many of those who have hitherto been considered the most advanced.

The smooth-bore pieces of former days have been superseded by the new pattern light twelve-pounders, or "Napoleon," as it is familiarly called. This is a gun howitzer of about twelve hundred pounds weight, with a diameter of bore 4·62 inches, made of gun metal, and whose projectiles —all spherical—are solid shot, case-shot, shell, and canister. For service, its ammunition is all "fixed." The fuses for its hollow projectiles are all "time" fuses of the peculiar pattern known as "the Bormann," a very ingenious and effective improvement upon which has recently been adopted by the Ordnance Department. It can be put into the service. The charge of powder for these guns is two-and-a-half pounds; and, though a special carriage is now being constructed for them, they mount readily upon the old pattern twenty-four pound howitzer carriage, with a slight alteration at the elevating screw.

For all distances within fifteen hundred yards this gun is most effective; and with case-shot at eight hundred yards, or canister at two hundred, it is believed to be irresistible. During the present war instances have been repeated and well authenticated where single batteries composed of this description of gun have successfully resisted successive and repeated pertinaciously charges of heavy bodies of infantry; even when, as has been the fact in several instances, the enemy succeeded in approaching to within thirty yards of the muzzle of the guns. In fact, there has not been an instance of all these battles having been fairly charged when its flanks and rear were adequately supported. With canoneers who will stand up to their work, such batteries can always take care of their own front, *and cannot be taken*.

The *rifled* field-guns at present used in the military service of the United States are generally the Parrott six-pounder and the regulation wrought iron three-inch gun. The former weighs nine hundred pounds, is 2·9 inches diameter of bore, and is made of cast-iron, reinforced at the seat of the charge with a wrought-iron jacket which it extends on. The latter weighs eighteen hundred and fifty pounds, is three inches in diameter bore, and is of wrought-iron, built up of sheets of boiler-iron wrapped round a central tube or core. The charge of powder for both of these guns is one pound; the projectiles used in them, which are all elongated, are solid shot, case-shot, shell, and canister; and they weigh about ten pounds. These guns mount on the six-pounder carriage of the old pattern, which is now strengthened by the substitution of the twelve-pounder axle. The twenty-pounder Parrott gun is also used as a heavier field gun and as a siege gun. It weighs, in round numbers, eighteen hundred pounds, is 3·67 inches diameter of bore, (the same as the old pattern six-pounder), and mounts upon the twelve-pounder carriage. Its charge of powder is two pounds, and its projectiles, which are of the same nature as the ten-pounder, weigh about twenty pounds.

A few of the old fashioned bronze six-pounder guns, reamed out to a diameter of bore of 3·80 inches, and rifled after the method of JAMES' have been unavoidably introduced into the service. The charge of powder for these guns is 1¼ lbs., and the projectile weighs about 13 lbs. The gun and carriage being illy adapted to withstand the shock of so heavy a charge and projectile, the carriage is seen disabled by the fire of its own gun. These guns are therefore being withdrawn from the service as rapidly as the regulation three-inch gun can be substituted for them.

The *range* of all of these rifled field-guns at 12° or 13° (the greatest elevation their respective carriages will admit of) is from 3000 to 3500 yards, or about 11 to 2 miles. With higher elevations, readily procured by the simple artificial means familiar to every artillerist, ranges of 4000, 5000, or even 6000 yards (more than 3½ miles) can be obtained.

While the *projectiles* used in field-guns come under the general denomination of solid shot, shell, case-shot, and canister, the characteristic inventive genius of Americans, stimulated by the enormous demand and by the large fortunes accumulated by the more lucky inventors, has produced many varieties of each. The "winged" or "buttoned" projectiles of the early days of rifled artillery, have given place to such as receive their rotatory motion on the principle of "expansion."

The many combinations possible in this direction have offered a wide field for inventors, into which scores of them have wildly rushed. The so-called "*improvements*" which have been offered for trial, and most perfectously pressed for adoption, have in many cases appeared to offer but small guaranty of worth. In others, where the principle appeared to promise success, it was either but partially perfected, or the elaboration was so great as to involve either excessive cost of manufacture, or great difficulty, uncertainty, or risk in use. In all cases a patient examination has been made, by authorized persons of the Ordnance or Artillery Department of the Army, and, whenever opportunity or the pressing exigencies of the service would permit, fair test trials have been made. It has thus happened that but few of these ventures—some voyagers upon the sea of "improvement" have brought home cargoes, either useful to the Government or profitable to themselves. PARROTT, SCHENKL, and HOTCHKISS are the only three whose projectiles for rifled guns have been generally adopted into the United States service. Those of JAMES and SAWYER are yet temporarily in use to a limited extent.

The perfection of the "expansion" principle of the projectile having been nearly uncertain the old method of igniting the fuse of the hollow projectiles, the necessity has arisen for certain modifications to ensure this result.

Inventors have here again been offered a promising field, and, as has been stated with regard to projectiles, they have not disregarded their opportunities. In all these, therefore, we are known to have spent their time and money in the endeavor to render certain the ignition of the fuse in case-shot of rifled artillery (which kind of projectile it may perhaps be necessary to inform the unprofessional reader, is intended to scatter a shower of small missiles, or, as object SAYER, is the only one who has been *fully* successful. SAWYER and HOTCHKISS have made very creditable advances in this direction, and are still engaged in perfecting what gives fair promise of entire success. The "combination fuse" of SCHENKL is ingenious, and, as it appears, promising, is perfect as to be open to scarcely any objection. In certainty of ignition, regularity of burning, and simplicity in use, it is truly admirable. As has been before remarked, this plan of combining the principle of "concussion" with the ordinary "time" fuse, is unquestionably the case-shot of rifled artillery. With *shells* the circumstances are entirely different. These projectiles being designed to burst *on impact*, or immediately afterwards, percussion fuses were readily arranged. Those of PARROTT, SCHENKL, and HOTCHKISS, though at first somewhat capricious, have lately been much improved, and they now answer very well the purpose designed.

In the PARROTT system, the "*expansion*," which is applied entirely at the base of the projectile, is produced either by a cup of brass rifling "gas" by the action of the powder charge, or by a thin filling the grooves of the gun and imparting their twist to the projectile; or by a ring of brass partially swedged and attached to the base of the projectile in such manner as to form an imperfect juncture. The gas of the projecting charge entering these cavities, expands the ring into the grooves, and produces the effect desired. The former plan is now confined to the 10-pounders and 20-pounders, as it is considered that it facilitates the expansion of the projectiles for these lighter guns. The performance of PARROTT'S guns and projectiles, when used, has been properly pronounced by the highest general satisfaction. It is indispensable, however, in these guns that *suitable* powder and PARROTT projectiles be used.

In both the SCHENKL and HOTCHKISS plan the expansion is produced by the projecting charge forcing upon the inclined plane of the base projectiles the softer material with which their posterior portion is enveloped. This imparts the rotatory motion nearer the centre of gravity and of volume than in the PARROTT plan. In the HOTCHKISS projectiles this "softer material" is lead. In the SCHENKL it is composition. SAWYER'S plan is a variation of that of HOTCHKISS. The plan of JAMES was formerly upon a principle similar to that of the Minié ball for small arms, but as this was found in practice to work badly, it has been now modified upon the inclined plane principle.

Between the SCHENKL and HOTCHKISS projectile there is perhaps but little to choose. In accuracy of flight, and in range, they are about the same: and while the excellence of SCHENKL'S "combination" fuse gives his case-shot an advantage over that of HOTCHKISS, the numerous fragments into which the shell of the latter disperses on explosion renders it but little inferior in destructive qualities to a case-shot.

The advantage of the enlarged experience which the present war is offering will not be disregarded by either PARROTT, SCHENKL, or HOTCHKISS; we may, therefore, confidently look for still greater perfection in their respective inventions.

In position, siege, garrison, and sea-coast artillery, great improvements have been made. In fact, the advances made by the United States in guns of heavy calibre, their carriages, projectiles, manufacture, method of mounting and service, are quite as great as those of the field artillery. A description of this branch of artillery, together with some account of the organization, service, proportion of rifles to smooth-bores of field artillery is reserved for future papers. B.

HINTS TO CAMPAIGNERS.

No. III.

After pitching a tent, suitable draining arrangements should be made. A ditch dug around the outside of the tent, or even a slight furrow made with a tent-peg, will serve to turn water from the interior. When a storm is threatening, care should be taken that the pegs are not subjected to too much strain, else the shrinking of the canvas when wet will tear them up. Tent furniture should be as simple as possible. The most essential articles are, a small portable bedstead, folding table, and a couple of camp stools. Where these can be transported they are luxuries that well pay for the providing. Camp stools should be low and wide, and the table should correspond in height, as the seat is best considered when the table is low. The stools, if made sufficiently wide, will serve the double purpose of stool and portion of bedstead. Flannel should always be worn next to the skin. Experience has shown that, in all expeditions requiring exposure, a great proportion of the sick waste from those who were unprovided with flannel. Cotton is next in excellence to flannel, and linen is the least desirable to health. For an outside covering, a poncho is an invaluable article, as it also serves for a blanket. India-rubber ponchos are good in wet weather, to shed rain, but render the wearer uncomfortable, and should not be worn except when it cannot be avoided.

Of equal importance with the proper selection and preparation of the stopping places, are the details relating to the means of locomotion. To prevent sore backs on saddle and pack animals, every precaution should be taken at the starting, to have well stuffed saddles and ample saddle-cloths. To preserve the backs of pack animals, short journeys, light loads, well balanced, frequent rests, and salt water well rubbed in, are essential. It has been found that travel very early in the morning, or late in the evening, but that very late at night is not so. The first indications of a sore back must be at once attended to, otherwise the injury will increase in size, and a single day's neglect will convert what might have been easily cured into a serious and irremediable evil. Feeding the saddle-cloth, so as to cause frequent rests from the injured part, or even picking out the stuffing from the saddle, where it would bear upon it. is the best immediate remedy that can be employed. Girth galls may be relieved on their first appearance, by sewing two rolls of soft woolen or flannel cloth. In stopping for the night, the nature of the country and the dangers to be apprehended must determine whether the animals are to be picketed, hobbled, or knee-haltered. A picketed horse soon consumes all the grass of the circuit he moves in, which necessitates the cutting of more for him. A horse that is hobbled o knee-haltered will travel a mile at night. A strong bobble may be made by a stirrup leather, put at its middle around one fetlock, twisted half a dozen times, and then buckled around the other fetlock. To picket a horse on a sandy plain, fasten the rope to a bundle of sticks or brush, and bury it two or three feet in the sand. To secure a whip to a horse that is to be shot from, else, when a gun is raised to fire, he will imagine it to be the whip, and is sure to be unsteady. In crossing a deep river with a horse, drive him in, and then follow, grasping his tail. Should he turn his head and attempt to return his course, he may be directed by splashing water in his face. All other methods of swimming a horse are objectionable, and frequently result in drowning him. The great point of all is to retain the seat on his back; but if that should be attempted, the rider must at least remove his feet from the stirrups before entering the water. In fording a swift stream on foot, heavy stones should be carried in the hands; they will serve as a resistance to the force of the current, and if they endanger the stream, the more weight is required, though these is less at command, owing to the buoyancy of the water. Fords which are more than three feet, should not be attempted by footmen. For horses, they should not be over four feet. Fords should be tried for where the river is broad, rather than where it is narrow, and especially at these places where it bends in its course. The line of shallow water does not run straight across, but follows the line running from a promontory on one side to the nearest promontory on the other. By entering a stream so as to take such a course, shallow water will be entered at the beginning and end of the course, which will not be the case in attempting to cross in any other direction.

NOTICES TO CORRESPONDENTS.

The Editor of this JOURNAL will always be glad to receive from officers in the two services, correspondence and general communications of a character suited to its columns. It is necessary that the name of the writer should, in all cases, accompany his communications, not for publication, but as a guarantee of good faith.

Officers are especially requested to give an early notification of all personal matters of general interest; of the movements of vessels; of casualties among officers; and military and naval events.

The Editor will, at all times, be pleased to respond, in these columns, to enquiries in regard to historical and military matters.

From gentlemen in the medical service we shall be glad to receive communications on military hygiene, practical surgery, and reports of notable operations and more important cases.

The subscription price of THE ARMY AND NAVY JOURNAL is FIVE DOLLARS a year, or TEN DOLLARS for six months, invariably in advance. The subscription price may be sent in United States funds, or Quartermaster's Pay-master's or other drafts, which should be made payable to the order of the Proprietor, W. C. Church.

All communications should be addressed to the ARMY AND NAVY JOURNAL, New York.

Subscribers who fail to receive their paper promptly, will please give immediate notice of the fact.

Advertisements of a character suited to the columns of the JOURNAL will be inserted to a limited extent, at twenty cents a line each insertion.

The Editor does not hold himself responsible for individual expressions of opinion, in communications addressed to the Journal.

The postage on the JOURNAL is twenty cents a year, payable quarterly in advance, at the office where received.

U. S. ARMY AND NAVY JOURNAL.

NEW-YORK, SATURDAY, SEPTEMBER 12, 1863.

THE CAPTURE OF CHATTANOOGA.

GENERAL ROSECRANS' arduous campaign in Of the Alpine region of East Tennessee, has culminated in the capture of Chattanooga, which was entered by his forces on the 9th inst. General BURNSIDE's cooperating column had taken possession of KNOXVILLE on the 4th. General BUCKNER's corps of observation, which had been holding KNOXVILLE and guarding the Virginia and East Tennessee railroad, fell back before the superior force and in all probability concentrated on the main rebel army, under General BRAGG at Chattanooga. BRAGG finding that the enemy before whom he has already so frequently retreated was executing another of his flank movements—that his line of communications with the East was in possession of the Union forces, and all hope of reinforcement cut off, and that General ROSECRANS was grasping his only line of retreat, evacuated Chattanooga, just as he, two months ago, evacuated his strongholds at Shelbyville and Tullahoma.

This upshot of the campaign was probably anticipated by the few persons who have carefully studied the strategical manœuvres of General ROSECRANS, before and since he crossed the Tennessee river. The real significance, permanence and value of this achievement will, however, depend very much on the strength and *morale* of the rebel army. If it be still of sufficient strength to cope with the Union force, and its spirit and obedience power not entirely destroyed, he may doubtless make a stand in the vicinity, and a great battle may be necessary to decide the possession of that powerful natural citadel—the mountain region of East Tennessee. In this case, his course would be to retire to occupy Cleveland, Dalton, and Rome, taking up a strong position to cover his communications and give battle.

The movement toward Chattanooga, which has reached so gratifying a conclusion, has been, technically, a movement of double exterior lines of operation concentric toward the enemy. Gen. ROSECRANS starts from Winchester, Tenn. (headquarters previous to the advance), to move on Chattanooga, almost due east, distance in air-line fifty miles; in actual line, probably, seventy-five miles. Gen. BURNSIDE starts from Lexington, Ky., to move on KNOXVILLE, and thence on Chattanooga, almost due South—distance about an even hundred miles.

It is, perhaps, due to say, that the principles of military science, and the experience of innumerable campaigns, condemn this kind of operation. FREDERICK, NAPOLEON, Prince EUGENE, and CÆSAR, won some of their finest victories over an enemy offering precisely such advantages as the double line advance on Chattanooga offered. This, of course, does not imply that such a division of force is not justifiable under special circumstances. It is entirely justifiable, for example, when each column is strong enough to take care of itself against an enemy concentrating on the one or the other isolated. There are also many other cases in which, from the peculiar strategic relations of the enemy, the *morale* of his troops, or the character of the commander, it is quite justifiable. Gen. ROSECRANS seems to have known enough of his enemy to feel secure in taking a step which has so often proved fatal.

The advantages of the cooperation of BURNSIDE's column to the success of the operations of the main body, under Gen. ROSECRANS, are obvious. The direction of the rebel base of operations, oblique to the line of communications of the Union commander, with his secondary base of operations at Nashville, and his primary base the Ohio river, gives the rebel commander an advantage which could not be overlooked. It was by means of this very advantage that Gen. BRAGG, at this very time last year, when Gen. BUELL's advance had already got within shelling-distance of Chattanooga, by a turning movement by the right of the Union army, succeeded in throwing back Gen. BUELL, first on Nashville, and then to another movement by the right on Louisville. It was absolutely necessary to guard against a repetition of the same stroke this year. The advance of Gen. BURNSIDE's column covering the left flank of Gen. ROSECRANS' army, and planting itself on the lines which the enemy would have to follow (the same he *did* follow last year) on debouching from the mountain region for an offensive movement, would do this quite effectually. The possession of the Virginia and East Tennessee railroad—the main line of communications of the enemy between the left and centre zones of the theatre of war (and the only one they have, unless by a great detour by the Western and Atlantic railroad)—at KNOXVILLE, or any point between KNOXVILLE and Chattanooga, would also give the immense advantage of cutting off the rebels from the power to reinforce their army in East Tennessee by any troops drawn from their army in Virginia.

The abandonment of KNOXVILLE by Gen. BUCKNER, was a correct step on his part, provided his force did not exceed the number at which our information fixes it—from eight to twelve thousand men. He falls back, concentrating on the main body at Chattanooga. It is true that, in evacuating KNOXVILLE, and allowing it to be occupied by the Union force, he gives up the great line of rebel communications between the east and the west, which should be held at all hazard. But if a military head as sagacious as Gen. JOE JOHNSTON has been directing operations in that region, he, of course, knows that the possession of this great artery will be decided by the result of the shock of arms between the two great armies, and that the loss of individual detachments, or the holding or giving up of special points. It must, therefore, have been his first care to see to it that he had his total force well in hand, for the execution of any plan he may have devised.

In our view of the military situation, published on the first page, we have given a detailed statement of the positions and movements of the different portions of Gen. ROSECRANS' army. He seems to have crossed the Tennessee on the 31st of August with his right (McCOOK's corps, the 20th), and centre (THOMAS' corps, the 14th), with the design of making a flank march on Chattanooga, while he threw the left wing (CRITTENDEN's corps, the 21st) across the *north* side of the river into the Sequatchy Valley, for the purpose of observing the enemy in front, and holding him in check there, while he executed his turning movement with the right and centre. The main body had succeeded in passing the first ridge of hills that intervene in the thirty miles between the points of crossing and Chattanooga, on the 7th, when it became so apprehensive for his communications that he abandoned the place, and CRITTENDEN's force was able to swing around and pass the river into Chattanooga.

We do not wish to indulge in mere speculation; and yet it may not be without instruction to confess that the situation of affairs presented itself during the week after Gen. ROSECRANS had crossed the Tennessee, and while BURNSIDE was in KNOXVILLE, gave the rebels the opening for a bit of strategy, not beyond the scope of a skilful, enterprising general. The region which Gen. ROSECRANS, had to pass through in order to reach Chattanooga is one exceedingly difficult to operate in, very easy to defend by a very small force, and which the Union commander could not traverse in less than ten days. (He has not got there with his entire body yet.) On the other hand, from the rebel position at Chattanooga to KNOXVILLE, where Gen. BURNSIDE's force was, the interval is an open valley with railroad communication. If the rebel commander had a force superior to BURNSIDE's, which he probably had, what was there to hinder him from holding Gen. ROSECRANS in check in the defiles of the mountains, while he threw himself on the isolated detachment at KNOXVILLE and used it up? That he did *not* do so (if we can be definitively assured that the rebel commander is not now attempting such a coup) is the most striking evidence that could possibly have been given of the weakness of his force, both materially and morally. The credit that is due to Gen. ROSECRANS for the capture of Chattanooga is not lessened by the fact that the plan of operations was one which, in a military sense, was not altogether free from faults.

REBEL RAMS IN ENGLAND.

WE publish in another column the memorial addressed to Earl RUSSELL by the Emancipation Society of London, with reference to the building of the two steam iron-plated rams designed for the rebels, touching which we have had for some time back numerous foreshadowing rumors, which now assume definite and very formidable proportions. These two engines of warfare, powerful iron-clads, said to combine the ram and Monitor principles, have been built by Mr. LAIRD, at Birkenhead, and one of them had reached such forwardness as to be ready for sea. These vessels have been followed throughout the whole course of their construction by our Government's agents abroad, and there is not the shadow of a doubt that they were designed and built for the rebel service. We are glad to be able to acknowledge that the voice of public opinion, as expressed through the leading British journals, gives an emphatic protest against this shameful business, and loudly calls upon the government to interfere and put a stop to the sailing of these vessels. The protests of the *Times* and the *News* are as pointed as they could well be made. The case is a pretty clear one, unembarrassed by a single doubt or obscurity. British law holds and acknowledges it unlawful to equip vessels of war for the use of a belligerent; not to say that international law discriminates between war-vessels and other contraband of war. The memorialists point out that Earl RUSSELL has himself already decided that "the Foreign Enlistment Act is sufficient to meet all "dangerous practices." And yet every cruiser now in the rebel service, preying on our commerce on the high seas, has been fitted out in British ports! The amount of energy and ingenuity that are enlisted in the service of breaking the spirit of a law so clear, only imposes the greater care on the British government to see that the law is observed. We presume the authorities will do their duty. In fact, it would be unfair to suppose they would not. had we not already had so many proofs of how they have been *thwarted* (to say the least) in their previous attempts to do it. It will be hard for them to explain away such a flagrant failure in the present case. We are sure there is not a man in the country that would not feel the permitting one of these iron-clad engines of warfare to get to sea in the rebel service, to be both a case and a cause of war.

FERNANDO WOOD'S PEACE PROPOSALS.

WE have before us a batch of private correspondence with officers in the Army, which shows that, among the men actively engaged in the field, at least, Mr. FERNANDO WOOD's patent for securing peace, is regarded as the joke of the season. The proposition of that "Democrat of the first stamp," deeply impressed with "the great necessity of restoring the Union of these "States" (as he touchingly photographs himself), that they should stack arms in front of the enemy, while *he* experiments on the pacific dispositions of those bank-like rebels, whose inoffensive nature they have so long failed to appreciate, if it serve no other purpose, has, at least, been of use in relieving the tedium of quietude on the Rappahannock, by a gentle, jocular stimulant. We put on record elsewhere the correspondence between Mr. WOOD and PRESIDENT LINCOLN, as a curious chapter in the history of the war. The EX-MAYOR's authority for his assertion as to the peaceful disposition of the rebels, rests on the remarkable string of hypotheses and indirections that "he had been *informed*, by an authority which *he* "deemed likely to be *well-informed*, as well as reliable "and truthful, that the Southern States would send "representatives to the next Congress, *provided* that a "full and general amnesty should permit them to do "so." And he requests that the war shall be stopped, while ambassadors are sent to ascertain the truth of the matter. PRESIDENT LINCOLN's reply is pointed and conclusive. He discredits entirely the information on which Mr. WOOD professes to have acted: but he says that, if the Southern people will communicate

to him their willingness to end the war on such terms, *"the war should cease on the part of the United States, "and a full and general amnesty would not be with-"held."*

It is well that this correspondence has been published, for it very effectually pricks this bubble, and shows that to be a mere bubble which some might have taken for a solid reality. As to Mr. WOOD'S assumption, that the rebels were ready last Fall to return to the Union on any terms, it need hardly be said that there are the most conclusive proofs of its falsity. Perhaps the most emphatic of these has just been given in a letter, a few days ago, made public, and written by General GARFIELD, Chief of Staff of General ROSECRANS. Referring to the interview between Mr. VALLANDIGHAM and ISHAM G. HARRIS, the fugitive rebel "Governor" of Tennessee, at the time VALLANDIGHAM was sent across the lines, General GARFIELD says:

"In a full and frank conversation between himself (VALLANDIGHAM) and Governor HARRIS, the latter, after hearing Mr. VALLANDIGHAM'S statements of his own opinions and policy said, in the presence of many witnesses: 'You totally misunderstand us. *We have resolved to listen to no "terms short of the total separation and absolute independence of "the South, and we will accept no boundary south of the line of the "Ohio and the Potomac. Negotiation on any other basis is utterly "useless.'"*

It will be observed that Mr. WOOD'S second letter, in which, as well as in the first, he dwells so emphatically on the fact, that "military operations so bloody "and exhausting as ours, must sooner or later end," bears date of December 17th, which was just on the heels of the receipt of the tidings of BURNSIDE'S disastrous repulse at Fredericksburg; and the whole context shows that he means they will "and" favorably to the side of the rebels. Eight pregnant months have passed since the date of that letter, and the results of military operations do certainly give good hope that they will speedily end, though in a sense opposite by the whole diameter to what Mr. WOOD anticipated. The victories of Vicksburg and Gettysburg, the progress at Charleston, the reconquest of the whole of the State of Tennessee, including Chattanooga and the entire mountain region, the opening of the Mississippi, the freeing of the whole of Kentucky, the capture of Knoxville, and consequent complete severance of the rebels, east and west, go far towards that "end" which our "humble but loyal citizen" so fervently desiderates—the "restoration of the Union "of these States."

THE POLISH QUESTION.

ENGLAND, France, and Austria, after consultation, have given up the plan of a joint note to Russia, in reply to GORTSCHAKOFF'S late dispatch; but, agreeing upon the points, has each written for herself, and in her own way. The actual text of the three notes has not transpired, but we have the gist from the *Memorial Diplomatique*. It is worthy of note, that a preliminary paper has appeared in France, in the form of an ably written pamphlet, which is probably one of NAPOLEON'S habitual, politic anchors to the windward. This is addressed to the French first, then to the Poles, to England, Russia, Austria, and Prussia; and its object is to show that, while Russia has no cause to complain of France, there is abundant cause, both on general principles, and for particular reasons, to interfere in the Polish question, if the Emperor sees fit to do so. The writer very adroitly assumes the entire unanimity of England with France in these views. Following the spirit of this *brochure*, and adopting much the same general tone of argument to his dispatch, M. DROUHYN DE L'HUYS denies the positions of Prince GORTSCHAKOFF, and regrets his conclusions; declares his attitude inconsistent with the treaty of 1815; insists that the French can take no different view than that already announced; and finally warns Russia that if she refuses friendly counsel, she must remain responsible for every consequence of the continuance of the Polish troubles. The notes of Lord RUSSELL and Count RECHBERG, though varying in terms (the English is much the longest of the three), take up the same views, principally insisting that the Russian minister is disregarding the obligations of the Vienna treaty, and considering his pretence that the Polish insurrection is the work of a revolutionary propaganda, for the existence of which the three powers themselves are responsible. There is no positive war tone in the dispatches; they are firm and courteous; but it is easy to see that the three powers have agreed to make a great point of the treaty of 1815, so that they may have, if hostilities are determined upon, the best of excuses. The infraction of a treaty is the best justification of a war; yet it is hardly to be expected that the two great maritime powers will so declare on the eve of a Russian winter, that would make their ships useless. There was a great deal of shrewdness after all in GORTSCHAKOFF'S hint, about NAPOLEON himself dwelling on a revolutionary volcano, and it gives us the key to the anxiety of the three powers, especially of Austria and France. "Disturbances in the adjacent provinces of Poland," says a good writer on this subject, "are as disagreeable as a fire in "the next house, when the partition wall is made of lath "and plaster."

WAR IN JAPAN.

THE gloved hand is not going to answer with the Japanese. They are as cunning and deceitful as the Chinamen, and much better at fighting. They are already pelting at ours, as also the English and French ships, with the beautiful Dahlgren's and rifled guns that we presented them; and from which, with their great imitative skill, they have already cast whole batteries. On the 24th June, the Japanese government paid over the indemnity ($440,000) demanded by the English for the murder of the Commissioner at Yokahama (or Kanagawa), thirteen English war vessels, two French, and the American steamer *Wyoming*, in all, about 180 guns. There is a hiatus in our information, at this point; but the English and French Admirals had announced that they would take and hold Kanagawa, which was another way of saying bear off the American ship *Pembroke* and the English ship *Medusa* (merchantmen) being fired at by the Japanese steamers and forts, on the 15th July, and much damaged—the *Medusa* losing ten men. The *Wyoming* started instantly, and, after a beautifully brisk fight, silenced the Japanese batteries. Mew up one steamer (the *Somerfield*), and the *Tancred* (the *Lancet*) in a sinking condition. She received twenty shots, and lost eleven men. The British steamer *Tancredi* followed, a few days after—the batteries, it would appear, having been re-established—and had a fight of three hours with them, after which a detachment of troops landed, stormed the forts, spiked the guns, blew up the magazine, and burnt the adjacent village. Two thousand Japanese troops came toward the shore, but kept out of reach of the shells. It is probable that nothing but an extensive drubbing will keep the diversified Daimiechy organized government of Japan, in decent good faith. We ought to be soon taken there (the *Lancet*) in the *Wyoming*, in the probable contingency of the forced flight of the American residents, could not take off half of them. Meanwhile, the fierce and accuracy of the Japanese gunnery is worth noticing.

THE MAORI WAR.

THE Maori war, or native insurrection in New Zealand, is a matter of a good deal of interest in England, but of which we are almost totally ignorant. New Zealand (lying a little south-east of Australia) is a colonial depedency of England, upon a similar tenure with the Ionian Isles, and has a royal Governor and popular legislature. The Maoris, or natives, being no independent and half savage people, placed themselves, some twenty or thirty years ago, under the British flag; a treaty being made, by which, among other provisions, the right of possession of the soil was expressly guaranteed. A considerable European emigration followed, and a degree of natural prosperity. Col. BROWNE, the governor, however—some five or three years ago—as is admitted on all hands, took arbitrary possession of a tract of land, the title of which was in dispute; whereupon the natives rose, and a tedious and bloody war ensued. The British government, when the case was understood, restored the disputed land, without hesitation; but, as might have been expected, the semi-barbarous natives, having once got a taste of blood, and being able, from their habits, to carry on the war at considerable disadvantage to the Europeans, refused to be pacified. Soldiers have had to be sent out from England, and considerable expense incurred, with no present prospect of ending the war, except by the virtual extermination of the native population. They fight in guerrilla, or Indian style, murdering and tormenting, and, it is alleged, eating their prisoners. All the white population is imperilled, as the Maoris wage an indiscriminate war. There are no battles, but a succession of small skirmishes and ambuscades—a regular bushwhacking process, in which the Maoris—said to be hardy, active, and good marksmen, are quite apt to get the advantage. No doubt the steadiness of regular soldiers will prevail in the end; but the process is tedious, and as the white settlers, like other British colonists, generally, resolutely refuse to do anything to help themselves, the home government is getting tired of the bargain.

CAPTURE OF MORRIS ISLAND.

IN the capture of Morris Island Gen. GILLMORE has the key to Charleston. He will be able to make Cumming's Point the *point d'appui* for his batteries, for operating both against the rebel works on the right side of the harbor, and against Charleston itself. He is now brought within a mile nearer the city of Charleston than the position of his batteries from which he has already thrown shell into the city. The table of ranges of Parrott guns, which we give in another column, will show the facilities he possesses for bombarding Charleston. If her proud and rebellious citizens wish to see it laid in ruins and ashes, they have but to refuse to surrender. We confess we think they are capable of this. In this case, it only remains for Gen. GILLMORE to use his batteries against the city and the rebel works, while Admiral DAHLGREN cooperates with the fleet of iron-clads. If a mere contest of any other kind than one in which obstinacy is pushed to its extreme, the possesion of Morris Island would be equivalent to the possession of Charleston.

GEN. BLUNT, with his army, 4,500 strong, including twenty pieces of artillery, crossed the Arkansas river on the 22d August, and offered battle to the Rebel Generals STEEL and COOPER, who had massed in his front 11,000 men. After a faint show of resistance the enemy commenced a retreat, which soon turned into a disorderly flight. They abandoned all their property. BLUNT pursued them a hundred miles south of the Arkansas, to Perryville, which is only fifty miles from the Red River. At this point he captured and destroyed their commissary depot. They continued their flight to Boggy Depot, on Red River. The Indian Territory is now clear of Rebels. BLUNT is marching on Fort Smith, which will, doubtless, fall without a struggle.

WE have news from Mexico to August 15th. The French have taken possession of Tampico, in the State of Tamaulipas, and have advanced to the State of Mexico as far as Tulncingo. The Mexicans are rapidly and extensively fortifying Guadalajara, in the State of Jalisco. Doblado has started, with 4,000 men and $400,000, westward, in order, it was said, to procure arms and purchase ammunition in California. MIRAMON had taken the oath of allegiance to the Emperor MAXIMILIAN. In the Spanish possession of Santa Domingo a new insurrection had broken out, and troops and war-vessels were sent there from Cuba. It is said that the insurrectionists had been defeated.

A MILITARY commission, composed of Major-General AUGUR, Brigadier-Generals KETCHUM, PAINE and BARNES, and Colonel THOM, of General HALLECK'S staff, are in session at Washington for the purpose of prosecuting an investigation into certain fraudulent transactions connected with the several departments of the army.

THE demand for the first two numbers of the ARMY AND NAVY JOURNAL has been so great as to exhaust the large editions which were printed, and we are obliged to have them re-set to keep up with our orders. Hereafter, the JOURNAL will be stereotyped, and we shall be able to supply back numbers from the beginning.

THIRTY-THREE surgeons were sent last week to Charleston on the steamer *Constitution*, which carried 5,000 beds and large medical supplies.

THIRTY-FIVE physicians from this city are now before the board for examining candidates for surgeon's places in the ocgro regiments.

THE publication of the United States Naval Squadron List is intermitted at the request of the Secretary of the Navy.

NEW FOREIGN MILITARY BOOKS.

THE new life of the First NAPOLEON, which is now in course of publication in Paris, contains numerous hitherto unpublished letters, some of which throw additional light upon his character. There are numerous epistles to JUNOT, which illustrate the extreme rigor of NAPOLEON's views of the method of treating the population of conquered provinces, and especially Italy. Before JUNOT was created commandant he received the following order:

"PARIS, 6th Vendemiaire, An—Four hussars must send you troops. *Burn five or six villages; shoot one in a persons; make very severe examples.* Nothing is more salutary than terrible examples given *opportunely*. NAPOLEON."

This advice is repeated over and over again with most "damnable iteration." Later, JUNOT is complimented on having learned the lesson well. He is very glad to hear "that the village of Menane had been burned. Noise it abroad. The forty-four individuals condemned to death "and to prison, will serve as a salutary lesson, and for the future curb people desirous of yielding to their natural inconstancy."

The letters which NAPOLEON wrote to his brother JOSEPH, created this year King of Naples, are instructive on two points: they show the manner in which he was expected to govern his kingdom, and the difficulties he experienced. The communications addressed to his agents will determine to those readers of JOMINI's war-rated for being too clement, was constantly ordered to adopt severe measures, and was furnished with sketches of Italian character not favorable to his new subjects. The EMPEROR informed him that "he "took the greatest pains to be unpopular, but especially in "his glory, without which life was not worth having;" then, a few days after, he blamed the distribution of his army, telling him that he should always march in such a manner, as to be able to unite his different corps in one day on the field of battle. With 15,000 men he would like to fight JOMINI with his 36,000, for he would be sure to find himself everywhere superior on the day of battle.

On the 18th of February, 1806, he tells his brother to entitle all his acts JOSEPH NAPOLEON; it was useless any longer to put Bonaparte. Notwithstanding this, he should be the "u" out of this name, it still smacked too much of the Corsican origin.

An idea may be formed of the richness of German literature in military works, by glancing at STEINGASS's carefully compiled catalogue, embracing the years 1850-60, and forming a supplement to the general bibliographies of WILLEBERG (1840-50), and SCHULTZE (for the preceding twenty years). Among the more recent works are "Studies on the Subsistence of Armies in the Field," by B. BAUMANN; and "Campaign of the Prussian General FOUQUE in Silesia, 1760." This is a valuable contribution to the history of the Seven Years War. Though the day was lost by FOUQUE, his King, the Great FREDERICK, paid homage to his skill and bravery in the following memorable words: *"Cette belle action ne trouve dans l'histoire qui lui puisse être comparée que celle de Léonidas et des Grecs qui défendirent Thermopyles."*

Three volumes of the works of the Archduke CHARLES of Austria have appeared, and five more are forthcoming. "Small Military Essays" form the contents of the first volume. The author starts in the introduction with the axiom, "In war the victory is always achieved by the superior "power, represented sometimes by numbers, oftener by higher "art of bravery." The second volume of the works of Archduke CHARLES contains MAXIMS (*Grundsätze*) of the Art of War, &c. It is a posthumous work, and as such has received high praise from German critics, as one of the best existing works to be taken up by advanced students of military science. The third volume contains "MAXIMS of "Strategy, illustrated by a description of the campaign of 1796 in Germany." The remaining volumes of the works of the Archduke CHARLES caused himself to be called by NAPOLEON the greatest and worthiest of his enemies.

The Paris military publishing house of SAUTERE & Co., announce a military *magnum opus*, entitled "*Bibliotheque Historique et Militaire*," in seven large octavo, one volume of which is now ready, and an atlas of 178 plates, compilers are M. M. LISKENNE and SAUVAN. The price is fixed at 195 francs ($40), and, at the present rates of duty and exchange, would probably cost about seventy-five dollars to import. The work, as the title imports, is intended to be a complete military library, or library, giving all the great works on the Art of War, from the time of the Greek writers to the present day. The *first* volume contains: 1: an "Essay on the Greek Tactics." 2: The four volumes of THUCYDIDES; the two volumes of the "Retreat of the Ten Thousand;" the two volumes of the "Cyropedia" of XENOPHON; and the "Treatise on Equitation and the Command of Cavalry." 3: The seven books of ARRIAN on ALEXANDER. The *second* volume contains an Essay on the "ROMAN Militia;" and POLYBIUS. The *third*, CÆSAR's "Commentaries." The two TICS, ONOZANDER, the "Institutes" of the Emperor LEON, FRONTINUS and POLYEN, together with all that FREDERICKS, FOLARD, SANTA-CRUZ, JOLY DE MAIZEROY, CESSAC and CARION-NIZAS have written on Stratagems, Ambuscades, Surprises, etc. The *fourth* volume contains the "Political and Military Life," "story of the French from the foundation of the Monarchy," with the works of MONTECUCULI, TURENNE, FRUQUIERES, PUYSEGUR, FOLARD and Marshal SAXE. The *fifth* volume contains FREDERICK the GREAT's "History of My Times," and his "Secret Instructions to His Generals," as well as the works of LLOYD, GUIBERT, "The Duke of a General-in-Chief," by LACUEE-CESSAC, CARNOT, THIEBAULT, JOMINI, etc. The *sixth* volume is occupied with the *Mémoires* of NAPOLEON, originally published in nine volumes, and selling at a very high rate. The *seventh* volume contains military history from the days of NAPOLEON to the present time. The *Bibliotheque Historique et Militaire* will undoubtedly be the most complete and curious collection ever published, on the Science of War, as applied to the general politics of nations.

The *Correspondence of* GETHE *and the Grand Duke* KARL AUGUST, of WEIMAR, published in Germany, considering that it embraces a period of such stirring, warlike events, might inspire the hope of some interesting bits of military insight; but it is chiefly remarkable for the utter absence of all this. If we may judge from this correspondence, GOETHE and KARL AUGUST were blind to the world in which such names as NAPOLEON, JENA, Austerlitz and Moscow were absolutely unknown. About the time when NAPOLEON was invading Germany, for the campaign that ended in Austerlitz, the Grand Duke was planning fire-works and congratulating himself that the Court Theatre would close for his opera. There is, however, a curious memorandum of an offer made by the Dutch to the Grand Duke for a loan of troops, which illustrates the value of a fine German peasantry to their sovereign in those days. Fifty thalers a year were to be paid for the service of every soldier he should supply, and at the end of the war they were to be sent back. But it occurred to the negotiators that one natural consequence of a war was that it might be difficult to return precisely the same number of troops that had been sent, and the agreement was drawn up to meet this property. To meet this contingency, it was provided that whatever might be wanting in the number when they were given back, "should be made good" by a payment of "three hundred "florins for a rider and horse, and one hundred florins for a "foot-soldier." So that a peasantry was worth something in those days.

The *Journal de Genève* contains the following, from a Paris correspondent: "La Vie de CÆSAR (The Life of CÆSAR), by "LOUIS NAPOLEON, is putting at this moment. There can be "no farther doubt about the publication of volumes of infamy. "It is from the Imperial printing office, to the effect that a "first impression, consisting of one hundred copies, has been "struck off, in which the necessary alterations are being made "at this time. Workmen have been selected for this purpose "who have been employed for the last twenty years; and "they have been told that on the slightest indiscretion on their "part they will lose their places. After the printing of each "leaf in quarto, every form is secured with three chains and "locks, the keys of which M. PETITIN, the director of the "printing-office, takes with him. As soon as the printing is "completed, the sheets are taken into the EMPEROR's cabinet, "then the *collaborateurs* set to work to correcting the press, or "altering such passages as the EMPEROR wishes to see done. "You see that measures are pretty well taken against any in-"formation reaching foreign papers." This work, it is here further said, will appear in the months, and in two editions —one printed at the Imperial printing-office, the other at PLON.

SIR EDWARD CUST's standard work, the "Annals of the WARS of the Nineteenth Century, up to 1815," will speedily be completed, by the publication of the two concluding volumes.

"The Life of SIR HOWARD DOUGLAS," by Mr. FULLON, is published by MURRAY, of London. It is written in a somewhat turgid and diffuse style, but contains some good material. SIR HOWARD's "Treatise on Naval Gunnery," (first edition, 1819, last, 1862), and his "Essay on Fortifications," are standard and highly-esteemed professional works. In later years he took part in the discussion on iron-clad ships, the bitterness of the controversy causing him considerable agitation. He may almost be said to have died declaring "All "that I have said about armor-plates will prove correct. How "little do they know of the undeveloped power of artillery," —a declaration which the experience of our own war has strikingly borne out.

STEAM RAMS FOR THE REBELS.

THE London *Daily News* of August 26th publishes the following memorial, which was sent from the Committee of the Emancipation Society to Earl Russell on the 25th inst., and the *News* editorially calls upon the government for prompt interference in the matter:

To the Right Honorable Earl Russell, &c., &c.:

The memorial of the Executive Committee of the Emancipation Society humbly showeth:

That your memorialists desire to call your lordship's attention to a matter of very grave and pressing importance: Your memorialists have learned that certain persons, regardless of the proceedings already taken by her Majesty's government to stop such practices, have equipped vessels of a very formidable kind, which are about to sail from England to make war upon a nation with which this country is at peace, and a people very nearly allied to us by ties of friendship and commerce. In particular your memorialists are informed, and currently call upon your lordship to make investigation into the fact, that two powerful iron-plated steam rams, which for some time have been in preparation in the Mersey by the builders of the *Alabama*, are almost ready for sea; that these vessels are equipped and armed with steel guns and torpedoes, and are intended for commencing hostilities against the government and people of the United States of America. One, it is believed, will sail on or about the 27th day of August next, and is to be joined by the Confederate war vessel *Florida*, now hovering off the British coast for the purpose. Another iron-plated war vessel, destined for the same service, is approaching completion at the Clyde. In view of what her Majesty's government has already done in the case of the suspected gunboat *Alexandra*, and of a strong expression of opinion that you believed the Foreign Enlistment Act sufficient to stop these dangerous practices, your memorialists cannot doubt that the law will be enforced against the persons and vessels concerned, in a spirit of loyalty and good faith to an allied nation struggling for constitutional freedom and emancipation against a rebellion of slaveholders.

May it, therefore, please your lordship to cause a prompt investigation into the circumstances above detailed, and, if necessary, for this purpose, to stop in the meantime the departure of the war vessel which is ready to sail, and to apply the law with vigor, to prevent hostile acts against a friendly power contending for human freedom.

And your petitioners will ever pray.

W. EVANS, Chairman.
P. A. TAYLOR, } Joint
T. BAZLEY, } Secretaries.
F. W. CRESSON, Hon. Secretary.

The following letter, published in the London *News* of August 31th, refers to this same subject —

"I trust that only the reception of Earl Russell, but the serious attention of the public, will be attracted by the very important memorial of the Emancipation Society, published in Tuesday's *Daily News*, as to the steam rams now about to leave Birkenhead and Glasgow for the service of the Southern Confederacy.

"It is popularly boasted of one of these vessels that she could cut the *Warrior* in two—probably simple brag; but no one can doubt that the design (however unattainable) of the builders is to sink the ships belonging to the United States of America.

"What, then, has the government to consider, and what has the public to urge upon the government? It is understood that in November the appeal of the crown will be heard from the Exchequer Chamber against the Court Pollock in the case of the *Alexandra*. Surely these vessels of war may at least be detained until then.

"It is absurd to say that the government would run a risk of being cast in damages? Such a calamity is possible, no doubt. But what calamities, what risks he upon the other hand, if these vessels escape? No less than a war with America, and irretrievable dishonor to our neutrality.

"While, then, I write, I trust that Earl Russell may, sir, fearlessly appeal to the country to pronounce which course it is the duty and the interest of England to pursue.

"I am, &c. W. T. MALLESON."

LONDON.

SIR WILLIAM ARMSTRONG ON SOME SPECIAL POINTS OF GUNNERY.—At the last meeting of the British Association for the Advancement of Science, held during the last week of August, SIR WILLIAM ARMSTRONG, the distinguished inventor of the heavy ordnance which bears his name, was President, and delivered the inaugural address, summing up the progress and present position of the various sciences. He did not go with any fullness into his own special branch; but the following paragraphs, which we clip from the report of the address, covering an entire broadside of the London *Times*, will be found interesting:

"The science of gunnery, to which I shall make but slight allusion on this occasion, is intimately connected with the progress of chemistry. The theory of heat is exploded in a common, the immediate effect of the affinities by which the materials of the powder are caused to enter into new combinations. To make a theory which simply supposes as heat, and then takes the form of mechanical power, communicated in part to the shot and in part to the products of explosion, does not also applied from the gun. The mechanical force of the shot is reconverted into heat, when the motion is arrested by striking an object, and this heat is divided between the shot and the object struck. The proportion of the work done or damage inflicted upon each. These considerations led me, as long ago as 1858, now with my friend CAPTAIN NOBLE, to determine experimentally, by the heat elicited in the shot, the loss of effect due to its resistance, and the penetration of some plates. And, and the known velocity of the shot, enabled us to compute the number of dynamical units of heat representing the whole available energy of the projectile, and thus determining the number of units developed in it by impact, we arrived at the power which a shot has to penetrate the substance of the plate. These experiments showed an enormous absorption of power to be caused by the yielding nature of the materials of which protection are usually made. But further experiments are required to complete the inquiry.

While speaking of the subject of gunnery, I must pay a passing tribute of praise to that beautiful instrument invented and perfected by Major NAYER, of the Belgian Artillery, for determining, by means of electro-magnetism, the velocity of projectiles. This instrument has been of great value in recent investigations, and there are questions affecting projectiles which we can now only hope to have solved, once. Experiments are still required to clear up several apparently anomalous effects in gunnery, and to determine the conditions which are conducive to efficiency, both as regards attack and defence."

FOREIGN NAVAL AND MILITARY MATTERS

A COMMUNICATION from the Camp of Châlons, dated the 23th, says:—"The Emperor was yesterday present at a second grand series of manœuvres, under the orders of Marshal BARAGUAY D'HILLIERS. An immense number of persons from the surrounding neighborhood were assembled, and saluted with the loudest acclamation his Majesty and the Prince Imperial, who was on his pony. This morning the Emperor will review at the target practice of the artillery and infantry. To-morrow, at 9 o'clock, will take place the grand review, at which the Emperor is to distribute the decorations awarded on the occasion of the 15th, and in the course of the day his Majesty will leave the camp for St. Cloud."

THE Act of Parliament passed at the end of the late session provided a sum of £650,000 towards defraying the expenses of constructing fortifications for the protection of the royal arsenals and dockyards at Portsmouth, Devonport, Portland, and of creating a central arsenal. The act recites that the Commons have cheerfully granted the sum for the purpose mentioned. The first series was £170,000 by the 53d and 54th Victoria, cap. 109, and the second sum, £1,200,000, making, with the present, £3,350,000 towards the fortifications. The estimated cost is £5,020,000, and the further amount to complete the works is £3,070,000. The site for the central arsenal to be provided is estimated at 1,000 acres, which will be the largest.

A CUTTOLA screw iron-clad called the *Rolf Krake* has recently been built for the Danish Government by Messrs. NAPIER & SONS, Glasgow. She is of peculiar construction, having been built from a design approved by Captain C. P. COLES. Her length is 185 feet, breadth 33 feet, depth 14½ feet, tonnage 1,264, and her engines are 200 horse-power. She is to draw about five feet above the water line, with bulwarks to fold down in action, and displays two revolving opposite rising forts, each of which will carry one 9-inch twenty-one feet in diameter. She is armor plated from stem to stern, the plates being 4½ inches in thickness, increasing to 5½ inches at the ports with the addition of a 9 inch teak lining inside. Her armament is to consist of four 68-pounders, two to each turret, working on the main deck. The deck is entirely clear of obstruction, except the funnel and a small fixed tower aft for steering the vessel.

SIR WILLIAM ARMSTRONG'S 110-pounder gun has recently been subjected to a trial of its loading by hand, with but indifferent results. Most of the shells burst at the muzzle, one of the shot stripped, and the fifth shot shot 1,240 feet. The experiment showed that the high opinion entertained of the accuracy of the gun. The London *Army and Navy Gazette*, of the 22d ult., says:—"The question in its breech loading is necessarily weak, or whether the gun is altogether too light, may be doubtful; but there is one thing certain, viz., that the present charge of 40 lbs. is found to be too great for the gun, and therefore 12 lbs. are now used with it. The result is that the 110-pounder is now of far too small power for the broadside of our vessels; and as the smooth bore will be found much more effective, we have at present no guns fit for the armament of our iron-clads.

BROWN'S vibrating sheathing for ships is now attracting considerable attention in England. The bottoms of several vessels have been covered with it, and if the results prove such as are claimed, copper, as a sheathing, will be superseded. The economy resulting in coating small iron plates with soluble glass, these plates to be attached by cement to the bottom of ships. The Admiralty have confirmed the report of the invention, to order the whole of the armor-plates of the copola ship *Royal Sovereign* to be thus covered. The new adhesive process by which the plating is secured to the vessel has been ascertained to be capable of resisting all ordinary contingencies from pressure or abrasion. In regard to the economical consideration,

NAVY YARDS AND NAVAL STATIONS.

WASHINGTON NAVY YARD.

The *Yankee* and *Eureka* have been towed up to the yard for repairs, being disabled. The captured steamer *Neptune*, a description of which has already been published, has had a complete overhauling at the Navy Yard, and her engines have been placed in complete order. She has been renamed the *Clyde*. Her engines have been subjected to a trial, and it is believed from their working that she will be able to make eighteen or nineteen knots per hour. They work so smoothly that there is no jar in any part of the vessel. She will no doubt prove to be one of the fastest vessels of our Navy. The following officers have been ordered to her: Acting Master A. A. Owens, commanding; Acting Ensigns George Dunn, and C. F. Watson; Master's mates, C. Palmer, and G. Dorsey. Second Assistant Engineers, W. Stewart, and J. D. Rodger; Third Assistant Engineers, W. O. Saville and James B. Adams.

The *Primrose*, which for sometime past has been on the ways, is now ready for service. This boat was formerly the *White Furnace*, of New York, and was captured while in the service on the Potomac, where she has been employed. The following is a list of her officers: Acting Master W. T. Stroot, commanding; Acting Ensigns, C. A. Stewart, 1st Officer; Master's mates, Jacob Hahn and H. Z. R. Woods; Third Assistant,—Jenks and Pilot W. Penn.

BROOKLYN NAVY YARD.

The past week at this yard has been marked by the visit of two Admirals. Admiral Foote, who relieved Admiral Joseph Smith, the chief of the Bureau of Yards and Docks, who made an official inspection throughout the entire yard. He expressed himself highly pleased with the state of affairs in every department, and complimented the officers in charge for their zeal and attention to the duties of their office.

The U. S. gunboat *Union*, arrived last week from a cruise along the coast of Florida and the blockade squadron. The *Honduras*, a newly purchased gunboat, was put into commission on Tuesday. The United States gunboat *Commodore Hull* went into commission last week, at the Brooklyn Navy Yard.

The United States ship *Ino*, Acting Master James M. Williams, commanding, arrived at this port last week from South Atalaia, and on the quarter. She touched at the Island of Jamaica, St. Kitts, Antigua, Captain Williams was informed by the Governor of that island that on the 17th of June, the British ship *Agrippina* touched there with a cargo of coal for the Alabama, and sailed the same day for Bahia. He has not heard of any privateer in the South Atlantic. The Governor of Fernando de Noronha assured Captain Williams that no Confederate vessel would not be allowed to anchor at that island. The Brazilians are preparing to give them a warm reception in case they should do so. The *Ino* sailed from Bahia on the 5th inst.

The steam sloops-of-war *Hartford*, *Richmond* and *Brooklyn*, at this station, will be docked as soon as vacated, and the *Niagara*, at Boston, is to be ready about the same time.

The Navy Department has chartered at this port the fine steamer *Whirlwind*, which was brought to the Brooklyn Navy Yard on Wednesday. Orders have been received from the Secretary of the Navy directing her to proceed to Charleston, where her commanding officer is to report to Rear-Admiral Dahlgren. She has on board necessaries for the squadron.

On Wednesday, the newly purchased steamer *Grand Gulf*, was turned over to the authorities of the Brooklyn Navy Yard by the builders.

The steamers *Jacob Bell* and *Hawkeye* were put formally in commission on Tuesday, at the Navy Yard. They are under orders to proceed to sea as soon as their preparations can be completed. The *Hawkeye* was recently purchased. Both of their vessels have been fitted out in every way for men-of-war.

The Secretary of the Navy has concluded to give the repairing of the *Brooklyn* to Mr. Westervelt, of this city, who built her. A survey held on her a few days since shows that she is almost in as bad condition as the *Richmond* and *Hartford*.

PHILADELPHIA NAVY YARD.

Several important movements in the Philadelphia Yard are being made. The old boiler shop is being torn up and the main avenue have been demolished, and the cellars dug for a new Purser's building. The new building is to be of brick, three stories high, with a basement, and will be 150 feet long, with a depth of 50 feet. The three upper stories will be complete in themselves, and form three long halls 150 by 50 feet. The basement will be divided into three apartments, each 50 feet square. The Purser of the yard, Mr. Hutchinson, will occupy the middle building. The joiner's shop is to be extended also. A three-story brick building is to be added to the present shop. It will be 60 feet long by 40 wide, and will be connected, together with the other buildings, by the 1st of February.

The United States steamer *Kansas*, which was constructed at Philadelphia in the year 1858, and the new gunboat steamer *Princess Royal*, was launched on Saturday. She is a splendid vessel, and measures about 375 feet in length.

The gunboat *Pembroke* arrived on Monday from New Orleans and the Southwest Pass. She has been on blockading duty off Mobile. Her officers and crew will share $200,000, the proceeds of the sale of the *Antona*, captured by her.

The steamer *Shenandoah* sailed on Tuesday from Philadelphia for the blockading squadron, via Washington. The *Bermuda* sails on Saturday for the West Gulf Squadron.

BOSTON NAVY YARD.

Business at the Boston Navy Yard is becoming daily more active, and but a short time will elapse before the number of workmen will be largely increased. A sidewheel steamer, which had received her machinery at East Boston, was returned to the yard during the week, and the prize steamer *Peterhoff*, which has been undergoing a thorough repair, was removed from the dry dock. The bark *Ethan Allen* also sailed on a cruise. The arrangements at the lower ship-house for the building of the contemplated sea-going steamer are nearly completed, and the keel will be laid in a few days. The frigate *Niagara* will shortly leave on a three years' cruise. The screw steamers *Sara* and *Penguin* are receiving their machinery on board, and the ironclad *Monadnock* has received nearly all her side plating.

The sloop of war *Tuscarora* arrived on Thursday of last week. The gunboat *Hendrick Hudson* arrived from New York on the 5th.

The prize steamer *Cranstock*, recently captured while running out of Wilmington, N. C., has been unloading in Boston. She had a cargo of 1,500 bales of cotton on board, in addition a large quantity not packed. There were also turpentine and tobacco on board. The steamer is of three hundred or four hundred tons, but having very small engines, &c., possesses a large capacity for stowage. She is a fine sailer, and is built of live oak and cedar.

The monster propeller of screw frigate *Niagara*, at the Charlestown yard, has been adjusted. It weighs twelve tons, and cost $20,000. The *Niagara* will be sailed on Tuesday night for the blockading squadron off Wilmington, N. C. The screw steamer *Iron Age*, Lieutenant-Commanding E. E. Stone, sailed last week on a cruise.

BALTIMORE NAVAL STATION.

The United States steamer *Daylight*, which has been in Baltimore for some time undergoing repairs, sailed on Sunday. She was put in good running order, and it is hoped will be of considerable service in her cruise.

NAVY PERSONAL.

By invitation of Com. Montgomery, the Hon. Gideon Welles, Secretary of the Navy, took a trip down Boston Harbor on Monday in the steamer *Fearless*.

Flag-Lieutenant S. W. Preston, has returned to the flagship of Rear-Admiral Dahlgren, after leave of absence at home, and is now off Charleston.

The Department has received information of the killing of acting master R. A. Turner, commanding screw-steamer *Corbett*, at Natchez, by Gen. Ellet, the Provost Marshal of that city. A commission to investigate the matter relieved the Marshal from all blame.

Lieut. Commanding Thomas C. Bulger, Admiral Dahlgren's Acting Fleet-Captain, lost one of his legs in the naval attack on Fort Moultrie on the 1st inst. He has been in the service since the age of thirteen. The *Independence*, *Savage*, *Mississippi*, *Perry*, *Vincennes*, *John Adams*, ordnance ship *Plymouth*, *Marblehead*, and at the Washington Navy Yard as ordnance officer.

Edward Driscoll, a seaman in the United States Navy, arrived in this city on Thursday, from the Brooklyn Navy Yard, where he was tried by a general court-martial. He is sentenced to be imprisoned for six months, to lose all pay, and at the expiration of his term of imprisonment to be dishonorably discharged from the service. Admiral Paulding has turned him over to the authorities at Sing-Sing, where he is to undergo his sentence. The court-martial held in this session at Philadelphia, and will continue so for some days.

The following have been recommended by the Examining Board of Engineers, in session at the Philadelphia Navy Yard:

First Assistant Engineers.—Second Assistant Engineers Samuel L. P. Ayres, Wilson K. Purse, Emery J. Brooks, and James Sheridan.

Second Assistant Engineers.—Third Assistant Engineers William H. Harrison, George W. Melville, Benjamin F. Wood, E. A. Leavitt, F. G. Coggin, Henry P. Gregory, A. J. Kenyon, Hiram Cox, and Wm. F. Sidney.

For Admission as Third Assistant Engineers.—Samuel P. Bush, Jr., Edward Hobbs, Richard Inch, Washington, D. C.; Francis C. Burchard, Pa.; Julius A. Raiser, Washington, D. C.; Frank H. Townsend, Pa.; Geo. W. Beach, New York; Andrew L. Vanderslice, Pa.; W. H. F. Reichenbach, Pa.; Isaac B. Fort, Washington, D. C.; George F. Sawyer, New York; Andrew H. Henderson, Md.; Edward Stiles, Pa.; H. F. Lovezee, Pa.; James D. Lee, Pa.

VARIOUS NAVAL MATTERS.

The *Ethan Allen* was in Gloucester harbor on Thursday.

The brig *Bainbridge* is now given up as lost.

The new propeller for the frigate *Niagara* weighs twelve tons, and cost $20,000.

The United States sloop of war *Mackerel* was cruising at the entrance of the Straits of Gibraltar on the 17th ult.

The iron-clad gunboat *Cincinnati*, which was sunk by the Confederates during the siege of Vicksburg, has been raised.

The *Canonicus* at Boston will be ready for sea in three months. She is an Ericcson battery.

The iron-clad monitor *Tecumseh* will be launched at Jersey City on Saturday, the 19th inst.

The supply steamer *Union* will sail from New York on the 17th inst for Pensacola, touching at Port Royal, Key West, and all of Admiral Bailey's stations.

Screw steamer *Cambridge* sailed from Newport, R. I., on Saturday, hound, it is stated, to join the blockading squadron off Wilmington, N. C.

The United States schooner *George Mangum*, Collins, arrived at Georgetown, on the 22nd ult., from a cruise, she would remain in the Gulf for the protection of fishermen.

The *Ino*, which arrived at Boston on Tuesday from Melbourne, spoke the Confederate steamer *Georgia* on the 11th inst., in Lat. 23° S., Longitude 30° W., which afterwards sailed for the Southwest.

The French *Le Nord* of the 18th ult. says:—"The Confederate corsair *Florida* has lately hurned an American ship laden with goods belonging to a Marseilles house. We suppose that the French government will make reclamation on the Confederate government at Richmond."

The Secretary of the Navy has contracted with the Messrs. Cramp, of Philadelphia, for the construction of an immense cruiser, intended for fast steaming. She will be over 3,000 tons burden, and longer than any other vessel at present in the service.

The steamer *Vanderbilt* has been heard of up to July 24—a proof that she had not been sunk by the *Alabama* at the time stated in the Florida paper.

The number of enlistments in the Naval recruiting services, in Cincinnati, for the past year, is over eighteen hundred men, all of whom have been accepted, and have proved first-class men. Great praise is due Acting Master Brown for his energy and efficiency in this branch of the service.

The frigate *Cumberland* was raised from her bed in Hampton Roads, yesterday, and the boats were then easily pumped, when the tide began to make with such velocity as to seriously disturb operations. Suddenly the huge monster frigate sprung to her keel at the bottom.

Since the war began, Marshal Millward, of Philadelphia, has disposed of eighty-three prize vessels, comprising thirteen steamers, three sailing ships, three barques, five brigs, fifty-nine schooners, and five sloops. The steamer *Bermuda* was the most valuable of the lot, the *Princess Royal* next.

The Court of Admiralty, in the case of the London *Globe* case, a report that sundry vessels, on the *Alabama* model, were being built for the Confederates in French ports. The proceedings were dismissed with much severity of the Bar had, nevertheless, leaked out. The writer points out that, inasmuch as the French Government enjoys supreme control in such matters, and that it cannot be hedged in by legal technicalities, as in England, they will be fully responsible to the Federal Government for such infractions of the international law as they may permit.

The government has purchased the prize steamer *Merrimac*, which was captured some time ago in attempting to run the blockade. She was brought to the Brooklyn Yard on Thursday to be converted into a gunboat. Capt. Drayton, of the ordnance department, is preparing a battery for her, and Chief Engineer Delano has hands at work making a man-of-war of her. The *Merrimac* is a first-class steamer, reputed to be very fast.

NAVY GAZETTE.

NAVAL ORDERS.
REGULAR NAVAL SERVICE.

DETACHED.

Lieut. Jonathan Young, from the command of the *Penobscot*, and ordered temporarily to duty at the New York Navy Yard.

Lieut. Commanding Edward Newman, from the command of the *Dawn*, and ordered to the *Pembina*.

Gunner Thomas Bell, from the Mississippi Squadron, ordered to the *Niagara*.

Third Assistant Engineer James A. Barton, from the *Dai Ching*, and awaiting orders.

Commander Joseph P. Sanford, from the command of the *Sassacus*, and ordered to the command of the *Neptune*.

Lieut. Commanding Thomas H. Eastman, from the command of the *Neptune*, and ordered to the command of the *Sassacus*.

Lieut. Commanding Edward Terry, from the command of the *Stockdale*, and ordered to the command of the *Dawn*.

Second Assistant Engineer G. P. Hunt, from the *Niagara*, and ordered to the *Sassacus*.

Commander James M. Duncan, from the command of the *Sebago*, and ordered to the command of the *Stockdale*.

Lieut. Francis L. Brown, from the West Gulf Blockading Squadron, and ordered to the duty at the Navy Yard Annapolis.

Commander Donald McN. Fairfax, from the South Atlantic Blockading Squadron, and ordered home.

Lieut. Frederick Rogers, from the *Mendota*, and ordered to the steamer *Sassacus*.

Assistant Surgeon John W. Coles, from the receiving ship at New York, and ordered to the *Sebago*.

ORDERED.

Lieut. Commander Andrew M. Johnson, to the South Atlantic Blockading Squadron.

Ensign Henry J. Mohr, to the frigate *Sabine*.

Third Assistant Engineer Truman Jones, ordered to examination.

Lieut. Commander Edward Terry, ordered to temporary duty at the Navy Yard, Boston.

Third Assistant Engineer John Bortswick, to examination.

Lieut. Commander George Brown, to the command of the *Seneca*.

Ensign Edward Hooper, to the West Gulf Blockading Squadron.

Commander John Guest's orders to the S. A. B. Squadron, revoked and ordered to temporary duty at home.

Lieut. Commander Charles E Fleming, to command the *Sagamore*.

Acting Master Thomas Hall, to the *Paul Jones*.

Ensign Henry B. Rumsey, to the iron clad *Roanoke*.

Second Assistant Engineer Robert Wilson, to examination.

Third Assistant Engineer Robert N. Ellis, to the *Sassacus*.

Third Assistant Engineer Charles Perkins, to the *Sassacus*, vice Third Assistant Engineer John L. Lay, detached and ordered to examination.

Ensign James B. Gibbs, to duty at the Naval Rendezvous, Philadelphia, Pa.

Lieut. Commander Wm. Smith, orders to command the *Paul Jones* revoked, and ordered to duty in the Mississippi Squadron.

Lieut. Commander Edward C. Dale, preparatory orders for sea service.

Lieut. A. Sydney Smith, ordered to duty at the Naval Academy.

Lieut. Theodore F. O'Kane, preparatory orders for sea service.

Third Assistant Engineer Charles H. Hall, to the vice Chief Engineer J. F. Lundin, detached, and ordered North for duty on the steamer *Powhatan*.

PROMOTED.

Midshipmen John B. Bartlett, and Edward N. Kellogg, to the grade of Ensign.

APPOINTED.

T. Kemp, as Assistant Surgeon in the Navy, to date from Sept. 5, 1863.

VOLUNTEER NAVAL SERVICE.

DETACHED.

Acting Assistant Surgeon George A. Hatch, from the *Brandywine*.

Acting Assistant Surgeon M. H. Hollock, from the Mississippi Squadron.

Acting Ensign Mich. H. Wallerys, from the *Perry*.

Acting Ensign Hugh Jones, from the *Cour de Lion*.

William G. Wright, from the command placed on furlough.

ORDERED.

Acting Ensign Charles F. Watson's orders to the *Clyde* revoked, and, ordered to the Princess Royal.

Acting Assistant Surgeon George W. Hatch, to the *Neptune*.

Acting Assistant Surgeon M. H. Hollock, to the *Brandywine*.

Acting Master H. H. Savage, to the command of the *Britannia*.

Acting Assistant Surgeon T. M. Young, to the *Calypso*.

Acting Ensign Hugh Jones, to the *Clyde*.

Acting Volunteer Lieut. John W. Simmons, to the command of the *Dawn*.

Acting Ensign Wm. C. Hanford, to the *Perry*.
Acting Third Assistant Engineer Wm. Billy, to the *Penguin*.
Acting Master's Mate Robert Clifford, to report to Rear Admiral Lee.

Acting Third Assistant Engineers James M. Chaney and William Connett, to remain attached to the *Gunboat Commodore*.

Acting Third Assistant Engineer John Matthews, to remain attached to the *Sebago*.

Acting Third Assistant Engineer Edward Dwyer, to remain attached to the *Gunboat Anacostia*.

Acting Third Assistant Engineers David Pace and Morris McCarty, to remain attached to the *Pocahontas*.

Acting Third Assistant Engineer John Minton, to remain attached to the *Valley City*.

Acting Third Assistant Engineer Dennis Harrington, to remain attached to the *Hetzel*.

Acting Third Assistant Engineers Oscar L. Smith and Thomas Herrington, to the *Gem Buckingham*.

Acting Master's Mate C. W. Wood, to report to Commodore Bell.

Acting Master's Mate G. W. Wall, to the *Memphis*.

Acting Master's Mate Lewis Hall, to the *Wyalusing*.

Acting Ensign William Young, to the *Memphis*.

Acting Ensign Wm. Sewell, to the Off. of Gulf Blockading Squadron.

Acting Master Charles W. Lee, to the command of the *Howgate*.

Acting Master's Mate John Cannon, to the *Lackawanna*.

Acting Master's Mate Joseph Hall, to the *Sonoma*.

Acting Second Assistant Engineer William L. Orr, to report to Rear Admiral Lee.

Acting Master's Mate R. H. Eldridge, to report to Commodore H. Bell.

Acting Master Thomas B. Sears, to report to Commodore Bell.

Acting Master's Mate Wm. Hall, to the *Sonoma*.

J. L. Bidwell, Samuel Dean, and M. F. Schneider, Acting Third Assistant Engineers.

David Lee, Wm. L. Baker, James E. Crosby, S. Winton Chase, John B. Sweeney, James F. Quigley, and Charles G. Jones, Acting Master's Mates.

PROMOTED.

Acting Master's Mate Polly W. Morgan, to Acting Ensign.

Acting Master's Mate Wm. H. Foster, to Acting Ensign, and ordered to the *Kanawha*.

Acting Master's Mate John S. Rees, promoted to Acting Ensign, and ordered to the *Memphis* Squadron.

Acting Master's Mate A. B. Goldsmith to Acting Ensign, and ordered to the Mississippi Squadron.

Acting Master's Mate Wm. H. Cameron, to Acting Ensign, and ordered to the Mississippi Squadron.

Ensign O. C. Bowers to act as Master, and ordered to the Mississippi Squadron.

CHANGED LEAVE.

Acting Master's Mate O. W. Lane; Acting Assistant Paymaster Frank K. Moore.

CONFIRMED.

The appointment of C. B. Caldwell as Acting Master.

The appointments of Acting Master's Mates P. M. Topham, L. W. Smith, and E. K. Reverhud, and Acting Ensigns W. Caldwell, Jos. and E. T. Sears.

RESIGNED.

Acting Master S. A. Schoonmaker.

ARMY GAZETTE.

ENGAGEMENT IN GREENBRIER COUNTY, VA.

CHECK OF THE REBEL INVASION OF WEST VIRGINIA.

CLARKSBURG, September 11, 1863.

GENERAL—I have the honor to report for the information of Brigadier-General AVERELL's report of his recent engagement in Greenbrier County, Virginia, that I am, most respectfully, your obedient servant,

JOHN J. ABRAM,
Assistant Adjutant-General.

Brigadier-General G. W. CULLUM,
Chief of Staff, Washington, D. C.

HUTTONSVILLE, Va., August 30, 1863.

GENERAL—I have the honor to report the safe return of my command to this place, after a successful march and engagement with the Confederates, Hughes, Bird, Greenbrier, and Jackson's Virginia Cavalry, numbering in all about 2,000 men, commanded by Brig.-Gen. Jenkins. The enemy's force was encountered on Wednesday, August 26, at Greenbrier Bridge, on Greenbrier River, where they had burned camp fourth West, and a large amount of arms, equipments, and stores (captured at Gauley Bridge), and were under the direct command of Major-General SAM. JONES and Colonel PATTON, at Keeny's Knob, near Meadow Bluff, on Wednesday, August 26, about two days. We drove the enemy from his first position, but the want of ammunition, and the number of men wounded and dismounted to reinforce the enemy, from the direction whence the reposition of General Scammon's force was made, rendered it necessary that my command was withdrawn in good order, with the loss of only two (2) men during the engagement. The loss of the enemy is reported at one hundred (100), officers and men, killed and wounded, among whom are reported Lieut.-Col. W. W. CLEMENS, A. D. C. Major, while leading an assault on the enemy's right, Major MCNALLY, second Virginia, and Captain WOOD, Jackson's Virginia, severely wounded. I have reason to believe the enemy's loss equal to, if not greater than, our own. Our PARROTT gun burst on the first day, and another of less size was abandoned. Great efforts, up to noon to-day, have been made by the enemy to send forces around my flanks, in order to prevent our return, but without success.

We have brought in over thirty (30) prisoners, including a Major and two (2) or three (3) Lieutenants, a large number of cattle, horses, etc. Your obedient servant, COL. E. M. MCCOOK, Brigadier-General, in addition to the above, I am, General, very respectfully, your obedient servant,

To Brigadier-General KELLEY.

SKIRMISHES IN WEST VIRGINIA.

GUERRILLA OPERATIONS.

CLARKSBURG, WEST VA., SEPT. 2, 1863.

SIR: I have the honor to report that the detachment of my command, now in charge of the prisoners, has had several skirmishes with the guerrillas in that county. About fifteen miles of the 6th Virginia Cavalry, under Major Hall, encountered a force of about 150 men, under Jones, Jenkins, and other lesser lights, and one or more bands under Bird. Another scouting party encountered a force of about 100 men, some thirty or forty dismounted, killing three and scattering the balance. Our party had no casualties. Lieut. Bird lost one during the engagement.

Three companies of the 11th Virginia Infantry arrived at Sutton, on the 28th; they had a fight with Bird's band, about 200 strong, from Glenville; killed four bushwhackers and captured some eight more. Among the latter Lieutenant Bird's brother. Bird, with the rest, escaped, arrested a rebel mail carrier at Sutton on the 26th ultimo. In this way have been captured the mails of the rebel Jones and Jenkins. Bird's brother was lately informed by a prisoner, that Gen. JONES is not now serving with a corps of eight thousand men.

I have the honor to be, respectfully, your obedient servant,

W. WILKINSON, Col. Comdg. Brig.

OFFICIAL ORDERS.

General Orders, No. 200, from the Adjutant-General's office, and dated August 31st, 1863, directs:

I. The State of Missouri, for the purpose of the enrollment of the militia, and the draft to be made on the 27th inst., for the quota of troops for certain State officers is given to the counties of Missouri, that State is the only one in which the draft for the United States, and provision is made for the appointment of commissioners to act in conjunction with Provost-Marshals-General in carrying out the draft. It is hereby ordered that all such duty accorded to the Provost-Marshals-General in Missouri be performed by the Provost-Marshals of the counties from that State, and allowed access to them for the purpose indicated.

A circular issued from the Adjutant-General's office, August 28th, directs that: All men charged with desertion who belong to regiments whose terms of service have expired, shall be mustered out by a commission of three to be appointed for the purpose by the officer commanding Provost Marshals of Enrollment District in which such men may be found, and they be held in confinement by the latter officer, whether they are actually deserters: and if a should appear that they are not, they will be mustered out with the rest. Provided, however, that the penalty of desertion may be remitted without trial, under par. 109, Army Regulations, and the men sent to the nearest military officer (under G. O., 191, of 1863) nearest the place of enrollment, to be mustered out with the regiment. The Provost Marshal should consider them deserters, or the men cannot clear themselves of the charge, and will be required, and sent to one of the regiments from the same State, serving in the same Corps or Department in which the regiment to which he belonged is serving, or reserved, if not, on such disposition as the Division, Corps, or Department Commander may make of them, according to Regulations in the case of men sent to the front by draft. Provost Marshals will forward with the deserters them, and entered on their descriptive list, or muster and descriptive roll. The time to be made good will be the time from the date of desertion to the date of joining the regiment to which assigned. Provided, however, that deserters who forward with the regiments whose terms of service have expired, is the same manner as others, will be mustered out with the regiment.

An Executive Order, dated Executive Mansion, Sept. 4, 1863, orders that the Secretary of War cause to be paid to the persons who furnished substitutes from the United States of arms, ammunition, or munitions of war, and to the Quartermaster at the proper quartermaster's, by order of the Secretary of War, dated May 13, 1863, directed to pay to the persons who furnished substitutes for drafted men the United States, of all horses and mules within their respective commands, and to do and accomplish all things in the premises that horses, and harness, and like stock designed for exportation to, as for modified that may exist between the United States and the country to which exported to the place of original shipment, and that any like stock found in any State of the United States, or the Pacific ocean, may be exported from any part of such State or Territory.

The following form of a letter answers numerous communications received at the Adjutant-General's office:

WAR DEPARTMENT, ADJUTANT GENERAL'S OFFICE,
WASHINGTON, D. C., Sept. 1, 1863.

I have the honor to acknowledge the receipt of your communication of —— relative to procuring Pension, Bounty, Arrears of Pay, &c., which you desire to obtain for ——.

As there is no evidence of the muster-in of this person on file in this office, the fact of his service cannot be here certified to. In mustered into the service of the United States, becomes a question of evidence, and the Pension Office requires evidence before allowing, in their application to have the name of the officer or soldier entered on the rolls, to which the application is made, or name represented.

The original enlistment papers, muster-in rolls, and the register of enlistments, are the proper and only evidence that can be furnished this office of enlistment, muster-in, service, death, &c. You have correspondence with the Pay Department. Your application of the officer who mustered in his Company, or other proper evidence, and no notice will be taken of communications previous to the muster-in and evidence of his enlistment, if enlisted, and the muster-in of the officer who enlisted him, if mustered in. You can make no entry for the Pension Office. Surgeons and Assistant Surgeons of the attending physician, with testimonials as to respectability from two reliable citizens, that personally know the facts in the case, sufficient evidence, where there was no attending physician, or he has since died—will be required.

If it is impracticable to obtain evidence of the nature required above, sufficient to establish the claim, the Pension Office has power and support the statements made, must be obtained.

I have the honor to be, very respectfully, your obedient servant,
Assistant Adjutant General.

DISMISSALS

During the week ending Saturday, Sept. 5, 1863.

Colonel H. Fowler, 109th New York Volunteers.

Major William Wellington, 4th Pennsylvania Volunteers, and Assistant Surgeon Wm. Hall, 1st Rhode Island Cavalry, to date August 3, 1863, for failing to report at headquarters Provost Marshal's office, according to orders, having been publicly posted August 3, 1863, and failing to appear before the Commission.

Assistant Surgeon Wm. Hall, 1st Rhode Island Cavalry, and Captain W. H. Eiland, 18th New Jersey Volunteers, to date August 3, 1863, for failing to report at headquarters Provost Marshal's office, according to orders, having been publicly posted August 3, 1863, and failing to appear before the Commission.

Captain Wm. Hall, 1st Rhode Island Cavalry, having been publicly posted August 3, 1863, and failing to appear before the Commission.

Captain A. Hall, 1st Rhode Island Cavalry, to date August 3, 1863, for failing to report at headquarters of the Provost Marshal's office, according to orders, having been publicly posted August 3, 1863, and failed to make satisfactory defence

A NEW SYSTEM OF BATTLE FLAGS.—Major-General Rosecrans has established a new system of battle flags, by which the various corps of his army may be designated. The color of the flag denotes the corps, the number of the stars on it the division, and its place on the staff near the brigade. The 14th Army Corps (THOMAS) has a bright blue flag; the 20th Corps (MCCOOK) bright red; the 21st Corps (CRITTENDEN) a flag with three horizontal bars, white, red and blue. The division has a white field, the number of the division is inscribed in white or black stars, and that of the brigade by a figure in the same colors.

Each battery has a small flag, corps colors, with letters and numbers of the battery inscribed thereon in the usual way.

The cavalry divisions have such a bright red white and blue flag as the army running vertically and outermost, and black stars.

The engineer corps has a white and blue flag, blue uppermost, and engineers in the centre.

The hospitals and ambulance depots have a light yellow flag, for hospital and principal ambulance depots on the field of battle; ambulance depots and store-houses have a plain, light green flag, three feet square, and Quartermaster's flag the same, with the inscription, "Q. M. D.," in white letters.

The reserve corps has a white red and blue flag, bars running diagonally, the division number indicated by white crescents.

General Officers' headquarters are marked by the national flag, six feet by five, with a golden eagle below the stars, and the number of stars, 34, 33, 32, &c., according to the order of their corps flag, trimmed, with black eagle in the centre, with the number of stars in black or white field. Division commanders have corps flags with black stars; brigade commanders, same, with white stars. Brigade hospitals, in RESERVE, have golden stars instead of white, to designate their brigade.

General officers, Division Commanders, have a bright green flag, with two crossed cannon in white, and 5, 4, 3, respectively, "garnet" in black, and a crimson streamer above the flag with same inscription.

GEN. EWELL'S PIETY.—In the course of a recent address by GEN. SMITH, he told his rebel audience the following anecdote of GEN. EWELL :—"During the hero JACKSON'S lifetime, GEN. EWELL was wont to remark that JACKSON could pray better, and could swear better, and could fight better than any man in the army. And then the two together could whip the devil. After GEN. EWELL lost a leg, the light of the Gospel shone with increasing ease over his spirit, and he became a Christian. Under the influence of this new light he has found the enemy heavily intrenched at Winchester. He said that he felt averse to expending his powder, but to go deeply altogether certain to result from an attack on the works. He retired to his tent, and there spent a time in prayer for light. He then said, 'I have prayed over it, and I am willing to go in.' The Governor then remarked, 'I am glad to hear you say so, for I feel that the hand of God is visible in this

UNITED STATES

ARMY AND NAVY JOURNAL;

A WEEKLY NEWSPAPER, DEVOTED TO THE INTERESTS OF THE ARMY AND NAVY, AND TO THE DISSEMINATION OF CORRECT MILITARY INFORMATION.

On Thursday, the 27th of August, the undersigned will commence the publication, under the above title, of a weekly newspaper, devoted to military and naval affairs and to the diffusion of information touching the interests of the United Service. The ARMY AND NAVY JOURNAL is established in the interests of no party; it will be controlled by no clique. Its independence will be absolute. Avoiding all personal and political feuds, its influence will be directed solely to the inculcation of sound military ideas, and to the observation of the public service in all its departments. Its pages will be devoted to the highest military criticism by competent authorities, to the dignified discussion of questions pertaining to the welfare of the profession, and to a full and reliable record of all subjects of interest to those in any way connected with military or naval affairs, or interested in the art of war.

The Department of Engineering, which now has no intimate an association with the service, will receive ample and close attention in this connection, and the interests of our Commercial Marine will also have an appropriate place. Among other matters the columns of the JOURNAL will contain from week to week:

1st. Full official lists of all appointments, promotions, changes of station, leaves, resignations, dismissals, and other changes in the personnel of the two services.

2d. A full and reliable record of all active operations by the Army and Navy.

3d. A summary of all official orders proper for publication.

4th. A full account of the operations of the Coast Survey and the Revenue Service, so far as of interest among the officers of these two departments.

5th. Changes in the material and armament of the two services, with matters relating to military hygiene, surgery and the sanitary condition of the Army and Navy.

6th. Descriptions of inventions and improvements relating to the Art of War, and of experiments and discoveries illustrative of military science in this country and abroad.

7th. Reviews of military and naval exploits and adventures; correspondence from members of the two services. Answers to questions in regard to difficult or disputed military points, when of general interest, suggested by correspondents.

8th. An intercommunicant movements of foreign armies and navies, with notices of changes in the personnel of the military and naval services.

9th. Criticisms upon current literature and art, of interest to the military profession.

10th. Articles upon military and naval engineering.

11th. Similar articles upon the Commercial Marine, report of Navy Yards, and movements of foreign naval vessels.

12th. Editorial discussions upon subjects of interest to our services and country.

A summary, in short, of whatever occurs in all parts of the world of value to the two services. No effort will be spared to make the JOURNAL complete in all its departments, and to render it worthy of a high-toned, reliable, lively journal, which will be read with interest by all who are connected with or interested with the public service and by the great body of the intelligent public.

The importance which Military and Naval affairs have assumed in the United States, and the necessity of a journal which can make with some of the most competent writers on these subjects, is apparent to the country, and for such official and departmental assistance as will secure to the JOURNAL the fullest and most exact character of changes, orders, &c. The undersigned in completing the arrangements for the publication of the JOURNAL has the valuable co-operation of many professional officers and of a large number of publicists, gentlemen outside of military life. With their earnest sympathy and valuable assistance, he feels confident that the paper upon such a basis as will ensure its success.

The ARMY AND NAVY JOURNAL will, therefore, be peculiar for the establishment of the JOURNAL has been a necessity. Among its subscribers are officers of the highest rank, in advance of publication, numerous expressions of interest have been received from officers high in the service, and from civilians, of the value of such a publication. Many have received abundant assurance that the JOURNAL will meet with a hearty support from the services.

The terms of the paper will be FIVE DOLLARS A YEAR, PAYABLE IN ADVANCE. It will be published in a large-sized quarto sheet of 16 pages, consecutively paged, and printed in the best manner on fine book paper. This will furnish a yearly volume of over 800 pages, filled with information indispensable importance to every soldier or sailor and to those of government in the military service, to every man desirous of taking an intelligent view of the military operations now going on in the country. Subscriptions and communications should be addressed to the UNITED STATES ARMY AND NAVY JOURNAL, New York.

SMALL STORES, &c., for 1863-64,
NAVY DEPARTMENT,
BUREAU OF PROVISIONS AND CLOTHING,
Aug 19, 1863.

Proposals, sealed and indorsed "Offer for Small Stores," &c., will be received at this office until 12 o'clock M., on the 15th day of September next, for furnishing and delivering (on receiving ten days' notice) at the Inspection Stations and Cooperage Depots, or either of the Navy Yards at Charlestown, Massachusetts, Brooklyn, New York, Philadelphia, Baltimore, Washington, Norfolk, and Pensacola, the articles of Small Stores, Soap and Candles, named and specified in the following classes, for the service in such quantities as may be required, from time to time, during the year 1864, or by the reasonable dismissance of these yards respectively, during the latest part of the year ending June 30, 1865, viz:

CLASS NO. 1.

300,000 lbs. Pure Water Soap.

The soap must be manufactured from cocoa-nut oil and of the best quality, denominated "White Soap," and must be delivered in cakes of good size, of good strong bones, containing twenty-five bars, weighing one pound each, and after inspection the bars must be bopped at each end as the manner of the U. S.

CLASS NO. 2.

15,000 Jack Knives,
20,000 Spoons,
10,000 Forks,
5,000 Razors (in single cases),
5,000 Razor Straps,
20,000 Scissors,
10,000 Awls, Sawing, Nos. 1, 2, 3, 4, drill-eyed, Brewers,
10,000 Thimbles, 8-10 and 9-10 in diameter.
1,000 Canvassers.
6,000 dozen B. Buttons.

CLASS NO. 3.

2,000 dozen Gilt Eagle Buttons, Small.
2,000 dozen Gilt Eagle Buttons, medium.
2,000 dozen Gilt Eagle Buttons, Large.

CLASS NO. 4.

10,000 Pine Combs, India Rubber or Gutta Percha.
10,000 Comse Combs, India Rubber or Gutta Percha.

CLASS NO. 5.

10,000 Scrub Brushes.
10,000 Hair Brushes.
10,000 Shaving Brushes.
10,000 Whisk Brooms.

CLASS NO. 6.

6,000 Hands Grass, for bats.
10,000 lbs. Rosewax, in the cakes.
10,000 lbs. Spruce Shoop, not less than two ounces per cake.
20,000 lbs. Sealing.

CLASS NO. 7.

16,000 spools Cotton, of Nos. 6 and 16, 200 yards each, three cords equal parts.
5,000 spools Cotton, black and white, in quarter-pound packages, equal to Marshall's best Nos. 6 and 16, 200 yards each, three cords, as required.
1,000 pounds Lute, sewing, blue black, pure silk, as colonpoon weight, (wrappers not facilitated).
1,000 pounds Lute, sewing, white, packages.
10,000 pieces Flannel, ins, best French block, 12 by 16 to 8 by 12 inches.
10,000 pieces Flannel, ins, fine, four yards in length, one-half inch wide.
15,000 pieces Flannel, ins, twilled cotton, six yards in length, one-half inch wide.
29,000 lbs. Tape, linen, assorted, cotton, 30d, by 28 inches, weight not less than 1¼ ounces each, texture 8 to 9 to a square inch.

CLASS NO. 8.

30,000 lbs. Mustard (in tin cases).
1,000 lbs. Pepper, Mackler.
1,000 gross Rollers, assorted mustard and pepper.
1,000 gross Corks.

CLASS NO. 9.

100,000 lbs. Starches Candles.

The candles are to be "stripes," of prime leaf tallow, 6-to inches in length, exclusive of tip, six candles to the pound, and no candle to weigh more than 10 ounces, and be paid for according to the weight delivered, deficiency in weight exceeding the melting point not to be less than 160 degrees Fahrenheit. The wicks to be composed of the best spool of 78 cotton threads of the best quality of No. 10 cotton, to be loosely twisted, to burn slowly and clear, to bend, to good bones, consisting about thirty (30) threads to the inch, and to be of such size as to consume the candle at the weight of the candles.

All the articles to be in a condition to be included in the ration, and no article to be required within the first year, and no excess of one-fifth in the quantity of any article required.

All the foregoing articles must be of the best quality, and be packed in all respects, to the samples deposited at each of the Navy Yards, and no article will be received at any Navy Yard where delivered as the Chief of the Bureau of Provisions and Clothing may direct to the Navy Department.

All the articles to be delivered free of charge, and the boxes, barrels, or packages containing the several packages, and the price of each article must be the same as the sample. Each box, barrel, or package in which the above articles are delivered must be marked with the name of the article contained in the package, and be sufficient to insure their temporary transit.

The contractor must establish agencies at such places as the Chief of the Bureau may direct, and must arise in furnishing what may be required; and when the contractor fails to furnish any article required by a requisition, the Chief of the Bureau of Provisions and Clothing may cause the articles to be purchased to be made to supply the deficiency, under the penalty of the contractor for the amount of the cost of the requisition, or a duplicate copy thereof, at the Bureau of Provisions and Clothing, and at each of the Navy Yards aforesaid, shall be evidence that such requisition has been duly received.

Two or more approved sureties, in a sum equal to the amount of the contract, will be required to each bid and twenty per centum, in addition, will be withheld from each payment to the contractor, and deposited as collateral security, to secure its performance, and will be forfeited to the use of the United States in case of failure; eighty per centum of the amount of each delivery will be paid on the receipt of the articles, and the other twenty-five the same shall have been passed by the inspecting officer.

The acceptance of the letter addressed to any bidder of the acceptance of his proposal, will be deemed a notification thereof, within the meaning of the Act of 1846, and his bid will be made and accepted in conformity with this understanding.

Every offer made must be accompanied (as directed by the Act of 31st January, 1861, amendatory of the naval service for 1846-47, approved 16th August, 1846), by the guarantee of two persons, to the effect that if the proposals be accepted, they will not object to the validity of the bond on the ground that they are not bondsmen, and that if any bid or bidder shall be accepted, enter into an obligation within ten days, with good and sufficient sureties, to furnish the supplies proposed. The Bureau will not be obligated to consider any offer unless accompanied by the guarantee required by law; the competency of the guarantors must be certified by the District Attorney, or the Collector of the Port, and by satisfactory evidence that the bidder has the bonds required by the Act of Congress of March 3, 1863.

The attention of bidders is called to the sample and description of articles required, as, in the inspection before acceptance, a just and rigid comparison will be made between the articles offered and the samples and contract, and no article will be received that is inferior in quality, nor will any particularly directed to the final reception of it until March, 1864, and to the last of May, August, 1864.

PROPOSALS FOR BOOKS.

BUREAU OF NAVIGATION, NAVY DEPARTMENT,
WASHINGTON, D. C., August 20, 1868.

Sealed proposals will be received at this office until 12 M. on the 1st day of October next, for the delivery of the nautical supply of books for vessels of the Navy, and for the Naval Academy, at Annapolis, Md.

Proposals must be indorsed "Proposals for Books," and addressed to the Chief of the Bureau.

Lists of the books will be furnished on application personally or by letter at this Bureau.

No proposals will be entertained from those not actually engaged in the publication and sale of books, and the right is reserved to reject any or all bids, if for the interest of the service.

The books must be supplied, as called for by order of the Bureau, and delivered, free of all charges, at the Navy Yards at Boston, New York and Norfolk Station, at the expenses and risk of the publishers, and all books will be subject to such tests as the inspection of, and entirely satisfactory to the officer appointed by the Bureau for that purpose.

Every offer must be accompanied by a written guarantee, as required by law.

UNITED STATES INTERNAL REVENUE, FIFTH CONSOLIDATED DISTRICT, NEW YORK.—Notice is hereby given to all persons concerned that the undersigned will commence the enumerations made since the 1st of May, 1868, within the above named District, on Monday, the Seventeenth, Thirteenth and Fourteenth Wards, with the Assessment Districts thereof, on the 1st day of October next, and for the space of fifteen days from the date thereof, and that he will be personally present at the office of the Assistant Assessor of each District for fifteen days, until the 20th day of October, 1868, between the hours of 10 A. M. and 3 P. M., to receive any evidence or extensive valuations or enumerations by the Assistant Assessors. Appeals from the decision to be determined by the Assessors, on an appeal suggesting the probability of undervaluation, and where the appeals liable to duty or taxation, shall be, whether the valuation or enumeration be made by the said valuation or proportion to other valuations in the same assessment District, and the appeal shall be determined or be not entered. And all appeals to the Assessors aforesaid shall be in writing, stating specifically the particular cause, matter or thing respecting which a decision is required, and the reasons and facts on the ground or principle of inequality or error complained.
GEO. F. BELLOWS,
Dated New York, Aug. 31, 1863. Assessor.

TREASURY DEPARTMENT, OFFICE OF THE COMPTROLLER OF THE CURRENCY, WASHINGTON, August 25th, 1863.—Whereas, by satisfactory evidence presented to the undersigned, it has been made to appear that the Second National Bank of the city of New York, in the county of New York and State of New York, has been duly organized under and according to the provisions of the Act of Congress entitled "An Act to provide a National currency, secured by a pledge of United States stock, and to provide for the circulation and redemption thereof," approved February 25, 1863, and has complied with all the provisions of said act required to be complied with before commencing the business of Banking:

Now, therefore, I, Hugh McCulloch, Comptroller of the Currency, do hereby certify that the said Second National Bank of the city of New York, in the county of New York, and State of New York, is authorized to commence the business of Banking under the said act aforesaid.

In testimony thereof, witness my hand and seal of office, this thirteenth day of August, 1863.

[SEAL.] HUGH McCULLOCH,
Comptroller of the Currency.

THE MILITARY SITUATION.

THE operations of the week, while not of a startling character, have been important and progressive. The occupation of Cumberland Gap by General Shackelford, (commanding General Burnside's advance), which was simply announced in last week's Journal, is fully confirmed. It occurred on the 9th instant, at 3 P. M.—the rebel General Frazer surrendering without resistance, with 2000 men and 14 pieces of artillery. General Burnside was present in person, having marched his infantry column from Knoxville to Cumberland Gap, 60 miles, in 52 hours. Thus we hold the great gates of Eastern Tennessee. The most cursory glance at a good map shows the vast importance of these two points—Chattanooga and Cumberland Gap—now, after so long a time, in our possession. They not only cover the entire State of Tennessee and Kentucky on the east, but form the *only* base of inland operations against Alabama, Georgia, and South Carolina.

General Gillmore is establishing himself finely at Cumming's Point, (Fort Wagner) from which he commands the city of Charleston, at easy range for his heavy guns. A brisk fire has been kept up on him from the adjacent batteries at Fort Johnson, Battery Bee, and Moultrie; but the extraordinary defensive capacities of Wagner are now all in our favor. Some days must, of course, elapse, before operations will be resumed from Cumming's Point, with the full force that usually marks Gillmore's proceedings. The men must recover in a degree from the great fatigues which have insured their recent triumphs; it is no small task to reorganize Fort Wagner out of the wreck which the bombardment left it. It is our unpleasant duty to record an ill-conceived and unsuccessful attempt on the part of our naval forces to seize and occupy Fort Sumter. It was made on the 8th instant, and although conducted with the utmost promptitude and resolution, failed on account of an imperfect acquaintance with the nature of the obstacles to be overcome. We lost 10 officers and 104 men. In brief, the affair was as follows: The expedition consisted of 20 boats carrying 34 officers and 413 men, of whom 120 were marines; all under command of Commander Thomas H. Stevens, of the *Patapsco*. The plan of attack was to assail the Fort at two points, one party landing on the gorge wall, with the intention of ascending the ruins and gaining the parapet, while a second was to attempt an entrance through the lower embrasures. A third party was held in reserve. The expedition started at 11 P. M.; and at half past one, the first line of boats was challenged by the sentry on the Fort. A fire of musketry opened upon the boats before they reached the shore, and only seven touched the island, from which about 150 men landed, only to be cut to pieces and taken prisoners. They found on landing that, instead of a slope of *debris* up to the parapet, which was the appearance of the ruins by glass, from the fleet, and on which they expected to ascend, there was a solid wall of sand bags, 12 feet high, from which they were repulsed with fatal accuracy, by the enemy's sharpshooters. No scaling ladders had been provided, or thought necessary, and our men could neither advance nor retreat. At the very moment of landing, too, signal lights were thrown up, and a fire was opened on our boats from all the rebel batteries bearing on the Fort.

The garrison materially assisted this assault, by throwing lights upon the boats. The principal mischief was done, however, by a rebel ram, which came up and attacked the boats at close quarters; hand grenades were thrown down upon our men from the ram and from the walls, and even the heavy bricks of the fort were used as missiles. As nothing could be done, the order was given to retire, but only four out of the seven boats got away—three having been swamped by the enemy's guns—and very few of the detachment which had landed secured a retreat. Those who were not killed fell into the hands of the enemy, who are of course, very jubilant. No blame, say the correspondents, can possibly attach to Admiral Dahlgren or any of his officers. This is a very cheering assurance; but the event remains, and the only question is whether it was possible by any nearer reconnoissance than was made, to obtain a more accurate knowledge of the nature of the obstacles to be overcome on landing. If it was possible to be better informed, we can hardly rest satisfied with the uninvestigated exculpation of the commanding officer. Beauregard's taunt to Admiral Dahlgren, while it naturally stimulated that officer, was sufficiently suggestive of a consciousness that the Fort was not defenceless, and should have induced caution. The second line of boats, which were to land a force through the embrasures of the lower casemates in the northeast face, did not effect anything. Lieutenant Higginson was in command, and he found a landing impracticable—his advance boats banging heavily on the sharp rocks at the base of the Fort. Two of the boats were intercepted in their approach by the rebel ram before mentioned and pulled off into shoal water to escape, returning to the assistance of the others, when the ram steamed away. Other boats were driven away by the ram in the same way, and the reserve did not come into play at all —very fortunately, as it turned out—for a more perfect coöperation of our force, and the landing of a greater number of men would have probably only increased our loss.

Lee's army has retired toward Richmond. Down to a recent date his lines stretched from the base of the Blue Ridge and the upper Rappahannock, to Port Royal, on the lower Rappahannock, some 20 miles below Fredericksburg; near which latter point, Longstreet's corps was stationed; Ewell and Hill being respectively at or near Culpepper Court House and Gordonsville. But his whole army was in retrograde motion about the 10th instant, and General Foster telegraphs from Fortress Monroe that Lee's headquarters are now in Richmond, where the greater part of his army is massed. There is reason to believe, however, that Longstreet's corps, if no more, has gone to reinforce Bragg, or to act independently against General Rosecrans. General Rosecrans' headquarters, too, may have received reinforcements. Our cavalry under General Pleasanton, are hanging on Lee's rear. On the 13th instant, this officer, supported by the Second Corps, crossed the Rappahannock, at Kelley's, Rappahannock, and Sulphur Springs fords, at 4 A. M. He found the enemy five about 2 miles south of the river, and pursued his pickets to Culpepper Court House, which he entered at 10 o'clock, having taken 5 guns and 43 prisoners. The enemy evacuated Culpepper in great haste. The next day (Monday, 14th,) General Pleasanton reached the Rapidan, at Racoon Ford, where he attempted to cross, but met a spirited resistance from a large body of the enemy. Smart skirmishing was had from Culpepper Court House, to this point, and about 150 prisoners have been taken by our troopers since Sunday. General Pleasanton, however, still remains on this side the Rapidan, and the force of the enemy is yet uncertain.

General Blunt's operations in Arkansas have been completely successful. Apprehension was felt on account of the great disparity of force—the enemy being 12,000 to our 4,500—but the event vindicates General Blunt's confidence. He crossed the Arkansas river on the 22d ultimo, and offered battle, with this odds, to the rebel Generals Steele and Cooper, who retreated, after a brief fight, in disorder, abandoning their trains. General Blunt pursued them 100 miles, to Perryville, 50 miles from Red River, where he destroyed their commissary depot. On the 1st instant he took possession of Fort Smith, defeating and beating back 4,000 men. The rebels are now in a strong position, about 4 miles this side of Little Rock, and number 17,000 men, with 30 or 40 guns. General Blunt is preparing to leave Fort Gibson for Fort Scott. His campaign has so far been exceedingly brilliant. He has marched his little force 250 miles in 9 days, with an enemy before him, outnumbering him, whom he has defeated in two battles; he has utterly destroyed their commissary depôt, with a large amount of stores, captured their strong hold, Fort Smith—and cleared the Indian territory, redeeming 100,000 square miles from the invaders.

The natural result of the great victories of Grant and Banks in Mississippi, is appearing in the swarming of guerillas in that State. They are made up of deserters, paroled prisoners, and rascals of all stripes; and number, altogether, from five to eight thousand, under two or three notable leaders. They operate upon the central and northern parts of Mississippi, and the river shore; though the region of Corinth is particularly infested. There will probably be increased difficulties of this sort soon in Missouri, and in every State to which the deserters or disbanded men of the rebel army return. Thoroughly demoralized by two years of war in a bad cause, and under unprincipled leaders, they return only to curse their native States, and to be the terror of their former neighbors. Throwing aside even nay pretended adhesion to the so-called Confederate Government, they become mere free-booters. Of course, our soldiers deal with them, whenever they have a chance; but the people of the States themselves, as soon as they are at liberty to return to the Union, must be depended upon, mainly, to put them down. This they will do with a will.

Work on the military railroad from Nicholasville, Ky., to Knoxville, Tenn., has commenced, and will be pushed with great rapidity. A thousand men to the mile will soon be employed. Negro laborers have been impressed along the line of the road, every third slave being taken. They will be clothed and paid. And these negroes who have come into the Union lines, in the Southern States, are being forwarded to labor on the route. They will be paid one-third of the wages, the balance being reserved to aid in providing a home for them in a foreign country when the war is over.

James B. Fry, Provost-Marshal General, has issued an order which will govern, in lieu of all orders relating to the Invalid Corps. The expenses of recruiting for the Invalid Corps are precisely the same as those paid from the recruiting fund for those of the regular army, consisting of office expenses, transportation of recruits, and officers, &c.

THE MEDICAL STAFF OF FOREIGN ARMIES.

No. II.

GREAT BRITAIN.

Turn re-organization of the Medical Staff of the British army, which occurred in 1858, is one of the most important results of the labors of the Sanitary Commission sent to the Crimea. For, although the duties of this Commission ceased with the war, the effect of its observations and reports, and the impressions received by its members of the inefficiency of the system of medical organization then existing, operated toward a more general appreciation of the necessity of reform. Accordingly, the subject was freely ventilated by the Medical press of the United Kingdom, and, arising thereby to the dignity of a question of great public importance, soon found its way into Parliament; where its merits, being early recognized, insured it the honor of a patient hearing.

The first result of this deliberation was the appointment, by the QUEEN, on the 8th of May, 1857, of a Board of Commissioners (consisting in part of former members of the Crimean Sanitary Commission), whose duty it was made to inquire into everything pertaining to the medical service of the army, and to report what changes were necessary to advance and insure its greater perfection and utility.

On the 9th of February, 1858, the Report of this Commission was presented to Parliament, by Lord PANMURE, and in it appeared the startling admission that the military profession in Great Britain must rank as among the most insalubrious—that the Medical Staff are wholly blameless for this, doing all that was permitted them to do by their commanding officers to reduce the causes of preventible disease and that with the limited authority possessed by them, no better results could be expected. The report further showed that, for years, constant importunity had been made by the Medical Staff, for reforms in matters of dress, food, barracks and hospitals; and that the few unnecessary changes recorded were wrung from the hands of bureaus with the utmost opposition. The report concluded by saying that the Medical Department of the army, being under the *immediate* and absolute control of the Secretary of State for War, the Bureau would have no consciousness in co-operation to improve the sanitary condition of the soldier, unless compelled to do so by the force of public opinion.

Fortunately for the honor of humanity, the force of public opinion did make itself felt, and the result was that, on the 1st of October, 1858, a royal decree was promulgated, entirely re-organizing the Medical Department of the army, and so far disenthralling it from the old trammels of official bandaging, which had so long fettered its limbs and paralyzed its activity.

We give below the most important features of this act.

GRADES.

The act creates *four*, viz:—

1. Inspector-General of Hospitals.
2. Deputy-Inspector-General of Hospitals.
3. Staff or Regimental Surgeons; who, after 20 years full-pay service in any rank, shall be styled Surgeon-Major.
4. Staff or Regimental Assistant-Surgeons.

MEDICAL OFFICERS.

Of these there are at present 1,075, viz:—

1 Director-General.
6 Inspectors-General of Hospitals.
32 Deputy-Inspectors-General of Hospitals.
348 Staff and Regimental Surgeons (66 of whom are Surgeon-Major, having served twenty years).
684 Staff and Regimental Assistant-Surgeons.
5 Apothecaries and Dispensers.

ADMISSION.

No candidate can be admitted into the army who does not possess qualifications sufficient to entitle him to practice medicine and surgery as a civilian; and none shall receive a commission as Assistant-Surgeon until he shall have satisfactorily passed an examination in Military Medicine, Surgery and Hygiene, after attending the authorized course in a General Military Hospital.

PROMOTION.

Assistant-Surgeons must have served as such* *five* years, on full pay (two of which must have been passed in or with a regiment), and undergo a successful examination, before being promoted as full Surgeon.

Surgeons, whether on the staff or regimental, must have served as such two years, on full pay, two of which must have passed in or with a regiment, before being eligible to the rank of Deputy-Inspector-General of Hospitals.

Deputy-Inspector-General of Hospitals must have served *five* years at home, or *three* abroad, in that rank, before they can be promoted to the rank of Inspector-General.

But whatever good of the service requires it, the Secretary of State for War may shorten the periods of service, for the purpose of making regular promotions. And, although as a general rule Assistant-Surgeons shall be promoted only in the order of their *seniority*, unless unfit by physical or professional incompetency or misconduct: yet, in cases of distinguished service this rule may be departed from, and they be advanced out of the regular course; the recommendation upon which such promotion is based being published in the General Orders of the army, and in the Gazette in which the promotion appears.

Promotions from the rank of Surgeon to that of Deputy-Inspector, and from that of Deputy-Inspector to that of Inspector-General, shall be made by selection, for ability and merit, upon grounds stated to the QUEEN in writing, and recorded in the office of the Commander-in-Chief; and the selections shall be made from the whole rank of Surgeons, whether styled *Surgeons* or *Surgeons-Major*.

PAY.

The following table exhibits the daily pay (in Federal money) of the Medical Staff, after the specified terms of service on full pay:

	YEARS.						
	30	25	20	15	10	5	0
Inspector-Gen. of Hospitals	$13	$13	$13	$13			
Deputy-Inspector-General		$ 20	7 26	6 66			
Surgeon-Major			6 07	5 33			
Surgeon					$4 37	$3 64	
Assistant-Surgeon						2 80	$2 73

Or on promotion, should these periods of service not be completed.

In addition to the pay of their rank, officers at the head of the Medical Department on *foreign* stations shall receive allowances, as follows:—

PER DAY.

If with an army of 10,000 men, or upwards in the field,	$4 86
If with an army of 5,000 men, or upwards,	3 64
If with an army of any less number,	2 43
If serving in a colony when the forces consist of 1,500 men or more,	1 21

Officers placed on half-pay by reduction of establishment, or on Report of a Medical Board, in consequence of being incapacitated by reason of ill-health caused by wounds, or brought on by the discharge of duties, are allowed the half-pay to which their period of full-pay service entitles them, as follows:

	YEARS.						
	30	25	20	15	10	5	0
Inspector-General	$9 11	$8 14	$7 59				
Deputy-Inspector-General	6 26	5 47	5 20				
Surgeon-Major	4 49	4 00					
Surgeons				$3 28	$2 67		
Assistant-Surgeons					2 43	$1 94	$1 46

In order to maintain the efficiency of the service, all medical officers of the rank of Surgeon-Major, Surgeon, or Assistant-Surgeon shall be placed on the retired list when they shall have attained the age of *fifty-five* years; and all Inspectors-General and Deputy-Inspectors-General, when they shall have reached the age of *sixty-five*.

Officers thus supernumerated are entitled to the rate of one-half the pay stated in the above table.

ASSIMILATED RANK.

INSPECTOR-GENERAL.—*Brigadier-General*, according to date of commission. If with an army in the field, or after three years, full-pay, *Major-General*.—He has every privilege belonging to that rank, except the right to the Presidency of a Court-Martial (reserved to *combatants* alone), and the first choice of quarters.

DEPUTY-INSPECTOR-GENERAL.—*Lieutenant-Colonel*, and after *five* years full-pay service, as *Colonel*.

SURGEON-MAJOR.—*Lieutenant-Colonel*, but Junior to that rank.

STAFF OR REGIMENTAL SURGEON.—*Major*, according to date of commission.

STAFF OR REGIMENTAL-ASSISTANT-SURGEONS.—*Lieutenant*, according to date of commission, and after six years full pay, *Captain*.

Medical officers are, according to their rank, equal to those in the line, in all that relates to *position, money, servants, forage, fuel, light, &c.*; but not in respect to salutes from regimental or garrison colors.

FIELD OR WAR ALLOWANCE.

Besides their regular pay, officers are entitled to the following *per diems*, when actually in the field:—

	REGIMENTAL.	ORDINARY.	EXTRAORDINARY.
Assistant-Surgeon under six years service	$0 24		$0 49
Assistant-Surgeon above six years service,	0 36	..	0 61
Surgeon	0 48	..	1 09
Surgeon-Major	0 61	..	1 09
	STAFF.		
Assistant-Surgeon under six years service	$0 36	..	$0 61
Assistant-Surgeon above six years service	0 49	..	0 85
Surgeon	0 73	..	1 21
Surgeon-Major	0 73	..	1 21
Deputy-Inspector-General under three years	1 09	..	1 82
Deputy-Inspector-Gen'l. above three years	1 45	..	2 43
Inspector-General	2 18		

A SOUTHERN VIEW.—The following is from DEBOW'S *Southern Review*. It will interest, and perhaps surprise the French and English friends of a Confederacy:*

"The open ridicule and denunciation of the preamble of the Declaration of Independence, and of the doctrine of human equality, which we hear men indulging in every day, is another healthful conservative of the times. But most conclusive of all, is the evidence afforded by the change of opinion and of action on the subject of slavery and the slave trade in France and England. The Emperor of the French and the London *Times* newspaper are the most influential political *mediums* in Christendom; the best expounds of public opinion, for they always have either the sagacity to detect and follow it, or the power to foresee and control it. They are both advocates of slavery and the slave trade."

* i.e., with a commission.

FIGHTING AND PRAYING.

There was a time, and not very long ago, when the majority of people in civil life took their notions about military men from the prurient English comedies of GEORGE III.'s period; when, to be an officer of the army implied a code of morals offensive to public taste and domestic happiness, in which code, if to love your neighbor was not inculcated, to love your neighbor's wife was. According to that code, religion was at a discount, and a praying soldier was a "canting "hound."

That picture, as this undoubtedly was, of English society, it has been, in all time, absolutely false of the American Army. A letter set of men than our old Army, could not be found in equal numbers taken at random from any other profession, and among them some of the very best officers have been devoutly religious. But it is not of such we mean to speak. Our present purpose is to point out the prevalence of the religious element among all classes of fighting men; the fact that those who hold their lives in their hands, leaving "senseless bigots" to fight "for forms of creed," recognize the God of battles, and commend themselves to their captain in the midst of danger. The simplest expression of the relations of "praying and fighting" was, perhaps, the blunt order—"Put your trust in God, and keep your powder "dry."

It is easy to prove what we have said, by reference to modern history. The Mussalman humbly obeys the muezzin's call before he plunges into the fight to reap glory, or gain Paradise and the Houris. Indeed he rather contrives the Christian in regularity of prayer.

Cromwell and his Ironsides found themselves never dangerous men to meet in battle; the "Sword of the Lord and of Gideon" was exceeding sharp, tempered as it was with hourly prayers.

Nor were the Cavaliers wanting in prayer, although despising the so-called cant of the Roundheads. The King's men were known by their cuirasses and their oaths. "Boys, "my brave boys," said Major SHIPPEN, "pray well and fight "well, and God will certainly give us the victory." "Oh "s'Lord!" said another, "if I forgot Thee, as in the press of "battle I may, do not Thou forget me."

There is something sublime in the spectacle of GUSTAVUS ADOLPHUS and his vast army, on the eve of the battle of Lutzen, in which he fell, praying on bended knee, and then chanting—

> "Be of good cheer—your cause belongs
> "To Him who can avenge your wrongs:
> "Leave it to Him, and rest in peace."

The KING fell, but the battle was gloriously won.

It is related of the celebrated soldier LA HIRE, that when about to go into battle, he sent for the priest to obtain absolution. He was told to confess. He had not time to go into detail, he said, but he confessed "all the usual sins of a sol"dier's life." Upon receiving absolution, he made his prayer, as follows: "Oh Lord, do unto me this day, as I would unto "Thee if I were God and thou wast LA HIRE." It sounds harsh to us now, but the proud old Frenchman thought he was very devout.

Who can ever forget the touching colloquy between my Uncle TOBY and Corporal TRIM, concerning the prayers of soldiers. It is eloquent, patriotic and true. Find it, oh readers, in the inestimable TRISTRAM, and enjoy it again. If it spoils volumes for my uncle and aunt, it says much also for "our army in Flanders," especially considering that other accounts make them "swear terribly."

All the world knows that STONEWALL JACKSON struck harder blows, because he prayed so much. He was evidently of the fanatical stamp, and his habit in prayer was fervid-like than intelligible Christian petitions, and yet they fired the man who fought better than any other Rebel.

ROSECRANS, a devout Roman Catholic, just before his designed attack on Chattanooga, had mass said in all the churches of Cincinnati for the success of his arms. The same solemn spirit pregnant with results.

And so it must always be: Before going into battle the foolish, wicked, unmeaning oath is silent; with the bracing of the nerves for the struggle, a silent prayer for strength and valor and deliverance. The wounded pray to be saved from death; the dying recall the words of old petitions learned in their childhood, and in their hearts breathe them to the souls to God.

On the battlefield of Gettysburg were found, hread-straws, Bibles, and prayer-books. Carried in coat blooms, or pockets, they came forth in the bitter moment, a solace to the wounded and dying, and a proof that soldiers pray as well as fight. All honor and thanks to the worthy chaplains who foster this noble spirit, and to the philanthropic men who care for the soldier's interests at home, taking with them, as timely visits on battle-fields, and in crowded hospitals, comfort for the poor suffering mortal bodies, and holy books and words of prayer for the well-being of the immortal souls.

CORRESPONDENCE.

THE MONITORS.

The task of reforming a prevailing opinion, or even shadowing forth a doubt of its correctness, is not only a difficult, but frequently a thankless one. Such, I feel, is the position I must to some extent occupy in expressing my disbelief in the universally received idea that our iron-clads or Monitors are the ultimate of all that is essential to the purposes of attack and defence—an impression made but too easily upon minds prepared by national vanity for the ready reception of any such erroneous idea. Without stopping to inquire on what grounds such a claim is made, a gratified and pleased public have been but too ready to rest securely upon the comforting delusion that our newly found iron walls had rendered us impregnable, and that as each new spark of war gathered on our political horizon, all that would be necessary to meet it would be to call into requisition an additional number of forges and foundries, and multiply the Monitors.

In obedience to the almost universal cry of the people, based upon they knew not what, the Government, without fully investigating the capabilities of these vessels for attack and defence, or bestowing enough thought upon their defects and disadvantages, hurried forward the vessel, their use, has contracted, equipped, and put in service a large fleet of iron-clads, and is almost daily making additions to the number; faithfully responding in this particular, at least, to the popular voice for "Monitors." There can be no doubt that, to a certain extent, well-plated vessels will resist the impact of shot better than wooden bulwarks; but for all that, there is no reason why a people and a government should run mad over a class of vessels whose construction is such that they have never yet accomplished a success, and which a little further experience will prove to be the most gigantic failure of the age.

The most ardent admirer and believer in the powers of the Monitors, cannot point to a single success which has been achieved by these much-lauded vessels since their appearance upon the scene of action. The victory over the *Merrimac* in Hampton Roads, won by the first *Monitor*; though, according to Confederate accounts, nothing but her light draught, which permitted her to run for shallow water, prevented her from being run down by the rebel vessel. Every other engagement in which they have taken a part has resulted in nothing but defeat and mortification to all concerned with them. After a vain attempt to reduce Fort McAllister, on the Ogeechee river, by several of these vessels, they retired from the contest with the plea that the attack was only an experimental trial, public attention being diverted from the facts of the case by the shelling and burning of the famous steamer *Nashville*; the defeated iron-clads, meantime, returning ingloriously under the cover of the smoke thus raised.

The attack on Fort Sumter by Admiral Dupont in April last, added another gloomy page to the history of iron-clad failures, though the public learned but few of the disconcerting circumstances of the disaster. One thing, at least, is certain, that five of the nine iron-clads which went into the action were disabled in about the space of one hour, and rendered unfit for service; one of which was a total loss, and nearly became the tomb of its gallant commander and brave crew. And now, when General GILLMORE, with the land force under his command, has silenced Fort Sumter and rendered it a heap of ruins, when the next act of the drama must be performed by the naval fleet, and while the entire nation stands in breathless suspense for the result, more than a fortnight is allowed to elapse without a movement being made. What can we suppose to be the occasion of this loss of time, when every week gained by the besieged has the value to them of a year? What can be the reason, but the distrust felt by the Admiral for the iron-clads of his fleet, with which the attack must be made? The reduction of Sumter leaves the harbor bristling with an armament as heavy as that fort held in April last, while beyond the silenced Sumter, batteries equally as formidable as kept the fleet under the fire of that work during the first disastrous attack. The same causes which rendered that attack a failure, exist to an equal, if not greater, extent at the present time, and are equally as likely to render the next movement abortive.

The inefficiency of the iron-clads as at present constructed lies not in the inability of their armor to resist the impact of shot and shell, but in the extreme delicacy of the mechanism on which the operation of the most important part of the structure depends. The arrangements for revolving the turret, the mechanism for moving the guns, and the means by which the ports are shielded, are each and all liable to a disaster from every shot fired by the enemy: thus rendering the very parts of the vessel on which its fighting properties depend liable at every moment while in action to receive such injury as to completely disable the ship. And since it is a well-known fact that no construction is stronger than its weakest part, there is no injustice in considering the iron-clads, for the purpose to which they are applied, as amongst the least reliable portion of our Navy.

But coupled with the above objection, the injury they inflict upon the health of their crews may for a moment be adverted to. Instead of giving some a chance for life when others are taken off by the casualties of service, as in ordinary wooden vessels, the sum total of injury has to be borne by all in effects that will remain throughout the lives of the survivors. Iron-clad vessels of the very best construction are characterized as perfect coffins for their occupants, even when lying at anchor, and, in the event of battle, on a war establishment, and a portion of the time in fighting trim, have produced effects upon health far more disastrous, and that, too, without adequate remuneration for the sacrifice.

The content now expected to take place in Charleston harbor is by looked for with breathless interest by those who know the powers and are acquainted with the weakness of the iron-clads. With such, the result of the trial is not doubted. Another failure is anticipated which must place these vessels before the country, stripped of the adventitious glare which has attended them ever since the first engagement in the waters of Hampton Roads, upon the credit of which they have hitherto existed. SAILOR.

ARTILLERY IN THE UNITED STATES ARMY.

No. II.

SIEGE ARTILLERY.

THE Ordnance and Artillery Departments of the Army have received much newspaper and pamphlet abuse for their blind adherence to old systems, their indifference to new inventions, and their neglect and harsh treatment of inventors. These criticisms are as unjust as the pretended facts upon which they are based are unfounded.

The fecundity of inventors is such, that the two Departments named would have had time for nothing else, had all the time end experiment been devoted to inventions that was demanded by inventors. The great expenditure of money would also have been such, that the Treasury itself would have been well-nigh exhausted. Inventors are gratified with test-trials to the full extent permitted by other more important duties. Much that was offered was obviously worthless for service, and much was deemed on various accounts unsuitable, and was, therefore, rejected. In such cases the persistent and assertive inventors, that not a few of these so-called "improvements" crept unavoidably into the service. So great an evil did the multiplication of calibres, and varied form of projectiles at length become, that, at the very commencement of the operations of the Rebellion, the Ordnance Department found itself manufacturing, purchasing, and issuing to troops actually in the field, no less than *four hundred varieties* of artillery projectiles. The professional reader will readily comprehend the enormous expense, confusion, embarrassment, and total effect upon the efficiency of the artillery, necessarily involved in such a state of things. Instances are well recorded, and not infrequent, where artillery ammunition of peculiar form and fabrication, to be procured only of patentees or private manufacturers, was exhausted at most critical times, and although supplies for all other guns were abundant and at hand, the ammunition for these special calibres was not to be procured, and such guns were thus useless.

The Ordnance Department felt constrained to ask for the denial of some practical benefit, as a means of correcting the evil, by ridding the service of what was either worthless, unsuitable, or (though it might otherwise be good) what embarrassed it by an unnecessary multiplication of calibres, and also to prevent, as far as possible, the further introduction into the service of any material liable to the same or similar objections. These objects have already been effected to a great degree, and the artillery of the Army is rapidly being systematized and simplified in such a manner as greatly to increase its efficiency and facilitate its supply.

During the past two years, the armaments of position, siege, and sea-coast artillery has undergone many radical changes.

Rifled guns, larger calibres, and iron-carriages for sea-coast guns and mortars, have been extensively introduced, have proved their great efficiency, and are now considered indispensable. Improved methods of manufacture, by far the most important of which is RODMAN'S mode of "hollow-"casting," are now more generally used. While in the mode of mounting, the supply, and general service of the heavier guns and mortars, very much has been done to facilitate, to economize, and to simplify. When the Rebellion commenced, there was not in the United States service a single *rifled* siege gun.

For siege purposes, the old pattern cast-iron 12, 18, and 24-pounder, weighing respectively 3,600, 4,800, and 6,300 lbs., were our chief reliance. Such guns were invented to use only solid shot; no shells and but few spherical case-shot and canister, being upon their supply list. Their range is limited, and their general efficiency—though formerly good—is inferior in the present advanced condition of artillery. 8-inch howitzers, and 8 and 10-inch mortars, for shell-firing, were also used then, as now. But none of these *guns* were effective for breaching purposes beyond 1,000 yards, and none of the former siege artillery was useful for any purpose whatever beyond 1½ miles. When it is remembered that the respective sieges of Fort Pulaski, Fort Macon, and Yorktown, and the operations before Richmond and Corinth, have proved the entire practicability, with the present improved siege artillery, of breaching at 1,700 yards, with the probability of extending this to upwards of 2,000 yards, and of creating not only great annoyance, but positive damage, to the enemy at distances exceeding three miles, even the non-professional reader can readily appreciate the very great advances which have been made. This improvement is not merely confined to the heavier ordnance and of range, but we have also immense gains in penetration, in destructive effect, and in consequent economy of labor, time, and material. The superior lightness of the present siege artillery is also a great advantage as to mobility. The 30-pounder PARROTT, and 41 inch RODMAN, though throwing a projectile varying in weight from 29 lbs. to 32 lbs., are lighter guns than the lightest of those formerly in use: the former weighing less than the 18-pounder, and the latter less than the 24-pounder. These two siege guns are of cast-iron, the former having the usual wrought-iron reinforce about the seat of the charge. They use solid-shot, case-shot, shell, and canister, and their charge of powder is 34 or 34 lbs. The 30-pounder weighs 4,250 lbs., has a diameter of 4.2 of inches, and mounts upon the 18-pounder siege carriage. The 41-inch RODMAN weighs 3,450 lbs., has a diameter of bore of 4.50 inches, and mounts upon a special carriage, which is, however, in most of its dimensions the same as the old 12-pounder siege carriage. The range of these guns at 5° is the greatest which, in actual sieges which we have had, is about 4,000 yards, or 2¼ miles; but, as is the case with rifled field guns, elevations can be obtained by simple artificial means, which will give ranges of more than 6,000 yards.

In some of the siege operations of the present Rebellion, particularly in the sieges of Yorktown and Fort Pulaski, circumstances seemed to demand the use of guns of far heavier calibre than any of those above mentioned, and than are usually employed in similar operations elsewhere.

In the siege of Yorktown, at the time the enemy evacuated the place, two 300-pounders, five 100-pounders, and ten 13-inch sea-coast mortars, were already in position and ready to open fire, and four 100-pounders and ten 10-inch sea-coast mortars were being placed in battery.

The projected artillerist can well appreciate what would have been the effect of the fire of such batteries upon a position entirely unprotected by casemates. Opportunity was only offered to try the effect of the 300-pounders and a few of the 100-pounders, and this was at ranges varying from 21 to 3 miles. The most satisfactory results were obtained even at the latter range.

At the siege of Fort Pulaski, four 8-inch and six 10-inch Columbiads, two rifled 32's and two rifled 42's, and six 13-inch sea-coast mortars, were in position, and rendered essential service in the reduction of the place.

As to the carriages, transportation, mounting, and service of pieces of ordnance of such immense weight (the lightest weighing more than 9,000 lbs., and the heaviest about 17,000 lbs.) are, of course, attended with considerable difficulty. But that this was successfully accomplished at the two places named, in spite of the apparently insuperable difficulties described in the official reports of the respective Chiefs of Engineers and Artillery, induces the belief that the use of such heavy metal is practicable under all circumstances.

A more particular description of this class of ordnance will be given in a paper on garrison and sea-coast guns.

B

RE-ORGANIZE THE MILITIA.

SOMETHING vigorous should be done at once in the several States, to revive and increase the militia. In most of them it has dwindled to a shadow, the bulk of its members being in the three years' army, and their old places still vacant. What is worse, the militia system is commonly sneered at, and put in a ridiculous contrast with the Army. "The place for soldiers," it is said, "is the rend to Richmond; and there are too many Home Guards." But to prudent men all such careless talk is unpalatable, with bloody riots fresh at our gates, and prospective trans-Atlantic troubles looming in the distance.

New York city was authorized, it seems, to expect United States soldiers to enforce the draft. But New York ought not, in a second such emergency, to have her main trust in the Army of the Potomac. Every soldier should have his post vacant in the saddle or at the rifle-pit. It is a sorry way of helping the good cause, to call away this or that regiment to do the duty which belongs to men at home. Every scheme tending to keep the Army intact, for its main work, is clear gain; and prominent among such schemes is the equipment of strong State Military Reserves.

In the event of foreign war, well-trained militia under a prompt executive might bear the brunt of invasion, no matter how sudden, until reinforcements could be safely sent

from the Army, or new troops raised and equipped. But without an adequate local force, it might be necessary either to leave the invaded section to its fate, or cripple the Army, as a critical juncture, for its defence. For, though Government troops were lent to push through the draft, cases calling for military intervention might arise, when it would be hazardous, or perhaps impossible, to count on their aid. Times have been, and may be again, when every soldier, foot and horse, was needed in the front, and nowhere else. Property and family must then be left to the defence of police and militia. What provision has each State for this emergency? In Massachusetts, always noticeable for its careful military status, in numbers, equipment, and discipline, when the Governor called for State troops to quell the Boston draft riot, he found, it is said, only two companies of infantry, two horse companies, and a light battery, fit for service. The rest were mainly gone to the war. Some nine months' regiments just returned and not yet mustered out; United States troops from the border, and a few drill-clubs, made up the force. But it served to show what was needed for less fortunate circumstances. Here were from four to seven hundred efficient militia (excluding the nine months' men) in a State, where a few years ago, there were as many thousands. Up that way in time of peace! Now, we do not complain that the militia has been depleted hitherto. The cause of that loss is obvious and satisfactory. The mistake is in continuing to leave the organization weak, especially in time of war.

Disturbances may happen, too, of such a nature that the National Army cannot judiciously be called upon to interfere. The Fall elections will soon be here, and, after them, that whirlwind of excitement, a Presidential campaign. In ordinary times, the clash of party causes a certain amount of no little anxious speculation as to the effect of all this frenzy —whether the heat may not be swamped in its rollings and rockings. Our misgivings cannot be lose, in a canvas carried on amid the quick fluctuations of popular feeling, the sudden elations and depressions, the wide beat of the excitement, to which these three straining years have brought the nation.

The whole people has grown pugilistic, is in fighting mood. The very anthrax have caught the influence of the war, and desire to settle every dispute by fight: not to be out of fashion of more portentous riots. Blood can be shed in the streets far more easily than three years ago. And, added to the war fever, so fresh in mind is the comparative success of the New York mob, that for months to come it will be difficult to gather any great spasmodic throng, on exciting partisan topics, without recalling to the populace the brute strength there is in sympathetic masses—particularly if not confronted by resolute troops, sufficient in numbers to cope with them.

Military chieftains will probably figure among the next opposing Presidential candidates—with not a few of the lesser officers of the generals, we say, for Presidents; and their own returned troops, the devoted worshippers of this or the other hero, a great part of the voters. Add, then, to the previous calculation, the intense enthusiasm of every gallant soldier for his leader—an enthusiasm too, which has been caught by all classes of men and women throughout the land.

Even if a few States, removed from the seat of war, staid and well-governed, can safely count on the stability of their populations, the same must not therefore be assumed for all; in Border States, for example, like Maryland and Pennsylvania—the scene of tumultuous stir for the last year—"close" political States, too, where bludgeons have more than once been introduced in argument, during the canvass.

We have dwelt chiefly on the *prospective* benefit of the militia, because the other considerations will suggest themselves: e.g., the *free school* of military training furnished always by a thorough military system. With the cloud of Intervention still lowering, and the political cauldron swelling with triple heat, States and municipalities will need strong supports; a faithful, disciplined, and always-ready force, to give nerve to their movements. We want to find our protecting power, not on the Neuse or Rappahannock, but right at our side, ready to parry the first blow struck—a complete defence against foreign and domestic invasion. The time to accomplish this work is the coming Winter, that Spring may find us equipped.

It may be urged that building up the militia will draw from the resources of the Army, since men who would otherwise join the latter, might satisfy conscience and patriotism by faithful service in a well-trained militia, liable to a brief campaign in the National struggle, and certain of being the chief defenders in local broils or sudden invasion. This objection seems bad force. But now the Army is to be filled by conscription, from which also militiamen are not exempt. The draft being relied on to furnish all the troops required, there is no longer any question about volunteering.

G. E. P.

A GOOD RECORD.—The following statistics, showing the number of soldier men in Hamilton county, Ohio, including the city of Cincinnati, natives of the different States, and designating the branches of service to which they are attached, has been kindly furnished us by Colonel A. E. Jones, Provost Marshal of the district—Enlisted in Ohio regiments, 5,761; in Kentucky regiments, 415; in Volunteer Infantry, 295; as Teamsters, 50; in Regiments unknown, 6,118; in Cavalry, 684; in Artillery, 200; in Marines, 200; officers appointed, 90; Total, 11,873.

Among these enlistments, the following soldiers from other States are thus represented:—Indiana, 64; Illinois, 15; Missouri, 41; Michigan, 1; Pennsylvania, 9; Virginia, 2; Minnesota, 1; Mississippi, 1; New York, 14; Wisconsin and Iowa, 8; Massachusetts, 6; Tennessee, 5; and Nebraska, 1. Total, 171.

With this splendid record, there are but about 4,000 men subject to draft, in case such should be ordered; but the volunteering is progressing so rapidly, that there is not the least probability that a draft will be made. It will be made. Hamilton County deserves great praise for her noble efforts in behalf of the government.

FORTIFICATION—HARBOR DEFENCES.

THE experience of our Navy in this war tends to show that any vessel, iron or wood, and the majority of ones, run past any batteries, however well manned, selecting, of course, her opportunity; provided that the channel be in no ways obstructed, and that she can arrive at some definite desired spot, not in the range of batteries. The history of any fortress is considered to be built as obstruction, perhaps the most efficient of all obstructions. Hence it may be concluded that stationary defences alone are not sufficient for the protection of a harbor, unless those defences so control the harbor that there is no spot in it where an enemy's vessel can remain exposed to their fire at effective range—effective, with reference to the armament of the work and the resisting power of the vessel. This latter condition cannot be fulfilled in harbors, like New York, formed at the mouth of one or more large rivers.

Where the defence is to be made in shallow waters and narrow channels, obstructions can be made which we have not yet discovered the means of destroying or removing, and that when protected by a sufficiently powerful artillery, they form an effective defence for a harbor. That such obstructions are not impregnable as not to interfere with the free navigation of the channel, is shown by the facilities with which the blockade runners have entered the harbor.

The position of Fort Sumter was a necessary element in the defence of the harbor of Charleston, simply because the harbor was to be for the most part of the channel so controlled from the shore; the effect of shot thrown against iron-plated vessels diminishing very rapidly with the distance of the vessel from the gun.

GILLMORE has proved that masonry can be breached at 4,000 yards. The path of a shot at that distance is so curved that in 30 yards (the width of the ditch of a permanent fortification according to the bastioned system) it would fall 60 to 64 feet, then striking the wall supposed to be covered at its very foot.

The reasons why works for the defence of harbors have been constructed of masonry rather than of earth, are, that the positions for such works are generally limited in extent, and it is frequently impossible to counter earth-works, or more possible, they cannot be made sufficiently extensive, whereas, by raising masonry works, many tiers of guns can be placed one over the other. The vessels for defence against which such works were constructed were more efficient in proportion to their tonnage. It is easier to breach or burn wood than granite, and where vessels cannot approach so close as to bring their whole broadside to bear against a very limited portion of the work, the fort has the superiority of fire.

The increasing power of iron-clad vessels has very much changed this problem, but they have lost so much aggressive power that the superiority still rests with the fort. Sumter was breached from a land battery, and not by the Monitors. Whereas our old wooden walls were vessels of 120 or 100 guns, our new iron-clads carry 2, sometimes 4, rarely 8 or 10.

It is far, therefore, from being the case that harbors, where good obstructions can be made, are indefensible by just such works as have always been constructed.

Where such works are liable to be attacked from shore batteries, it is evident that they already require additional defensive strength, and as they are not built for to-day or to-morrow, but for the future, they should anticipate as far as possible the progress of military science. Therefore, all forts now constructed, where it has been the habit to use stone, should be of iron. The limitation of the powers, defensive and offensive, of sea-going iron-clads by the primary necessity of making them efficient ships, leaves evidently the balance of power where it was. Iron walls and large guns, which the *Great Eastern* could not carry, can be placed in permanent batteries, and our harbors, where the channels can be readily obstructed, made more defensible than Cronstadt or Sebastopol.

Where channels are too wide to be efficiently controlled by land batteries, or forts constructed in waters where a foundation can be obtained, floating defences become indispensable. The problem of constructing an efficient vessel for harbor defence is so much simpler than that of constructing an efficient sea-going iron-clad, that the advantage here also rests entirely with the defence.

A system of defence wholly stationary has one palpable disadvantage—the assailants can manœuvre, the forts cannot. A ship attacking a fort takes up a position in which her whole broadside bears upon the fort. With well-arranged and handled auxiliary floating defences, they should not be able to do this without exposing themselves to being raked.

A system of defence wholly or mainly dependent upon floating vessels has this other palpable defect, that they are very liable not to be at hand when wanted, or, to be constructed in sufficient numbers for each important harbor to have its quota. They are expected to make up by locomotion for lack of numbers; and, the advantage of choosing his point of attack and concealing it by threatenings in other places being invariably with the assailant, there is a great probability of the attacking point being the least defended when it most requires it.

The failure of the New Orleans obstructions confirmed previous experience that no mode of efficiently obstructing a rapid and wide channel has yet been devised. How far obstructions can be made useful in deep water, is a topic important a subject to treat of summarily. The consideration of this question, together with the modifications which it may be desirable to introduce into the forms of works and the utility of bad fortifications, must be discussed at a future day. The principles already established are that harbors should be defended by obstructions—these obstructions to be supported by earthworks where possible, where not, by iron forts, with a small and purely auxiliary floating defence, and that the armament of such works should be maintained superior to that which it is proved possible to place in sea-going iron-clads.

ARMIRAL DAHLGREN has ordered the rebel ram *Atlanta*, which had the contest with the United States iron-clads, to proceed to Boston where she will probably be docked at New York or Philadelphia in a few days. She is at present at Port Royal, being rapidly repaired for the trip. On her arrival she will be surveyed by a Board of Constructors and Engineers, with a view to ascertain the cost and practicability of converting her into a model craft for that service of the United States. She is reported to be in good condition, and to have a great deal of sound material in her hull. The officers who command her have been detached temporarily from vessels of the South Atlantic fleet.

MAJOR-General Carl Schurz arrived in Philadelphia on Monday evening.

GOVERNMENT has just made a contract for 1,000 horses, at $145 each. The price of horses has steadily advanced lately.

DURING the month of August there were granted enrolled army pensions to one thousand three hundred and sixty-eight widows, mothers, &c., and one thousand and fifty-two to others.

HON. John Cochrane, late Brigadier-General of Volunteers, has accepted the nomination of the "Union State Convention" of New York for the office of Attorney-General of the State.

LIEUTENANT-General John C. Pemberton is not dead as reported. A Southern paper says he has arrived in Atlanta, Georgia, and is now confined there by the rebels.

COLONEL Henry E. Davies, of the Harris Light Cavalry, has been appointed Brigadier-General of Volunteers. For some time past he has commanded the First Brigade of the Third Cavalry Division of the Army of the Potomac.

WE are gratified to learn that Captain John Rodgers, the hero of the Weehawken and Atlanta fight, has so far recovered as to be able to go out. On Wednesday he rode from the Naval Hospital to the Navy Yard. It will, however, be several weeks yet before he will be ready for service.

THE following amounts have thus far been drawn from the Treasury on account of Army Pay for July and August:—For the Army of the Potomac, $1,000,000; for the Southern Department, $1,000,000; for the Department of Virginia, $1,500,000; for the Pacific Department, $750,000; for the Middle Department, $5,000,000; for Banks's Army, $500,000. Total, $9,750,000. The Treasury will be ready in a short time to fill all the requisitions of the Paymaster-General.

THE buildings in course of erection for the cavalry on the Maryland shore of the Potomac river, at Gresham, nearly opposite Alexandria, are nearly completed. Soon, therefore, the cavalry, now scattered over a surface of several miles in Virginia and Maryland, will be concentrated at that point in permanent barracks. There are several thousand horses in camp already. Brigadier-General Merritt is the commander.

OFFICIAL DISPATCHES.

OPERATIONS IN MIDDLE TENNESSEE.
MAJOR-GENERAL ROSECRANS' OFFICIAL REPORT.

HEADQUARTERS DEPARTMENT OF THE CUMBERLAND, }
WINCHESTER, TENN., July 24, 1863. }

GENERAL:—For the information of the General-in-Chief and the War Department, I respectfully submit the following report of the movements and operations which resulted in driving the Rebels out of Middle Tennessee. I will report to you briefly, Murfreesboro, a place two hundred and twelve miles from the nearest point of supplies. I will endeavor briefly to present the circumstances which forced upon me that movement.

1. To establish and secure a depot of supplies at this point.

2. To organize an adequate cavalry force to combat that of the enemy, without which no system of communications for the movement of the enemy should be to be secure or effective.

The depot was established under favorable condition by the 1st of May, as has been reported, but the inferior numbers of our cavalry and the vast superiority of the enemy in that arm rendered it impossible that we could replace them, and it was not before the 10th of June that we had mustered into service a sufficient number.

The General-in-Chief has been informed of the reasons why an advance could not be made with safety to the depot at an earlier period.

Their main base of supplies was at Chattanooga, but a vastly superior cavalry force had occupied McMinnville, and their depot at the Duck River Valley and the country southward. Tullahoma, at the junction of railroads, depended on the Nashville and Chattanooga, or the Nashville and Chattanooga Railroad with the McMinnville branch, was their main depot. It must now control by the fortified Duck river, a deep, narrow stream, with but few fords or bridges, and a rocky, ridge of hills, which commands the whole valley from the lower level of Middle Tennessee.

Bragg's main army was in a strong position north of Duck river, the lateritey extending from Shelbyville to Wartrace, and their cavalry on the flanks at McMinnville, and on Bragg's extreme right at Spring Hill, where Forrest was concentrated, and threatening Franklin.

The position of Bragg's infantry was covered by a range of high, rough, hills, with a single practicable road through each gap, the Manchester toward Tullahoma and the line of the enemy's communications.

1. By McMinnville it is seventy-five miles to Tullahoma. Its length and position on the intersection of railroads at that point and Manchester were so difficult as to be regarded as assistant for the movement of an army.

2. The Manchester Pike passing these hills through Hoover's Gap, and the entrance to that gap commanded by the enemy's batteries on Matt's Hollow.

3. The Wartrace road through Liberty Gap, which passes into the same defiles and valley as the Manchester road.

4. The Shelbyville turnpike running through the Guy's Gap.

5. The Unionville road.

6. The road by Versailles, into the Shelbyville and Triune roads, both of which unite at Christiana, on the Nashville road.

The enemy held all these passes, and his main position in front of Shelbyville was covered by a valley, by a rocky ridge, and by Mud Mountain on the east, to Duck river on the west, covered by a line of abattis.

Polk's Corps was at Shelbyville. Hardee's headquarters was at Wartrace, and Bragg held Hoover's Gap with Cleburne's division. Polk's Corps was generally estimated by intelligent Rebels and Union men, at 20,000 infantry, Hardee's Corps, 20,000 more, at 12,000, infantry and artillery—making a total of 50,000 of these arms, and about 5,000 effective cavalry.

Positive information from various sources concurred to show the enemy intended to fight a battle for the possession of Middle Tennessee, should we advance by that route, and that he would be in good position to select his own time for the commencement of the engagement. Two winding roads from that place which lead up to the "barrens," and then to the river, were known to be practicable for the advance of the mountains toward that base. I was determined to render these two lines impracticable for the enemy's advance, and to force him to it by turning their right and moving on the railroad bridge across Elk river. The bridge was destroyed, and the railroad torn up for miles on each side of it. Deserters reported that the enemy considered it unnecessary to make Bragg believe we could advance on him by the Shelbyville road, as Bragg's spies had reported to him that the river was not fordable. Manchester with the main body of the Army, in the most exact manner, was to be ready to move on the enemy's flank when Hoover's Gap, a narrow way three miles in length, between high hills, was forced, and Liberty Gap, a narrow way, with high hills on each flank, was forced. The enemy's position was to be turned by the movement of Bragg's infantry toward Woodbury, would seem to be fatal to their position, as the topography and the roads presented every disposition to force.

Bragg's infantry was to be driven from its position, and the enemy compelled to fight in the open country, where the superiority of our troops and our infantry advance

LIFE IN A BARRACK.

THE barrack-life of the English soldier is the subject of a paper in a recent number of the *Cornhill Magazine*. The subject is pleasantly treated by one who writes as a looker-on of the life he describes. The following extracts will be of interest, as showing the routine of the life of one of the best disciplined armies of the world:—

PAY AND PENSIONS.

Up to 1847 (I believe) the soldier was enlisted not for ten, but for twelve years, and for the whole of infantry regiments. Cavalry, artillery, and engineers are now enlisted for twelve years; and they also have to serve two years abroad. In the foreign service, where men cannot well be spared sometimes. Should the soldier volunteer to remain in the army at the end of his first term of ten years, he has but another ten or twelve years before him; but he gets a second bounty at starting, a five left, and two or three months' furlough to go home to take it. Cavalry men receive a higher pay than infantry men. They get sixtenpence a day; we, thirteenpence: and as the cost of rations and other charges are much the same in all branch es of the service, it follows that the cavalry man enjoys more "spending money" than his fellow-man. If I remain in the army ten years only, I shall get no pension. Twenty-one year's service entitles me to a stipend of eightpence daily so long as I may live thereafter; and, besides, I shall get a penny a day for every good-conduct stripe I may gain. Three years' good conduct after enrolment gives me one stripe or "hook;" but I must show five years' good behavior for every other. And so a quiet, good soldier may retire on a shilling a day. If a man is discharged as unfit for service after ten years, or after three, but fewer than ten years in the ranks, he then gets an optional and temporary pension; say sixpence a day for a year or eighteen months.

THE OUTFIT.

Within two or three days after he has joined his regiment, the recruit is "fitted out" with his kit, and sent to drill. The items which make up the kit are these:—One knapsack and straps, *i. e.*, the straps that fasten the knapsack to the back and to bind the coat round the knapsack; three shirts, three pairs of socks, two towels, two pairs of boots, one pair of leathern leggings, one pair of braces, one pouch and pouch-belt, one trousers; a tunic, a shell-jacket, one pair of braces, two shoe-brushes, a clothes-brush, a box of blacking; a razor and case, a button-stick, a jack-knife, a fork, and a spoon, with a "bold at" to keep these last-named articles in. It must be acknowledged that this is a sufficiently handsome outfit however. All we remark on concerning it is apropos of which the army has to be grateful for, though, to be sure, it would seem the result of simple providence in the world that it has been overlooked till lately. It is not long, I believe, since the British soldier had to march and fight in the same clothing, and the same boots, moreover, which he had worn in the ice and the frosts of Canada. Climate so consideration, was the view at the Horse Guards; but that is now changed. In very cold climates the soldier is provided with warm clothing; he has the felicity of licking rebellious sepoys in the shirt of military costume.

Every year after the first, the soldier gets one tunic, one pair of winter trousers, and one pair of boots; every second year a pair of summer trousers and a pair of shoes. Everything else that he needs he has to pay for—caps, shirts, socks, towels, &c., &c. It is necessary to buy a jacket, too, every year; and it is a most unsatisfactory article that summer trousers will wear for two seasons, eight stiffings and sixteenpence being the price of a pair of the best of the thrifty and the seldom sort, have some little help from friends and relations. Of the shirts and socks we can but say it will only say that they often show a degree of devotion which is inexplicable, except on the old hypothesis of some rabid love of cold water. I have known instances of all the clothes from her back to get drink for a soldier whom she had not known for more than a month. Of the love likewise she would have done the same thing for any civilian alive.

THE BARRACK ROOM.

About drill I have nothing to say here, save that it is not considered exactly at any time a thing to be done for the charm on first acquaintance. Nor is the recruit very much delighted, at first, with his future apartment. It is to happen to have been lately familiar with the comforts of a decent home; and remember that some amongst us have been tenderly bred, though in what we call the lower ranks of society, they find themselves at once more handsomely and wholesomely provided for than ever they were in their lives. Still, a barrack-room is by no means a home. It is not to be with any chance of quiet or privacy in it. Generally it accommodates about fourteen or sixteen men, for whom it has to serve as bed-room, dining-room, day-room, work-room, and study; and thus, with a half-dozen men about me at this business, there is no glad eye there, and few of any one make it our recreation, so far as we can. Well, each man of us here has a bed to himself, with an arm-rack behind it, and two or three pegs in the walls above to hang belts, &c., upon. The bedstead is of iron, about two and a half feet wide, and hinged in the centre, so that it can be turned back in the daytime and form a seat. To each cot there is a mattress, a pillow (both stuffed with straw, and ungrateful to the bones at first), and we soon get used to them. Then there are ets, two sheets, and a rug. The sheets are changed every month, the blankets every three or four months. Shelves run round the room, which is also furnished with tables—for two tables, four forms, a plate and a basin for every man, a large long-handled scrubbing-trash, a broom, small handscrubber, a tin-pail, a wooden pail, a wooden box with handles to contain coals, with poker, shovel, &c. The tables have moveable tops fitting upon iron stands; and the cupboard doors are of iron-wire, like those of a meat-safe. The basins are made to serve the purpose of tea-cups also: knife, fork, and spoon, as I have said, are found in the kit. Of course I do not know all these details are the same in *all* barrack-rooms; but I describe those of one of the most important stations in England, and I should expect to find few differences elsewhere.

ROUTINE OF THE SOLDIER'S LIFE.

The ordinary routine of life in the barrack is pretty much as follows:—At six in the morning he is called up by the reveille, or, in more familiar English, the rouse. The last notes of the bugle are still ringing in his ears with the feelings of every sluggard who hears them; but they are succeeded by a few others of an encouraging and lively character, and he is soon astir. The first thing to be done now is to make the beds. The bed-linen are turned up, mattress and bolster are shaken, and the blankets folded neatly, the blankets (all very neatly), and placed on top of the bed-irons, toward the wall; the rug is folded next, and that also placed on the blankets in front of the blankets, forming a seat is formed. When a bed is well made up, it looks very neat and tidy indeed. The next operation is to clean the irons, which is done with sand and scrubbing with the formidable long-handled brush before mentioned; that, and the adjustment of the bedding, and so on, completes the barrack-room. The orderly man—that is to say, a man told off to cater for his comrades—to draw rations, prepare tables, and the more difficult matter of cooking them for the day, next considers breakfast, which is served at about eight o'clock. Before that time, of course, the orderly has drawn rations, of which the principal is bread, which is specially prepared (each room forming a mess), for nothing is to be done but to put a table up and clap the loaf upon it. Table cloths are unknown, and are not needed, considering that the tables are kept white as a new deal board. The meal consists of bread and tea, with, in winter, a bit of fat pork cook in the cook-house, where coppers and ovens are fitted up according to the number of men to be served. Breakfast over, the orderly man has to wash up. Every one does it nicely. No cloths are provided for the purpose, and an old shirt, or any other rag that can be obtained, is thought good enough. Dinner comes at one. Then the table-cloth being, and it is a treasure: a thing to be conveyed by the envied owners from mess to mess, and even from barrack to barrack occasionally.

After clearing away, the orderly man next employs himself in cleaning accoutrements, which is done daily, and on, while the other men clean arms and accoutrements for morning parade, which takes place about ten o'clock. The "fitness" of accoutrements is a question for parade sounds at a quarter to ten; and the "fall in" at ten precisely. Any man who makes his appearance after the "fall in" has sounded is punished by one or three hours' extra drill; and that is felt as a disgrace as well as a bore. However, this should not be supposed to mean that the regimental drill lasts for about an hour and a half; after that has been accomplished the men are free to dispose of themselves till dismissing, when they are free for the rest of the day. One o'clock is the dinner hour; when we have a very fair meal of meat, potatoes, and soup. Sometimes we have a boiled dinner—a thing supposed to be more than half savory three times a week; but there are few barracks, I believe, in which the three times are not reduced to two. Formerly we have gone to make up the soup. Occasionally a brief period of parade or drill follows dinner. At a quarter-past four the drum-major sounds the barrack with the decent decay of the Chinese plant; and then again we are at our own disposal till "tattoo," or bull-past nine. The interval between "tattoo" and the sounds—and sunset: that is to say, at various hours according to the season. When the tattoo has sounded, it is bed-time.

"Tattoo" is divided into the "first post" and "last post." The first post sounds at nine, when all the men's names are called in the barrack-rooms. It is expected that they are absent being taken down. As many men as return before the last post has sounded at half-past nine have their names re-called; but those who are absent are left to the orderly officer. As the absentees drop in they are marched to the guard-room and severely dealt with according to circumstances, absentees, and men drunk. At ten we who are sober and well-behaved are all in bed and darkness.

Of course there are exceptions for certain men to perform during the day; some men are in hospital, some in prison, and some under fatigue-duty, and so on; but the above is a fair account of the routine of barrack-life. A routine in a cavalry barrack is, of course, different in detail. Let us take the case of a dragoon regiment. At half-past five in the morning, at six in summer, at the winter, the morning stable trumpet sounds, in answer to which the men come and answer to their names, and then proceed to their appointments and the stable itself. By this time it is about a quarter to seven. They then return to the barrack-room, where they wash and clean themselves for personal accoutrements. Breakfast arrives from the cook-house at a quarter to eight—fetched by an orderly man as with us in the infantry barrack. Breakfast over, the orderly man is employed in sedding horses and in dressing. At nine, should there be no fatigue-duty, the exercise commences (and should perhaps once a week), the men ride their horses to exercise in the surrounding country or in the riding school: always after supervision by the officers. Between about two hours' exercise they return to barracks, and proceed to undress (old clothes are used for work in barracks), and arrange their kit fully on the shelves over the cots, their arms being placed on the tables for the casual inspection of officers visiting the room. The mid-day trumpet sounds at half-past eleven; from which time until one the men thoroughly clean their horses, and put up saddles, polishing the saddle-irons till they are as bright as silver. Dinner at one, and it comes with every good soldier. At one they dine. After dinner—save for an occasional drill or parade on foot, from three to four—the men have the afternoon to themselves, etc. From six to seven they have a third stable hour, bedding down the horses and making them snug for the night; seven to ten are leisure hours again. The bold dragoon who is not present when the orderly-sergeant goes round at the latter hour notes the absentees gets into trouble. If he does not appear within ten minutes, he spends the night in prison-cell, and next morning is punished according to length of absence, to his general character, and to the condition in which he returned.

Barrack-rooms as much of their time as possible out of barrack, while others abide within its walls pretty constantly. The poorer men, who have no friends to send them a shilling or a pound occasionally, are the dull and steady men (often the best soldiers), and the slovens, go far to make up the number of stay-at-homes. Not that it is easy to get accustomed to a barrack-room: it is to be fell at home in it. When the men are not at drill or cleaning their arms, accoutrements, &c., all sorts of employment are found for them in the barrack-room. Gambling, swearing, reading, writing, barking, boxing, single-stick exercise, and conversation, form the principal occupations. Gambling ceases only when they all go on at the same moment, the result is not agreeable to quiet and retiring spirits. However, it is not common to all that characters, though the non-regiment families, of course, specimens of every variety of the British character. I do believe, and therefore I do say, that some of the most finished gentlemen in the world are to be found in the army—heartless, prodigate—men who will rob you when your eyes are on them, but gentlemen. Men, also, who will cover sin and shame as well as excellent rogues, and popular opinion keeps them very much in order. Of course it is impossible that a thousand men of all sorts and of any degree of education together without including several blackguards, and I daresay we are not much worse off in that respect than other regiments. A heavy drinker here has a very bad time of it in the army; but the man whose life is most oppressed—who suffers most constantly from "bluff" is the man who pretends to more moral and religious than his comrades have reason to believe him to be. A truly religious man, or one who could pass as such without any pretensions, are convinced, is left in peace, and is respected. Almost every company has a good sinner or a good dancer, and is not quite happy without a fellow, who sometimes gets an engagement to perform of an evening at a public house in the town. He comes out strong at Christmas, when he is generally engaged to perform a few nights to furnish forth good cheer for their men, and what is more, they will come and spend an hour at the bar to hear him. Officers are also sacks of potatoes one day, spending much time and money in providing for the recreation of their humbler fellows. Cricket, quoits, and handball are the only games in the common indulgences, and, with the library, keep many a man not only out of mischief, but wholesomely employed.

ADVANTAGES OF A SERVICE.

You, who read this, have seen pretty clearly what is the ordinary day's work of a soldier, and it must have struck you as being in comparison with that of the mechanic or the agricultural laborer a day for a pound a week, very light. Of course there are certain additional contingencies, such as the "sergeant shot, or" of the old song, and starved to death in a trench; but I have no doubt it would be found, on inquiry, that the taller's trade is more destructive to life than the soldier's. Then the soldier's home on the soldier's calling keeps him healthy while he *does* live: the apprentice's is often little better than a lingering disease; and I hate that he is not more differently treated. It is a consolder this, that the daily bread of the soldier is certain. He is simply provided for; and come what may, should his loss be accidental, he is compensated. When he falls sick he goes at once into an hospital in which every care is taken of him, as I should be sure to be easily to acquire, and which no difficult to replace, as a well-trained soldier. Should he be invalided and discharged before he has completed his term of service, he receives a small pension according to the nature, cause, and probable duration of his disease. And on completing the full term of service he is guaranteed from starvation by a pension varying from eightpence to fifteenpence a day (according to the character of his service), a gratuity sometimes amounting, but small, and shed out by the extreme alacrity of civilians to employ deserving old soldiers. To be sure, a soldier cannot marry on his pay, but it is hard to see how an agricultural laborer can or ought to marry on *his* pay.

THE MORRIS ISLAND BATTERIES.—The following are the names and commanders of the batteries on Morris Island:

Battery Brown, commanded by Capt. Chas. Strahm, of the Third Rhode Island Artillery.

Battery Rosecrans, commanded by Capt. Capt. D. Comstock, Jr., Third Rhode Island Artillery.

Battery Meade, commanded by Lieut. H. Holbrook, Third Rhode Island Artillery.

Battery Kearney, commanded by Lieut. Atwell, Seventh Connecticut.

Naval Battery, commanded by Capt. F. Parker, of the *Wabash*.

Battery Reynolds, commanded by Capt. Reed, Third Rhode Island Artillery.

Battery Reed, commanded by Capt. Skinner, Seventh Connecticut.

Battery Hays, commanded by Capt. R. D. Shaw, Third Rhode Island Artillery.

Battery Stevens, commanded by Capt. Colwell, Third Rhode Island Artillery.

Battery Greenough, commanded by Lieut. Wilson, First United States Artillery.

Battery Strong, commanded by Capt. Gray, Seventh Connecticut.

Battery Kirby, commanded by Lieut. Selman, Ninth Maine.

Marsh Battery, commanded by Lieut. Selman, Ninth Maine.

MAJOR JACOB P. Gould, of the 18th Regiment, Massachusetts Volunteers, has been designated Colonel, and Major John Hodges, Jr., of the 8th Regiment, Lieutenant-Colonel of the 59th Regiment, Veteran Volunteers, which will be recruited in Essex and Middlesex counties, Massachusetts.

ARMY PERSONAL.

MAJOR-General Burnside has tendered his resignation to the President, who refused to accept it.

CAPTAIN S. Van Rensselaer, 12th United States Infantry, has resigned his commission.

COL. Sanford, of the Fourth Minnesota Volunteers, has been made Brigadier-General.

MAJOR-General B. F. Butler is engaged to canvass the State of Pennsylvania for Governor Curtin.

BRIGADIER-General G. A. Custer was wounded during General Pleasanton's recent reconnoissance.

COLONEL Thomas Kilby Smith, late of the 54th Ohio Volunteers, has been appointed Brigadier-General of Volunteers.

MAJOR Falls, First Pennsylvania Cavalry, has been ordered to report to General Hatch, at Philadelphia.

MAJOR-Gen. Hunter, Brig.-Gen. Barry, and Colonel Farragut will visit the city during the week.

BRIGADIER-General Haupt has been relieved from duty as General Superintendent of Military Railroads, and Colonel McCallum has been assigned to his position.

LIEUT. Newman Buckhardt, of the Sixty-sixth New York Volunteers, was seriously injured a few days since by a fall from his horse, and is still unable to return to duty.

MAJOR-General Rosecrans entered Chattanooga on the 10th. Archbishop Purcell, of Cincinnati, celebrated mass in the cathedral at that place.

BRIGADIER-General Nathan Kimball, of the Army of the Tennessee, has been appointed to command the department of Arkansas, at Indianapolis.

BRIGADIER-General Haupt has been relieved from duty as General Superintendent of Military Railroads, and Colonel McCallum has been assigned to his position.

LIEUT. Newman Burk

NOTICES TO CORRESPONDENTS

The Editor of this JOURNAL will always be glad to receive from officers in the two services, correspondence and general communications of a character suited to its columns. It is necessary that the name of the writer should, in all cases, accompany his communications, not for publication, but as a guarantee of good faith.

Officers are especially requested to give merely information of all personal matters of general interest, of the movements of vessels, of casualties among officers; all military and naval events.

The Editor will, at all times, be pleased to respond, in these columns, to enquiries in regard to official and other matters.

From gentlemen in the medical service we shall be glad to receive communications on military hygiene, practical surgery, and reports of sanitary conditions and events in hospitals.

The subscription price of THE ARMY AND NAVY JOURNAL is FIVE DOLLARS a year, or THREE DOLLARS for six months, invariably in advance. The subscription price may be sent in United States funds, or Quartermaster's, Paymaster's or other drafts, which should be made payable to the order of the Proprietor, W. C. Church.

All communications should be addressed to the ARMY AND NAVY JOURNAL, New York.

Subscribers who fail to receive their paper promptly, will please give immediate notice of the fact.

Advertisements of a character suited to the columns of the JOURNAL, will be inserted to a limited extent, at twenty cents a line each insertion.

The Editor does not hold himself responsible for individual expressions of opinion, in communications addressed to the JOURNAL.

The postage on the JOURNAL is twenty cents a year, payable quarterly in advance, at the office where received.

U. S. ARMY AND NAVY JOURNAL.

NEW-YORK, SATURDAY, SEPTEMBER 19, 1863.

DOWNFALL OF THE GREAT REBELLION.

SECRETARY SEWARD'S "Circular Dispatch No. 39," while a paper designed for diplomatic use, is so strictly a piece of military history, that we cannot be said to go beyond our legitimate province in making its contents the text for a few words of comment. Mr SEWARD opens his paper with the remark that "whenever the United States have complained of the premature "decrees of Great Britain and France, which accorded "the character of a belligerent to the insurgents, the "statesmen of those countries have answered that from "the first they agreed in opinion *that the efforts of the "Government to maintain the Union and preserve the "integrity of the Republic would not be successful.*" It must be confessed that even were this consideration the whole *animus* of their conduct, there was much to inspire the belief in the impossibility of our putting down the Rebellion.

There is no example in European history of a great revolution which has not been successful, and it was certainly not wonderful that, considering the colossal proportions assumed by the revolt against the Union, they should have applied the precedents of their own experience to our case, and concluded that we, too, would have to succumb. Nor was there anything in the peculiar nature of our Government that would lead European statesmen to conclude otherwise. Its strength in putting down internal insurrection had never been tried, and our weakness at the outset in all existing military means was so great, and our want of military spirit as a people so marked, that there was every thing to strengthen the conviction that we must miserably fail in the attempt to subdue the revolted States.

And yet the progress made in the work of recouquering the territory held by the insurgents, and crushing the armed forces of the Rebellion in the field, has during the past two years been so striking, that there is not in all history an example to match it. The reverses such as are incident to all wars—and indeed inevitable with a foe so powerful, so well-disciplined, and above all, so determined in spirit as that opposed to us —the course of the conflict has been steadily on the Union side. Through darkness and disaster and defeat, a force silent and potent as that of gravitation, has by day and night been drawing the Rebellion to ruin and death. The work has now so far advanced that even the most cautious and critical can safely look forward to the speedy termination of the war. Without attempting to anticipate its exact duration, it is certainly fair to believe that the expiration of the three years term of service, for which our Army of volunteers enlisted, will witness the task for which they took the field gloriously finished in the complete crushing of the Great Rebellion.

It is with a view to bring this argument to bear on the cabinets of the leading European Powers that Secretary SEWARD addresses this circular dispatch to our representatives at the foreign courts. He gives a masterly summing up of the progress of the Union arms during the past twelve months, with a view to show that the victories we have achieved leave the rebellion without a hope of success, except through foreign assistance, and that all that is required to secure speedy peace is an honest neutrality on the part of foreign States. The dispatch is under date of August 12th; and the events that have transpired during the interval of a month subsequent to that event, not only take nothing away from the point of the argument, but they actually add to it. During that time Gen. ROSECRANS' advance has taken place, ultimating in the capture of Chattanooga, which has always been regarded as the strategic centre of the rebel territory. The effect of this is not second to the opening of the Mississippi by the capture of Vicksburg and Port Hudson. The result of the opening of the Mississippi was to bisect the rebel territory—cutting off the rebel forces west of the great river from those east of it, and also cutting off the rebels from all hope of supplies from the trans-Mississippi region. Gen. ROSECRANS, by seizing the mountain system which runs like a wedge into the heart of the Confederacy, has again cleft them in twain, and by his possession of the salient angle of the great line of communications between the East and the West, once more cuts the rebels off from supplies and reinforcements.

The entire rebel territory is now "out of joint," and those feats of *concentration* which the rebels were able to achieve by means of their admirable interior lines, and which won them some of their finest victories, are henceforward impossible. The progress at Charleston is not less encouraging, and there is not now the shadow of a doubt that that stronghold is destined speedily to fall under the batteries of Gen. GILLMORE. Nor are the victories equal to those of a purely territorial nature. The blows struck at the armed forces of the rebellion in the field have been most damaging and most fatal. Three months ago there were three great rebel armies in the field—the army in Virginia, under LEE, the army in Tennessee, under BRAGG, and the army on the Mississippi, under JOHNSTON and Pemberton. The latter may be said not now to exist. JOHNSTON is to-day confessedly unable to raise *ten thousand armed* men in the whole department he commands. BRAGG's force is a routed and demoralized mob, which has for the past three months been deserting at the rate of a thousand per week! Thus, leaving out the whole line in a military point of view, we may say that the left wing and centre of the rebel grand army are completely broken. It remains to crush the right wing; and this done, subsequent operations will be purely of a subordinate nature.

If European statesmen have been honest in the avowal that their practical conduct as to American affairs has been largely influenced by theoretical considerations as to the improbability of putting down the insurgents, we think the time has come when, considering matters in a military point of view, they must abandon this foregone conclusion. If they do not, it can only show that there is an *arrière pensée* behind this avowed motive. The whole logic of events has been such as, in Mr. SEWARD's own words, "to convince those who seek a renewal of commercial "prosperity through the restoration of peace in "America, that the quickest and shortest way to gain "that desirable end is to withdraw support and favor "from the insurgents, to leave the adjustment of "our domestic controversies exclusively with the people of the United States."

WROUGHT-IRON GUN CARRIAGES.

WE give in our Army Gazette this week, a special order by which Brigadier-General BARRY, Inspector of Artillery, Major ROMEYN, and Capt. BENTON, of the Ordnance Department, are appointed a Board to convene at Watertown Arsenal, to "devise a plan for "wrought-iron carriages for siege and field guns, and "to consider whether any change is expedient in the "plan of the wooden gun carriages now in process of "construction, or to be hereafter made."

Attention was first officially called to this subject in the report of Colonel DELAFIELD, the senior member of the Military Commission which visited Europe in 1855. In speaking of the Russian systems of Fortification and Artillery, Colonel DELAFIELD says:—

"The large guns (68-pounders) calculated for the largest ranges as yet obtained by any gun, were being mounted on a wrought-iron chassis and carriage of peculiar construction, well worthy our particular attention. Several thousand gun carriages are necessary for our extended sea-coast. If these are all made of wood, after our present model, it is very questionable whether we, in the power of the Ordnance Department to keep them in repair. As to their renewal, in case neglect of annual repairs should call for it, such would be impracticable to do so in any reasonable period." He adds, with reference to field carriages, "Carriages for field artillery had, in like manner, been made of wrought-iron plates, both on the tubular principle, and with sides riveted to plates, after the design of one of the Archduke. They had been tested by being fired at with shot, wooden carriages being subjected to the same trial. *Satisfactory results were obtained in favor of iron, as far as the experiment had been carried.* But it is for our sea-coast that I most earnestly invite attention, by the introduction of wrought-iron tubular (or box) carriages, in imitation of Russian experience and skill. The Russian manufacture of one of them would be of advantage to the military profession."

As a proof of the confidence with which the Russians viewed this, then, to them, new carriage, Colonel DELAFIELD adds, in speaking of the celebrated Cronstadt defences, that "several wrought-iron chassis and "carriages were on the ramparts of this work, ready "to be put in position, showing a confidence in their "superior excellence justifying a *change* of armament, "*in presence of the enemy.*"

Carriages of this description have been constructed in this country, and are now universally employed with the heavy class of guns; the 13-inch, 200-pounder PARROTT's, the 10-inch, and larger COLUMBIADS, and DAHLGREN's, and the heavy mortars. These carriages were practically tested at the Siege of Yorktown for the 100-pounder and 200-pounder PARROTT's, and at that of Fort Pulaski for 13-inch mortars, and 10-inch COLUMBIADS. They possess the excellences in these, their first trials, serviceable carriages, combining great strength, with lightness and facility for working the gun; having great durability, and requiring but few repairs, which, when required, were readily made.

The best illustration of this combination of strength, with lightness, is in the case of the new 13-inch mortars, which weigh 17,120 lbs. In all other patterns of mortars, the mortar bed weighs nearly as much as the mortar; in this, it hardly weighs one-tenth. In guns the advantage of weight varies from 13 per cent. in the 33-pounder and 24-pounder casemate carriages, to 24 per cent. in the 10-inch COLUMBIAD. Increase in weight of carriage as the gun increases in size, and the necessary strength becomes more difficult to obtain in timber constructions.

We understand the duties of the above Board to be, to determine whether the advantages thus obtained for barbette, casemate, and ship's carriages, cannot be likewise obtained for field carriages. Such a task has been judiciously placed in the hands of the very best men who could have been selected. The reputation of Major RODMAN, and Captain BENTON, as scientific Artillerists, is not limited to this country—it is European; and Brigadier-General BARRY, Chief of Artillery to General SCOTT during the time the large Artillery of the Army of the Potomac was organized, and now Inspector of Artillery to the Armies of the United States, brings to this Board an extensive practical acquaintance with the necessities of field and siege service surpassed by no officer in the service.

THOUGH our military successes are rapidly and continuously counting up, and the resources of the nation remain very far from exhausted, there is yet necessity for us to consider whether we are making the most of these resources. The heads of our War and Navy Departments must not content themselves with the security which the victories of our arms afford them. They should feel it a public duty to see that those successes are achieved with as little drain upon the life and wealth of the nation as possible. Should, unhappily, great European complications come upon us before our domestic difficulties are settled, it will be a matter of the gravest importance that the naval and military resources of the country be judiciously husbanded. What we want is more attention to military organization. We have shown ourselves a martial, a warlike people. We must prove that we are a military one as well.

The principal points demanding the attention of our war administrative departments now, and of our Senators and Representatives, at the next Congress, are: the proper separation and organization of the duties of the Secretary of War and the Commander-in-Chief; the withdrawal of the promotion and appointment of officers from all but military influence, as soon as troops are mustered into the service of the United States; the introduction of a regular system of promotion, by which each officer will find his military advancement entirely dependent upon his military skill, energy and bravery; the organization of a Bureau of Artillery on the same principles as the Bureau of Cavalry, now organizing; the amalgamation of the Ordnance Corps

with the Artillery, as in all other armies; and, as the Topographical Engineers and the Engineer Corps have been recently amalgamated, the introduction of some officer corresponding to the French Intendant, by whom the accountability of each Division, Corps or Army shall be settled in itself instead of an attempt being made to keep the accounts of each separate officer in Washington. There are other points; but these are the leading ones, and indicate the direction which military reform should take.

In the course of a conversation reported in the London *Times* as having occurred recently between Mr. DAYTON, our Minister to France, and an English visitor, Mr. DAYTON is represented as saying that, if in consequence of the negligence or the self-inflicted impotence of the British authorities, the iron-clads now building in their ports for the rebels, be suffered to escape and plunder us, "the American people, irritated enough already, will be ungovernable. You "have seen enough of them," Mr. DAYTON is said to have added, "to know that *their resentment is not "under the control of their interests.* They will really "become as mad as your French friends call them. "They will be quite ready to ruin themselves in order "to ruin you."

The sentence we have italicised is pregnant with meaning for that class of Englishmen represented by the *Times*. As Mr. DAYTON suggests, the chief danger of collision with this country, through persistence in the present course of your double-dealing, does not arise from that calculation of commercial advantages which their instincts teach them is the mainspring of national action. There is a spirit in the American people which, once thoroughly aroused, is beyond the control of any conservative regard for profits to be won or lost. It was that spirit, wrought upon by ambitious leaders at the South, which produced the Rebellion; it was that spirit, aroused by the attack on Fort Sumter, which gave the first impulse to the loyal movement at the North, the results of which are so sadly disappointing the calculations of England and France. It is the spirit of indignation, which the knowledge, or the suspicion of unfair dealing, is sure to arouse in the American people, until the counsels of prudence are forgotten, and they are ready to submit to any personal sacrifice, if they may but inflict signal punishment on the offender. For their own sakes, as well as for ours, we trust the English ministry will find a way of preventing further violations of good faith, before the indignation of the American people shall point where they will cease to count iron-clads, or to enter into comparisons of strength with those who have violated the obligations of national good-fellowship.

We have had placed in our hands a pamphlet of the New York Submarine Engineer Company, and a special order of Major-General BURNSIDE, acknowledging the services of Professor MAILLEFER, the Engineer, and Captain LEVI HAYDEN, the Superintendent of that Company, for their services in raising and clearing away the obstructions in the harbors and rivers of North Carolina. In land sieges the work of the defenders, in obtaining cover, is efficiently counteracted by the work of the assailants in approaching, and with one invariable result. We do not think that any great Naval success can be anticipated at Charleston, until the Navy show themselves as willing as General GILLMORE has been to use the newest developments of science and mechanical art, and until, as on shore, the well-directed labor of the assailants is brought to bear upon the labor of the defenders. We should like to see those gentlemen who have been so successful in North Carolina trying their ingenuity in Charleston harbor. The result cannot fail to be favorable to the attack; for whereas the defenders have to obstruct and defend every possible channel, we have only to clear one.

THERE seems to be very little doubt that the rebel chiefs are putting forth every effort to send reinforcements to General BRAGG, for the purpose of enabling him to withstand General ROSECRANS' advance, and even, if possible, to assume the offensive. All the evidence goes to show that the veteran army of LEE, in Virginia, has been greatly depleted for the purpose of strengthening the rebel army in the West. In order to form a junction with BRAGG's force in Georgia, troops will have to be sent by the Western and Atlantic railroad, making a great detour by way of Charleston. Considering the dilapidated condition of the fixed and rolling stock of all the Southern villages, this will be rather a slow business; but as it will be very difficult for General ROSECRANS to make any immediate advance from Chattanooga (at least with any other than a cavalry force), they can undoubtedly in the meanwhile concentrate a large force at Atlanta. Of course in doing this they run the risk of sacrificing Virginia and even Richmond. But they may consider a small force assuming a purely defensive attitude, and retiring if hard pressed, behind the works of the rebel capital, adequate to delay the progress of the Union Army long enough to enable BRAGG to strike a blow in the West.

As General ROSECRANS is, for the present, dependent on a line enormously extended for his supplies, his position is undoubtedly a somewhat hazardous one. The advance of the Cavalry force of the Potomac Army to Culpepper, shows that General MEADE is fully awake to take advantage of any opening LEE may afford him. The day has gone by when the rebels can perform with impunity those feats of concentration of which they last year gave so many brilliant examples. Any great depletion of LEE's force should lose the rebels Richmond.

WE surrender several columns of our present issue to the publication of General ROSECRANS' official report of his operations in Middle Tenaessee, commencing with the advance from Murfreesboro, and culminating in the capture of Tullahoma. The subsequent movements of the Army of the Cumberland, up to the capture of Chattanooga, form, in reality, part of the same campaign; and, viewed as a whole, the history of the war does not afford a more magnificent series of operations, whether as regards the supreme importance of the results achieved, the vastness of the theatre of war, or the simple brilliancy of General ROSECRANS' style of work. The results of his noble campaign have been to extend the line of occupation of the Union arms by a depth of two hundred miles, to clear the rebels from the entire State of Tenaessee, to seize possession of the Great Central Mountain System that runs into the heart of the Confederacy, and to rout and demoralize the army of Bragg. The means by which Gen. ROSECRANS has brought about these results have been by three flank movements—first, on the rebel position at Shelbyville, secondly, the rebel position at Tullahoma, and, lastly, the rebel position at Chattanooga. General ROSECRANS' report is written with admirable clearness and simplicity, and forms, of itself, a very valuable and important chapter of military history.

WE observe that General ROSECRANS, in his official report, speaking of Colonel WILDER, says:—"He "ought to be made a Brigadier-General." If ever there was a well-MERITED promotion, this is, undoubtedly, of that character. Colonel WILDER's services in command of his brigade of mounted infantry, have, perhaps, been greater than those of any other commander of a small detached body. His records are really legion; he has destroyed millions of rebel public property, and he has never met the enemy's cavalry but to whip them. Colonel WILDER's mode of keeping his command supplied with horses is his own, and realizes CESAR's maxim, that "war should support war." Whenever his men need a remount, instead of sending them to the cavalry depot, he makes a raid on the enemy, and he never returns without from five hundred to a thousand horses. He forages also entirely on the enemy. His fight with a rebel force five times his own number, at Hoover's Gap, during General ROSECRANS' advance from Murfreesboro, is one of the most brilliant exploits of the war; and, it will be remembered, that he reached and bombarded Chattanooga a week before the arrival of the rest of the army. We regard there never was a man who more richly merited the star.

A SOUTHERN Sympathizer, in a letter to the London *Practical Mechanics' Journal*, lays claim to the shells with polyhedral cores, (lately introduced to the British authorities by Mr. EDWIN EASTBROOK, of New Jersey, U. S.,) as the invention of an artillery officer of the Confederate States, and now employed universally in that service. In support of this claim publication is given to a "Memorandum in regard to shells "with polygonal cavities," issued from the Confederate States Central Laboratory (Ordnance) on the 22st of January, 1863, by Colonel GORGAS, Chief of the Rebel Ordnance Department. The "Southern Sympathizer" declares that this "Artful Yankee," as he calls Mr. EASTBROOK, is indebted for the hint he obtained to fragments picked up in the field of battle, after having been fired from Southern guns.

NEGOTIATIONS are, we understand, in progress between General MEREDITH and Commissioner OULD, commissioners from the United States and so-called "Confederate States" respectively, looking to a general exchange of prisoners; but no decisive result has yet been attained. The release of the agents of the Sanitary Commission, which has just taken place, is an exceptional case. The Government has always been ready and desirous to carry out in good faith the terms of the cartel heretofore agreed upon; but the rebels have declined to do so. It is learned, upon inquiry of the officials having the exchange of prisoners in charge, that no new terms or conditions have been made by our Government, and no arrangements have yet been made by which the parole and exchange of prisoners, other than enlisted men, will be resumed.

WE understand that General HALLECK has, during the present week, secured the appointment of twenty-two young soldiers from our armies now in the field to cadetships, at West Point. This is, assuredly, a most excellent measure. Our armies are replete with the genius of a high order of military talent, which only requires the nourishing influence of a true great military school to develop to maturity. The practical experience which our young soldiers have had of actual war in the field will be of inestimable advantage to them in the theoretical studies on which they will enter.

REBEL dispatches announce that ROSECRANS' advance has reached Dalton, Georgia. This is a town in Whitefield County, on the Western and Atlanta Railroad, and the Northern terminus of the East Tennessee and Georgia Railroad, leading to Knoxville by way of Chattanooga, and forming part of the direct route between the Eastern and Southwestern States. A Federal detachment is also reported to have occupied Lafayette, a town of some importance, lying southwest of Dalton.

ON Wednesday, Major-General DIX and Staff, accompanied by Mrs. LINCOLN and Mrs. BANKS, the wife of Major-General BANKS, and Baron d' OSTENHAZY, the Consul-General of Russia at this port, visited the Russian frigate *Oelitch*, now lying in New York harbor. The distinguished guests were most courteously entertained, and upon their departure a salute of fifteen guns in honor of Major-General DIX was fired from the frigate.

THE Richmond *Whig* urges the concentration of the rebel forces. "When too weak to fight," the *Whig* says, "we can retreat, and by having all our forces in two grand corps, our skilful generals can so manœuvre them as to thwart a foe vastly superior. The day of defeat will have passed away when our veterun armies are hurled in solid masses against the foe."

THE Court of Inquiry engaged in investigating the evacuation of Winchester and Martinsburg, has completed its work, and adjourned *sine die*. The members of this Court were Brigadier-General W. F. BARRY, *J. J.* ABERCROMBIE, and G. A. DE RUSSY, U. S. Volunteers. Captain R. N. SCOTT, 4th U. S. Infantry, Judge Advocate.

THE following-named officers of the Regular Army have been retired:—Lieutenant-Colonel WM. CHAPMAN, Major THOMAS HENDRICKSON, Captain DAVID C. WOOD, 16th Infantry, Captain THOMAS W. WALKER, 3d Infantry, First Lieutenant EDWIN P. BOILOW, 1st Cavalry.

THE Richmond press pretend to be desirous that the reported offensive and defensive alliance between the United States and Russia should be consummated, and assume that it would at once settle the policy of the Western European powers in favor of the Southern Confederacy.

THE Charleston papers say that 7,551 shots have been fired at Fort Sumter. It has been struck 5,634 times. Of these shots, 3,595 struck the outer walls, and 2,139 struck inside.

FOREIGN NAVAL AND MILITARY MATTERS.

THE improvement in ordnance, patented in England, by Messrs. WHITWORTH and LESLIE, and with which many think have been recently made, refers to the manner of constructing the gun, and consists in making an ingot with a hole through it, and afterwards hammering it between an angular-shaped anvil-block and a hammer-head of a similar shape. A mandril of a taper form is inserted through the hole cast in the ingot, and the operation of hammering or forging proceeds until the mandril becomes too hot, from contact with the heated metal. A cold one is then inserted, and the forging is continued until the ingot is brought to the desired size and shape, after which it is annealed. For heavy guns the inventors make the inner tube from a bar of iron, ingot, and mandril it with cylinders made of homogeneous metal, in the manner above stated, put on by hydraulic pressure or other suitable means, in one or more layers as required. For closing the breech of these built-up guns, a breech is employed on which screws of two or more different pitches are cut. The screw of the smallest diameter takes into an interior screw in the breech end of the inner tube, and the screws of the larger diameters take, at the same time, into interior screws made in the second, or second and other series of hoops. The bore is afterwards finished and rifled. The trunnions form a portion of the outer hoop. By this construction it is claimed that the free and sudden expansion of the gun laterally is permitted—the inner tube and the strengthening hoops being ready to take their own proper share of the end pressure arising from the explosion.

THE London *Lancet*, in an article on "Vice and Disease in the Army," calls attention to the fact that more than one-half of all the sick sent to the British military hospitals are admitted in consequence of venereal complaints. It complains that many of the troops in Brussels, where sanitary precautions are taken with reference to these diseases, with that of the British Foot Guards. Amongst the Brussels troops only 10 men in 100 suffered, and these in the mildest forms; while of the severe form only 1 case occurred in 36, or less than 3 per cent. Mercurial treatment of the disease are almost unknown. In the Guards every fourth man suffers from the severe form, instead of every fiftieth, and of these one-half are sent to some into hospital for the severer constitutional symptoms. The *Lancet* in view of these facts, urges the necessity of sanitary precautions; of such precautions as medical precautions with respect to the soldiers, and especially the women who follow camps and infest garrisons. It also advises the establishment of a system of police, and in connection with garrisons and camps, of Lock hospitals, with beds for in-patients. "There is good reason," the *Lancet* says, "to know that even the happy women would gladly avail themselves of this 'refuge;' and to us it would seem that even the stern humanities would almost demand the reception of the half of these wretched persons who, through ignorance, have made sense pleasure in remembering "that under no other circumstances can such happy occasions be found for realizing the hopes and aims of Bible truths the moral sense of these unfortunate women; that in every instance the addition of an asylum to a Lock hospital has been a means of rescue for many that had else been utterly lost."

A COMMITTEE, consisting of several prominent officers of the British Army, has been formed with the view of simplifying and improving the equipment of the soldier. The changes proposed include the adoption of a loose and comfortable serge patrol jacket, to be worn in addition to or in lieu of the tunic, for ordinary field-days and other duties, a warm and substantial Jersey being added to it in winter, with the view of making it a more comfortable dress than the present tight-fitting jacket. It is also proposed to prescribe generally of having blue summer and gray winter trousers, by the introduction of gray cloth trousers. A new cap is also under consideration. Several changes are proposed. One idea is to give the soldier the infantry cap, and to add to it a handsome badge, giving not only the regimental number, but the special insignia of the corps. Another cap proposed is somewhat similar to the French kepi. The improvement of the tunic, giving it a larger and more comfortable sleeve, is contemplated. A new knapsack is under consideration, built up with iron supports underneath, which, whilst they keep the knapsack off the back of the soldier's back, prevent the straps from cutting him under the arms. A mess kettle of light construction, adapted to cook for seven, made to be carried on the back of the soldier's pack, is under consideration. A new great coat, which shall be lighter than the old one, more impervious to water, vexes the ingenuity of the committee.

A NEW naval broadside rifled gun, of seven inches bore, which will weigh somewhat under seven tons, is now fast approaching completion in England. The gun has been specifically constructed to meet the views of Admiral FREDERICK, the gunnery Lord of the Admiralty. It is a muzzle-loader, and differs in many essential particulars from the ARMSTRONG. The *Army and Navy Gazette* says:—"There are four guns of seven and a half tons, which are known as 'Armstrong.' Three of these weapons are to be muzzle-loaders, lined with thick solid-ended steel tubes; and the fourth, Mr. RICHARDS' gun, is to be a breech-loader, and lined with unnecessarily an open steel tube, which is of great length. In another part of "the gun factories there are several shells of great length and weight being made for Mr. LYNALL "THOMAS' gun, now at Shoeburyness. These shells," and also all the projectiles previously made, which "were brought back from Shoeburyness for the purpose, are being coated upon the bearings with a "zinc mixture—it being thought that the previous "firing had indented or rubbed the projections upon "the bore so that Mr. THOMAS's hopes by "this change to surpass all other competitors in producing the best rifled weapon.

A CONSIDERABLE number of segment and common shells for the ARMSTRONG 100-pounder gun are being prepared in the Royal Arsenal. The common shell is to contain the very largest bursting-charge of 47 lbs. of powder, and is intended to be fired by seven 100 lbs. of powder, if the gun be found capable of withstanding so large a charge. These shells are fitted respectively to the percussion fuze of Captain PALLISER, which consists of dividing a number of small brass buttons into under-cut holes drilled upon the surface of the projectile. These buttons become firmly fixed, and form the bearings which take the rifle grooves and give the rotatory motion to the projectile. They are placed in position previous to entering the gun grooves in the gun) of four in each row, and after being driven firmly in, so that the brass fills the holes, are turned and countersunk to fit the grooves of the gun. The difficulty with these buttons is that they are likely to prove too delicate for actual warfare. It is said that the Government Proof Butts at Shoeburyness to be fitted in the gun, had to be packed in sadding and carried as carefully as glass. Capt. PALLISER is expected to have his shells ready for the castiron guns, which have been granted him for the purpose. The plan, it will be remembered, is to strengthen the gun by the insertion of a wrought-iron or steel tube in the bore of the cast-iron gun, so as to substitute the strength of a superior metal for that of the cast-iron of the interior. One of these guns will be strengthened in the superior of a coil tube, and the other by means of a tube of mild steel.

THE *Aurora*, a new iron vessel of the British Navy, recently made her trial trip, which proved every way successful. She has been fitted throughout with sails of canvas, was over fourteen knots, and subsequently, she ran twenty nautical miles in one hour and seventeen minutes. She has engines of 200-horse power one hundred and twenty revolutions, with twenty-seven lbs. of steam, and a vacuum of twenty-five inches. She afterwards ran the measured mile in four seven minutes, her engines averaging 127 revolutions. The *Aurora* is an iron vessel, 165 feet in length, with a beam of 32 feet 6 inches, thirteen feet six inches, an area of midship section of 150 square feet, and a displacement of 950 tons. Her engines have a single cylinder, a stroke of 2-3 feet, and drive two three-bladed screws, each independently of the other, five feet in diameter, and with a pitch of 6 feet six inches. The armament is 2 12-pounders and 2 16 inches, and a 21-inch stroke. She carries two short masts, rigged for fore and aft canvas, and altogether, although built as a gun-boat, however, has the appearance of a thorough steam "clipper. Her draft of water at starting was seven feet three inches aft, and five feet three forward. Her trip was regarded with interest, inasmuch as she is the fourth vessel made upon the twin-screw principle, advocated by Commander WARD, Novelty, Mr. BARNABY, and first introduced into the English Navy by Messrs. J. and W. DUDGEON, shipbuilders and engineers, of Limehouse, who, November 1, 1862, launched first vessel fitted in this way. Each screw is worked by independent engine power, enabling the vessel to manœuvre rapidly in any circumscribed space. The double screw was adopted in the present case from necessity, in the construction of the iron-case floating batteries, but they were driven in those vessels by collective, not independent power. It is consequently the adoption of the principle in their case only enabled the Admiralty to construct vessels that float at a moderately light draught, and yet possess the great power (for their tonnage) weight of armor and armament, in addition to the weight of their engines, but it gave the vessels no increased power to manœuvre or manœuvring rapidly under steam in a confined space.

CHOLERA has broken out at several of the British military stations in India, and every person attacked is dying of this fearful disease, according to the virulent form. The Calcutta *Englishman* says it hopes that the stations "are not about to come "under one of those fatal visitations of cholera which of "late years have visited them with such lamentable "results; but facts in that direction certainly justify "us in taking a serious, if not a gloomy view of the "prospect.

MORE recent and particular accounts from Japan, indicate that the executive branch of that queerly-organized Government is not directly to blame for the attack upon the British and American ships. It would seem that the TYCOON is awake to the importance of regular foreign relations; but that the "spiritual EMPEROR," who is a kind of Pope over him, takes a different and bigoted view; and that the great military chiefs, the DAIMIOS, are of the same mind, that these, together, have the poor TYCOON "in fear," as the pugilists say, and that all his decisions are made under fear and in durance; and that they hold him, in real Japanese style, as a hostage for his own good behavior, with *hari-kari* directly before him, if he fails to banish the hated foreigners. It was one of these independent princes that set upon those volunteers named RICHARDSON—who fired upon the English and American ships, from a few private batteries of his own, kept for the gratification of his personal, princely ungentlemanliness. But if the princes are powerful enough to make the TYCOON sanction murder and outrage, it does not require much but his own gentle disposition will make much differences.

A NEW process of coating armor-plates of vessels with copper—known as the "WALENN" process—has been successfully tried at the Portsmouth dockyard. One of the *Royal Alfred's* armor-plates, measuring 15 feet in length, 3 feet 6 inches in width, and 4½ inches in thickness, was thus covered. The surface of the plate was cleaned by the sand-fourth of an inch, and it was deposited with a beautifully even and bright surface, notwithstanding that a plate had been selected by the dockyard officials which was unforced and honeycombed on its outer surface in a most peculiar manner. The several trial to which Mr. WALENN'S process has been subjected in the dockyard, such as mass, and the very perfect manner in which the "plate has been coated," says the *Army and Navy Gazette*, "is the best possible proof of its efficiency "and value of the principle, and we trust in future to "have no such errors committed as belting wrought-iron armor-plates on their sides, below the water line, "with zinced bolt fastenings.

THE British military papers acknowledge that their *Warrior* and *Black Prince* are, and their *Minotaur* and *Agincourt* will be, the finest ships in the world of their class, but the great space they require to turn in, perfectly useless to attack such fortresses as Cronstadt, is a fatal defect in steering. Therefore they look with great interest upon the introduction of the "twin" screw principle, with the increased engines, which will enable them to work advantageously in a narrow space, whether engaged with an enemy afloat or with a shore battery.

ALADENSE, the only soldier on full pay who joined Prince Louis Napoleon in his attempt at Boulogne in 1840, recently died in a *maison de santé*. His conduct in deserting his colors was redeemed by the manner in which he endeavored to stay bloodshed, and saved the life of his captain from a pistol shot aimed at him by the Prince. The ball intended for Captain COL. PUYGELLIER, turned aside by ALADENSE, went down into the heart of that unfortunate grenadier who was standing quietly by, much astonished at the altercation going on between his commander and the invaders.

THE Paris papers announce the death of General RULLIERE, at the age of seventy-six. The deceased General entered the army in 1807, and was severely wounded at the battle of Leipsic, in the rank of general of division. He was also created a Peer of France, and was Minister of War when LOUIS NAPOLEON was President of the Republic.

ANOTHER LETTER ON SHIP ARTILLERY.—The following letter, bearing the signature of Rear-Admiral HALSTED, of the British Navy, appears in the London *Daily News*, of the 27th, on the report of the Select Committee of Ordnance, and especially that portion of it which referred to the artillery of the navy. Admiral HALSTED writes:—

In the main I concur with this letter in publicly is plead, on behalf of my profession, for that complete 're-construction' of the rifled guns of the Navy which the Select Committee make really effective those of the sister service. For the present utter neglect in furnishing to any of our ships artillery fit for service, and for the unnecessary delay that has occurred. It is evidently the duty or no one. It is a phase in our navy's history that will not be soon forgotten, before were its ships, for consecutive years, left destitute of guns able to act as heavy blows as those they might receive from any foe. Yet this neglect on the part of the Admiralty would be passable a Woolwich or anywhere else, unless, indeed, the one or two monster curiosities called naval, now building at the former place, should be found to be entirely reply" Every object not a practical experiment is anywhere to be heard of; the most costly smart at Woolwich owing telling of the further destruction by the 110-pounder of the newly-designed breeches, or the dangerously premature bursting of its shells. In the absence of any such practical test, which common sense, as the acknowledged means of meeting the demand of modern naval warfare, has made as yet in England no step of any consequence, and the 110-pounder and 7-inch gun remain so precisely offered us for the purpose having shrunk before the first requirements of peace practice, insisting for its own safety, and not unreasonably for ours too, that its charge should be reduced from 14lb. to 12lb., and necessarily carry-shot from 250lb. to 200lb. Such a reduction as this, even if it is, its two still more effete 70-pounder and 8-pounder is a "more powerful gun than the 110-pounder[Armstrong]." Yet not a traceable effect, however weak, can the senses of the gunners detect as a remedy for the evil complained of in the equipment of our naval forces, though the report further shows the urgency

used on the Admiralty in 1859 for heavier calibres of rifled ordnance wherewith to meet demands prominent even then; and it shows how fully the Admiralty knew that the popularity of the 110-pounder to meet those demands was proved as far back as September, 1861, in the trial of Captain Coles' cupola. In it, then, that we see in a state of natural selfparalysis arising from exhaustion, and that exertions to render the broadsides of our iron-clads impenetrable to the shot of an enemy have ceased. Is it recollection that his respect for them will be measured exactly by their power to pierce his own? Or is not our destitution to this day of a single true plate any way slip of our feet the evidence of more and sheer neglect? Or, rather than either or these, is it not an evidence that the resources of our arsenales are represented by a faint a voice at the head military department, and its advising boards, on which in all such matters the navy has been made so prodigious a figure, that since, if indeed heard at all, is comparatively unheeded by those who naturally are but too absorbed in completing the organizations to give serious attention to the subject in the state of ours, about which they quite as naturally and necessarily know so far less."

IRON SHIPS FORTY YEARS AGO.

THE following extract from the London *Mechanic's Magazine* of Saturday, June 6, 1824, shows how completely the idea of what are considered modern discoveries was anticipated by scientific writers a score of years ago. It would seem as if the time represented the necessary time between the conception and the execution of an idea:—

"Since the discovery by Mr. Perkins of so vast a destructive power as his steam artillery, it becomes of more importance than ever to render iron applicable to make floats as well as shot and shell proof as possible. On this subject there is, in Frenier's *Bulletin des Sciences Technologiques*, a memoir by M. de Montgery, a captain in the French navy, which is well worth attention, and from which chiefly we shall extract the materials of the present article.

"The author's object is to recommend the universal adoption of iron instead of wood in the structure of ships. A multiplicity of facts are adduced to show that there are now formed of iron—bridges, arches, aqueducts, public highways, and other objects not so colossal, but very important in their application to the comforts of life, as to wrought-iron tanks and hollow cylinders for masts and yards, and chains in lieu of hempen cables and anchors. But why say so much on a subject when so few vessels constructed entirely of iron? Will not mankind at some future period, when have we neighbored sufficient wood and coal for building objects so stupendous and so expensive with so fragile and perishable a substance as wood, while they possessed a substance more durable, as well as solid and durable as iron? The ordinary term of duration of wooden ships is 20 years, and during that period they must be hove down and thoroughly repaired at a dock-yard. To the durability of an iron ship, on the contrary, it would be difficult to assign any period. Vessels of this description have no need of caulking or copper-bottoming. Little subject to leaks, there is less fear of their running ashore; and still less are they subject to be set on fire by lightning, a danger which might be greater (that we doubt), but from their far greater durability, and standing in so little need of repairs, the saving in the end would be immense. If, however, iron is to be considered that large timber is becoming every day more and more scarce, while from the increased dimensions of new ships more wood is required in shipbuilding; if iron, on the contrary, the stores are inexhaustible. It may be said that the adoption of iron would occasion a great and disagreeable numerous body of men (the shipwrights), and throw them for a time out of employment. A temporary inconvenience of a few might be, however, to the advantage of the many in good, considering, moreover, how much the country at large would gain by the increased activity which the new demand for iron would give to our native mines and forges of iron.

"M. Montgery contends that while we have vessels of war constructed of iron, they should at least be plated with iron, and it will be seen from the following passage that he had distinctly anticipated the recent application of projectile force as that discovered by Mr. Perkins:—

"'For more than 350 years it has been in agitation to furnish ships of war with horizontal shot-proof batteries, then according to the general practice. The adoption of bowsiters in the field of battle, independently of the great number of guns and mortars carried on board of ships, must doubt the importance of this mode of firing, which it has also been proposed to adopt on board of ships and on marine batteries.

"'Long before any one had thought of substituting metal for wood in the construction of vessels, plates of iron and of brass had been used for covering ships of war and battering-rams. The celebrated galley built by Archytas and Archimedes for Hiero, king of Syracuse, was cased in lead. Philo, of Byzantium, afterwards proposed using battering machines made entirely of metal: but Father Mersenne appears to have been the first to think of adopting them for ships.

"'M. Montgery says that to render the sides of a vessel shot and shell proof, they should have a plating of iron about six inches thick—that is, a series of sheets of iron, with blocks of oak between. The thickness of the sheets of iron would only be necessary in the parts exposed to the fire of the enemy, and that there would be no occasion for them toward the keel of the vessel.'"

WESTERN IRON-CLADS.—The Navy Department recently ordered an additional number of the Western iron-clads to be in course of construction. They report four peculiar, large, iron, flat-bottomed river gunboats, well advanced towards completion—one launched, and two others nearly ready to be floated at Carondelet, near St. Louis. They are of the following general dimensions:—Extreme length, 180 feet; beam, 55 feet; depth of hold, 8½ feet, and will draw six feet of water; square sterns and blunt bows; plated with armor plates three inches thick. One to be armed with sixteen sixty days, and the others in two, three, and four months. At the city of St. Louis they found one wooden gunboat, with an Ericsson turret just completed, ready for trial. She is 180 feet long, 50 feet wide, and draws five feet water; has six bolers, 4 engines, and 4 propellers. The turret is 150 feet inside diameter, and 6 inches thick, and the armor plates are three inches thick. On the levee three blocks below, from McCord & Brayton are receiving buildings to construct two of Ericsson's light-drawing vessels. They are the same as those building East. At Cincinnati, Ohio, there are three different sets of contractors employed in constructing iron-clads. The Niles Works have two large vessels, the *Catskill* and the *Oneota*. The former is well advanced, and may be completed next spring; but the latter has only the keel laid and a few frames up. These vessels will cost about $1,000,000 each, and cannot be intended for present service. Their extreme length is 225 feet, 46 feet beam, and they draw 12 feet of water. They have low-pressure engines and batteries, surface condensers, and one propeller of 14 feet diameter and 20 feet pitch. They are beautiful models, and are expected to have high speed. Half a mile below the Niles Works the Ohio, another one of the same class (the *Peppercove*) is being built by Miles Greenwood. The other is at Fulton, Ohio, a little above the suspension bridge, where two of Ericsson's light-draught Monitors are under process of construction by Messrs. Swift & Co. The keel of one of these has been laid and a few frames up, and they are to be the same as those building East. At Pittsburg, Snowden & Mason are building one (the *Monongoal*) the same as the *Catskill*, and one of the light draught. The former is well advanced—has the hull all plated, bulkheads and beams in place, and the machinery will be built below to her. The machinery for both of them is being made at Brownsville, on the Monongahela river, sixty miles above Pittsburg. The engines expected for these vessels can be completed and delivered in about forty days according to contract before next summer.

LAUNCH OF THE IRON-CLAD TECUMSEH.

THE Iron-clad steamer *Tecumseh* was launched at the yard of the Messrs. Secor & Co., precisely at 8 A. M., on Saturday last. The launch was a success in every respect, and a people who had assembled to witness it. The launch was in every way successful, and all connected with her construction expressed themselves highly satisfied with the manner in which she betook herself to the element upon which she has yet to make her most important fighting more than an ally of our enemies in the last war with England.

Among the Naval officers present we observed Admiral Lardner, Commodore Montgomery, Captain Le Roy, Engineer Stimers, the general inspector of iron-clad steamers, also Commanders Craven and Guest, Lieutenant Commander Miller; Lieutenants Harrison, Fairo, and Moore; Deck and Assistant Engineers Hall and Allen.

At the launch an elegant and substantial lunch, with an abundance of refreshments, was served out by the Messrs. Secor, when the usual toasts were drank and congratulatory speeches made.

The *Tecumseh* belongs to what may be termed the third edition of the Monitors.

At first there was the *Monitor* herself, built as an experiment; many of the essential qualities of a naval vessel being sacrificed to rapidity and economy of construction. Her fight with the *Merrimac* in Hampton Roads months later than the decision at Washington that she should be built, and her cost below $500,000. The cost of vessels now building to carry the same armament.

Upon the establishment of the fact that guns within an impregnable, revolving turret, on a low, flat, shot-proof hull, were superior to the same guns placed in any other known position, the Navy Department commenced the construction of those vessels now in use, making such changes from the original exponent of it as were called for by the ordinary rules of naval construction, to render them safe and seaworthy for the ocean as well, and by the defects which have been shown in detail matters respecting which are not essential to the principle.

The first of these completed was the *Passaic*, and the whole ten are known in the Navy Department as the *Passaic* class, and of which the *Tecumseh* exactly is the *Canonchet*, which was built for the California coast, and is now on its way to San Francisco as freight in the hold of a sailing ship. She erected and united together here. Each of these are now off Charleston, S. C., where they have proven themselves of remarkable strength. The great

REVENUE CUTTER SERVICE.

The officers of the United States revenue cutter *Jackson*, STEPHEN CONNELL commanding, boarded, during the month of August, 1863, at the port of Baltimore—ships, 3; barks, 14; brigs, 13; schooners, 929; sloops, 63—total 1,022.

The *Miami* has finished her repairs to her engines, and is on duty at this station.

On the 15th inst. the revenue cutter *Kenshaw* was launched from JACOB ASHTON'S shipyard, foot of Second street, New York. She is one of six steam cutters ordered by the Treasury Department for coast service. The dimensions of the *Kenshaw* are as follows: Length on deck, 150 feet; breadth of beam, 26½ feet; depth of hold, 11 feet; and of 350 tons burden. She is to have two oscillating low-pressure engines of 36-inch cylinder, with 32 inch stroke, to carry one 30-pounder rifled Parrott gun, and six 24-pounder howitzers. She will be brig-rigged. Her engines are being built by R. & J. B. GRAY, and will soon be ready.

In addition to the six vessels specially ordered, the Department has purchased the steamer *Governor Dodge*, and the *Active*, all of which are now doing duty. There is also a small steam fleet doing duty on the Chesapeake and its tributaries. The following is a list of the fleet vessels which now compose the revenue-cutter squadron:—

Name of Vessel.	*Commander.*	*Station.*
Active	Capt. Charles A. S. Coulter,	Maine.
Bibb	Capt. Hollis Burgess,	Portland, Maine.
Dallas	Capt. Webster	Portland, Maine.
Morris	Capt. Joseph Knight,	Boston.
Thompson	Capt. Peter	Newport, R. I.
Cephalonia	Capt. Wm. Howard	New York.
Miami (steam)	Lieut. Roger	New York.
Naugatuck (steam)	Lieut. Wm.	New York.
Crawford	Capt. Carson	New York.
Jackson	Capt. Connell	Baltimore.
Reliance (steam)	Capt. Dugan	Rappahannock.
Hercules (steam)	Lieut. Baker	Chesapeake.
Tiger (steam)	Capt. Jones	Washington.
F. Allen	Lieut. Gilbert	Potomac River.
Forward	Capt. Ottinger	Newbern.
Agassiz		Beaufort, S. C.
Brown		Brunswick, S. C.
Arctic		Key West, Florida.
Shubrick		Mobile, Ala.

NEW STEAMERS—*Johnston, Wyandotte, Mahaning, Kenshaw, Pawtuxet*, and one in Baltimore.

NAVY YARDS AND NAVAL STATIONS.

BROOKLYN NAVY YARD.

Time yard is crowded with work, and the available room is engaged upon it. The following is a list of vessels upon which workmen are employed:

Arkansas	Transport	Repairing.
Savannah	Sloop-of-War	In the stream.
Richmond	Sloop-of-War	Repairing.
Richmond	Screw sloop	Repairing.
Penobscot	Screw steamer	Fitting for repairs.
Adams	Pilot steamer	On the dry dock.
Fulton	Ferry-boat steamer	Repairing.
Powhatan	Screw steamer	In the stocks.
Spark	Screw steamer	On the docks.
Union	Transport steamer	Waiting for guns.
Grand Gulf	Screw steamer	Storing and coaling.
Mercury	Screw steamer	Just launched.
Fah-Kee	Screw steamer	Repairing.

The hardness is so excessive that Admiral Paulding has been obliged to send to Boston for a machine to cut the armor-plating. The plating is to be used for the Monitors *Canonicus* and *Sassacus*, which are being built for the South Atlantic Squadron, and are remarkable for good service, which, however, is coincidently, remarkable some important repairs necessary.

On the 15th inst. the revenue steamer *Kenshaw* was launched. Miss Meade, daughter of Captain Meade, of the *North Carolina*, and niece of Gen. Meade, performed the ceremony. She is a fine vessel, of the following dimensions:—Length, one hundred and thirty-one feet; length between keel, twenty-three feet; depth of hold, eleven feet. Her engines and boiler are the ones formerly in the tugboat *Mercury*, which was sunk in the North River.

The United States steam supply ship *Western*, T. A. Harris, Acting Master, arrived at this navy yard from Port Royal, S. C., on Tuesday, August 11, and on Saturday. She brought as passengers Acting Ensign Edward Hall, Acting Master's Mate Charles Hall, and 15 officers.

Acting Vol. Lieut. Commanding, T. A. Harris; Acting Master and co-editor, Wm. Hall; Acting Ensign, Edward Hall; Acting Assistant Surgeon, Charles Millett and Milton Webber; Acting Paymaster's Clerk, Augustus Bolton; Acting Master's Mate, Charles Hall; Acting 1st Assist. Engineer, Isaac Maples; Acting Master's Mate, G. K. Wilson; Acting Ensign, and J. Rose; Acting 2d Assist. Engineers, F. C. Lomas, John Quinn, and Samuel Hoffman; Captain's Clerk, James Hamilton; Acting Gunner, Wm. Hall.

The United States despatch steamer *Mary Sanford*, Redgers, from Charleston, S. C., arrived at this navy yard on Wednesday morning, and a mail from the *Iron*, arrived on Wednesday. The following is a list of her officers:

Wm. Rodgers, Acting Master Commanding; L. B. Partridge, Acting Master and Executive Officer; Hervey Brown, Acting Ensign; M. J. Daly, G. W. Price, and C. A. Pike, Acting Ensigns; A. P. Rich and Chas. Benjamin, Masters' Mates; C. Seattle, 2d Assist. Engineer in charge; James Hare, 3d. Assist. Engineer; John L. Boyle, do; Chas. H. Hunt, do.

The United States gunboat *Hendrees* sailed on the 12th, to join the Blockading Squadron, off the coast of South Carolina. She has on board as a list of officers:

Acting Master Commanding, A. N. Gould; Acting Assist. Surgeon, J. P. Dyer; Acting Assistant Paymaster, W. H. Ingraham; Engineers, D. Shaw, W. B. Rankin, and C. W. Cleveland; Acting Masters' Mate, B. D. Hoffman; Acting Ensigns, Wm. Hamilton and Jos. St. Asslet, W. P. Nolan; Acting 3d. Assist's. E. F. Williams, G. J. Church, and C. Meserole; Paymaster's Clerk, E. C. Wales; Surgeon's Steward—D. F. Rooney.

PHILADELPHIA NAVY YARD.

The most important event of the week is the destruction by fire of a portion of the store-houses in the northwest corner of the yard. These buildings were used for the naval officers, the gunner, pursor, engineer, and boatswain. The buildings were of brick, and three in all, formed a block of four houses. The fourth story of the building was used by the boatswain for the storage of sails and other canvas work. Dahlgren rifles, pistols, revolvers, cutlasses, &c., and was called the gunner's store-room. The third story called the engineer's store-room, was the apartment where all the work upon the grating and polishing for the guns was done, and in the rear of the fire contained the tackling for the guns of nearly a dozen vessels in port. Besides these there was a large quantity of powder for exercising purposes, and the material for making the cartridges. The second story was occupied by the boatswain, and in different rooms at the west end, compasses, nautical charts, books, stationary, &c. The second story was the canvas room. It was filled with sails and canvas for vessels now fitting out and in port. The third story was occupied by officers for offices. The engineer, purser, gunner, ordnance officer and officer of the day all had offices here, while the basement was used to contain provisions, and was full to the time stored principally with meats in barrels. The fire was discovered about 2 o'clock A. M., by the watch on the dock in the morning, and the officers of the guard were immediately aroused. The fire department was promptly on the ground. At one time the fire threatened to be general, but it was finally confined to the other adjoining buildings. The roofs of the houses, the ship houses and other buildings escaped almost miraculously. It seemed to the writer that the flames would not be at an end for an overtaken, was spontaneous combustion, caused by the accumulation of inflammable material. The loss will be considerable upon the houses. This matter had been smouldering for some time, and the fire will be extinguished until the last spark which is to be covered by burning remnants to the next story. When it was discovered by the watch on the dock in the morning, the impression is believed by the officers of the yard that the fire had been burning for a week, and it is owned that no one can at any time of the night move in any part of it without the fact being known. Without the aid of the steam fire engines the buildings would have been impossible. It is now thought that the damage and loss will be between $20,000 and $30,000. But it cannot be definitely ascertained until the reports of different departments that are effected by the fire are received.

The gun-boat *Wachusett*, at the Navy Yard, has been placed upon the dry-dock. The *Wyoming*, at the entrance of the Navy Yard, has been brought into the dock to undergo repairs.

The last new boat at the Navy-yard is to be called the Tracy. She will be built of iron, and the Navy Department will be that of the *Kearsarge*, which will soon be ready to launch.

The steamer *Commodore Perry*, in the Blockading Squadron, off Wilmington, N. C., on the 9th.

The pilot-boat *Phantom* arrived in the Delaware river on the 13th, in charge of Ensign Hamilton. She was captured some time since by the United States steamer *Florida*, off Cape Fear, and bound for Baltic, Central America. Her cargo consisted of one hundred and eighty-five bales of cotton, and a full complement of men, including the captain and mate, were brought here by the *Britannia*, and duly delivered to the United States marshal. The United states supply ship *Britannia* sailed on Saturday, loaded with stores and a number of officers and men for the South Atlantic Squadron. Among the good things taken on board were one hundred and thirty bags of oats, and eighty barrels of potatoes.

The transport *Massachusetts* arrived on the 13th. She brought 200 prisoners, among them Brig.-Gen. Ford. Commodore Lee was on board of her. She had been on the south as Florida, and supplied fifty-three vessels. The *Massachusetts* leaves on Saturday for the South Atlantic Blockading Squadron.

WASHINGTON NAVY YARD.

Lieut. J. C. P. DE KRAFFT, executive officer of the Yard, who has been detached, has left for his home in Illinois. Lieut. De Krafft has been on duty at the Yard since the 1st of May, and has been very popular at the Yard. Commander F. A. Parker has been ordered to fill the position left vacant by Lieut. De Krafft.

The gunboat *Western World*, which has been doing duty in Chesapeake Bay, arrived at the navy yards.

The new gunboat *Commodore Read* has arrived here from New York, and will probably be ordered to the South Atlantic Blockading Squadron.

A sale of about 15,000 pounds of scrap copper took place at the Yard on Wednesday, at which quite a little excitement was felt by bidders. The highest bidder was Mr. E. Pelrich, of Georgetown, D. C., to whom the whole lot was knocked down at 31½ cents per pound.

BOSTON NAVY YARD.

The new iron-clad *Monadnock* arrived in Providence on Saturday to receive her machinery. The Gosnold will remain at the yard a week for repairs, and then proceed to Key West. Lieut. Perry, detached, at his request, and Mr. Walker, formerly of the *Hartford*, takes his place.

The prize steamer *Britannia*, lately captured while attempting to run the blockade, is at the Navy Yard undergoing a thorough overhaul and repair, probably under sealed orders. The following officers have been appointed to the vessel: Acting Master, R. H. Symons; Acting Ensign and Executive Officer, Franklin E. Field. Acting Ensigns, M. E. Wilson, C. H. Hall, and Wm. Hamilton. Acting Assistant Surgeon, ——— Wilder. Master's Mate, Robert Jones. Engineers—Samuel Anderson, Chief; Second Assistants, William Butts, J. L. Swords, Chas. Howes, and Malcolm Sinclair.

VARIOUS NAVAL MATTERS.

The Confederate Reed, built in New York, has arrived in Wilmington, from the Bermuda Islands.

Commander Daniel Ammen has assumed the position of Chief-of-Staff to Admiral Dahlgren.

The *Santiago de Cuba*, Janssin, and *Tuscarora*, were at Cape Haytien, St. Domingo, on the 29th ult.

The French man-of-war *Guerriere*, Admiral Reynaud St. Pierre, arrived at Halifax, N. S., on the 15th.

The privateer *Jefferson Davis* was off the bar, at Charleston, at last accounts.

The *Harriet Lane* still remains above Redfish Bar, on the Texas coast. The rebels can't get her machinery to work.

The consignees of the United States steamer *Sanfuore* request the captain of the rebel schooner *General Worth*, on the way from Havana to Mobile, with a general cargo.

The steamer *Ariel* is reported about to be raised, by direction of the Government. She lies in the Elizabeth river, nearly opposite Craney Island.

Fourteen prisoners of war, captured on the *Osceola* (formerly the *Georgiana*) by the United States steamer *Ethan Allen*, under Acting Lieutenant Bland, were landed at Fortress Monroe on the 12th.

The ship Isaac Webb, which arrived at Boston on the 13th Tuesday, reports having been chased by a rebel cruiser off the Cape of Good Hope on the 25th of July, but escaped capture.

The *Princess Royal*, of the Gulf Squadron, has lately taken three valuable prizes; two cotton-loaded schooners (four hundred and seventy bales each), and a large sloop loaded with salt, besides seventy tons of copper.

The flag-steamer *Bermuda*, of the Gulf Squadron, lately captured a two prizes—fine schooners; one loaded on board one hundred and forty-eight bales of cotton, and the other had a cargo of salt, a liable cargo of medicines, liquors and cigars.

A letter received from a gentleman in Kentucky Navy Yard, from a friend on board the iron-clad frigate *Roanoke*, at Fortress Monroe, states that the vessel will not be ready for service for remain as she is, a moment harbor battery, after a few weeks.

A telegram from Fortress Monroe, on the 16th, says: "A few days ago about a dozen of blockade runners, with Sibley south of propriety, were passing Fortress Monroe, in the Roanoke, the southern point of Maryland."

The Russian frigate *Oriaske*, under the command of Captain Boutakoff, arrived at the port of New York on the 14th, from Cadiz, after a passage of twenty-two days. She was built in Petersburg, and is a magnificently constructed vessel of 3,000 tons burthen.

Acting Rear-Admiral Bailey, under date of Key West, Sept. 6, states that the blockade is being constantly maintained. Not a single instance of yellow fever, or of anything approaching it, has made its appearance among the officers and men of the fleet, and the general healthiness of the place in every respect is remarkably good.

The steamer *Sumpter*, commanded when she was taken by the Japanese, is the little iron steamer of that name that formerly ran between Boston and Pembroke Mass., having been built at the Atlantic Works, East Boston, for the Pembroke Iron Company. She was built in 1860, and is 2 of 131 tons burthen.

Three of the guns recently captured by the *Minnesota*, near Port Fisher, in the vicinity of Wilmington, N. C., have received Whitworth guns. They are of English manufacture. One is a Whitworth gun. They are splendid pieces of ordnance, and have apparently been used but a short time.

On the 12th, John English & Son launched from their yard, at the foot of Second street, Greenpoint, the steam tug Mr. Steers. Oliphant & Co., of China, she being the third steamer built for that company by the above-named gentlemen. She is 100 feet keel, 20 feet beam, 8 feet deep of hold, 12 feet 6 inches.

The following vessels are now under construction at South Boston. Two are named *Sassacus* and *Wyoming*. The *Sassacus* is receiving her machinery, and the *Wyoming* for Monitors, and will probably be ready the latter part of December. Only the keel of the *Wyoming* is laid. The other vessel, *Susquehanna*, is the largest of the six. Her keel has been laid 30 days.

The Augusta (Ga.) *Chronicle says*:—One of the crew of the *Florida* states that Capt. Semmes, late of the *Alabama*, has taken command of the *Florida*, and has a new and formidable vessel, called the *Georgia*, as has been stated. With this four-in-hand—the *Florida*, *Alabama*, *Georgia*, and *Tallahassee*—Capt. Semmes will, perhaps, undertake a fast team among the merchant craft of the federals.

The Secretary of the Navy has issued an order requesting the construction of the iron-clad vessels *Puritan* and *Dictator*, at this port, to be pushed forward with the utmost expedition practicable. The *Puritan*, *Dictator*, the Quinnebaut battery now at Green Point, is also to be hurried forward. Every practicable means of expedition and success is to be put in readiness for service without delay.

The new iron-clad steamer *Lehigh*, at the Brooklyn Navy Yard, has received a letter from his son, on board the United States steamer *Richmond*, dated off Port Royal, S. C., August 29. The letter was called "ship letter," and forwarded in the usual manner. This is four days later than the letter received from the ship by the Navy Department, and gives days later than the date on which she is said to have been stuck on a bar in the harbor.

The Navy Department has received information of the capture on the 23d ultimo, in latitude 25 50, longitude 86 30, by the steamer *Star of the South*, of the schooner *Rebel*, with four men and her cargo of 85 Louis pure, now Galveston, bound to Vera Cruz. Her cargo consists of eighty-five bales of cotton, and the Captain and crew are under the charge of J. T. Davis off the Rio Grande, having run out of the same port. Her papers were found secreted about the person of the captain, and were sent to New Orleans for adjudication.

The following is a list of officers of the steamer *Norwich*, under date of St. Johns river, Florida, August 26th, communicates to the Navy Department, that the vessel left Port Royal on the 24th inst. for Jacksonville, consisting of two launches of that ship, and two cutters of the *Rhode* to destroy a schooner on the St. Johns which they succeeded in capturing the picket and completely surrounding it before the rebels were aware of the approach of the boats. The vessel, and rebel flag were secured, with signal flags, telescope, &c.

A letter, written on board the iron-clad steamer *Lehigh*, which sailed, August 22, in tow of the *Star of the South*, from New York for Charleston harbor, gives a graphic picture of the sufferings of the officers and crew, during a storm encountered in the passage. The writer says: Soon after leaving the Hook we had a gale, and it encreased wardrobe. The writer says: "The temperature on the deck was 120 in the warmest part, ranges between 90 and 100 a day, day after day.

Algernon Blake, Landsman, Intermittent Fever, Chester, July 21.

Thomas J. Carroll, Landsman, Intermittent Fever, Chester, July 21.

ARMY GAZETTE.

CAPTURE OF CUMBERLAND GAP.

CUMBERLAND GAP, Sept. 8, 1863.

Major-General HALLECK, *Commander-in-Chief:*

I have telegraphed you from every station up to the occupation of Knoxville by our forces. Since then a cavalry force has been sent up the railroad to the north of Knoxville to destroy all bridges and some tunnels, locomotives and twenty-odd cars. Another force, composed of two regiments of infantry and a battalion of cavalry, I brought to this place in person, to reinforce Gen. Shackleford, who was here with two regiments of cavalry and a battery of artillery. On the Kentucky side with a brigade, which I started in that direction before leaving Knoxville, Gen. Burnside has marched from Somerset to Cumberland Ford, eighty miles, in forty hours.

Gen. Shackleford's force, on the Kentucky side, has been operating since the 30th inst. The Rebel garrison here, consisting of over 2,000 men and 12 pieces of artillery, made an unconditional surrender at 3 P.M. to-day, without a fight.

A. E. BURNSIDE, Major-General.

DEPARTURE OF TROOPS FROM NEW YORK.

HEADQUARTERS U. S. TROOPS (FIRST DIVISION,) DEPARTMENT OF THE EAST, CITY OF NEW YORK AND HARBOR, NEW YORK CITY, Sept. 14.

GENERAL ORDERS, No. 25.

In relieving from further duty with this command a large portion of the troops who have been serving under the General, the commanding General desires to express his gratification that the gallant conduct of these troops in the recent campaign has been duly appreciated not but less enduring—to the many laurels already won by them on the field, and under the fire of the enemy, and to say that he is authorized from many sources to convey to them the assurance that their sojourn in this city, and their conduct while here, has secured for their fellow citizens, the excited for them a personal interest above that ordinarily given to troops on duty, and that this interest will not pass away with the occasion that gave rise to it, but will follow them wherever they go, and will be ready to hail their return to exile, with the warmest wishes for their success and welfare.

The commanding General desires further to state, the expression of his thanks to the state troops, the Metropolitan Police force, and to the local authorities with whom he has been officially associated, during his the kindness and courtesy shown to the officers and men of his command, and the aid he has received from them, which has contributed in that had for its object the advancement of our common wishes and labors.

By order of Brigadier-General CASEY,

S. T. ESTERBROOK, Assistant Adjutant-General.

WROUGHT-IRON GUN CARRIAGES.

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE, WASHINGTON, September 11, 1863.

Special Orders, No. 408.

A Board of Officers, to consist of Brigadier-General Wm. F. Barry, U. S. Vols., Major Wm. H. Bell, Ordnance Corps, U. S. A., and Captain James G. Benton, Ordnance Corps, U. S. A., will convene, as soon as practicable, at Watervliet Arsenal, West Troy, New York, Watervliet Arsenal, to devise a plan for wrought-iron carriages for siege and field guns, and to report the most suitable and economical plan, in the plan of the wooden gun-carriages now in process of construction, or to be hereafter made.

The Board will report fully, and as soon as practicable, on these subjects.

By order of the Secretary of War,

E. D. TOWNSEND, Assistant Adjutant-General.

HEADS OF BUREAUS.

WAR DEPARTMENT, ADJUTANT GENERAL'S OFFICE, WASHINGTON, September 1, 1863.

GENERAL ORDERS, No 301.

Under the provisions of section 42, act of March 3, 1863, the head of each Bureau in each Executive Department is to be considered a part of the Executive Department, and is to perform such duties as part of the Government as special instruct to the Department, or to any head of a Bureau of the Department, as the law may require or authorize. Such letters must be marked official on the envelope, with the official signature of the writer thereon.

By order of the Secretary of War:

E. D. TOWNSEND, Assistant Adjutant General.

SUSPENSION OF THE WRIT OF HABEAS CORPUS IN CERTAIN CASES.

BY THE PRESIDENT OF THE UNITED STATES.

A PROCLAMATION.

Whereas, the Constitution of the United States has ordained that "the privilege of the writ of habeas corpus shall not be suspended" unless, when in cases of rebellion or invasion, the public safety may require it; and

Whereas, a rebellion was existing at the time of the passage of that act, which rebellion is still existing; and

Whereas, by a statute which was approved on that day, it was enacted by the Senate and House of Representatives of the United States, in Congress assembled, that during the present insurrection the President of the United States, whenever, in his judgment, the public safety may require, is authorized to suspend the privilege of the writ of habeas corpus in any case throughout the United States, or any part thereof; and

Whereas, the judgment of the President, the public safety does require that the privilege of the writ of habeas corpus be suspended throughout the United States, in cases where, by the authority of the President of the United States, military forces are employed in the suppression of the said rebellion, and by reason thereof certain persons have become subject to the rules and articles of war, or are deserters or mustered or enlisted in, or belong to the land or naval service, by the authority of the President of the United States, or are subject to martial law, or to the rules and articles of war, or are deserters from said service, or are employed in any fort, navy yard, dock, ship of war, military or naval service, by the authority of the President of the United States, or are in any way connected with or giving aid and comfort to persons engaged in the said rebellion; and

Now, therefore, I, Abraham Lincoln, President of the United States, do hereby proclaim and make known to all whom it may concern, that the privilege of the writ of habeas corpus is suspended throughout the United States in the several cases before mentioned, and that the suspension will continue throughout the duration of the said rebellion, or until it shall be otherwise publicly proclaimed. And I do hereby require all officers within the United States, and all officers and others in the military and naval services of the United States, to take distinct notice of this suspension, and give it full effect; and all citizens of the United States are hereby required to render due obedience accordingly, and in conformity with the Constitution of the United States and the laws of Congress, in such cases made and provided.

In testimony whereof, I have hereunto set my hand and caused the seal of the United States to be affixed, this fifteenth day of September, in the year of our Lord one thousand eight hundred and sixty-three, and of the Independence of the United States of America the eighty-eighth.

By the President:

ABRAHAM LINCOLN.

WILLIAM H. SEWARD, Secretary of State.

COMPUTATION OF PAY.

(CIRCULAR.) TREASURY DEPARTMENT,
PAYMASTER-GENERAL'S OFFICE,
WASHINGTON, Sept. 1, 1863.

The Rules for the computation of the monthly pay payments to employes of the Government having been so construed as in many cases to operate unjustly to the employe, the following Rules have been adopted and will be observed, when applicable, in all payments made after this date, viz:

1. The law providing compensation having imposed unequal duties upon the months, by allowing thirty days to each, and the Pay Department having for convenience, established each month's pay into thirty equal parts, called days, and the terms "month" and "days" being by law full entity provided by law for the entire year, the months should be assumed, for the purpose of pay, to be of thirty days each, and the fourth, and the fifth days being treated.

2. To conform with the foregoing rule, and to save the trouble and delay of first ascertaining the number of monthly pay, in November thirty days will be assumed to be a month of thirty days each, and the fifty days will be assumed to be a month of thirty days each, and every month in the year.

3. For any full month's service performed by persons employed by the Government at a stipulated monthly rate of compensation, for yearly salary, if paid in instalments, payments will be made at such stipulated monthly rate, without regard to the number of days the month paid for may contain.

4. In cases when the service commence on an intermediate day of the month, and terminate on an intermediate day of a month, the number of days will be assumed to constitute the entire duration of such months, whether they contain more than thirty (30, 31, or 32, days, and pay will be computed accordingly.

5. When the service commence at an intermediate day of the month, and have embraces but a fractional part thereof, the whole number of days contained in such fractional part of a month, will be allowed in making payments.

6. Where the accounts are hereafter rendered for services which have been performed from one given date to another, one of the days named will be allowed, but not both, whether the service or interested was "inclusive" of both.

7. The month of February will be calculated as though it had that month contained thirty days; thus, from February 21 to end of month inclusive, will be nine days, and from March 1 to same date, but eight or nine days.

8. The foregoing rule does not apply to commutation of rations. In computing them the actual number of days are to be ascertained and allowed.

J. M. BOGGERD, Comptroller.

CHANGES AND APPOINTMENTS.

The following changes and appointments are announced, having been made by the President, in conformity with sections 5 and 6 of the act approved March 3, 1863, for enrolling and calling out the national forces," &c. They will be obeyed and respected accordingly:

ILLINOIS.

August 19—Benjamin Sweet, Commissioner Second District, vice Moulton, resigned.

WISCONSIN.

August 29—L. B. Caswell, Commissioner Second District, vice Gregg, resigned.

DELAWARE.

August 31—Dr. Daniel C. Hazzard, Surgeon, vice Cahall, resigned.

NEW YORK.

September 5—Dr. Philemon H. Gregory, Surgeon First District, vice Richardson, resigned.

KENTUCKY.

September 5—Dr. John M. Congdon, Surgeon Second District, vice Webber, resigned.

September 8—Frederick Ellsworth, Commissioner Fourth District, vice Brevoort, declined.

WEST VIRGINIA.

September 9—Benjamin H. Smith, Provost Marshal First District.

September 9—William D. Smith, Commissioner First District.

September 9—Dr. Thomas Peters, Surgeon First District.

September 9—James Ewing, Provost Marshal Second District.

September 9—Dr. Andrew Peter, Surgeon Second District.

September 9—Dr. Samuel D. Kelly, Surgeon Second District.

September 9—Dr. Wm. H. Ruffner, Surgeon Third District.

September 9—George C. Bowyer, Commissioner Third District.

September 9—Dr. Wm. Lewis, Surgeon Third District.

Lieutenant-Colonel Joseph Darr, jr., has been detailed to aid the War Department, and will report to Col. Fry, Provost Marshal and Inventory in the execution of the Enrollment act. Headquarters at Wheeling.

NOTICE TO DELINQUENTS.

The following officers having been reported at the Headquarters of the Army for the Potomac as absent without leave, or having neglected that they will stand dismissed the service of the United States, unless within thirty days from this date they appear before the Military Commission in session in Washington, of which Brigadier-Gen. Holt is President, to answer charges and make satisfactory defence to charges against them:

Failing to report at Adjutant-General, and to his regiment, as required by Army Regulations, since February 2, 1862.

First Lieut. William H. Paxson, 5th U. S. Infantry.

Failing to report at Headquarters Military District of Washington, D. C., under arrest, as ordered.

Second Lieut. Charles Sawyer, 5th U. S. Cavalry.

Failing to report at Headquarters Military District of Washington, under arrest.

Second Lieut. Robert Sweetman, 5th U. S. Cavalry.

Absent without proper authority.

Surgeon T. F. Rodenbough, 2d U. S. Cavalry, 1st Army Corps.

Capt. F. C. Tarr, Assistant Adjutant-General 3d Brigade, 3d Division, 1st Army Corps.

First Lieut. Charles F. Bowers, Acting Assistant Quartermaster, 3d Brigade, 3d Division, 1st Army Corps.

EXEMPT FROM DISMISSAL.

The following officers, charged with offences, and heretofore published as dismissed, have been restored to duty by the President of the United States, the Military Commissions constituted by Special Orders No. 34, cumstances, from this office, having reported that satisfactory defence has been made in their respective cases, viz.:

Lieut.-Samuel Appleton, A. D. C. to General Abercrombie.

First Lieut. Samuel E. Trowley, 4th United States Infantry.

Colonel C. L. Dawes, 6th Massachusetts Volunteers.

Capt. Ralph Van Brunt, 3d Wisconsin Volunteers.

Capt. Wm. Ayres, 14th U. S. Infantry, Brigadier.

Capt. Francis M. Pinto, 2d New York Cavalry.

Capt. Wm. H. Boyle, 2d New York Cavalry.

First Lieut. Charles A. White, 35th Pennsylvania Cavalry.

Captain A. S. Dewey, Quartermaster, Milroy's brigade.

DISMISSALS.

During the week ending Saturday, September 12, 1863.

Major Anton Von Poschelatta, Captain A. Von Gontard, 8th New York Cavalry; John H. Rose, 12th New York Volunteers; Assistant Surgeon B. S. Warner, 42d Pennsylvania Volunteers, and Second Lieutenant Alfred F. Gaedke, 63d Pennsylvania Volunteers, to date from August 31, 1863, for absence without proper authority, having been published officially August 18, 1863, and failing to appear before the Commission.

Captain E. D. Dudley, Lieutenant John Lowery, and Captain Wilbur C. Newberry, 3d New York Volunteers, to date August 10, 1863, for absence without proper authority, having published officially August 18, 1863, and failing to appear before the Commission.

Captains James A. Steele, B. F. Wilson, and Wm. Wherry, 1st Virginia Cavalry; Robert H. Tibbs, and Adjutant Edward Philpot, 8th Michigan Cavalry, to date August 31, 1863, for absence without proper authority.

Captain Wm. Wherry, 1st Virginia Cavalry of the Ohio, confirmed by the President, to date August 22, 1863.

Captains Charles Bird and Samuel Hitchcock, Lieutenant Hitchcock, 18th New York Volunteers; First Lieutenants A. W. Richardson and John S. Jones, 8th New York Cavalry, to date August 31, 1863, for desertion, having been published officially August 10, 1863, and for failing to appear before the Commission.

Lieutenant Eugene Lamb, 1st Pennsylvania Cavalry, for improper conduct, to date September 5, 1863.

First Lieutenant Joseph H. Wilson, 1st Virginia Cavalry, to date August 26, 1863, for absence without proper authority, having failed to appear before the Commission.

Captain Wm. Wherry, 1st Virginia Cavalry, and Captain Robert H. Tibbs, (subsequently,) for conduct unbecoming an officer of the United States Service, to date September 8, 1863.

Lieutenants S. W. Babcock, 59th New York Volunteers, (dishonorably,) for conduct unbecoming an officer and a gentleman, to date September 8, 1863, and for failing to deliver a sword on the 7th of September.

Lieutenant Wm. Wherry, 1st Virginia Cavalry, for conduct unbecoming an officer of the United States Service, to date August 22, 1863.

The following officers, heretofore dismissed, are restored, provided the commissions have not been issued to the Governors of their States:

Colonel C. Wheelock, 97th New York Volunteers, with pay from the date of dismissal.

Lieutenant Joseph C. Smith, 14th Massachusetts Artillery, with pay from the date he was dismissed the service.

RESIGNATION ACCEPTED.

Colonel David Campbell, 1st Pennsylvania Volunteer Cavalry, accepted to take effect, to date October 13, 1862, the date of dismissal, for the reasons given in his application.

COURTS-MARTIAL.

The President has set aside the proceedings of the Court-martial in the case of First Lieutenant MERRILL HOGE, Fourth Kentucky Cavalry, convicted of desertion, and has ordered that he be not dismissed the service of the United States for conduct prejudicial to good order and military discipline, but that he be mustered out with a "dishonorable" to date," Lieutenant HOGE "is however disabled from the service of the United States by order of the President, for the offence of absence without leave."

RELIEVED FROM DUTY.

WAR DEPARTMENT,
WASHINGTON CITY, September 14, 1863.

SIR:—You are hereby relieved from further duty in the War Department.

You will turn over your office, books and papers now in your possession to the officer who may be appointed to succeed you.

Very respectfully, your obedient servant,

EDWIN M. STANTON,
Secretary of War.

To HERMAN HAUPT, Esq., *in charge of Military Railroads, Washington, D. C.*

MEDICAL DEPARTMENT.

Assistant Surgeons S. A. Holmes and Enoch Pearce, U. S. Vols., to report to Major-General Meade, commanding the Army of the Potomac.

Assistant Surgeon Charles S. Wood, U. S. Vols., to report to Major General Wright, commanding the Army of the Ohio, for duty.

Assistant Surgeon Charles H. Crane, U. S. Vols., to report to Major-General Banks, commanding Department of the Gulf, for duty.

Assistant Surgeon Wm. Kelly, U. S. Volts., to report to Major-General Butler, commanding Department of Virginia, for duty.

Assistant Surgeon W. M. Notson, U. S. A., to report for examination as to his fitness.

Surgeon P. A. Gouliaus, 105th Pennsylvania Volunteers, is relieved from duty in the Department of Washington, D. C., and will proceed to join his regiment without delay.

Assistant Surgeon A. S. Hague, U. S. Vols., to report to the Medical Director at Washington, D. C., for duty with battalion D. C. Vols., Colonel A. C. Richards commanding.

Assistant Surgeon H. W. Burritt, Gerhard Seel, and Robert Gowan, U. S. Vols., to report to Major-General Rosecrans, and by letter to Assistant Surgeon General R. C. Wood, St. Louis, Mo.

Assistant Surgeon H. E. Ashmead, U. S. Vols., to report to Major-General Rosecrans, and by letter to Assistant Surgeon General R. C. Wood, St. Louis, Mo.

Assistant Surgeon John D. Wood, U. S. Vols., is hereby relieved from duty in the Department of Missouri, and will proceed to report for duty, by letter, to Assistant Surgeon General R. C. Wood, St. Louis, Mo.

Assistant Surgeons Jairo Perkins and W. C. Daniels, United States Vols., is respectfully ordered to Major-General Grant, and by letter to Assistant Surgeon General R. C. Wood, St. Louis, Mo.

Surgeon Edward Shippen, U. S. Vols., is relieved from the exigencies of his sick leave, will report for duty to the Medical Inspector of the Department of the South.

Surgeon Edward Schippen, U. S. Vols., now on duty in the Army of the Potomac, is ordered to report for duty to Brig.-Gen. Wm. Hoffman, Agent for the Exchange of Prisoners, Washington, D. C., and by letter to Surgeon General R. C. Wood, U. S. Army, Medical Purveyor of the South-west General Hospital, St. Louis, Mo.

Hospital Chaplain J. J. Stewart, U. S. Army, is hereby granted leave of absence for twenty days, to take effect when relieved from duty at Fort Monroe, Va., and will proceed to Washington, D. C., on business relative to his claims against the Government.

Surgeon Wm. A. Carter, U. S. Army, having reported for duty at the Surgeon General's Office, in accordance with Special Orders No. 397, is relieved from duty in the Department of Washington, D. C.

Assistant Surgeon Charles M. Slater is relieved from duty at Fort Monroe.

Assistant Surgeon Levi Deuel, 14th Connecticut Volunteers, at Camp Parapet, Louisiana, is relieved from duty with the 14th Connecticut Volunteers, under detached service for 30 days.

Assistant Surgeon Wm. Thompson, Frederick G. H. Bradford, C. S. Ayer, and Wm. Bowen, U. S. Vols., are relieved from duty in Washington, D. C., and will proceed to Assistant Surgeon C. Wagner, U. S. A., to receive his instructions in the examination of candidates for the Medical Staff. He has authority to visit and recruit treatment at the Baltimore Infirmary, Baltimore, Md.

MISCELLANEOUS.

Information has been received at the Surgeon General's Office, of the death of Surgeon Burton Downes in Virginia.

The following officers have been ordered by special orders No. 396, from the Surgeon General's Office, to report to the Medical Examining Board for the Invalid Corps that may be found at the various hospitals in and around Philadelphia, Pa.:

DISCHARGED.

Assistant Surgeon Grenville Kay, 72d Regiment New York Volunteers, on account of physical disability.

Assistant Surgeon Robert Babcock, Second Wisconsin Volunteers, on account of physical disability and the wounds received while engaged in the service of the regiment.

Assistant Surgeon Samuel H. Hill, Thirtieth Missouri Volunteers, on account of physical disability.

By special order No. 394, September 10th, from the War Department, Assistant Surgeon Gustave Kleinz, 20th Regiment New York Volunteers, is honorably discharged the service of the United States, on account of physical disability.

Assistant Surgeon Hiram Babcock, Second Wisconsin Volunteers, on account of physical disability and wounds received in battle.

RESIGNED.

The resignation of Surgeon Samuel Lee, U. S. Volunteers, has been accepted, to take effect September 8, 1863.

Assistant Surgeon Wm. Notson, U. S. A. September 10, 1863.

RESIGNATION ACCEPTED.

The resignation of Assistant Surgeon Wm. M. Giffin, U. S. Army, has been accepted by the President, to date from September 10, 1863.

EXAMINING A CONSCIPT.—All must enter the little ante-room, where so many, good, bad and indifferent, have endured before, and there defiling the artificial battalions of society, must don the clothing which nature alone supplies, otherwise, appearing in *puris naturalis* box, will await the grim summons to appear before the examining board upon the opening of the door, which divides the thin partition. You may expect your turn to come soon, unless there may be a crowd of fellow victims, in that case you may have the pleasure to wait. Best sooner or later, the summons will come in solemn form, and you enter the room with your back straightened against one side of the door, upon which the spectator will note a number of chalk marks, from five feet upward, to indicate the exact height of Uncle Sam's prospective recruit. But while we have been writing the above, your name has been called, you have been hauled out to the Clerk, and the facts are already recorded as to your age, the name in full, the trade, profession or occupation. Now comes the Surgeon's examination strictly. You are commanded exercise to put into immediate requisition. You will show your points by coursing around the room several times until the word is given, then you raise your arms above your head, touching together the extreme ends of the fingers; now the Surgeon is satisfied there is no hernia; you throw your arms forward and back to convince him of the soundness of the shoulder and vertebræ. Standing on one foot, next, each knee is drawn up to the chin alternately; resting the knee, you are required to stand in the upright position by springing up; noting the scale of the knee joint, you are required to put the hands to the floor. Now you take a series of jumps to the full extent of your ability, until there can be no doubt as to the soundness of extremities. The surgical examination of the chest organs comes next, the condition of the heart and lungs, the form of the abdominal organs, the state of the circulation and the skin, and finally a careful search for any deformities, blemishes, scars, wounds, amputations, faulty limbs, malformations, derangements from previous diseases, tumors, ulcers, fistulæ, varicose veins, spunks, fractures and sores. The state of the teeth must not be overlooked, whether ill or not is the question. Then comes the hair or soft. The eye-sight must be clear enough to read with a certain number of inches. It will depend on your almost complete physical perfection and vigor and probable endurance, were you to undergo the fatigue of those of an Aronis in beauty, if you are looking in some points. But long ere this the surgeon has consulted in his own mind with the unfitness, though the knowledge has not yet been officially made known (you will be duly informed in due season) and you have been politely dismissed to allow your contrères in the same state of nudity to enter. Then you at once more put on the covering and airs of civilized life, feeling proudly conscious that you have done your duty in the defence of your country, whether you are accepted or not to do good battle in her noble service.—*Henry Knickerbocker.*

HOW AMERICAN SOLDIERS BEHAVE.—The New York *Journal of Commerce* bears the following testimony to the orderly conduct of the million-armed soldiery of the nation. The city is full of soldiers. The parks and public places are thronged with them. They jostle against and elbow citizens at every turn. The number of troops now concentrated here, or in this vicinity, is not exactly known; and if it were, it would be unsafe to publish it in stating it. What we wish to call attention to now, is the exemplary conduct of this large army of soldiers, as a class. They have now been in the city—to which most of them were strangers—for a week, and with all the temptations to drunkenness and dissipation are all about them. It is obviously impossible to enforce the rules with regard to passes in the conduct of armies as strictly here as in the field of active service.

"Under these circumstances, the temperate and quiet behavior of these soldiers is truly remarkable. They crowd the sidewalks of the streets. Not a citizen writes to the newspaper that he is insulted by them. They are not seen reeling, or hearing the effects of liquor. The police do not have occasion to arrest any of them, and we hear of no more than one such arrests. They give no more trouble to the city authorities than the same number of other peaceable strangers, coming here for pleasure or business. It may be said that no special credit is due to them for behaving decently; but it is a fact remarkable in the case of other countries, where cities and towns are garrisoned by troops, serious difficulties between the military and civilians are continually occurring. Self-respect and a regard for the feelings of others may be justly set down as eminent traits of the American soldier."

THE SIGNS OF THE TIMES.—The President closes his letter to the Union State Convention in Illinois, with the following hopeful words:

"The signs look better. The Father of Waters again goes unvexed to the sea. Thanks to the great North-west for it. Nor yet wholly in them. Three hundred miles up they met New-England, Empire, Keystone, and Jersey, hewing their way right and left. The same work, now in more colors than one, also lent a helping hand. On the spot, their part of the harvest was gathered in. Let the nation take it. The job was a great national one, and let none be slighted who bore an honorable part in it. And while those who have cleared the great river may well be proud, even that is not all. The Gulf of Mexico, and all connecting waters, will be freer and safer for the home of Farragut, Davis, Foote, Gettysburg, and on many fields of inferior note. Nor must Port Hudson be forgotten. At all the watery margins they have been present, not only on the deep sea, but on the coast, and the prompt, the brave, the patient, the loyal, and the firm, have, in the midst of danger, conquered the danger. Thanks to all. For the great Republic—for the principle it lives by and keeps alive—for man's vast future—thanks to all.

Peace does not appear so distant as it did. I hope it will come soon, and come to stay; and so come as to be worth the keeping in all future time. It will then have been proved, that among free men there can be no successful appeal from the ballot to the bullet, and that those who attempt it will be sure to lose their case and pay the cost. And then there will be some black men who can remember that, while others fought, they simply starved, and died, toiled, and were paid, suffered, and were not paid, labored long and unrequited, and planted and shed blood on soil which bore fruit for others, but for them scarcely a blade of grass or an ear of corn. And when the war is over, and the arms are stacked, and the drums are beaten for the last muster-out, and victorious armies marching through streets, proud with full ranks and waving flags, and exulting in the nation's gratitude, and cheered by the citizens thronging sidewalks, windows, balconies, and house-tops, then will be the time for some people to remember the black men who have helped mightily to win the great consummation; and then will be the time to see that justice is done to them."

Still, let us not be over-sanguine of speedy, final triumph. Let us be quite sober, and keep down all exultation, and with unceasing energy and fervent prayer to God, working that a just God, in His own good time, will give us the rightful results."

FORT SUMTER.—A correspondent of the Sa- vannah *Republican*, writing from Charleston, under date of August 25, says:—

"The entire southern face of Sumter is one mass of ruins. Piles of bricks, broken granite, timber and guns—rises from the water and forms an inclined plane to the original parapet wall on the top. Only the muzzles of the guns on this face are still in their carriages, and pointing over the wreck. The interior of the fort is as well as the outside, packed with sand bags, and for this reason the embrasures are filled up. The parade ground is down, there is no caving in, and but little diminution of the work. It also offers far more resistance to shot and shell than it did a month or two ago, and is capable of, and hence but little more damage can be inflicted from the land batteries. The fort is in as good a condition now to all these which pass over and strike the interior of the parapet, as it was before the parapet. This fact has annoyed the enemy no little, and an attack was made before daylight this morning from another quarter.

DEFYING THE BATTLE-FIELD.—Large portions of the battle-fields of Gettysburg are covered with them the heights of Cemetery Hill and the Round Tops, with its massive rocks and other commanding positions, have been purchased by D. McConaughy, who proposes to erect thereon a large building to command all the battle. The project has the sanction of many respectable citizens of Gettysburg, and a company is now organized for the purpose. The incorporated Association be formed, which shall take the ground at its actual cost, and, if funds can be raised, erect the building, and sell out Shares are to be fixed at $10 each, and the general question be submitted to the public is invited.

[Advertisement.]

We refer our readers to the new advertisement of E. E. Conklin, 259 North Front street, Philadelphia. This gentleman has established himself in the sale of Fine and Unadulterated Wines and Spirits only. Sutlers and Officers of the Army and Navy, should give this department of the Army and Navy, should give this establishment a call. Reasonable, long and favorably known in the wine trade, is connected with the firm.

FISHER.—At Woodside, L. I., on Monday, September 14, 1863, Mrs. ANN, wife of Captain J. K. Fisher, aged 52 years and 3 months.

OBITUARY.

A SAIL.

Capt. George W. Rodgers, killed on board the Cumberland, August 17, 1863.

On then float a sad fated fleet-ves
On the far off Southern shore,
Thine white sails, O Rodgers, are stained
In our bosoms ever more
Let's sadden about in triumph
Over the crumbling of the wall—
Our poor hearts are only sunshine
At the purchase of its fall.

Ah, our brothers' hopes and griefs!
Could a thousand sharpen'd swords
For the one life, in a moment
Thou hast given from love of words!
No shall lead but sons to honor,
Who shall guide their young ambition
To the path that leads to glory—
To the grave.

Only now is left the lesson
That life is nothing but a pageant,
In his country's pope of glory—
In the field of living breath
Free from self or sordid motive,
Be the path of duty death.
Sorrow best his kind and country.
Thus he went from love of earth.

On the hero's wreath of laurel
Fall Ah! not a tear of sorrow,
And the memory of his valor
All his goodness more endearing,
Oh, these fun'l and fatal fortress,
On the Sea of Southern waters,
Thoughts of tenderness and anguish
Cling around their vast more!

M. D.

THE LATE LIEUT.-COLONEL NATHAN.

THE late Lieutenant-Colonel GEORGE NATHAN, U. S. A., was the son of GEORGE NATHAN, Esq., of London, and Miss ADELAIDE PHILLIPS, of Boston, his wife, the father in 1815. His mother's maiden name was HALL. He was born in the city of New York, and graduated at West Point, as a Cadet; in 1823, he was acting Assistant Surgeon, and in 1824 a Surgeon in the army. In 1836 he graduated and was commissioned Brevet Second Lieutenant of Topographical Engineers, and in the same year received his full Second Lieutenancy in the Corps of Artillery. In 1838 he was appointed Assistant Commissary of Subsistence in March, 1838; Commissary of Subsistence of Florida, with the rank of Major, from September, 1838, to August, 1839; promoted to Captain in March, 1847, and in 1848 was appointed Commissary of Subsistence, August, 1848. He was brevetted Major for his services in the Florida war, 1836, to May, 1842, and was distinguished particularly in the battle of Okee-cho-bee, December 25, 1837. He was brevetted Major for services throughout the War with Mexico, under General Taylor, from May, 1846, to February, 1848, and was specially distinguished in the battle of Cerro Gordo," 18th April, 1847, and was brevetted Lieutenant-Colonel and Colonel "for meritorious conduct in the battles of Contreras and Churubusco," 20th August, 1847, and was "brevetted Brigadier-General of Chapultepec," 8th September, 1847. He was brevetted Major-General "for meritorious conduct" as was "Commissioner of Prizes" at Vera Cruz at the time of the siege conducted by General Scott against the city by the U. S. Army. He commanded Fort Columbus, New York Harbor, from 1848 to 1851, served on the Pacific Coast, from May, 1854, to January, 1861, and was promoted Major of the 3d Field Regiment Artillery, December 24, 1855, which Regiment he commanded from May, 1861, to March, 1863, and again for about seven months in 1863; was Inspector-General of the Department of Oregon and California, from May 8, 1858, to January 15, 1861, and commanded the District of Oregon, in the Department for some months in 1858; was promoted to the Lieutenant-Colonelcy of the 3d Artillery, May 14, 1861, and was Military Governor of Newport News, Virginia, in March, 1862, during the operations of the Army of the Potomac on the Peninsula, and was in charge of the rebel steamers, on which occasion he was favorably mentioned by General McClellan in his official despatches; for the last year stationed at Fort Warren, in Boston Harbor, commanding, in person, the garrison, work for a state of proper defence.

Lieutenant-Colonel NATHAN was on the eve of promotion to a full Colonelcy of Artillery, and his commission was signed by the President, August 13, 1863. He was on his way to Lancaster to visit his children at their school, when he was taken suddenly ill at the reached Philadelphia, and while at the Depot of the Cumberland Valley Railroad, he was compelled to take the cars, he was suddenly attacked with ill-ness, and, notwithstanding their kindness, everything was given to him by most excellent physicians (Drs. Hewson and Agnew), he died at the Girard House, Philadelphia, about 1 o'clock, A. M., on the 17th inst., after a brief illness of four or five days, in the 59th year of his age.

The funeral of Lieutenant-Colonel NATHAN's children was private in the U. S. Army. They are Brigadier-General GEORGE NATHAN, Assistant Adjutant-General; Colonel GEORGE CADOGAN, Deputy-Quartermaster-General; Lieutenant-Colonel JAMES, Assistant Commissary of Subsistence; and Colonel HANNIBAL DAY, 6th Infantry.

Lieutenant-Colonel NATHAN was a brother-in-law of Major-General HALLECK, with whom every distinction he truly knows had ofttimes been associated in the course of their long years in the service, and both in the Army of the United States, and had been for many years intimately associated. Major-General Lovelace—from Texas to California and Oregon—and Major-General HALLECK were friends from boyhood and his country. He was on his return from the Pacific Coast, by the route of his brother-in-law, and then residing at St. Augustine, Florida, when the Rebellion broke out; and, although offered high rank and command by the rebels, and every inducement held out to make him a participant in their unholy cause, he spurned their base offer—never forgetting his country—and left his devoted wife and children, which, while yet a boy, upon entering the Military Academy at West Point, he had taken a solemn oath under which he had so often fought. Totally disabled from travelling overland, he proceeded to Havana, and in the South, he immediately hastened to the North, and applied for service. His wife and children, after some delay, reached his native place, Lancaster, and rejoined him. Soon he was called to mourn the loss of his daughter, Mrs. Fisher, the only young lady of his domestic happiness, and who, far away from her affectionate connections, he had in the trunk of children, who survive him, were left to his widowed care.

OFFICIAL DIRECTORY.

WAR DEPARTMENT.

Secretary of War.
Hon. EDWIN M. STANTON—20 Rear Pennsylvania.

Assistant Secretary of War.—Hon. P. H. WATSON, 20 Rear Pennsylvania.

THE BRAVE SOLDIER, CONSUMPTION-EXTERMINATOR, AND CONSTITUTION! Thus does the *New York Commercial Advertiser* speak of GENERAL WILLIAM WALKER.

CRM. T. BENT, 449 Broadway, has just published the authentic history of the "GREY-EYED MAN OF DESTINY," by Mortimer Addams. With portrait, 12mo. cloth, gilt, price $1.50. The career of General Jackson are described in this volume with peculiar reference to the similarity in his personal characteristics. With a warm admiration for his peculiar traits as a man, the author blends with them a generous and just esteem in devotion to which he sacrificed his life. The people of the United States will thrill with honor and noble qualities exhibited by the Southern Rebel. * * * The present biography will be read with interest as a tribute to the private virtues of a brave and conscientious man.—*Mr. Addams has done his subject justice.* Sent to free from postage prepaid. It is compiled from Official Documents, Private Letters, Narratives of both Federal and Confederate, and is not disfigured with a line of sectarian or partisan bias which it is claimed by each author to exhibit. The first edition is exhausted, and the second is now ready. Orders will be sent to the trade as they call for it. The edition is now ready. 12mo, cloth, one dollar. Copies sent by mail, on receipt of price. 8½" Canvassing agents wanted.

112 CHATHAM STREET,
NEW YORK.

UNITED STATES
ARMY AND NAVY JOURNAL;
A WEEKLY NEWSPAPER, DEVOTED TO THE INTERESTS OF THE ARMY AND NAVY, AND TO THE DISSEMINATION OF CORRECT MILITARY INFORMATION.

On Thursday, the 20th of August, the undersigned will commence the publication, under the above title, of a weekly newspaper, devoted to military and naval affairs, and to the discussion of subjects relative to the interests of the United Service. The ARMY AND NAVY JOURNAL is established in the interests of no party; it will be controlled by no clique. Its independence will be absolute. Avoiding all personal and political topics, its columns will be devoted solely to the inculcation of sound military ideas, and to the elucidation of the public service in all its departments. Its pages will be devoted to a candid and liberal discussion by competent authorities, to the dignified discussion of questions arising within the scope of its observation, and to a full and reliable record of all subjects of interest to those in any way connected with military or naval affairs, stationed in the fort or at sea. The Department of Engineering, which now has so intimate an association with military operations, will receive adequate attention in this connection, and the interests of our Commercial Marine will also have an appropriate place. Among other matters the columns of the JOURNAL will contain from week to week:

1st. Full official lists of all appointments, promotions, resignations, retirements, deaths, changes, dismissals, and other changes in the personnel of the two services.

2d. A full and reliable record of all active operations by the Army and Navy.

3d. A summary of all official orders proper for publication.

4th. A full account of the operations of the Coast Survey and the Revenue Service, and of all changes among the officers of these two departments.

5th. Such articles in the actual service of the two services, with matters relating to military hygiene, surgery and the sanitary condition of the Army and Navy.

6th. Descriptions of inventions and improvements in connection with the Army and Navy, and accounts of discoveries illustrative of military science in this country and abroad.

7th. Correspondence of military and naval epistolary adventurers; correspondence from members of the two services. Answers to questions in regard to difficult points of military science, and to questions suggested by correspondents.

8th. An account of important movements of foreign armies and navies, with notices of changes in the personnel of the military and naval service.

9th. Criticisms upon current literature and art, so far as they relate to military and naval life.

10th. Articles upon military and naval engineering.

11th. Reports of the proceedings of scientific societies, reports of Navy Yards, and movements of foreign navies.

12th. Editorial discussions upon subjects of interest to the two services.

A summary, in short, of whatever occurs in all branches of the military and naval service of the world. No effort will be spared to make the JOURNAL complete in all its departments, and to render it worthy of the high-toned, reliable, lively journal, which will be read by officers of the Army and Navy, and by those connected with the public service and by the great body of intelligent citizens.

The importance which the United States Army and Navy have attained in the estimation of the civilized communities, which, by its ability, entire independence of party ties, and its devotion to the service, its official recognition and thorough devotion to the Military and Naval interests, will command to the public and to the Army and Navy, and become a necessity to every loyal, liberal, intelligent and earnest man. The JOURNAL is established in obedience to a demand which has been made upon the part of the press prior to make a paper which our soldiers and sailors can read and understand, and a publication of which shall be successful in completeness and ability by the side of the best of the literary journals of the day. Liberal advertising rates will be made with some of the most complete workers of Military Literature in the country, and for such official and departmental notices as may be required by the Government of the principal quarters of changes, orders, &c. The undersigned in issuing the first number of the proposed publication of the JOURNAL has the valuable co-operation of many experienced officers and of the ablest military and naval publicists connected with the service, and feels confident that the publication will be established in the paper upon such a basis as to be permanent to them, for as the paper becomes accustomed to them, the better will be the service rendered to the Army and Navy. The JOURNAL will be published every week, and will be printed with the greatest satisfaction in the Army and Navy. Advertising rates will be made known upon application. The subscription price will be $5 per annum; and the proprietor in a large advance to the Army and Navy. Subscriptions and communications should be addressed to the UNITED STATES ARMY AND NAVY JOURNAL, New York.

UNITED STATES INTERNAL REVENUE, FIFTH COLLECTION DISTRICT, NEW YORK.—Notice is hereby given to all persons concerned that the Assessment Lists containing the assessments made since the list of May, 1863, within the Fifth Collection District of the State of New York, Fourth, Fourteenth, and Sixteenth Wards, will be open for examination at the office of the Assessor, No. 535 Broadway, in the city of New York, on and after the date thereof, and that the Assessor will hear appeals at the office aforesaid, from the decision of said Assistant Assessors, until the 30th day of September, between the hours of 9 A. M. and 4 P. M., excepting on such occasions or successive valuation or enumeration by the Assistant Assessors. That the appeals may then be determined by the Assessors, or an appeal respecting the valuation or enumeration of property, or objections liable to duty or taxation, shall be, whether the valuation contained in the list or not, in the same ratio to proportion to other valuations in the same assessment district, and to the general valuation of property in the county, to be ascertained by the Assessors, or an appeal respecting the exemption of property from duty or taxation, shall be, whether the property be exempt or not. And all appeals to the Assessors aforesaid must be made in writing, and must specify the particular estate, matter or thing respecting which a decision is required, and must, moreover, state the ground or principle of objection, or error complained of. HELM A. ROBINSON,
Dated New York, April 21, 1863. Assessor.

TREASURY DEPARTMENT, OFFICE OF THE COMPTROLLER OF THE CURRENCY, WASHINGTON, August 1, 1863.—Notice is hereby given, that the following-named persons have been appointed Assistant Assessors of Internal Revenue for the Fifth District of the city of New York, in the County of New York and State of New York, and have been duly qualified for and according to the requirements of the act of Congress, approved June 30, 1864, and the regulations of the Treasury Department, and have complied with all the provisions of said act required to be complied with before commencing the business of Banking, viz.:
Now, therefore, I, Hugh McCulloch, Comptroller of the Currency, do hereby certify that the said Second National Bank of the City of New York, situated in New York, and State of New York, is authorized to commence the business of Banking under the said Act aforesaid.
In testimony thereof, witness my hand and seal of office, this thirteenth day of August, 1863.
[SEAL.] HUGH McCULLOCH,
Comptroller of the Currency.

THE MILITARY SITUATION.

THE campaign of General ROSECRANS has at length culminated in a great battle, or rather series of battles, fought on Saturday 19th, Sunday 20th, and Monday 21st inst. The result of this three days' engagement, which takes rank among the most bitter and bloody of the war, and was illustrated by the splendid gallantry of the Union troops arrayed against a vastly superior force of the enemy, is, on the whole, unfavorable.

But, though a repulse, it was saved from being a disaster to our arms. General BRAGG simply claims to have driven ROSECRANS, "after a desperate resistance, from several positions." There is no claim to have routed the Union army. On the contrary, General ROSECRANS inflicted quite as much damage as he received, and after a conflict with a force composed of the whole of BRAGG's army, the troops of JOHNSTON and PEMBERTON and powerful reinforcements from the army of LEE—a force put as high as a hundred and forty thousand, and which must certainly have doubled the Union army—he retired in good condition to his position at or near Chattanooga, where, at the latest accounts, we have the cheering intelligence that reinforcements were rapidly being forwarded to him.

The engagement was begun on Saturday at a point some miles south of Chattanooga, in Northern Georgia; the army of General ROSECRANS being at the time on the advance—a situation which of course gave the rebels a favorable opportunity for attack.

The battle opened at 11 o'clock, and the engagement soon became general, the rebels it is said maneuvering their troops finely. The rebels first attacked the left wing of the army, which, as well as his own corps proper, forming the centre, seems to have been under the command of General THOMAS, and they accompanied it with an almost simultaneous attack of the right wing (McCOOK's corps). The feint on the left is stated by General ROSECRANS to have been of a very desperate character. The enemy were repulsed, but, being reinforced, regained their position, from which they were subsequently driven, after a severe engagement of an hour and a half. General THOMAS' troops then charged the rebels for nearly a mile and a half, punishing them badly. About two o'clock in the afternoon the rebels made a fierce dash on the Union centre, composed of the divisions of Generals VAN CLEVE and REYNOLDS. General VAN CLEVE's forces were struck on the right flank, and being vigorously pushed by the rebels, fell back, until General CARTER's line was broken and the troops much scattered. General THOMAS then pushed forward vigorously, recovering the ground which had been lost on the extreme right. The mode of attack disclosed the intention of the rebels, which evidently was to get between General ROSECRANS and Chattanooga. In this, however, they were foiled. The losses in this day's engagement are set down at 600 killed and 2,000 wounded.

The second day's battle was opened by an attack of the rebels at 9 o'clock in the morning. General ROSECRANS at this time held a handsome line, with his right on a ridge of hills and his left resting on the east side of Rossville and Lafayette, about four miles south of Rossville, and protected by abbatis thrown up during the night. The engagement was commenced by a fierce attack on General THOMAS' left and front, and lasting for an hour and a half. The enemy, finding their assaults vain, maneuvered to the right, with the view of throwing a force on the Rossville road and attacking THOMAS on the left flank. At this juncture General THOMAS ordered General BRANNAN, who had one brigade in reserve and two with General REYNOLDS, holding the key of the position (General THOMAS' right) to move to the left of the line, to protect the flank of the army, and at the same time sent DAVIS and VAN CLEVE from the right and centre, to support BRANNAN in the effort to hold the line to Rossville and cover THOMAS' right. On seeing the withdrawal of the skirmishers in front of the division which was moving for the right and centre, the enemy made a vigorous attack on that part of the line, piercing the centre, cutting off DAVIS and SHERIDAN from the left, and driving the centre into the mountains. The right and centre gone, General THOMAS brought his divisions into position for independent fighting, his line assuming the form of a horse shoe, along the crest of a wooded hill. He was supported by General GRANGER, from Rossville, with a division of General McCOOK's corps and General STEADMAN's division, and with these forces firmly maintained the fight until after dark. At dark General, THOMAS still preserved his position, and on the left held his line of the morning, but with the right of the enemy nearly back to his line, and almost at right angles with that of the morning. Of course, with the other portions of the army in the condition in which they had been placed, retreat was inevitable. Two lines were open to General THOMAS to Chattanooga, on one of which—namely the Rossville route—he fell back during the night.

On Monday afternoon the rebels made a third attack on the force of General THOMAS, who, as he had the front in the advance, now had the rear in the retreat. We have no details of the engagement; but the assault is said to have been handsomely repulsed, and he was able uninterruptedly to fall back on the main body of the army, the whole of which was well concentrated near Chattanooga by midnight of Monday. The movement of troops is said to have been executed in excellent order, and although they had worked hard for several days and nights, they were stated to be still in excellent spirits. At latest advices the army was in line and ready for another encounter.

The killed in these engagements will, it is thought, not overpass 1,200, and the wounded 7,000. General BRAGG, in his official dispatch, claims to have taken 2,500 prisoners, and 20 pieces of artillery. He acknowledges a heavy loss, especially in officers. A subsequent dispatch puts the rebel loss at 5,000 on Saturday alone. The fact of this dispatch being from BRAGG, shows that that General commanded the rebel force in these engagements, and the nature of the tactics displayed seemed rather to bear the impress of the genius of JOHNSTON or of LEE.

Of operations on Morris Island there is little or nothing to record since our last issue. General GILLMORE is proceeding quietly and energetically with the work of erecting siege batteries at Cumming's Point, and a Charleston dispatch to the Richmond papers, under date of the 20th inst., states that "the works" on Morris Island are rapidly increasing in strength "and extent." The labor of mounting guns on Battery Gregg was, however, very slow in consequence of the annoyance received from the rebel works on James and Sullivan's Islands, which threw shot and shell continuously, at intervals of about twenty minutes. The navy does not manifest the first sign of activity. The rebels, encouraged by this quiescence, and what it seems to import, are industriously increasing and strengthening their harbor defences, and we shall undoubtedly have to pay the penalty for this delay when an attack comes to be made.

The depletion of LEE's army in Virginia to reinforce BRAGG in Georgia, naturally fixes public attention on the Army of the Potomac, as an opportunity favorable for it to strike a blow. There is good reason to believe that expectations in this direction will not be disappointed. The movement of General MEADE's force has already begun—all the cavalry and the Second Corps having passed the Rapidan river. A movement by the Union General, seriously menacing Richmond, will undoubtedly have the effect to relieve General ROSECRANS of part of the weight of rebel force in his front, while, if General MEADE's advance be rapid and energetic, he should have time to strike a telling blow at the rebel army in Virginia.

THE expedition of Gen. FRANKLIN, (the 10th Army Corps), designed for operation in Texas, met with a repulse in Sabine Pass on the 8th inst., resulting in the capture by the rebels of two of our gunboats, and compelling the return of the expeditionary force to New Orleans. The aim of the expedition, which had long been fitting out with much secresy at New Orleans, was Sabine City, near the mouth of Sabine river, which forms the dividing line between Louisiana and Texas—a point of great strategic importance as a base of operations against either Western Louisiana or Central Texas. The land force was accompanied by a naval force of four light-draught gunboats, which were assigned the rôle of silencing the rebel batteries, and covering the landing of the troops. In such total ignorance, however, had the chiefs of the expedition allowed themselves to remain as to the nature of the ground on which they were destined to operate, that it was only "*on arriving at the spot* on which the troops were destined to land," that they became aware it was impossible to effect anything, owing to the marshy nature of the ground, and the excessively shallow water. In this situation the whole brunt of the work fell on the gunboats. The attack of the rebel batteries, situated some distance below Sabine City, was begun by the *Sachem*, which after engaging the fort for some time, was finally struck by a shot which exploded her steamchest, and left her a helpless wreck. The *Clifton* now attacked in turn, but presently she also was struck in the boiler and left in the same condition as her mate. The remaining gunboat, the *Arizona*, quite unable to cope single-handed with the enemy's batteries, and drawing too much water to engage them at close quarters, withdrew from the contest, and the whole enterprise was thus baulked and brought to naught. The vessels and their armaments of course remained in possession of the enemy.

A dispatch from General STEELE, dated at Little Rock, announces the capture of that point, the capital of Arkansas, on the 10th inst. The cavalry under General DAVIDSON, were stated to be in pursuit of the rebels, who were in full retreat Southward.

A DISPATCH from General ROSECRANS, dated at his Headquarters, says:—"I cannot be dislodged from my present position." Another dispatch, written at 40 minutes past 11 o'clock, P.M., on the 23d, says:—"No fighting to-day."

GENERAL GILLMORE ON LIMES, CEMENTS, &c.*

The publication, at this moment, of a stout octavo on "Limes, Cements, and Mortars," by one who has made his name illustrious by setting at naught the binding powers of these substances on the walls and foundations of forts, has almost the air of a practical joke; but General GILLMORE informs us in so introductory note that the experiments and researches embodied in the work were conducted under the authority of the Engineer Bureau, at Fort Pulaski, in 1861, and were completed in the summer of 1861. It will prove a valuable contribution to the engineer and architect, into whose arts the elements under discussion in this work enter for so much. General GILLMORE, unlike the majority of the graduates of our military schools, who are content with what they have learned in the text books, is fond of original investigation, and he has a talent for recording the results of his investigations. His report of the reduction of Fort Pulaski, overlooking the narrow limits of a mere official paper, assumed the form of a comprehensive and instructive *memoire* on the breaching power of rifled ordnance, and takes its place as a valuable piece of military history. The present monograph, though on a more specialised subject, is an important contribution to the branch of practical engineering which it covers. Such a work, embracing all the results of the latest experiments, both in this country and in Europe, was very much needed; and General GILLMORE's detailed and exhaustive treatment completely fills the desideratum.

It is needless in a work of so purely technical a nature as the present to do more than briefly indicate the scope of its contents, as professional men, who alone will be interested in it, will doubtless procure the book itself. General GILLMORE begins with a survey of the geographical and geological distribution of limestones, and stone suitable for hydraulic lime or cement throughout the United States. It need only be remarked that nature has supplied us with these elements in great profusion and endless variety; but the most extensive beds have their origin in the valleys of the great Appalachian chain of mountains, as they traverse the States of New York, New Jersey, Pennsylvania, Virginia, Tennessee, and the northern portions of Georgia and Alabama. He then gives the method pursued in testing the limestones which furnish the basis of artificial hydraulic lime or cement. These tests are with a view to determine (1) their capacity to resist a transverse strain; (2) their relative hardness; (3) their adhesive properties. Chapter I. is devoted to the celebrated Rosendale cements, so named from the fact that the stones were first obtained in the township of Rosendale, Ulster County, in this State; the different kinds and qualities of this cement are described and analyzed, and the various manufactories of the cement are given in full. Chapter IV. goes into the subject of lime, its characteristics, tests, theory of its hydraulic and hydrostatic energy, artificial "Portland" cement, strength of certain mortars, &c. Chapter V. treats of limestones, kilns, mode of treatment, &c. Chapter VI. of calcareous matters and "aggregates," the process of making them, by mills and hand, and the mode of application to plastering, stucco, &c. Chapter VII. of "concrete" and "beton," their uses, mode of manufacture in Europe and the United States. Chapter VIII. of the device of laying stone courses under air, classes of hydraulic lines, intermediate lines, natural "pozzuolanas," "trass," "aceres," hydraulic activity and hydraulic energy, artificial "Portland" cement, strength of certain mortars, &c. Chapter IX

CORRESPONDENCE.

ANSWERS TO CORRESPONDENTS.

FIRST SERGEANT.—With regard to the First Sergeant's duty while the "annual" is being executed, whether at dress parade or otherwise, we have the best military authority for the opinion that he should remain in his position, and should come to an "order" when the battalion order arms, and to a "shoulder," when the battalion shoulders arms, and remain while the "annual" is being executed.

HOSPITAL.—With regard to the authority of citizen surgeons in hospitals, we should say:—The rules governing hospitals are prescribed by the Army Regulations, and these are not sufficient, by the Surgeon-General. It is the duty of all connected with hospitals to comply with these rules. It is not competent for a citizen surgeon to assume to set aside these rules, or presumptive of either a commissioned or non-commissioned officer. He cannot confine an officer on that officer's own authority; but it is to be presumed that, for the purpose of preventing the escape of a prisoner, the officer commanding the guard will comply with all his reasonable requests to effect that object.

MILES.—The order of the Secretary of War, dated about the 21st of June, 1863, granting $3 advance pay to recruits, applies to both classes, veterans volunteers and soldiers of the Regular Army. The bounties cross-belt is preferable to the single one, if the weight of the cartridge-box and bayonet are evenly distributed. White belts are best—they contrast with a soldier's dark clothing in a most perfect manner. Some sort of frame is essential to keep the knapsack well up on the back, where it should be carried. The official recognition of the rebels by England and France would not prevent them selling under false colors.

THE MONITORS.

To the Editor of the Army and Navy Journal:

SIR.—Great is old fogyism, and even in this country of mechanical contrivances, ingenuity, it cannot prevail, it seems determined to hold up its head, and is not ashamed to cry out that iron-clads cannot be made to float. The world was good enough for our fathers must be good enough for us.

"SAILOR'S" letter in your last number was a very refreshing identification of this. Others have noticed it, did it not appear to represent the opinions of some naval men, who, musing the luxuries of their wooden sides, and failing to produce the same effect in the new and unknown projects of them, try to cover up their want of success by meaningless attacks upon the Monitors—attacks which show very little desire to benefit the Government, but to cover what they are ordered to fight, and very little judgment upon the general question of naval warfare, now, for the first time, presented for practical consideration.

When we were informed that the rebels were converting the *Merrimac* at Norfolk into a powerful iron-clad ram, Mr. Ericsson proposed to construct the *Monitor*, as an experimental vessel for harbor defence, and for the attack of sea-going iron-clads. In all his inventions, Mr. Ericsson invariably turns out his mechanical contrivances practically perfect at once. The Monitor went to Fortress Monroe, and the *Merrimac*, and defeated her. It is useless for the Confederate commander to say, and "SAILOR" to repeat, that the *Monitor* took advantage of the *Merrimac* when she was run down; for she was run against once and not injured; and, if she had been so manœuvred, why did not the rebel commander run up to the Monitor and sink her? Why did he vessels in that harbor the manœuvres which on the previous day had proved so successful with the *Cumberland* and *Congress*? What more complete proof was wanted, that for all the practical purposes for which they were designed they were eminently successful?

"But," says SAILOR, "the mechanism of their turrets, gun-carriages, port-sides, &c., is too delicate." Then let it be made stronger. In the case of the Monitor base of the turret, which seems the most vulnerable part of it, is being strengthened. From this delicacy of mechanism, SAILOR "draws the conclusion that they cannot stand among the least reliable portion of our Navy. Would a vessel be more valuable if, instead of having her guns protected, she could be sunk or set on fire by shells? Has "SAILOR" forgot the case of the *Cumberland* and *Congress*? But they are unbuilding. They have been built, and have been tested in the new vessels now constructing, to obviate the chief—the clearness of the atmosphere, "the fresh air which it throws into their engine-rooms, without which no man can rebel several times." But they do not carry enough artillery. No iron-clad does or can. You cannot carry armor and guns both. The question is to carry of the one, the best gun on the other. What avoided the superior nature and the superior weight of metal of the Confederate *Merrimac* which proved inferior to the smallest of the Monitors. But they will not take Charleston. Would a fleet of wooden vessels? Have they not been tried? Have they not been entanglement of their screw in ropes, &c., affects them less than iron-clads? Are they less liable to be blown up by torpedoes, or sunk by the guns of the enemy? The fact is, the obstruction question must be treated in a common sense way. Where there are obstructions in a harbor, a civil engineer removes them, or puts down a diving-bell, working on them, and blowing them up. This is the only way that they can be removed. Will any naval man of intelligence in New York who would undertake so to modify the machinery now in use as to affect this under fire. Until something of this kind is done, the navy cannot take Charleston, and abusing the Monitors will do no good. Will "SAILOR" propose something definite to take their place?

NEW YORK, *Sept. 23, 1863.* NOVELTY.

FIELD ARTILLERY.

To the Editor of the Army and Navy Journal:

SIR:—A very able article in your issue of September 12th, contained an account of the Artillery in use at the present time in this country. We are now contending in the field with an Artillery organized on principles almost identical with our own.

Were we at war with England or France we should not find this to be the case.

Our Field Artillery consists of two classes of rifled guns, one of 3-inch calibre and one of 3.8 inch. These guns being confessedly weak for close combat, we use a proportion of from one-third to one-half light 12-pounders. The French have a rifled bronze gun, 3-4 inch calibre,* nearly identical in its dimensions with the Dahlgren boat howitzer. They have almost, if not entirely, abandoned their light 12-pounders, which are undoubtedly the perfection of a smoothbore field artillery. They have certainly not done this without due consideration, and a little examination of the effect of calibre upon field guns, will both show the reasons which have led to this step, and indicate us seriously to consider whether it should not be followed.

Great range and accuracy in rifled guns are obtained by long narrow bolts, such as the WHITWORTH, which for a 16 pounder gun has only a 2-inch bore. The disadvantages of such bolts are their long time point blank range, and they require an unusually rapid rotation, and consequently strain the gun very much, and also, chiefly, that they have no interior capacity.

The effective destructive value of a field gun, depends in unequal proportions upon its calibre and its bullet's projectiles and its accuracy. At short ranges, as when a battery is charged, it depends entirely upon the former; at very long ranges, chiefly upon the latter. At medium and effective ranges, upon both. The following table from a statement published in the country, consequently in rather a hasty case and rather poorly executed, illustrates calibre. The shells are supposed to have a wall of three-sixths of an inch, which is found to be sufficient for the bursting charge, as the WHITWORTH gun, with its rapid rotation (1 turn in 20 inches), would require, at least, a half inch wall to its shell:—

Name of Gun.	Whitworth.	Armstrong.	Blakely.	French.	Proposed.
Calibre,	2.0	2.9	3.0	3.4	3.5 inch.
Interior capacity } of base. }	1.23	2.63	1.00	3.26	3.28 "

The object to be determined is how far the calibre can be increased without injuriously diminishing its accuracy at practically effective range. The chief advantage to be obtained by the use of 3-inch substitutes for the old 3-inch gun, and three sorts of ammunition for two or three guns, and seven or ten descriptions of ammunition. One disadvantage of the 3-inch gun is its weight; it weighs 1,200 lbs., while all the above mentioned rifled guns are slightly under 800 lbs. This advantage in bad roads, manœuvring on heavy ground, crossing bridges of carry and evicating the battery, when horses and men have suffered severely, cannot be exaggerated. The disadvantage of the light gun is its strain upon the carriage, but this can be obviated in the construction of the carriage.

I call attention to this subject because I am very desirous that we should not lose sight of the requirements of the service, in the possible contingency of a European war.

ARTILLERIST.

THE CAMP DENNISON HOSPITAL

To the Editor of the Army and Navy Journal:

SIR:—Probably none of the completed Military Hospitals in the United States is that at Camp Dennison, Ohio, located on the Little Miami Railroad, about 16 miles north of the city of Cincinnati. This Hospital was located in May, 1861, by General GEO. B. MCCLELLAN and the Hon. WM. DENNISON, late Governor of Ohio, and named after the latter gentleman. At the breaking out of the war, the Hospital proper consisted of only one building, a two-story frame, previously used as a boarding house, to which, having been improved, still forms part and parcel of the Hospital buildings. The ground upon which the present camp and Hospital buildings are located, was, only two years previous passed away, and the single hospital building and its few accompanying barracks have originated from a small beautiful farm with a hospital which in its accomodations and management, cannot be surpassed in the United States.

The present hospital is five-sixths of a mile in extent, comprising seventy-three buildings with grounds occupying 200 acres. The hospital buildings consist of 24 wards of 120 feet, neatly painted white, and decorated inside with paintings, engravings, wreaths of natural and artificial flowers, presenting, when all considered, a group of great statuary, as the taste of the soldier may dictate. From 20 to 40 kitchens and messes are kept scrupulously neat and in perfect order. In every fifth ward is a library of miscellaneous books, pamphlets, and papers, well selected and adapted to the intelligence of the readers. Every fifth building has in its rear a building 25 by 80 feet, which is used as a kitchen, and also for the nurses and hospital attendants. In the rear of the wards of the sick, are 40 acres of ground used for gardening purposes. This ground is worked by the convalescents, who have a few hours each day, early in the morning, and late in the evening. The vegetables raised are of an excellent quality. Back of this garden are the residences of the Medical Officer of the Post and his assistants, besides those of the officers in command of the camp. The office of the Post Surgeon is midway between the line of buildings, and on either side of it, about half way down the line, are the Medical Dispensaries. On the south line of buildings, a new chapel for religious purposes, 20 by 120 feet, has just been erected. It is plain and neat in appearance, has comfortable seats, a nice pulpit, and an excellent melodeon. The chapel will seat about 250 persons. The Post Chaplain is the Rev. M. CALLENDER, of the Methodist persuasion. He is very faithful in the discharge of his duties, and popular among the soldiers.

The number of wards in Camp Dennison Hospital is 77, containing 2,200 beds, and the number of convalescents accustomed to be found there is 600. From these are kept a corps of medical attendants, consisting of 74 of the lowest grade, 35 contract men acting as nurses, and 20 teamsters, who are also employed as nurses, as well as in the laundry. The wards are divided into divisions, each division having five wards and 160 beds under charge of an assistant surgeon. In the rear of every fifth ward is a building 25 by 80 feet, which is furnished with tables and benches. The table furniture is of the best kind, and the food furnished by the Commissary of the most excellent quality. A fine reservoir filled with water from the river, pumped up upon a high hill overlooking the camp, and filtered through a stratum of gravel, supplies the hospital and camp through metallic pipes. A number of hydrants and fire-plugs are scattered through the camp, which may be used for use in case of fire. Many of the old wards have beautiful flower gardens in front, and also in various sections, some of which are very beautiful, and evince much taste. The porches are covered with running vines, which make a pleasant and agreeable shade. As you approach the front of the hospital grounds from the railroad, you pass a beautiful fountain; and a miniature fortification, with bastions complete and mounted with quaker guns, suddenly meets your gaze. A long row of shade trees, which are thriving well, has been planted in front of the hospital, and a number of paths have been so constructed as not to disturb the beautiful green plateau in front. Besides the buildings mentioned, are two Ordinance rooms, where arms are kept and issued to the troops which are labelled when the rations, and delivered to him when he is discharged. There are many minor improvements, which time and space will not allow me to name, but the whole of these arrangements for the comfort of the sick and wounded soldier have been admirably planned and carried out by Major CHAS. R. WOOD, U. S. Army, who is now in charge of the hospital, and is devoting his whole time and energies to the improvement of the hospital, and to the well being of soldiers, and deserves not only great praise from the Government, but from the soldier and the civilian.

The following are the officers connected with the hospital:—

Post Surgeon—MAJOR BURNETT CLARK; Assistant Surgeon—CAPTAIN JOS. S. WARTHIN; Acting Assistant Surgeons—J. B. CLINE, W. P. CHAPMAN, J. W. COOK, A. CARNEY, J. N. HITCH, C. C. CUMMER, H. BOSWORTH-HAND, D. E. WARD, CHAS. KEARNS, W. C. COLE, W. A. ANDERSON, B. CLOAK, all of U. S. Army.

The Medical Purveyor, which is opposite the hospital grounds, has accommodations for a brigade, but at present there are only about 500 men in camp. General DEAVASS, of the Ohio Militia, commands the troops in camp, which will be used as a draft rendezvous in a few days, and a portion of it will probably be used as a cavalry camp in a short time. Both the hospital and camp grounds are very healthy, and but very few cases of local sickness are known.

R.

THE STAFF AND THE CHIEF OF STAFF.

To the Editor of the Army and Navy Journal:

SIR:—I am satisfied that foremost amongst the causes of our ill-success in the field is the lack of a well-organized General's Staff, and of a thoroughly capable Chief of Staff. KEPLER or EUCLID, with all their genius, could not have done what they did, if they had violated the absolute laws that rule all mathematics and mechanics. Genius is as well a science as an inspiration, and has absolute, paramount scientific laws and rules. Next to the special capacity, constituting rather an inspiration than anything else, which is needed in the General, comes the science and skill in detail which is comprised in Staff given rank. Often the high capacity of the Staff and as Chief of itself secures victory, when the commander has only indomitable courage. Such was the case with BURGOYNE and GATES against. The failures of MCCLELLAN, HALLECK, BURNSIDE, and HOOKER are eminently results of the inadequacy and inefficiency of their Staffs, and not of their Generalship. Even as a list at Ligny, Quatre Bras, and Waterloo, are to be attributed in great part to the inefficiency of SOULT; who, though an eminent commander, was entirely out of place in duties that devolve upon a Chief-of-Staff. Witness SOULT at Waterloo.

The rules of the service are better than we think them. They have kept their commanding officers and their staffs long enough to enable them to learn skill in the performance of their duties. The Regular Army has been handling large masses of men, and has by experience learned how to do his work well. We have not kept our leaders long enough to give them practical experience. Let us, then, in the same men around him for two years, and his Staff as well as he have acquired needed knowledge of their duties.

But we are impatient, and are groping our way. Only, don't let us fail to see light when we chance to get it.

WASHINGTON, 1863. G.

INFORMATION WANTED.

To the Editor of the Army and Navy Journal:

SIR:—Some months ago we heard that the great Texan expedition, after losing two out of the four gunboats assigned to it, had put back to New Orleans; to-day we receive the Galveston Civilian and Gazette of November 4th, after two days hard fighting, has been driven back by BRAGG, reinforced by JOE JOHNSTON, from Mobile, and LONGSTREET from Northern Virginia; and that there is strong probability that those movements of his Army and that of General BANKS, would have been led to believe to be so accurately, will, when completed, resemble that attributed by history to a certain king of France, who, with all his men, marched up the hill and then marched down again.

Being of an inquisitive turn of mind, I should like to ask you for some military explanations of points which my unfortunate intellect finds it difficult to understand. I know

* The following particulars in regard to the French rifled guns may be of interest. The calibre is 3.4 inches. The guns are made of brass, with six grooves .45 inches wide by .2 inches deep. The projectile has a cylindrical body with the shoulder and a half in the base; two, at the shoulder and one at the base, following the exact line of a muzzle-loader.

	Mountain.	Field.	
Calibre,	3.4 inches	3.4	4.76 inches
Length of bore,	52.94	77.65	84.00
Length of rifling,	9.33	16.07	16.33
Twist, inside,	27.5	27.5	27.5
Weight,	221 lbs.	750 lbs.	1,763 lbs.
Projectile,	1 lb.	1 lb.	2 lbs.
Diameter of projectile,	3.35 inches	3.35 inches	4.69 inches
Weight of projectile,	1.02 lb.	1.02 lb.	2.09 lbs.
Weight of charge,	0.11	0.11	0.16
Charge,	1.17	1.17	1.82
Extreme direct range,	1,312 yards.	1,312	1,640 yards.
Extreme range,	4,374	5,030	5,030

Horizontal distance, starting which the projectile is within 9 feet of the ground, 6°, 6, is effective against cavalry—

Range,			220	1,094	1,640	2,187	2,734	3,281 yards.
Rebot first gun	171	124	61	43	33	24	9	6 "
Rebound second do.	137	100	49	34	26	19	7	5 "

This table shows that the trajectory of the smooth-bore is flatter than that of the rifled gun, while the 3-20 pounder rifle is very much steeper at longer ranges. The initial velocity of the rifled gun is 1,312 feet per second, and the initial velocity of the 12-pounder is 1,312 feet per second; but at 656 yards the velocity of the rifled gun is already greater than that of the smooth-bore.

EDITOR.

of course, that, in my complete ignorance of military affairs, I must be wrong in supposing that the loyal gentleman who commands our armies, and who once wrote a work on military science, can have made any errors in his military combinations, and I should like you to enlighten me and your non-military readers, by answering the following questions:—

1. If Lee was not strong enough to win the battle of Gettysburg, and when Meade had been reinforced by the Harper's Ferry garrison, &c., (about 10,000 men) was not able to prevent him occupying Warrenton and Culpepper, why is he able, in front of Meade, to weaken his army?

2. While Lee and Meade are on the Rapidan, what is the special use of the garrisons of the forts in Washington, North of the Potomac, and why could they not be sent to reinforce Meade?

3. Why could not Meade, reinforced, if necessary, by every man that could be scraped together, within railroad distance of Washington, attack Lee, now that Longstreet is away?

4. What great harm could have resulted, if the Sabine Pass expedition had been deferred until the success of Roseraus was assured? and would not the prowess with him of its six divisions (two under General Franklin, three under General Washburn, one under General Herron) have assured that success?

5. Which would have been most likely to have produced the effect of a recognition of the South by France: to have left Texas *in statu quo* until the possession of Mexico had quartered the rebel States, already divided by the capture of Vicksburg, or Port Hudson, to have tried to do both things at once, and to fail in both?

6. If the Port Hudson column (that by sea, that by Brashear City and that by Alexandria) are not able each to take care of themselves, why do they move by such independent and distant routes? If they are not able, why not one of them have been sufficient, and the other troops have been directed where most needed?

7. Is there any rule of international law against landing on my part of an enemy's coast not occupied by his batteries?

8. Is it contrary to the constitution, or would it lead to a contradiction of power injurious to the liberties of the country, if the Navy were to avail themselves of the weakness of the coast obtained by blockading vessels; or, when they require such vessels as signals by which to rendezvous by night, is it contrary to professional etiquette for them to know?

I should like, if possible, to think that at least the amount of ability which is brought to bear by every merchant upon his private affairs, was at the disposal of and used by our military authorities. Perhaps your answers to these above questions may enable me to do so. ANTI-JOMINI.

NEW YORK, Sept. 21, 1863.

[We advise our every-day correspondent to await the final results of the military operations he criticises before forming decided opinions or censuring any body. Perhaps if he overlooked the whole situation, he might find less cause for complaint, than he now supposes. We elsewhere give the movement of Gen. Rosecrans a candid review.—EDITOR.

"THE HOME."

To the Editor of the Army and Navy Journal:

SIR—Now that the advent of the new steamer bearing the above euphonious and seductive name was announced in the New York dailies, the "martyrs" in the iron-clads here gave full vent to their imaginations, and in their own mind's eye substantial in the way of alleviation and temporary relief from the many discomforts and ills of their situation. But, alas for the hope! Like many other human expectations, when the *Home* arrived here, she was found entirely unfit for the service proposed, and the carefully laid schemes of the Navy Department was by no means carried out. She was immediately surveyed, condemned *in toto*, and sent to Port Royal, where she now lies for repairs until the time shall arrive for her turn to New York. It was a sore disappointment to the worn-out occupants of the damp, dark quarters of the Monitors, but they preferred to remain where they were than go on board of her. She had no accommodation for officers, beyond the merest complement, and "guests" on board the *Home* would have had to patronize the floor of the ward room, if they were sufficiently attracted by her name to remain on board at night. The same was the case with the men—her own crew needed all the space on her berth decks. But worst of all, she was without any proper outfit wherewith to entertain and comfort the sick, who are so often fully enduring every discomfort and trial incident to Monitors, and constantly exposed to them more or less, while on our decks wet all the time, and dismantled to "battle stops" week after week. IRON-CLAD.

Somebody to blame—who is it?
CHARLESTON BAR, Sept. 12.

ARTILLERY IN THE UNITED STATES ARMY.

No. III.

SEA COAST ARTILLERY.

At the commencement of the Rebellion there was not, in the military service of the United States, a single *rifled* seacoast gun, with the exception of two or three experimental pieces, whose merits and efficiency were then undetermined. The system of sea-coast artillery at that time in use, comprised the following: viz: 18, 24 and 32-pounder guns; 8 and 10-inch columbiads and sea-coast howitzers, together with 10 and 13-inch mortars for vertical fire, and 24-pounder howitzers for flank defence.

The *guns* were designated for solid-shot firing; the columbiads and sea-coast howitzers for *direct* shell firing; canister and grape were provided for all. The carriages, except a few for casemate guns, and the chocks of all sea-coast mortar beds, were of wood.

The system of sea-coast artillery of the present day, as arranged during the winter of 1861-2, by a Board of Engineer, Ordnance and Artillery officers, dispenses with all guns of smaller calibre than the 8-inch columbiad for fronts of fortifications looking upon channel-ways, retaining a few of the smaller calibre only for the land fronts, or for flank defence. The 8-inch columbiad would also have been dispensed with but for the inconvenience of using hot-shot from guns of larger calibre.

The guns and mortars, as at present adopted for the sea-coast service of the United States, with their respective weights, service charges, and weight of solid shot or shell, are as follows, viz.:—

Description of Guns.		Weight.	Service charge.	Weight of solid shot.	Weight of solid shot (Gomer No.)	Weight of shell (round No.)
		Inch.	*Lbs.*	*Lbs.*	*Lbs.*	*Lbs.*
Smooth-bore.		8	8 to 10	65		65
		10	15 to 20	18		128
		13	20 to 25	30		204
		15	40 to 50	50		438
Rifled.		6·4	(100-pdr.) 9 to 10	100		100
		8	(150-pdr.) 16 to 20	150		150
		10	(300-pdr.) 25 to 30	250		250
Mortars.		10	8 to 10	10		100
		13	20 to 25	20		200

An experimental gun of 20-inch diameter of bore, 116,000 lbs. weight, and throwing a solid shot of 1,000 lbs., with a charge of powder of 100 lbs., is now being cast at Mr. Charles Knapp's Fort Pitt Foundry at Pittsburg. It is believed that it will be ready for shot or shell see, in our service, guns of 30-inch diameter of bore.

All of the above-named smooth-bore guns and the mortars are cast by the invaluable method of "hollow casting," invented and perfected by Major Rodman of the U. S. Ordnance Corps. By its application of the great value of this improved method of casting heavy guns, it has been officially determined to give the designation of *Rodman's* to columbiads and all other guns and mortars cast by this method. It is understood that Parrott is also now making arrangements to cast his 8 and 10-inch guns in the same way. In fact, Rodman's is the only method of casting which produces safe and durable guns of the great size demanded by the exigencies of the present day.

All siege and sea-coast guns, and all sea-coast mortars, are now made without any "reinforce;" much greater facility in their service is thus ensured.

Iron is now substituted for *wood* in the construction of carriages (barbette as well as casemate) for all sea-coast guns and mortars. The old wooden carriages are now being replaced by the new iron ones, as rapidly as their fabrication and other circumstances will permit.

The original idea of the present iron carriage for the United States service, and the design and manufacture of the first one that was introduced, is due to Captain Barnes of the U. S. Ordnance Corps. Since then, others have suggested not a few modifications. For the elaboration of these, and their practical adaptation, credit is chiefly due to Majors Dyer and Rodman, of the U. S. Ordnance Corps. The latter-named officer also invented and perfected the present system of "chassis" carriages, and the guns of Parrott's system require special carriages for each calibre. These are also divided into casemate and barbette carriages, and the latter again sub-divided into "front-pintle" and "centre-pintle" carriages. Front-pintle carriages are now deemed the most suitable for sea-coast defence, although it is probable that hereafter the Engineer and Ordnance Departments will arrange for none other.

Experiments have been for some time in progress to ascertain the practicability of making serviceable rifle guns of the old pattern sea-coast 32 and 42-pounder calibre, by strengthening them about the seat of the charge with a wrought-iron reinforce, after the plan of Parrott. It is believed that these experiments will result successfully.

Experiments are also being made which, it is believed, will justify the use of much heavier charges in smooth-bore sea-coast guns than those which have hitherto been deemed as large as safety would permit. The higher initial velocity thus obtained will give increased efficiency to this indispensable class of guns.

While rifled guns give increased range, accuracy and penetration, the effect of their relatively smaller projectiles of the 13, 15 and 20-inch smooth-bores. Any one of these latter, well planted (as was most satisfactorily illustrated in the action of the *Weehawken* and *Atlanta*), places the unfortunate victim quite beyond the remedies of plugs, ship's carpenters and pumps.

The struggle for superiority between sea-coast and naval artillery is still going on, as it has for many years past; and, though the relative efficiency of both has been tolerably well preserved, in spite of the temporary advantages to the latter afforded by armored or iron-clad vessels, the question of calibres, smooth-bores, rifles, variety of projectiles and projecting charges, must be considered as still undetermined. The invaluable opportunities now offered will doubtless suggest modifications of existing systems, which will necessarily be adopted as the experience of active service proves their value. D.

FORTIFICATION—HARBOR DEFENCES.

In a previous article, the following points were established:—That harbors should be defended by obstructions; that obstructions can readily be made in shallow waters, but that, as yet, no mode of obstructing deep and rapid channels had been successful; that such channels should be defended by forts at the shortest ranges, mounting the heaviest possible artillery, constructed of earth where practicable, of iron where earth is not available; that such forts not being limited by the conditions imposed upon vessels, could carry a weight of armor and a weight and quantity of artillery which it would be impracticable to place afloat; and that stationary defences should be the basis, and floating the auxiliary means of harbor defence.

Torpedoes, a term including all means of producing subaqueous explosions, have been extensively used in defence of harbors and rivers by the rebels, and with very varying success. In the Mississippi a vessel was completely destroyed by one. In the bombardment of Fort McAllister, on the Ogeechee River, a hole was blown in the bottom of one of the iron-clads employed in attacking the work, and, however, when the hole was stopped sufficiently to enable her to be taken round to Port Royal and repaired. If this had happened in Charleston harbor the vessel would have been lost. In the James River, a torpedo exploding under the bow of a steamboat, blew off a column of water which would have swept overboard, but did not harm to the boat. The torpedoes, except in the two cases mentioned above, have rarely produced any greater effect than that in the James River. The reason appears to be that they are usually ignited by percussion, that the percussion arrangements are of inadequate force in their action, and that the small interval of time which elapses between the striking of the torpedo by the vessel and the explosion, is sufficient to allow the former to rebound and interpose a cushion of water, by which the effect of the torpedo is distributed over a large portion of the side of the vessel employed in lifting the vessel instead of locally in piercing a hole in it. The best remedy would be to use very large charges, or a more powerful explosive agent, such as gun-cotton. It is not difficult, however, to devise a means of entering a harbor known to be protected by torpedoes, which would be capable of inflicting the smallest injury on a vessel at 50 feet. A charge of 10 lbs. of gun-cotton would explode a percussion torpedo, or break the wires of one to be exploded from the shore within a radius of 12 feet. By exploding at the end of a 50-feet spar, dragged 12 feet from the side of the barges at 20 feet intervals, the passage of a vessel might be safely ensured.

In the obstruction of deep channels with rapid currents the difficulties to be encountered are—the great strength required to resist the shock of a vessel under way at that current; the necessity of supporting the chains or other obstacles drawn across the channel; of constructing such supports as that they cannot be injured by shot; and of so arranging them as to leave a practicable channel, except when desirous of actual attack. They should be so constructed as not to be readily destroyed by explosion.

In defending channels that are well obstructed, there are certain leading principles which it is necessary to observe in the placing of the defences. If the coast affords many positions favorable for the defence, the effect of attacking fleet diminished without sacrificing the fire of the batteries by giving them a great extension. At long ranges, if the batteries be well traversed, and the parapets made sufficiently thick, with high and interior slopes, plain earth batteries are much superior to ship's armor; because they are to the water the more effective. If, however, the vessels can approach within close range, the batteries absolutely require either to be 25 to 50 feet above the level of the ship, or to be roofed in. For permanent batteries, the best is the Haxo casemate, which is simply a brick arch turned over the gun, covered with 8 or 12 feet of earth on top, and 18 to 24 feet in front, except where the embrasure or opening for the gun is made. The crown of the arch just over the gun requires to be covered with iron. In temporary batteries wooden blindages, as they are called, are used, and in them also, the exposed part may be covered with railroad iron.

In the forms of such earth batteries the various systems of fortification should be entirely disregarded. A given amount of fire is required in a specific direction. To this all other considerations of form should be subordinated, and the arrangements for defence against assaults should be separate and independent. All modes of breaking the parapet to procure flank defence in the ditch of a field work, are not only very imperfect in the means they afford of defending

the ditch, but they injure the work by compelling it to assume a shape which can rarely be the best suited for its aggressive purposes. There is probably no more profound humbug in military science than the numerous buttressed systems which have called forth so much ingenuity, and are still taught with so little advantage. The principles of defence long ago laid down by MONTALEMBERT are peculiarly applicable to the great development of artillery, which is the chief scientific military feature of our age. His special constructions are of course valuable.

Many forms have been proposed for the construction of iron forts—most of them are adaptations of the turret principle, applied to a very large number of guns; this principle is faulty. The object of the rotation of the EURCASES turret or the CODD shield is to enable guns in one side of the shield to be trained in any direction. This is not necessary in harbor defence. The specific channels through which vessels of a given draught of water can approach are known. The fort can therefore be constructed so as to bring upon all these channels at the same time the proportion of its guns which their relative importance warrants. The circular form is the worst form for a fort, because the fire from it is scattered. A polygonal form, if a certain relation be established between the salient angle and the opening of the embrasure, not only is superior in fire to the corresponding circular fort in front of the sides, but also beyond a range dependent on this relation, in front of the angle also. Iron forts should be polygonal, with three tiers of guns. In many cases they might be made completely open in rear. It is necessary that the whole defensive construction should be of iron—only the faces exposed to fire require protection.

The question of the use of fortifications to defend the harbors of principal towns is a very important one.

In leading considerations here, is the extent which the works must occupy to cover the city against bombardment—the men and material necessary to occupy such works—the extent to which the place can be invested, or its necessary supplies intercepted.

The position and defences of Washington afford a good opportunity of illustrating these principles. To cover the city from bombardment, it has been considered necessary to occupy a series of hills south of the Potomac, from below Alexandria to above Chain Bridge—and then to surround the city with a chain of detached works at a distance of six miles radius. The armament of these works is enormous; the garrisons added to the Army in the Field would form two good divisions, and yet such garrisons are totally inadequate to its defence, which could only be successfully prosecuted by the capture of all the forts which invested it, and then the garrison of all but the attacked fort, increased to a siege footing, would be useless at the real point of attack. On the south of the Potomac, such positions as could be used by a battery for the bombardment of the city, must be occupied in force beforehand, and this advance is impracticable. The détoit of supplies at Alexandria requires defence. It is difficult, however, to see the necessity of the defence north of the Potomac—Washington depends for its food upon the Baltimore and Ohio Railroad. By threatening that communication, the Army of Northern Virginia would be compelled to fight without the protection of the forts, or the assistance of the garrisons, which it has been obliged to leave behind for their protection. Both of the rebel campaign in Maryland illustrate this—and in each if beaten, the rebel army would have had no defensive position with the North, have had to retire, not upon Washington, but upon Baltimore, where the fortifications, garrisons, and armaments of the north of Washington should be placed.

This example will illustrate the above principles, and show how our present case should be considered.

Convenient landing places near harbors, or large cities, should invariably be held by a small, well-armed work, secure against assault: it serves to delay a landing sufficiently to permit of a concentration to oppose it.

GUN-COTTON AND GUNPOWDER.

THE British Association in 1862 appointed a committee to investigate and report upon the qualities of gun-cotton. They made their report at the meeting of August of this year, and a very animated discussion followed, in which CAPTAIN ABNEY, of the so-called Confederate States Navy, took part. As the subject is one of the first importance to our scientific and military readers, we give an abstract of the facts elicited.

Austrian gun-cotton is best; Prussian next; Enfield No. 2 considerably inferior. The specific gravity of the material is not injured by damp; no smoke arises from the explosion; there is no carbon left in the gun.

The mechanical section of the committee "found it difficult to believe that greater mechanical effect could be produced by gases generated from gun-cotton than by gases generated from gunpowder . . . and it was only after long and careful examination that they were able to understand and explain the reason of this fact." In the discussion which followed, MR. SCOTT RUSSELL, the builder of the *Great Eastern*, claimed the increased power to the conversion of the water in the gun-cotton gases by means of the coolness of the gun on discharge to the absorption of the heat in this process. He stated that SIR WILLIAM ARMSTRONG had "argued that it was mathematically impossible that the gases of gun-cotton could produce half the power of gunpowder, and yet they did." CAPTAIN MAYNE pointed out the great advantage of gun-cotton in the defence of harbors, on account of its not being injured by water and its great explosive power: he instanced the case of a vessel destroyed by an explosion at eighteen feet distance.

The following facts show the relative force of gunpowder and gun-cotton. "A bag of gunpowder rolled on the apex of a city will blow them open. A bag of gun-cotton exploded in the same way produces no effect." "Against the palisades of a fortification a small square box containing twenty-five pounds of gun-cotton, simply flung down close to it will open a passage for troops." In one of the experience on palisades one foot in diameter and eight feet high, piled in the ground, backed by a second row of eight inches thick, and supported by a mound of earth, a clean opening nine feet wide. To this three times the weight of gunpowder produced no effect whatever, except by blackening the palisades. A casemate, 28 feet square, with a 24 foot span, was shattered to atoms by a small box containing 25lbs. gun-cotton laid on its centre. The bridge "was not broken—it was shivered. Two tiers of piles were placed in water 13 feet deep, 10 inches wide, with stones between them, and 4 feet of earth. Mounted pounds of gun-cotton, placed three feet from the face, and eight feet under water, made a clean sweep through a radius of fifteen feet, and ruined five to two hundred feet." In Venice, a barrel of 400lbs of gun-cotton, placed near a "ship in 16 feet of water, in 16 feet distance, threw it into atoms to a height of 400 feet."

100 pounds of gun-cotton gives 95% cubic feet of gas, and occupies one cubic foot. A temperature of boiling water it produces 1715 feet of gas, and exerts a pressure of 420 atmospheres.

100 pounds of gunpowder gives 308 cubic feet of gas, and occupies 1,981 cubic feet. At the temperature of boiling water it produces 421 cubic feet of gas, and exerts a pressure of 429 atmospheres.

Gunpowder has 68 per cent. of solid matter, which is not only useless, but absorbs power, and only 32 per cent. effective gas.

Gun-cotton can be exploded instantaneously. In this there is no analogy to gunpowder. A "compression of bullets" covered the means of giving cotton any velocity of explosion that is required, by merely the mechanical arrangements under which it is fired. In a rifle, it has any rate of speed of explosion, from one foot per second to forty feet per second, which is the velocity of gunpowder, or to one or four in ordinary shells, which is the velocity of gunpowder. "The instantaneous explosion of a large quantity of guncotton is beyond the use of shells, and is most formidable as a destructive effects on the surrounding material." To do this requires absolute perfection of closeness in the chamber containing the cotton. The "comparison of bullets without use of when it is required to produce manageable power is in the case of gunnery." To do this it must be "distributed and spread over a large surface, so as to produce a large space." "Colonel LENK has found by actual experiments that the proportion of 11 pounds of gun-cotton, occupying one cubic foot, produces a greater force than gunpowder, and a force of the nature required for sporting purposes." In rifles, the use of gun-cotton is "of most effective in guns when used as a quarter to a third "weight of powder, and employing a space one and one "fourth of the length of the powder charge." In rifles, "a cartridge is formed of a mechanical arrangement of spun "cords, and the distribution of these, the place and manner "of ignition, the length and diameter of the cartridge, all "affect the time of complete ignition."

THE MORTALITY AFTER AMPUTATION.

A TRANSLATION of the *Traité de Chirurgie d'Armée*, of M. L. LEGOUEST, published in the Boston *Medical and Surgical Journal*, contains the following paragraphs relating to the mortality after amputation:

"The general mortality after amputation has been very variable under different circumstances, and according to the returns hitherto published. Guthrie's statistics demonstrate that two-thirds of those amputated scenario; Faure assures us that after the battle of Pentenoy (1745), 300 amputations gave only 60 or 40 successful results. Bilguer reduces these to one or two the successful cases of amputation performed during the seven years war (1756). Larrey, recalling all his recollections after Germany years of war, thinks he has saved three-fourths of his amputated. A. Blandin, Surgeon of the Hospital, in his work on medical after-treatment we may hope to save three-fifths of those operated on. These are estimates without figures and without rule. We shall find in the following table, data, which, without being rigorously exact, are yet more certain, by reason of the very considerable numbers on which they are based:

	NO. OPER-ATED ON.	DEATHS.	PER-CENTAGE.
Naval battle, Brest (1794),	100	5	5
Battle of Newbourg (1704),	60	5	7.5
Naval battle, Aboukir (1798),	11	1	9
Battle in French army,	11	3	23.4
Campaign of Prussia (1806),	12	3	25.1
Battle of Toulouse,	90	23	25.3
Battle of Waterloo (1815),	34	9	26.4
Naval battle, Navarino,	56	14	24.3
Paris, Five Civilians (1830),	5	1	20.7
Paris, Juliet Diet (1830),	74	17	20.7
Paris, Rond Point,	30	7	23.3
Paris, Saint Louis (1832),	15	11	73.4
Paris, Hotel Dieu,	15	4	26.6
Spain (1836-37),	57	39	68.8
Battle of Constantine (1837),	27	7	25.9
Paris (1848),	13	3	23.0
Paris (1848),	14	4	28.5
Paris (1848),	14	13	92.8
Crimean war (English Army),	988	272	27.4
" Citizens war in Europe,	1,000	231	23.2
Capital operations only	4,466	1,101	
Totals,	6,797	1,916	27.63

The 6,797 operations brought together in this table, give a total of 27.63 per cent. of deaths.

Enormous differences exist between the ratios of mortality taken singly of the different kinds of operations. It appears that the mortality was the largest—73.9 per 100. They come successively, that of St. Louis, in 1832, 73.4 per cent.; Hotel Dieu, 1830, 70.7 per cent.; French army in the Crimea, 70.2 per cent.; Val de Grace, 1848, 64.1 per cent.; Gros Caillou, 1850, 55 per cent.; Waterloo, 51.4 per cent., and Paris, in 1830, according to Roux, 50 per cent.

The unfortunate circumstances in which the wounded were placed during the disastrous expedition of Constantine, during the long war of the Crimea, after the fatigue of a battle of giants like Waterloo, in the crowded hospital of St. Louis and the Hotel Dieu; and also the painful moral position of both military and citizen wounded, victims of the street combats of a revolution, appear to us sufficient to explain this great mortality.

"The mortality after operation in certain battles, as Aboukir, English army, 0 per cent.; naval battle of Brest, 3.3 per cent.; Hungary, 6.7 per cent.; Aboukir, French Army, 21.4 per cent.; Antwerp, 21.9 per cent.; New Orleans, 23.1 per cent.; and Navarino, 24.1 per cent., appear more easily understood.

It is rather remarkable that operations performed after naval combats, have given, generally, less mortality than those after land battles. The crowding, the fatigue of the wounded among a large number of vessels; to the cohort and seasoned constitution of sailors; to the absence of any derangement of their habits; the daily, busy their habitation, and becoming their hospital after having been in the field of battle. We must remember, also, that Newbourg, New Orleans and the Siege of Antwerp, which gave the smallest mortality after operations, were short and successful campaigns, during which the troops had not time to become fatigued, and were surrounded with cure and resources innumerable. It is well to know that at the beginning of a campaign the mortality is pretty considerable, but, in proportion as the war is prolonged, it must be practiced by new hands, more inexperienced, and can count upon less and less numerous successful cases.

This is the great cause of the sad mortality of our operations in the Crimea and subsequently, amounting to 70 per cent.; and to this cause are to be added the inclemency of the climate, epidemics, and the over-crowding of our hospitals. There is another remark of the author which explains the mortality of those operated on in the English army, our ally in this campaign; their ratio of 27.4 per cent is almost the same as the 27.63 per cent computed by LARREY during years of war. The superior success of English surgery over French is shown by the ratio of 23.2 per cent. Although this is greatly extenuated our surgeons, that certain surgical statistics from beyond the channel, recently published in France, have severely attacked, and thought to be vitiated by manifest errors."

A tabular statement of amputations performed in the United States General Hospitals, with their results, during the months of September, October, November, and December, 1862, prepared under official direction, shows that of 1342 cases, 100 were returned to duty, 25 were furloughed, 11 deserted, 350 were discharged, 336 died, 516 were under treatment January 1, 1863, and with 34 a secondary operation was necessary. The percentage of deaths, as stated is slightly over 25 per cent., but as the statement is not final (516 cases being still under treatment) this percentage ought probably to be increased to some extent.

NEGRO SOLDIERS IN THE REVOLUTION.*

THE complications of our present civil disorder offer many problems which we may call new and unprecedented, but it is hard to see how any of these present questions will arise, in this age of the world, that it is altogether novel. When the historical student sets to work, it is surprising to find how nearly the experience of the ancients, in managing the females of the Republic, to those arising among ourselves, on the military service of negroes. MR. LIVERMORE has published a book on the subject. The Second Part, comprised in pp. 39 to 136, in octavo, *Negroes as Soldiers*. MR. MOULTON has published a pamphlet, which at the same time before MR. LIVERMORE read his paper before the Massachusetts Historical Society, covers substantially the same ground. In the Revolutionary Period a publication of authorities are cited at length, which in MR. MOORE'S *Notes*, are only briefly described. The later editions of MR. LIVERMORE'S work will, we hope, give the full text of the Orderly Book, pp. 150, 162.

In taking the historical point of view, the writers of works like these disclaim all intention to advocate one or the other side of the questions which have given the spur to their inquiries. MR. LIVERMORE, in the position of simply himself in the attitude of attack, as against the doctrines of the modern pro-slavery school, especially in proposing to vindicate the Union in the constitutional contest as against what he Chief Justice TANEY in the DRED SCOTT case; and may thus have weakened somewhat the general bearing of his research. He is without the position of the apologist, which he maintains with much ability; though disclaiming it as professing "to act simply as an historical investigator, and only to attempt to enforce sentiments or theories of his own." The portion bearing on the employment of negroes as soldiers in the Revolution, is, however, only incidental to the scope of our specialty; and of this part, which appears to have presented itself as an after-thought to his more general inquiry, we may say that it has been given the most patient impartiality, and the same quality is even more obvious in MR. Moore's *Notes* of the same incidents. The publication of the documents is an additional guarantee of the thoroughness of their investigations. We can now form from his brief our impression of the results of these inquiries.

The record is clear that, from the beginning to the conclusion of the war of the Revolution, negroes served in the continental armies with intelligence, courage, and steadfastness; and that important results in general issues are directly traceable to their good conduct. Of these negroes, it

* *Historical Notes on the Employment of Negroes in the American Army of the Revolution.* By GEORGE H. MOORE, Librarian of the New York Historical Society. New York: C. Scribner, 1862. 8vo. pp. 252.

An Historical Research respecting the Opinions of the Founders of the Republic on Negroes as Slaves, as Citizens, and as Soldiers. Read before the Massachusetts Historical Society, August 14, 1862. By GEORGE LIVERMORE. Third edition. Boston: Printed for the Boston Local Publication Society, by A. WILLIAMS & COMPANY, 100 Washington street, Boston: 1863. pp. 184. 8vo.

appears that some were slaves, who enlisted, with the consent of their owners, as volunteers, or as substitutes for drafted men, without any particular provision on the part either of the State Government or the General Congress as to their future condition; though emancipation, at their option, after faithful service, seems to have been secured by force of public opinion. Others were slaves enlisted under special State laws or resolves, providing compensation for the owner and emancipation either on enlistment, or at the expiration of the term of service. The idea that a general emancipation of slaves was to be proclaimed by the President in the stand taken by the white inhabitants for their political liberty, seems to have been urged by a few persons in New England, but not to have had much acceptance. Washington, and the higher officers of the army, with some committees on military affairs, seem, at first at least, to have been against permitting negroes to enlist. The question did not take any positive notice of distinction of color among qualifications for military service, though the practical consequence applied between those who wished the exclusion of negroes, and those who proposed to recognise their personal capacity and to give negroes encouragement to their enlistment. "In the absence of a formal system under Constitutional authority, black men continued to find their way into the "service under various laws, of the Congress under no law, "or in defiance of law. Probably every State had its collored representatives among the soldiers, and there were "advocates for, and enemies, rejected or rendered, among "the records of nearly all the States." Moore, p. 19. The meritorious conduct of individuals soon began to be recognised in Washington and other generals to their enlistment. The matter was practically left to the States to decide. Congress, in 1775, favored the enlistment of free negro troops in South Carolina and Georgia. Colonel Laurens, of South Carolina, for a long time favored the scheme to that object. Hamilton endorsed it. Washington appears to have doubted its efficiency. General Greene afterwards urged the same measure upon Congress, but the recommendation was too strong. Slaves were employed in these States as pioneers and laborers in military undertakings. In Virginia the measure was defeated without much opposition, mere for emancipating such slaves were passed after the war. Maryland has favored their being emancipated on entering the service. In Rhode Island, in 1778, the Legislature approved the enlistment of negroes. In New Jersey it was directly prohibited about the same time. Pennsylvania to have been the only evidence of such prohibition. In New York, during the same year, enlistment of slaves, to be followed by emancipation, was authorized. It was said that all the New England States negroes appear to have been admitted into the ranks, as matter of course. In Rhode Island, a regiment composed of slaves, to be paid for and emancipated, was raised, which, under Colonel Greene, did distinguished service, especially in the "battle of Rhode Island, August 29, 1778, said by Lafayette to have been the best fought action of the whole war. A company of colored soldiers from Connecticut is also said to have proved themselves with fidelity and efficiency throughout the "war." The opinions of public men and legislative bodies seem to have been about even on each side of the question of the Rhode Island black regiment, the negroes and whites served together in the ranks. It would appear that this was the only instance of the kind in the matter of companionship and social intercourse. In Massachusetts it was at one time proposed to raise a regiment of "negroes, mulattoes, and Indians," to be officered by whites. Bancroft says, "The right of the free negro "to bear arms in the public defence seems not to be a little disputed in New England as their other rights. They took "their place, not in a separate corps, but in the ranks with "the whites; and in their manoeuvres they kept the proportion "rolls of the country, side by side with other soldiers of the "Revolution."

There seems to be little reliable evidence as to the numbers of negroes who were induced to go over to the British forces, by the proclamations of Lord Dunmore and the English generals offering freedom and protection to the slaves. Some such negroes appear to have been in the British service in garrison at Charleston, South Carolina, and elsewhere at peaceably at predatory bands; but, on the whole, their service in the way must have been insignificant.

In the Appendix to Dr. Lecount's book may be found General Jackson's proclamation, in 1814, to the free colored inhabitants of Louisiana, inviting them to serve in the army; also the Act of the New York Legislature, in 1778, for raising two regiments of negroes, and a note of the extent to which negroes are employed in the present struggle.

Mr. Livermore has also collected testimony to the fact that during the war of 1812, negroes in considerable numbers served in the ranks of what was then called "We believe that both in the naval and merchant service they have always been employed without objection on the part of white seamen.

The history of our own country gives the lie to the pretension of the rebel leaders, that the employment of negroes our military service is contrary to usage of war among civilized nations in general; or in what between communities composed mainly of slaves, or in civil wars, a system of slavery of blacks is recognized. In refusing quarter to negro soldiers, or in selling them, when taken, as slaves, merely because they are negroes, the Confederate war vengeance against captured officers of the black regiments, and in turning them over for punishment to the local authorities of the States in which they may be taken, the Southern leaders undertake to incorporate the local slave-codes into the law of war, in violation of the international code which, in claiming a separate nationality, they profess to be bound by; and commit a crime against public law which must be met, on the part of our Government, with the sternest military retribution.

After the 23d inst., all volunteers serving in three years' organizations, and having less than one year to serve, will, on re-enlisting for three years or the war, be entitled to the bounty of $402 provided for Veteran Volunteers.

[From the London Army and Navy Gazette.]

DEFECTS OF THE BRITISH NAVY.

With respect to the present fearful struggle in America, we believe that there are few, whether their sympathies are with the North or South, who do not believe that Charleston must eventually succumb to the batteries of General Gillmore, aided by the attacks of the Monitors, conducted, and perhaps, the ablest naval artilleries of the day. That Admiral Dahlgren and General Gillmore should be employed as much as possible in the attack on Charleston, whatever other failings the Government of Washington may have, it certainly does not evince the folly of passing over either naval or military talent—in fact, hitherto the difficulty has been to find it; but, when found, superior merit is as certain to be rewarded as it ever was in France in the palmiest days of the First Empire. We cannot but regret that this is not more the case in our own happier country, especially at the present moment, when the very best order of armaments sufficiently large to neutralize any evil effects from the blundering of our naval Parliamentary system, is expected as a matter of course: for we find that many of the military, and most of the few naval officers, who were to be favor of the Ironclad Programme forty years this opinion because our first line of defence, the ships, might be absent, leaving our dockyards defenceless. So that in place of defence for this country, we have had to provide ironclads for the Admiralty sending the ships away when required at home. Besides defence of our coast, it is, however, still more requisite, England be in a position to dictate to neutral nations, and be enabled to shield its vast commerces from hungry privateers, like the Alabama, sweeping up unshielded, ship to ship, as it is navy to navy, when compared with the force of any other nation. Can the Admiralty assure us that it is not in the power of any nation, in the wise provision and generous encouragement given them, more skilled in naval tactics and the use of modern ordnance, than our enterprising neighbors across the Atlantic, not to say resolutely annul that all is well, nor forget the lesson we once received from being entirely unprepared for the Crimean war, "in the midst of our weapons; and it should not be forgotten that we lost vessels and prestige, before Captain Hewett, with the *Shannon*, so brilliantly redeemed our former mishaps.

Such a course would keep our naval officers and men well up in all the advances made in gunnery, and would prevent that indefinite postponement that keeps us behindhand in every war. Our ironclads, as matters at present now stand, be, we believe, far the cheapest course to pick out five or six of the most powerful of the existing navy ordnance (including those of Whitworth and Armstrong) now under trial on shore, and to place a gun of each on board three ships that are to be completed and armed. Such a course would bring to light all defects, and enable the best system of rifling to be at once perfected and brought into the service with the least possible delay. The only thing which we have, as it is well-known, no service gun of sufficient power. It is true that the Times has stated the fact that the Northern States are fast turning out rifled guns with more than double the force of our own ordnance, and that the army of the North is now well provided with artillery, and practically drilled in their use. And, therefore, it is that we, as naval as well as military journalists, are most desirous to see our country, as in the efficient system, brought and kept up to equality, if not superiority, to other nations in gunnery—so as to be always in readiness to carry into success the motto which, for a thousand years has "braved the battle and the breeze."

THE ENGLISH SOLDIER.

We add a few extracts to those we gave last week from the article in the *Cornhill Magazine*, on "Life in a Barrack."

HIS RATIONS AND PAY.

Our rations and the usual disposition of our incomes must be treated together. As I have said, the men in every room mess together. Three-quarters of a pound of meat (not "without bone") and a pound of bread are drawn every morning for each man. Vegetables are supplied instead of a charge against us. The whole room's meat is drawn in one piece, the bread in four-pound loaves; thus fourteen pounds of meat and twenty-eight pounds of bread, and four and a half loaves. And here I am reminded of an important article of barrack-room furniture—an enormous two-handled tin pot, which is becoming known as such among other purposes. Meat and bread are supplied by a contractor, and it has to be grated as usual with cheese for my four officers—my servant, the doctor, the captain of the day, and his subaltern. Moreover, it is part of the duty of the orderly officer to inspect the meat and bread before or after each meal, to hear any complaint that may be made for report to the commanding officer. If the complaints are trivial, the orderly officer may have them referred to the superior officer. Supplied with meat and bread, then, we are still in need every day of tea, coffee, sugar, pepper, salt, mustard, potatoes, and, in fact, all else. All these articles are supplied in sufficient quantity (bread, half a pound; for the purposes of subsistence. Then, a certain sum of daily income to be disposed of. Out of this, a halfpenny is deducted for washing; a halfpenny runs on to the end of the month, to pay for the washing of the "Mess Things," which is kept back to be dealt with on signing accounts, goes to meet various incidental charges, so that, at the end of the month we have to pay the mess-sergeant a sum of money for which we have no account to render.

We have been under the hands of the barber, and his fee is a halfpenny; twopence has to be paid for shoe blacking; a penny towards repairing the library; a penny a week for the reading-room and for stationery; twopence for barrack damage, that is to say, for broken crockery, broken windows, &c. It will be seen, therefore, that little remains of our halfpenny-a-day savings. And as we live very well, and have all our daily wants supplied for nixpence. But the fourpence that remains is not (alas!) all "spending money."

I have already explained that a stock of underclothing and other apparel has first to be paid out of this sum.

The corporals, whose pay is one shilling and twopence a day, have white braces and a watch-guard; in short, they are much richer men. But the sergeants—the sergeants are our envy. They get two shillings and a penny a day. They have a mess to themselves, in a good room apportioned for that purpose. To be sure, the same rations of bread and meat are served out to them as to us; but then they expend twopence-halfpenny per day for groceries, instead of threepence-halfpenny, and that adds considerably to the comforts of the mess. Then, again, they may supply themselves with beer and spirits; and they are even better to enjoy the luxuries of their lot up to eleven o'clock at night, long after we are asleep. The colour-sergeant is even better off than his companions the sergeants. *He* gets three shillings and a penny a day, while his rations cost no more than theirs. He has no messing to look after, therefore, but marking all the men's clothes. Every article has to be marked with the owner's regimental number, and the mark of the regiment, and for every article so stamped he is a halfpenny.

The rations of cavalry men are the same as those served to the infantry, and are supplied at the same price: a pound and a half of bread, three quarters of a pound of meat, potatoes, a large allowance of hay, and a handful of corn per eight-pence. For washing they generally pay a penny, instead of a halfpenny, as with us; and that leaves them a twopence clear. If, however, they get more pay, they do more work; each man has a horse to keep in order.

When a man is in hospital, he pays tenpence a day for his food, however costly or however cheap it may be; and there is no stint of good things for a sick soldier. The wards are comfortably fitted up, and an orderly is appointed to wait upon every two inmates. A suit of blue serge, trousers, jacket, and cap, all of the same color—is substituted for the ordinary regimentals. The hospital, which, in spite of its constraints, has many charms for skulkers. Such men seize every excuse to report themselves sick; but the trick is no sooner discovered than they are "warned for duty" by their comrades, and not unnaturally, for the duties evaded by the skulkers fall on better men.

When a man is dead, he gets no pay at all, but sixpence a day is handed to the governor of the prison for his support. If a man be in confinement in the regimental or guest cells, then his pay is stopped also; and besides having attentions to work harder than I suppose a convict ever did, at the dietary is of the most scanty fare. Such is the law in her Majesty's other prisons. For breakfast he has eight ounces of oatmeal, and half a pint of milk; for dinner, twelve ounces of bread, and half a pint of soup. The only provocation to crime in such a dietary as that; and when hard labor is awarded, it is hard. It has to be done nine hours a day, and consists in the treadmill, pack-drill, and shot-drag. The nature of the last named punishment is pretty generally understood. Shot, varying in number from a thirty-two pound shot from one low block in the barrack yard to another, and so backward and forward without end. Pack-drill is of two kinds—regimental and punitive. Though not so laborious, perhaps; in this case the culprit has to carry a knapsack with a complete kit in it. Nine hours' labor is for fifteen days, and for every succeeding fifteen days the oath of duty (sickness without leave, drunkenness, and so on) may incur, from three months to twenty-eight days' confinement to barrack, with pack-drill for hour a day. Punishment to barrack is not easily evaded; for it is provided that a man under that sentence is to answer to his name every half-hour.

The regulations about married soldiers have much improved lately. A certain commanding officer has a standard may marry; of the sergeants, two-thirds of that number. Often, now-a-days, the married men have separate quarters; the wives, not the husbands, are responsible for the fit obtained by rugging up blankets between the cots. The children of soldiers are looked upon generally as their own small cost to the parents: twopence a month has to be paid for one child, and threepence for two; if you have a third child, inquiries are made. The money goes into the hands of the men are taken at a penny a head per month. The libraries, reading-rooms, cricket-ground, &c., &c., provided gratis, or at a merely nominal cost, and I recently heard a speech of one of the military savings-banks I have yet to say that they offer the liberal inducement of three and-three-quarters per cent. per annum: which is much better than the savings-banks open to civilian pays.

Another little bit of information I will give, because it seems that not only the general reader but even the general writer has very indistinct notions about it. When a company of soldiers is mustered in order to receive a bonded mother, they are called a file of men, so that when we speak of a company as so many file, we mean double that number of men. So with the word rank. That is, it sometimes means the exact number of men. Thus, thirty file are sixty men, but sixty rank and file are sixty men. Corporals are included in rank and file, but not sergeants.

IN THE GUARD ROOM.

It is a very unpleasant thing to spend a night in the guard-room; but, as a matter of experience, I do not call the place by those hard, unfeeling names. The food fancy of the soldier prefers to the more figurative appellations—such as the mill, the jigger, the corner shop, the house that Jack built, the Irish fortress, &c. But by no name can it be called a pleasant residence. The sergeant of the prisoner's call, or levée, sounds for it is then that the colonel, or senior major in the colonel's absence, holds his levée), whereupon every heard in the neighborhood is disturbed. The prisoners are marched out, first to the hospital, that it may be known whether they are fit to endure punishment, and then to the orderly-room, where they are brought to the front, each with fixed bayonets. In the orderly-room sit the colonel, the adjutant, and the sergeant-major, who reads over and mutters treated, he can appeal for a court-martial; but he seldom profits by the move. For the court-martial being assembled, and the prisoner brought in, there he sees before him his colonel and his captain, with the defaulter's book in their hands. In that book the misdemeanors in the company is inscribed, and every time he does wrong, the book is written down to him; and if it be only one fault, there it remains against him in that book to his credit, for the twenty years in the service. When a man is confined for being drunk, a cross in red ink is made against his name: and so soon as he attains the distinction of four chalks, he is liable

to be tried by court-martial for habitual drunkenness. But to have this effect, the four marks must be booked in not less a period than three hundred and sixty-five days; a license which is wide enough, and yet I have known men tried three or four times within the year. The sentence of a court-martial on such offenders as these is usually about forty-two day's imprisonment; which is done in the regimental prison or pierwell cells within the barracks. The sergeant in charge of them, and the superintendent of punishment in general, is called the provost-sergeant. A deserter is sent to a military prison, and generally gets about eighty-four day's imprisonment, with the additional discipline of being marked with the letter D. This brand is stamped under the left arm in Indian ink. If a man deserts two or three times, he may be flogged; but flogging does not often take place, and then for the most part for robbing his comrades, or who more readily coerce with the punishment than is supposed out of doors. No doubt it is a degrading punishment. A man under Indian has his neck protected by his leathern stock.

A regimental court-martial has power to sentence a man to from seven to forty-two days' imprisonment, or to a quarter's pay, and subalterns for members. A garrison court-martial is a far more important assembly; there you have a major for president, captains and lieutenants for members, and they may doom an offender to as much as three years' imprisonment. The accused has to sign and approve the proceedings of a regimental court-martial; no more a preliminary than the general commanding the district must confirm the decision of a garrison court-martial before it is valid. Whether a prisoner be found guilty or not, the decision is read to all the men on parade. It ought to have been mentioned before, perhaps, that while a regimental court-martial is in the guard-room, awaiting trial by court-martial, he gets but sparrow-a day; which would probably end in famine if his comrades in the mess, and especially the sergeants, this is not allowed, but the provost-sergeant is himself acquainted with the pinch of hunger, and he winks at the offence.

ARMY PERSONAL

BRIGADIER-GENERAL Cutler has arrived in Washington.

CAPTAIN F. T. Turuley, A. Q. M., has been placed on the retired list.

MAJOR-General Carl Schurz, returned to his command September 19th.

MAJOR-General Daniel E. Sickles, with his Staff, has arrived in this city from Georgia.

LIEUTENANT Samuel Gondy, of the 3d Maryland Infantry, was recently shot dead in Frankfort, Ky.

BRIGADIER-General Thos. G. Stevenson and Captain Anderson, arrived in this city, recently, on brief furlough.

CONTINUED illness has obliged Colonel Gardner Banks, of the 16th Mass. Regiment to resign his commission.

CAPTAIN Jacob S. Strobel, Provost-Marshal for the 3d District of Pennsylvania has been dismissed.

MR. CHARLES A. Dana, formerly editor of the New York *Tribune*, has been appointed Assistant Secretary of War.

THE regiment of Colonel M. R. Patrick, the 174th New York Volunteers, killed in action before Port Hudson, on the 14th of June last, took place in this city on the 21st.

CAPTAIN Henry Hall, Commissary of Subsistence, Meade's body guard, was seriously injured by a fall from his horse on the 17th.

THE Thirty-Third Regiment of New Jersey Volunteers has been mustered into the service. The commanding officer is Colonel G. W. Mindil, late of the 27th.

AN exchange has been effected for Brigadier-General Charles K. Graham, in the person of the Confederate General Kemper.

COLONEL Harrison Wilcox, of the Staff of Governor Andrew of Massachusetts, has gone abroad to execute an important commission entrusted to him by the State.

MAJOR Robert M. Lee, a paymaster in the Army, died suddenly on the 21st inst., at Brooklyn, N. Y., of disease of the heart. He was 46 years of age.

LIEUTENANT Joseph H. Metcalf, of the 14th Maine Volunteers, has been appointed Aide-de-Camp to General Nicholson, with the rank of Captain.

GOVERNOR Andrew of Massachusetts, accompanied by Major-General Banks and Staff, arrived in this city and remained the negro regiments stationed near Portemouth.

MAJOR-General Hunter arrived at St. Louis on the 21st, to preside over a Commission appointed to investigate the burning of the steamer *Sultana*.

LIEUTENANT-Colonel Purviance, commanding the 84th Pennsylvania Volunteers, was killed in the trenches before Fort Wagner on the morning of the 21st ult.

GENERAL Stanley, of the Cavalry Corps of the Army of the Cumberland, was very ill during the advance, and was obliged to go to sea. Brigadier-General R. F. Mitchell succeeded to his command.

CAPTAIN Drury, Chief of Artillery on General Van Cleve's Staff, of the Army of the Cumberland, was shot in the bowels by a sharp-shooter on the 18th of September. The wound is considered dangerous.

DR. A. J. Gray, Surgeon of the United States Army General Hospital, Portsmouth Grove, R. I., has been presented with a very beautiful silver "Tea Service," by the patients under his charge, as a mark of their confidence and esteem.

COLONEL L. W. Stevens, formerly of the 7th Regiment of New York, who died on the 17th at Stamford, Ct., was buried from the Collegiate church in Lafayette Place, New York, on the 19th.

CAPTAIN Clifton A. Blanchard, is recommissioned Captain in the 30th Massachusetts Regiment, to fill the vacancy caused by his own resignation, and has left to rejoin his regiment.

GENERAL Grant, who was lying ill at New Orleans on the 14th, from the effects of a late fall from his horse, later advices represent as recovered, and about to return to Vicksburg.

ADJUTANT-General Schouler of Massachusetts, has been confined to his house at Lynn, from internal injuries received by falling down an opening in the deck of the conscript ferry boat *Bellingham*.

AMONGSTE of the Libby Prison writes, on the 8th of August, that five hundred and twenty of our officers and soldiers were quartered there, and that they were as well and comfortable as could be expected under the circumstances.

MAJOR R. J. Falls, who was wounded during Major General Stoneman's raid in the rear of Lee's army, has been ordered on General Hatch's Staff, at Philadelphia, where his wife's friends are numerous and of young officers.

MAJOR John Hammond, of the 5th New York Cavalry, was wounded in the hand during a cavalry skirmish near the Rapidan, on the 16th of September. Lieutenant C. A. Barrows, of the 1st Vermont, was injured at the same time by a fall from his horse.

BRIGADIER-General Howard, in a General Order, dated September 15th, directs that visits to the houses of rabid secessionists, which have been frequent amongst officers of his command, shall cease, and that such visits being dangerous to the Army and the officers themselves.

CAPTAIN Hart, of the 4th New York Cavalry, Army of the Potomac, was killed on the 16th, by the rebels, who had secreted themselves in thick undergrowth, and fired into a party of our men who were engaged in digging rifle pits. A mortal ball penetrated his heart.

CAPTAIN John Sanford, of the 33d New Jersey Regiment, has returned home to look after deserters and stragglers. Lieutenant-Colonel Hall remains in charge of the regiment. The surgeons have rejoined the regiment, taking on with them a number of men.

SEVERAL gentlemen of Boston, have signified to Captain John L. Swift, of the 3d Massachusetts Cavalry, their desire to hear from his lips, he having had great facilities for obtaining the facts, a full account of the fight through the chase by a shot fired by a concealed bushwhacker, while on the march from Grove church.

BY special order No. 419, from the War Department, Captain E. D. Brigham, Commissary Subsistence in U. S. Army, will take charge as supervising Chief Commissary of the Eighth Army Corps, Northern District, and will make tours of inspection to the different points under his supervision.

THE U. S. steamship *McClellan*, which arrived at this port on the 19th from Hilton Head, brought as passengers, Colonel R. H. Jackson, Colonel J. B. Howell, Lieutenant-Colonel J. R. Lowell, Major C. C. Suydam, and U. S. Paymaster, U. S. N.; Surgeon Wm. S. Robinson, Lieutenant C. P. Stoupp, Lieutenant N. G. Parker and Lieutenant W. H. Tompkins.

BRIGADIER-General Robert Anderson, U. S. A.; Colonel Pitcairn Morrison, 8th U. S. Infantry, Captain Francis H. Parker, 6th U. S. Infantry, Brevet Major R. S. Macrthur, 8th U. S. Cavalry; Captain Joseph C. Clark, Jr., 4th U. S. Artillery; Captain William Johnston, 3d U. S. Infantry; Lieutenant Alexander P. Eakin, U. S. Artillery; Captain Charles H. Brighly, 4th U. S. Infantry, and 1st Lieutenant Francis E. Brevoort, 11th U. S. Infantry, have been ordered before the Retiring Board.

NAVY PERSONAL

FLEET Surgeon Pinckney, U. S. N., has finished a tour of inspection of the Mississippi Fleet, and returned to Cincinnati.

CAPTAIN Chas. S. Boggs, of the *Sacramento*, is at his home in New Brunswick, N. J., still quite ill. His ship is expected North immediately.

CAPTAIN Jeffers, Executive Officer, at the Philadelphia Navy Yard, will shortly report at Washington, by order of the War Department.

LIEUTENANT Wm. J. Hotchkiss, of the gunboat *Pequot* was killed in action with the rebels, in the early part of this month, which has caused universal grief in this Department, where he has been in the army of many brilliant engagements. He was from Derby, Conn.

CAPTAIN Wells, Acting Commandant at the Philadelphia Navy Yard, has been ordered to the command of the *Susquehanna*, on the first of October. Since he has been in command at the Navy Yard, the Captain has won the esteem and confidence of officers and men, of all official rankings, both for his gentlemanly bearing and excellent executive ability.

A LETTER from Captain Hughes of the Marine Brigade reports the capture of six Rebel Paymasters on the banks of the Mississippi. He had, with the U. S. steamer *Diana*, been patrolling a certain portion of the river, when Lieutenant H. in charge, to hunt for bushwhackers, when they came upon a coach full of men bound for Arkansas, who at a valuable prize. Captain Hughes hailed, Captain H. in charge, to hunt for bushwhackers, when they came upon a coach full of men bound for Arkansas, who at a valuable prize. Captain Hughes hailed, Captain Burland was promoted to the rank of Major a little more than a year ago, and his promotion was received with great joy by his friends, as Captain Grayson; Captain Broome, executive officer; and three Lieutenants for active duty."

THE Navy Agent at the Philadelphia Navy United States Navy, died at his residence in this city on the 17th, after being severely ill only one day, in the thirtieth year of his age. Since the breaking out of the rebellion he has distinguished himself on many occasions for his intrepid bravery and unflinching devotion to the cause of his country, and his sudden demise has cut short a career that gave brilliant promise for the future. He was chief engineer on board the *Wabash* in Dupont's expedition, and that officer held him in the highest esteem for his attainments as an officer, and his worth as a man. His remains were conveyed to Frederick, Maryland, the city of his birth, for interment.

ITEMS AND INCIDENTS.

THE Secretary of the Treasury has week issued clearances for the steamer *Henry Fergus*, with one hundred tune of ice for Morris Island.

THE Marquis of Normandy, late Earl of Mulgrave, lieutenant Governor of Jersey, with his family, sailed for England in the steamship Africa.

MANY of the substitutes, who had deserted from the Army of the Potomac, were taken from the recruiting camp toward the close of last week, and prompt and extreme punishment now awaits the class of offenders, without hope of pardon.

ONE hundred men are hard at work on the fort which is being erected on Dutch Island, for the defence of Newport, R. I., and which is to be a strong and permanent fortification. Seven hundred and fifty more 32-pounders are already on the ground, and will be mounted soon.

ON the 9th, Lieutenant-Colonel Hayes, with three hundred men of the 5th Ohio Cavalry, Brandenburg's corps, was attacked near Telford, Tenn., by eighteen hundred rebels, under General Jackson. After fighting gallantly for two hours, our forces were driven in, with the killed and wounded, were compelled to surrender to overpowering numbers.

THE Invalid Corps, which was authorized in an order dated the 15th of April, by the Secretary of War, and which was published on the 8th of May, already numbers about 12,000 enlisted men, in 24 companies, averaging 80 men each, have been organized. Twenty-four hundred and fifty officers have been appointed, and over a thousand more have applied for appointment.

AN order from Major-General Meade, admonishes newspaper correspondents to hold no communication with prisoners of war, and to put on their way to headquarters or temporarily detained in the custody of any officer, or to seek any information from guides, scouts or refugees coming from the enemy's lines. No newspaper correspondent or civilian, not connected with the army, will be permitted to accompany or remain with cavalry service in the front or on the flank of the army.

THE following promotions of rebel officers are announced: Colonel H. W. Allen, of Louisiana, to be Brigadier-General, to rank from July 30; Colonel C. H. Mott, of Alabama, to rank as Brigadier-General, from Aug. 20; Colonel Wm. A. Quarles, of Tennessee, to rank as Brigadier-General, from Aug. 20; Colonel Wm. Brandon, of Mississippi, and Colonel W. H. Kirkland, of North Carolina, to rank as Brigadier-General, from Aug. 20; Colonel Robert D. Johnston, of North Carolina, to rank as Brigadier-General, from Sept. 1; Colonel M. C. Butler, of South Carolina, and Colonel Wm. Smith, of Virginia, to be Brigadier-Generals of cavalry, from Sept. 1.

A GENERAL order from General Schofield, dated Sept. 17th, declares that martial law shall be strictly enforced hereafter throughout the Department of the Missouri, against all persons who shall, in any manner, encourage mutiny, murder, robbery, arson, or other violence, or who shall evince disaffection among troops, and against all persons who shall publish or utter publicly words calculated to excite insurrection among the people or with the like effect shall publish falsehoods or misrepresentations of facts, calculated to embarrass or weaken the military authorities, or in any manner to interfere with them in the discharge of their duties.

THE NEW BRUNSON GUN.—We are informed that Captain Brunson has contracted to construct some 13-inch guns for the government, which he have a greater initial velocity than any now in use. He is to receive nothing for the guns unless they burn over 50 pounds of powder—for every pound over 50 and under 60 lbs. Mr. Brunson is to receive $5,000. He is confident of being able to burn 100 lbs., and is certain of burning 75 lbs. The solid shot will weigh 270 lbs.

The English 68-pounder (of 12,500 lbs.), said by H. R. H. Prince Albert to be a 100-pdr., have velocities varying from 1,100 feet to 1,400 feet per second. The 300-pounder Parrott, of Dahlgren, is reaching power of 6,000 yards, and the 15-inch gun of 55,500,000 lbs. The new guns, with 75lbs charge (one-third of the weight), will have as great a velocity as the 15-inch gun, the paralleling power will be 56,000,000 lbs., or exactly double that of the English gun. With 100 lbs. of powder its velocity would be 1,600 feet per second, and the paralleling power will be 68,000,000 lbs. It will thus be by far the most formidable gun yet constructed. The great superiority of the gun to those in use by foreign powers will readily be noticed.

BURSTING OF A BLAKELEY GUN.—The Richmond *Enquirer* of the 15th, speaks of the bursting of one of the large calibre Blakeley guns, at Charleston. It says: "At the time of writing no particulars of the affair had reached us; but from all we know of such entrance, we think it likely that the catastrophe was brought about by an attempt to make a long shot—a shot which should astonish the Yankees and throw the performance of their heaviest pieces into the shade." The *Examiner* says:—"General Beauregard's communication hereafter be ranked among the invasions of monster cannon, at least of this nation, as we learn upon the best authority that he has communicated to the authorities that they need not send him any more of them."

NOTICES TO CORRESPONDENTS.

The Editor of this JOURNAL will always be glad to receive from officers in the two services, correspondence and general communications of a character suited to its columns. It is necessary that the name of the writer should, in all cases, accompany his communications, not for publication, but as a guarantee of good faith.

Officers are especially requested to give us early notification of all personal matters of general interest; of the movements of vessels, of executive moves affecting the military and naval world.

The Editor will, at all times, be pleased to respond, in a few sentences, to inquiries in regard to the detail and duties of officers.

From gentlemen in the medical service we shall be glad to receive communications on military hygiene, practical surgery, and reports of active operations and novel forms of treatment.

The subscription price of THE ARMY AND NAVY JOURNAL is FIVE DOLLARS a year, or THREE DOLLARS for six months, invariably in advance. The subscription price may be sent in United States funds, or Quartermaster's, Paymaster's or other drafts, which should be made payable to the order of the Proprietor, W. C. Church.

Subscribers who fail to receive their paper promptly, will please give immediate notice of the fact.

Advertisements of a character suited to the columns of the JOURNAL, will be inserted in a limited extent, at twenty cents a line each insertion.

The Editor does not hold himself responsible for individual expressions of opinion, in communications addressed to the JOURNAL.

The postage on the JOURNAL is to vary cents a year, payable quarterly in advance, at the office where received.

All communications should be addressed to the ARMY AND NAVY JOURNAL, New York

U. S. ARMY AND NAVY JOURNAL.

NEW-YORK, SATURDAY, SEPTEMBER 26, 1863.

THE LESSON OF ROSECRANS' REPULSE.

IT is perhaps premature to attempt to say *whose* shoulders ought properly to bear the shame and the blame that have befallen the National cause in the repulse of General ROSECRANS' army on Saturday and Sunday last; but it would be the sheerest intellectual stultification to blink the fact that there has been very great blundering somewhere. The compensation which arises behind the sad picture of broken battalions and an army in retreat, is the *lesson* taught by the disaster. The repulse in Northern Georgia is a fresh illustration of that principle of which the whole course of the war is a series of illustrations: namely, that all the successes achieved both by the Union and the rebel arms are the result of correct military action, and all the defeats that have befallen both as and the enemy the result of incorrect military action.

The situation of General ROSECRANS' army is a peculiar one: it forms the centre of the grand Union *cordon militaire* of which the Armies of the Potomac and of GRANT form the wings. To attempt grand operations with one portion of the line while the others are condemned to a role of inactivity, is simply to invite the enemy to a concentration against that particular portion for its annihilation. Every man capable of forming an enlarged view of military operations took it for granted that, with the possession of Chattanooga and the great central mountain system, the whole form of our military operations and operations would undergo a change. This at length gave us what the whole country had been in the habit of looking upon as the key to the situation—interior lines, forcing the rebels upon exterior lines, and opening the way to their defeat in detail. We ourselves have positively that General ROSECRANS fully expected that the two great armies of the West, his own and that of General GRANT, would form a combined operation in the present campaign—that to meet his advance a powerful column would be sent up the Tennessee River by way of Tuscumbia, and that, meeting there the two columns would encounter upon the task of annihilating the rebellion in the central zone. But he, and those of us who looked forward to this change in the military policy, waited in vain for any such proof of wisdom. Alone and unaided General ROSECRANS was forced to enter upon the campaign. His army, small but admirable *morale* and with the habit of victory upon it, began the advance, and the movement was attended with entire success. BRAGG, flanked at Shelbyville, retreated to Tullahoma; flanked at Tullahoma, he retreated to Chattanooga; flanked again at Chattanooga, one of the two lines of communication with the East cut, he fell back to Dalton to cover the other line. At this point it must have been evident to the clear-headed military men who sit in power at Richmond that a crisis was upon them, and that the most vigorous measures were required to meet it.

And to meet it, the one method was the massing of a force adequate to defeat the victorious and advancing enemy. We are of course in the dark as to the moves made on the great chess-board; but it is evident that no sooner does General ROSECRANS' advance begin seriously to threaten Chattanooga, than JOHNSTON and PEMBERTON, with the remnants of their armies and what they could gather around them, are called up; at the same time large detachments (at least a division from each corps) are hurried off from LEE's army of Virginia, and sent round, as the other line is in the meanwhile severed, by way of Charleston and Atlanta. It must be confessed the occasion was an opportune one for their making these detachments. The Union force that had menaced Mobile, and held JOHNSTON in position to cover it, was eliminated from the problem; and with regard to Virginia, the rebel chief felt at least secure in being able with even a small force to keep back any advance of the Union General long enough to enable a battle to be fought in the West, when the troops, if wanted, could be returned. In the meantime BRAGG grows up Chattanooga without a musket fired in its defence—the rebels justly reasoning that our territorial conquests are of small moment, while our military policy is bad. By the time General ROSECRANS is fairly in Chattanooga, the rebels are concentrated in position below, resolved, as we must suppose, that the Union General shall pay dearly for his next step in advance.

It is not quite clear to us why General ROSECRANS took that step in advance. If he had remained at Chattanooga, looking well to his communications, drawing in BURNSIDE's troops, and fortifying his position, he might have remained in comparative security until such reinforcements should be sent him. But if the authorities had definitively resolved that no reinforcements should be sent him, it was in keeping with ROSECRAN's ardent and impetuous nature, that he should seek to strike quickly a destructive blow at the enemy; knowing well that if the rebels should be allowed time to concentrate their forces, the position at Chattanooga would be exposed to the same flanking practice he had himself so successfully exercised toward the enemy.

That the authorities *had* definitively resolved that no reinforcements should be sent to General ROSECRANS, would seem to be plainly indicated by their action; for while the rebels were straining every nerve to pass in front of the Union army at Chattanooga, this was the auspicious moment chosen to send two expeditions —the one of twenty-five thousand men, under General STEELE; the other of about the same number, under General BANKS—out of the Central zone altogether, and into the Mississippi region. We have had no comment upon such conduct; for it passes all understanding.

General ROSECRANS advances, apparently with Atlanta for his objective point. At Chickamaga Creek, in Northern Georgia, a few miles south of Chattanooga, the rebels make a stand. Yesterday (Sunday) reached, the enemy meets him, and a fierce combat ensues on Saturday, the 19th inst. The rebels attack the left, centre and right, with the greatest impetuosity, their aim being to turn the flank of ROSECRANS and get between him and Chattanooga. They are successful in breaking his lines and pushing him in various parts; but, through the stubborn gallantry of Western troops, much of the ground is regained, and Saturday's fight may be regarded as a drawn battle. At nine on Sunday morning, the rebels resume the attack with overwhelming force. We have few intelligible details of this day's battle; but the result was that, in spite of the most obstinate gallantry of the troops, the line was several times broken by the solid columns of the rebels, and that General ROSECRANS was compelled to fall back to Chattanooga. This was successfully accomplished on Monday, General THOMAS covering the withdrawal, and handsomely repulsing a fresh attack by the rebels that afternoon. That General ROSECRANS was able, after such a battle, in such a position, and with such odds against him, to retire his army to Chattanooga, is the best possible proof of his skill and capacity. His valiant little army was ready to cope with BRAGG's force any day; but it was not able to withstand the shock of the whole Confederacy.

What may be the precise estimate to be put upon this repulse, will of course depend on what remains behind. The loss of the battle itself is not so discouraging as the fatality that placed the Army of the Cumberland in a position to be thus handled. Battles lost and battles won are but episode and anti-strophe of war. We have learned to bear that lot with becoming calm; but a vicious military policy is what stains the temper almost beyond the verge of endurance. The Government is now, we are told, rapidly reinforcing General ROSECRANS. If able to do it after the defeat, it should have been able to do it *before* the defeat; but if even this severe practical lesson was needed, the result may not be altogether without its compensations. In our issue of two weeks ago, we pointed out the dangers incident to General ROSECRANS' advance—a caution that drew down severe animadversions upon us. It is with no satisfaction that we are to-day able to look upon the practical justification of our position, in the repulse in Georgia, which furnishes a fresh illustration that the great principles of war cannot be violated with impunity.

A FAST TEAM AND THE CHIEF POSTILLION.

AMID the ever-increasing series of ominous disasters which the rebels have sustained recently, it cannot be denied that their navy has falsified the adage *ex nihilo nihil fit*. They have made a fleet out of nothing, so to speak, and naming their fast vessels after the rebellious States, *Florida*, *Alabama*, *&c.*, they seem likely soon to number as many fleet and powerfully-armed steamers as there are "warring millions," if not more. This at least is their aim. The Augusta (Georgia) *Chronicle* informs us that the notorious SEMMES, so long the commander of the *Alabama*, has now raised his flag upon the *Mississippi*, a formidable steamer, mounting twenty-four guns; and then proceeds to say that with the *Alabama*, *Florida*, *Georgia*, and *Mississippi*, the Confederate Neptune will drive a *fast team*, among "the merchant craft of the Federals." We are sorry we cannot gainsay this reasonable boast. As for SEMMES, he is, to give the devil his due, one of the most valuable men in rebeldom. As a sailor, he was not very fortunate in our Navy. He lost the *Somers* on the Mexican coast, but that might have been her bad luck, speaking sailor-wise, for she was the vessel in which Captain SLIDELL MCKENZIE suppressed the mutiny by hanging young SPENCER and his confederates; but, in the rebel navy, SEMMES has worked with an energy and skill which would have adorned a better cause, and with almost equal show of pleasant gallantry—minus the *éclat*; little by little, his crusade, aided by England's baseness, has evoked into being a fast team, and perhaps more than one *in posse* in the Confederate Navy.

But without stopping to denounce SEMMES' treason, or eulogize his seamanship, what are we doing to overhaul and destroy this fast team? Our navy is engaged on taking Charleston, and upon harbor defence, we are putting all our trust in Monitors, while the rebels are building fleet ships to destroy our merchantmen, and are eminently successful. Each engineery to its proper task, we say. At least, if we do the one, let us not neglect the other, as we have been doing essentially in the past.

The Monitors are quite far harbor defence and for passing fortifications; they can stand a wonderful degree of hammering: eleven-inch Dahlgren shells fall to pieces against their turrets, only indenting them about two inches. But while they are doing their proper duty, let us build and equip fleet and strong ships, to pursue these fast rebel cruisers, to convoy our merchantmen, which is the true way to find the rebel craft, and to sweep them from the face of the ocean. The problem is, to give our vessels the *maximum* of speed attainable with the heaviest armament, or, relatively, to beat the Anglo-rebels, in ships which shall be a little stronger and a little faster than their own—a problem of very easy solution.

When we cripple the fast team by destroying one or more of their ocean-cursers, we shall have great joy throughout loyal America; and should it chance to be the *Mississippi*, with SEMMES on board, we shall give him a cheer from the throat of every true hearted during the war, and cheek the enterprising maritime spirit of which he is "the head and front."

As for the other naval officers of rank, they seem to be ciphers. HOLLINS exhausted himself when he was nearly asphyxiated in the ram *Manassas*. INGRAHAM gained glory enough when he "broke the blockade" of Charleston. Poor old TATNALL's heart was broken when he deserted the Union, which he really loved. BUCHANAN sank the *Cumberland*, with her colors flying and her submerging guns pouring out iron defiance. That is certainly glory enough for him. If the Navy Department will take measures to destroy SEMMES and the fast team it will be the greatest blow which can be struck; and the "Confederate Neptune," aspiring

to be the PHŒNIX, will sink into his briny depths, to rise no more forever,—a kind of sea-cession which no one will be inclined to oppose.

DEFENCES OF NEW YORK HARBOR.

We print in another column a communication signed "Citizen," complaining of the defective armament of the forts of our harbor. It is gratifying to know, however, that the subject of harbor defences for New York is not in so backward a state as he supposes, but is receiving the most earnest attention from the officials to whom this duty is entrusted. For a considerable time past, not less than a thousand men have been constantly employed on our harbor defences; and most of the labor thus bestowed has been in substituting powerful modern armament for the ordnance of small calibre formerly in use. Our engineers have mounted smooth-bore guns throwing shot of 425, 128 and 68 lbs. weight, with rifled 300, 200 and 100-pounders, which now constitute the armament of our harbor forts. We have nothing smaller than these—aside from the guns of old pattern, some of which are still temporarily retained in the service. The only other calibre to be introduced is the 15-inch smooth-bore being cast, and for which the forts are prepared, exclusive of another experimental gun of a formidable character, which it is not necessary to describe. It is also another encouraging fact, that the State of New York has already commenced the expenditure of the $1,000,000 appropriated by the Legislature at its last session, for the construction of barriers to close ship channels against the approach of an enemy. "These barriers," says a cotemporary, "are nothing "less than floating islands, built of an indestructible "material, in the several avenues of approach—from "Long Island Sound and from the sea—and so arranged "opposite the principal fortifications as to check the en"emy and bring him directly under the concentrated "fire of hundreds of powerful cannon. Diagrams in "the office of the Government engineers, in this city, "show that when these works are complete, the fire "which in this manner will oppose the entrance of a "hostile fleet (from the moment it comes into range "until it passes out), is of the most terrible descrip"tion. Vessels are held within range by this barrier, "and subjected to a fire from this Artillery, immense "in numbers as well as calibre." Of course this subject is not one respecting which it is proper to enter into definite details; but this much may be stated, to reassure the public that our country, and our peace and rumors of wars, is not to be left entirely defenceless.

We have hitherto been of those who, looking to the supreme importance of the new general lines of operation which the territorial conquests of General ROSECRANS were opening up-for-him affecting the whole shape of the military programme east and west—have regarded with entire satisfaction the defensive attitude assumed by the Army of the Potomac. But the complexion of affairs in Tennessee alters the entire aspect of the case, and makes an immediate advance by our Virginia army now imperative. This is the surest method of relieving General ROSECRANS from a part of the heavy pressure on his front, while the depletion of LEE's army to reinforce BRAGG in Georgia affords General MEADE a good opportunity of striking a vigorous blow Richmond-wards. If so large a rebel detachment as is stated has been taken from Virginia, it will be hard for it to return by the circuitous route it will have to follow, in time to be of service to LEE, provided MEADE's advance is pushed with rapidity and vigor. The rebels are only formidable when, as of late, we allow them to concentrate against a portion of our forces. Occupy them at various points, and all their inherent weakness would be developed. From the statements made public, it appears that the advance of the Potomac Army has already begun—the cavalry and a portion at least of the infantry have passed the Rapidan. The country will follow with the most absorbing interest the progress of the new campaign in Virginia.

We suppose it is useless attempting to conceal the fact that the course of Admiral DAHLGREN during the whole progress of the attack of the rebel defences of Charleston harbor has excited very marked and universal disapprobation. From first to last he has done next to nothing. What the cause of this may be we do not pretend to fathom. Admiral DAHLGREN is an able officer—at least an able bureau officer. For such a task as that before him in Charleston harbor, however, it needs more than this qualification. It needs great skill, great resources, great intrepidity and firstclass pluck and seamanship. Admiral DAHLGREN may possess all these mental characteristics in the highest degree; but if so, he has hid them under a bushel. If he has them not, he ought not to be there; and if he has them and still has not used them, he ought *a fortiori* not to be there. What is worse is, that every energy seems to be neutralized by a want of cooperation between the land and naval forces. Now, if ever there was an occasion when it was absolutely necessary that the two arms should work heartily and harmoniously together it is this. The attack last April failed because it was a purely naval one, unsupported by the land force; the present attack drags out in wearisome delay, because the land force is working without the aid of the navy. This fatal spell from whatever cause it may arise, should be made to cease. We are happily rich in naval genius. There is the grand old Viking, FARRAGUT, whose "iron hearts in wooden walls," ran the fiery gauntlet below New Orleans. There is DUPONT, too, the skilful and brave, whose attack on Sumter without unnecessary results was one of the most brilliant pieces of naval audacity on record. Why should our iron fleet lie idle as "painted ships upon a painted ocean," when such men stand ready to carry it into gloxy?

We confess to considerable surprise that the Navy Department does not turn its attention to the construction of more breadside iron-clad vessels. The *New Ironsides* is, we believe, the only vessel of this class which we now have. Numerous Monitors have been made, and a large contract is still on hand. The two great ones are no process of construction, are also turreted vessels. There is no objection to the number of vessels of this type built and building, for we shall doubtless need them all; but it is hardly judicious, we think, to confine our constructions exclusively to this one model. In the attack of fortifications, what is above all wanted is concentration of fire, and this can only be obtained by the broadside fire of powerfully armed ships. And so far as the behavior of the *Ironsides*, whenever she has been in action, is concerned, there has certainly been nothing to make the authorities backward in building more like her. All the testimony goes to show that, in the various attacks on Fort Wagner, it was owing to what she could do that she was. In the attack of Fort Sumter in April last, when she was used by Admiral DUPONT as his flag-ship, her failure to do all that was expected of her arose simply from the fact that her steering apparatus was imperfect, and being caught in a strong tide-way, she became unmanageable; but the *defensive* powers on that occasion proved to be of a very high order. The whole subject of iron-clad vessels is yet in its infancy. Those who know most of the matter know how *little* is known. Under these circumstances, the only sound method is to distribute our constructions among the various models promising the best success.

In the Cavalry fight at Culpepper, great stress is laid upon the effect of horse-battery D, 2d Artillery, under command of Lieutenant Williston. This battery is one of the light 12-pounder batteries recently bored. It was found by the Cavalry generals that the solid case, and canister power of our small-bore rifled guns was not sufficient for close combat, and that the varied and densely timbered country in which our operations generally take place, gave little scope for long-range guns. These guns, on account of their unusual weight for horse Artillery, require eight horses for each gun and caisson. The result of the recent skirmish is the best justification of the wisdom of Brigadier-General HUNT, the Chief of Artillery of the Army of the Potomac, in determining to employ with Cavalry a greater weight of Artillery than has hitherto been used with that arm.

THE National Rifle Association of England in spite of the volunteer interest, seems rather poorly supported. It has recently appealed to the public for pecuniary aid; alleging, as a claim, the great impetus which its efforts have given to marksmanship, during the past four years. Yet it is probably rather an exaggeration to say that these efforts "have already "placed English Riflemen foremost in the use of that "weapon by which modern victories are won." It is to be doubted that England will ever rank skill in rifle-shooting among her distinguishing points. An extended frontier, or at least ranges of forests and mountains, where the necessities of defence or the attractions of the chase keep up the use of the weapon, seem indispensable to the maintenance of superiority in its use. Merely amateur shooting is a matter of fashion, and is subject to the fluctuations of taste. By suitable means, the 150,000 English citizen volunteers may be kept up near the average marksmanship of our organized militia; but that is all that can be hoped for.

It is a part of the regular pastime of the Anglo-Southern journals, to contrast the exceeding regard of the rebel leaders for the usages of war and the rights of humanity, with the alleged total contempt of both on the part of the Federal Government and its generals. One of these papers severely censures General LOGAN for his barbarous conduct, that when in the rebel territory he was not hard on his boys, who, with scarcely a biscuit in their knapsacks, sometimes unde free with a chicken or two; and calls attention, therefore, to the astonishing contrast afforded by LEE's soldiers in Pennsylvania, adding:—"The Confederate "Generals, during their recent incursion, sternly re"pressed individual plunder, *and went through the de*"*corous ceremony* of paying for the stores they re"quired, in the only currency which they could be ex"pected to possess!" Italics and exclamation point are ours. There is a conscious grin in the paragraph, though the editor, probably, hardly understood the full magnitude of the joke he was perpetrating.

The English *Army and Navy Gazette* is endeavoring to open the eyes of the British authorities to the fact that they are still dependent upon the old 95 cwt. guns for the most part, while the Americans are provided with 15-inch guns of 20 tons weight, and capable of throwing shot of from 420 to 450 lbs.; and while we will shortly be able to turn our longest ships almost upon their own axes, they still require a space nearly as large as Spithead, in which "to wind" (*Naval Service, Blackwood's Views*, &c. "It is undeniable," the *Gazette* says, "that the establishment "of a few of Brigadier GILLMORE's batteries before "Sebastopol, on the 17th of October, 1854, instead of "the 'tremendous armament' of which Lord GRAN"VILLE boasted, would have 'knocked the country' in "a cocked hat' in 24 hours." In the light of these facts it very safely comes to the conclusion that Jefferson Davis's proclamation of dangerous practice is now "contended for by neutrals, whose interest or passion "urges them to violate the Queen's proclamation and "to endanger the peace of the realm." Will the *Gazette* tell us why the British press and the British Government have been so long persistently blind to these facts, and what has so suddenly opened their eyes to it? If Americans have ever doubted it, they understand thoroughly now that the true measure of British friendship is found in the length of our pockets and the calibre of our guns.

A NEW edition of the Revised Army Regulations of 1861 has been issued by the publisher, LEONARD W. CHILDS, of Philadelphia, with an Appendix of some forty pages, "containing the changes and laws affecting the army regulations and articles of war to June 25, 1863." There are also changes in the body of the text, but as there has been no corresponding alteration in the pagination the table of contents is difficult to find them. The reference to page 281, under the head of "Medical Department," for instance, leads us in the midst of the Ordnance Department regulations. We trust this is not an evidence of the manner in which the plates of this important work have been revised. Though there is no announcement to that effect, we presume this revision of the regulations is the result of the labors of the Board to whom the work was committed at Washington last winter.

THE London *Naval and Military Gazette* of September 12th, says:—"We have information which leads "us to believe that President DAVIS and his Govern"ment have for some time past been preparing arms "and accoutrements for the negro levies, and that, in "the remoter parts of the Southern States, training to "arms has been extensively carried on. It is said "that almost immediately a large force of the colored "race can be assembled and regimented."

THE latest European advices seem to show conclusively that the British Government means to act upprightly in the case of the iron-clad rams. It is stated that Earl RUSSELL has given written assurance to Mr. ADAMS that the rams building at England, the Mersey will not be allowed to quit the Mersey. The British Government certainly could not do otherwise; but it will relieve the public mind if we can rely finally on this official promise.

FOREIGN NAVAL AND MILITARY MATTERS.

THE military budgets of the English and French armies for 1865-6, show that the total effective strength of the English Army was 147,118; that of the French, 355,187; the cost per head of the effective and noneffective English, numbering 147,118 men, was $446 67, while the French effective and non-effective force of 600,000 was $208 60 per head. The cost of the British manufacturing department was $31 20 per head, against $6 47 in military stores; cost per head, $27 36; French, $14 44; purchase of small-arms (British), $3 45; against $1 18; British military education, $6 62; French, $1 71; administration of the British Army (Secretary of State and Commander-in-Chief's department), $6 94; French, $1 67; Government Staff (British) per individual, $1,455 60; French, $1,872; clothing (British) $19 24, against $9 61 French. During a discussion in the British Association upon the difference between the cost of the French and English armies, the opinion was expressed that economy would be secured in a much greater degree, if the Government, instead of themselves manufacturing the *materiel* required for use in the Army and Navy, would entrust it to contractors.

A RECENT trial of the French and English armor plates was held at Portsmouth, England. The range, as usual, was 200 yards, and a complete section of 68-pound shot, the practice taking place afloat from the *Fawn* gunboat, against the plates fixed on the side of the *Hercules*, old ship. The target plates comprised four of the French, two of 4½ inches, and the remaining two of 5½ inches; and two of English, one made for the ship *Agincourt*, of 4½ inches, and one of 5½ inches, the average length of the whole being 15 feet, and their breadth 3 feet 4 inches. The French plates of 4½ inches received an attack of 11 rounds effectively, and both proved to be of a very inferior quality. They had both very extensive cracks and separations of the wood, and showed a much greater extent than have appeared in the French-made plates on any former trial. The 5½ inch plates stood no better, considering the extra quality of iron. They received ten shots, several of which were edge blows and opened the ieyes of the metal in an unusual manner, proving their plates, like the former ones tested, to be of very inferior manufacture in the welding. The metal was of good quality. The plate was struck by three shots in the number of 11 rounds fired, but in the rest of this space there were very deep fissures, with the iron driven into the ship's side from the main body of the plate. The English plates stood almost equally, and were by far the best of the six tested.

THE total enrolled strength of the British Volunteer force is 159,000 men of all ranks, of whom 1,300 are Cavalry, 4,000 Artillery, and the remainder, 152,200 Rifle Volunteers; and although quarterly returns and the "Army List," may show no sensible diminution in the strength of the force, the number of effectives falls far short of the number enrolled. Drills are becoming less frequent, musters smaller, and returns more defective. So much is said about "Volunteer" forces here, unless the youth of the country "Eagle" hand) more generally practice, as well as acknowledge "the duties of not being subject only, but 'voleus et voleus' willing and able to defend it.

THE British ship *Wolverine*, to carry an armament of 21 guns, was recently launched at Woolwich. Her keel was laid down in the spring of 1859, and the work was in a forward state in 1861, when the progress been withdrawn, her completion was delayed over two years, in order to bring forward the *Caledonia*, iron-cased ship. The *Wolverine* is 253 feet 6 inches extreme breadth is 40 feet 9 inches, and her tonnage 1,703.

THE two suspected iron-clads, the *Et-Toussun* and *Et-Monmouvie*, building in the yard of Mr. LAIRD, are frigates of immense power. They are 220 feet over all, 42 feet beam, with 24 feet 6 inches depth of hold. Tonnage, 1,850 o.m.; horse-power, 500. They will combine speed with good sea-going qualities. They are to be fore-and-after, with exceedingly fine ends, and will sit low in the water. Their draft when loaded will be about 15 feet; estimated speed 11 knots. The stem is so formed that they can use the same as a ram, and the stern, which overhangs, affords protection to the screw and rudder from shot or collision. The rig is that of a barque; the masts (which are telescopic), and the lower yards being of iron. Their plating on the sides of the vessels is 4½ inches thick amidships, and rather less at the ends. The plates, the joints of which together is imperceptible, are fitted into a teak backing of great strength. The deck is of 3 inches teak, backed with iron. The turrets work down in case of action in order to allow the turrets guns to fire over them. They have two cylindrical turrets on Captain COWPER'S principle—one before, and the other abaft the engine-room, heavily plated. These turrets are made for two guns each. The pilot-house is formed of teak and iron. At either end of the vessel are raised decks, which afford excellent accommodations for the officers and crew. In the captain's cabin provision is made for two heavy stern guns, and heavy guns can be trained from the forecastle deck. These vessels have capacity for 300 tons of coal. All the machinery is under the water line.

In an adjoining dock the British frigate called the *Agincourt* is building, and the work is rapidly progressing. About three-fourths of the iron-work of the hull is now fitted in place, and a large proportion of this completely riveted and finished off, so that the carpenters have commenced with the wood-work. Large quantities of the 5½ inch armor-plates have been received, and as all the machinery for preparing and fitting them has been complete and at work for some time, it is expected that rapid progress will be made with fixing them to the sides of the frigate. The *Agincourt* is to be 6,120 tons burden.

A writer in one of the English military journals complains of the martinets who, on first arriving at the East Indian stations, limit upon the troops observing in a tropical climate the same regulations which prevail at the Horse Guards at home. He laughs at the idea of "keeping the mind and soul in such a trim" and the surgeons treat the diseases of India according to those of England, which they often resemble. "I have known," he says, "a commanding officer and the commanding officer of a regiment on its first landing, which are appalling. Knapsacks and shakos are inevitable, and entirely useless before the middle of the day, and officers and men are compelled to be standing about in the sun, with an order against their wearing any but the regular kit, a time when even the tunicand natives repose in the shade. Our army is well disciplined, brave, devoted; but military duty is now, in the common sense, and many lives are sacrificed in the observance of regulations unsuited to the country. So long as they die according to regulation, the commanding officer is too often satisfied. Let us, for the love of God, demand, first, to take sanitary measures on his own responsibility 'might bring heavy reproof.'"

THE late Mr. BUCKLE, the author of "sditions organization in Ireland," says "that in 1798, the rebels were United Irishmen. In 1803, they were Sons of Freedom, or Sons of Erin. In 1848, they were Young Irelanders. Five years ago they were Phœnix men, and to-day they are Fenians and sons of St. Patrick. The objects are unchangeable. The Holy Catholic Brotherhood we have already fully explained: and although we do not believe that it numbers anything like 80,000 men, as has been stated, there have never been already drilled and armed in Ireland, there are not waiting indications that the conspiracy is widespread, and has many adherents. The Fenians, it seems, are to have a leader, or a readjutor for anything that may turn up. A war with France, now perhaps the most improbable event that can be imagined, is to be the signal for a rising in Ireland. America, is what they are to look out for with anxiety. The herald that makes proclamation that 'America and England are at war,' will be the signal for 'ing it, call the Fenians to arms—not to protect, but to assail their country.' Vast numbers of Irishmen have gone to America, and have been entertained by the ignorant that they will one day come back 'with a vengeance,' as the *Nation* once significantly said."

THE results which have been achieved by the *Florida* and *Alabama*, in the destruction of our commerce, are arresting the attention of the English naval and commercial classes. They feel that they are seriously exposed to attacks from vessels of this class, possessing great speed, with but little fighting power, and it is proposed to meet the difficulty by giving to armed ships danger—to give them the greatest attainable speed; two or three very heavy guns—no raging whatever, protection to the machinery, the source of accident to the machinery. A speed of 17 knots an hour, by placing a 300 horse-power engine in a small vessel, is believed to be attainable.

FRANCIS' corrugated iron wagons have been finally adopted for use in the English Army. They have been in use for some time by our Regular Engineer train.

MESSRS. Deville and Caron have lately been making experiments on the properties of a new gun-metal, a compound of aluminum and copper. The copper contains rather less than five per cent. of silicium, it presents a fine bronze color, is fusible, and rather harder than bronze. It can be cast in sand moulds, and is readily worked without clogging the tools as bronze does. Its tenacity is remarkable, being equal to that of iron. Experiments have shown that the best manufacture of its compounds with copper may be made by fusing together a mixture of sand, sodium, and copper, with some common salt and flour spar as flux.

THE best armor-plates made on the Continent are those of Messrs. Krupp, of Essen, in Prussia. It was found that the extreme purity of the French iron was attended with some disadvantages, which has led to the hardest and toughest iron not quite so pure. In constructing rolled armor plates, all the blooms from which the several shots of a pile for an armor-plate are to be made, should be subjected to indeed it is doubtful if the iron can be well cleansed by any other means. These blooms are then rolled generally 12 inches wide, and 1 inch thick, and about 6 inches long. Five of these are piled and rolled down into a rough slab, and two such slabs are welded and rolled down to a thickness of 11 inches, and shaved 4 feet square. Four of these are piled and rolled down to a plate 5 by 4 feet, and 24 inches thick; and, lastly, four of these are piled and rolled down into a finished plate of 4½ inch thickness. For thicker plates, the number of the slabs piled is increased in proportion. There are then about 4 inch thickness of iron to be reduced from 1 inch each to a pile only 4½ inches thick, each slab, originally 1 inch thick, being brought down to one-thirty-fifth of that thickness. There are, in a single plate, 4,000 square feet and upwards of surface to be welded in the rolls, and when the larger slabs are brought together, preparatory to the final rolling, the welding is a most critical operation, requiring not only the greatest nicety in heating, but the utmost precision in the time allotted to each part of the operation. The rolled plates, now produced when required of a weight of 20 tons, 20 feet long and 12 inches thick, appear to have the advantage over those produced under the steam hammer, that the armor-plates are made, however, from scrap iron, and it is a question whether the brittleness which they have been found to disclose does not proceed from the fact that the irregular quality of the scrap, rather than the mechanical action of the hammer. The mode of manufacturing hammered plates is as follows:—Scrap iron of the best description is selected and cleaned, piled, hammered into a bloom, and then rolled into bars 6 inches wide and 1 inch thick. These bars are cut up, piled, and again hammered into a slab. Several of these slabs are put together, heated, and hammered to the form required, and this process is repeated until the plate has increased gradually to the requisite length.

NAPOLEON'S ARMY AND COURT.

A RECENT French work, entitled "Military Souvenirs," (*Souvenirs Militaires*) of the decade of 1804-14, contains the reminiscences of Baron FEZENSAC, a distinguished officer, and a soldier of the time of the First NAPOLEON. In the year 1804 he entered the French Army, at the age of 18 years and 20, as a private in the 59th regiment. This corps was part of the force which, encamped at Boulogne, was destined for the invasion of England. Fezensac was engaged in the brief novitiate as a private soldier and sous-officier, M. DE FEZENSAC, in the course of nine months, was raised to the grade of sub-lieutenant. He was then attached to the staff of Marshal NEY, and under that brilliant soldier beheld the crowning victory of Jena, and the overthrow of the Prussian monarchy. He subsequently served in the victory campaign, was made prisoner of war in 1807, endured a brief captivity, and on the peace of Tilsit, left the service again in Spain, as a soldier of the invading army which, after Bayleu and the Convention of Cintra, was intended to subjugate the Peninsula, and to "drive the invaders into the ocean." He was again on the staff of Marshal NEY, and shared in the brief and deceptive triumphs which at first attended the efforts of the French and their allies to crush a speedy conquest. Having married a daughter of the Duke DE FELTRE, M. DE FEZENSAC, now assured of promotion, became an aide-de-camp to Marshal BERTHIER, in the best which crossed the Niemen to perish on the steppes of Poland and Russia. Here Berthier was the chief of staff to the Viceroy of Italy, and MURAT, and distinguished himself in the fearful service of covering the retreat from Moscow to the Vistula. For this service he received the rank of Colonel and General of Brigade, serving in that capacity at the battle of Leipsic.

For the main interest of the volume consists in its descriptions of the campaigns of NAPOLEON, of his army, his generals, his court, and the various causes of his successes and failures. Those who have been in the habit of considering NAPOLEON'S line and thorough organization of the Grand Army, will have reason to change their opinion upon the statements of M. FEZENSAC'S Souvenirs. The army which was encamped at Boulogne was the best NAPOLEON ever commanded; and yet we see evidences of the most ill-instructed, and wanting in proper discipline and practice—

"History attributes to the camp at Boulogne our subsequent success, and ascribes to it the perfection of discipline which existed in our military bodies and exercises. My readers will be surprised to learn that our commanders then took little pains to instruct the troops in the profit from so good an opportunity. . . . My regiment was selected to form a camp, and during a few months I was occupied with practicing it at targets, but very irregularly; and there was no reference to the time we were destined to use it. Our exercises were much too little varied, field-work; and none of our officers did anything that required head."

This army triumphed at Ulm and Austerlitz, and moved with astonishing celerity, speed more than once the enemy in a few weeks, subsisting upon pillage and forced requisitions. Its success, due to NAPOLEON'S genius, to its heroic valor, and to the fact that Napoleon was the first in the largest degree splendid; but this did not conceal the pernicious evils of the system on which it was organized and supported—

"The spoils of victory, which at first were considerable, soon vanished. The excess of fatigue, the want of food, the rigor of the cold, and the inclemency of the season, left nothing of all this booty to us, and I experienced in a month what I was to go through in my career. Before the battle of Austerlitz, we had not received our pay for three months, short of the staff, used to write. 'In this kind of war there are no magazines, and the soldier is fed and maintained by the requisitions levied on the enemy.' This was sanctioning pillage, and the countries we traversed were ruined. . . . The Grand Army had no regular system of transport. . . . I never went through so much in any campaign, that of Austerlitz excepted, as in that of Prussia and Poland, in which the army developed inexplicable and insubordination. When the soldiers went in search of food, they spread over the country, and the columns were crowned with robbers stragglers. History, however, depicts us as a victorious army, and we ourselves look on ourselves as such, as do all other nations."

Whole pages of this volume are filled with evidences of the ruinous results of making "war support war"—that is, of throwing an army upon a country without any provision for its transport. It is to this system, combined with the complete failure of NAPOLEON'S lieutenants in the Peninsula; to accounts of which the catastrophe in Russia; but we trace it in all the campaigns of NAPOLEON. The following is a picture of the state of the French army in 1807, some months after the peace of Tilsit—

"Our army at this time was greatly reduced, three men being absent from their colors, for the most part engaged in pillage, which, indeed, necessity alone used to justify. Numerous were numberless orders for the subsistence of his troops, but few of them were executed, or capable of being executed, very well to say that the country was ruined, and that the troops were reduced to make distributions and establish magazines; those who were in the habit of doing so, were the first to complain of the want of provisions. The resources which the army might have procured regularly. Our soldiers lived at the rate of a pound and a half of bread per day, which they could, if they pleased, live much better elsewhere, and the example of the Russians and Prussians proved it. . . . Some considerable stores of the orders given in January, my corps was starving by the agents of Marsh. . . . The cavalry especially had lost its spirit."

The Russian campaign was the proof test of an army organized after this fashion, that is, composed of brave troops, but unaccustomed to strict discipline, and depending mainly on the resources of the country. In the retreat the soldiers turned to pillage as a habit, destroying the supplies which had been collected on a larger scale than had ever been known, and fell into a state of demoralization to which, probably, there never was a parallel. We quote one of these frightful descriptions :

"The magazines had been respected at Wilna, but were sacked at Kowno, and the Duke of Treviso brought on Berthier's report, that of our 9000 drunk ran in immoderate quantities, and died from the effects of cold afterwards. They could not be kept from the liquor on about the streets; others plundered the biscuit and made havoc of the rice and flour. Others broke the staples of the wagon boxes open, and the clothes scattered about; each man took what he chose, and threw away his own, preferring the barrel without clothes to that and thought of nothing but flight."

It has been remarked that if the organization of Napoleon's army was not without faults, the arrangements he made for securing efficiency in the staff attached to each corps d'armée were admirable. Before abandoning Smolensk, M. de Fezensac shows conclusively that the staff system in the Imperial army was like a machine, in which the wheels and officers were no doubt intelligent, but they were ill-provided with horses, maps, glasses, and other appurtenances, and the result was that erroneous estimates were not seldom committed in the transmission or execution of the most important orders.

The main cause of the utter failure of the Russian campaign, M. de Fezensac shows to have been the absence of Napoleon with the bulk of his army from Smolensk to Moscow without any regular basis of operations, and without any organized means of transport, of assuring subsistence, and preserving the communications. The disorders risked in the false hope that a battle near Moscow would assure peace and a safe return to the French army, extended Napoleon's line beyond the distance which it could really hold, and separated them into disconnected masses, exposed to be intercepted and cut off, to lose any magazines they had collected, and to perish of cold and hunger even in a barren and inhospitable country. In fact, after the march upon Moscow, the French army, without drawing reinforcements, strengthened, M. de Fezensac shows that it has been encumbering itself with a line of 300 leagues of communication behind, their first manœuvres, which sought to risk an action within the camp of Drissa, in a clumsy imitation of Torres Vedras, and all their subsequent movements. Even M. de Fezensac justly remarks that had they shown any skill or vigor, not a French regiment should have re-crossed the Beresina.

We have before alluded to the utter lack of discipline of the soldiery in the retreat, which broke up entire divisions into straggliers, and tempted the leading officers to load their own magazines they found on their route, and thus to insure the starvation of the troops behind them. The abandoned sutler pillage was never so frightfully self-destructive. Take, for instance, the scene among many at Smolensko, the first stage on the road to Moscow, where some supplies had been collected for the army :

"Smolensko, like Minsk, was one of the great depôts of the army. We booked forward to the abundance which we should find in the place, and, indeed, they had been well replenished. But when an army becomes completely disorganized, it is impossible to prevent the excesses of its ruin. The Imperial Guard alone received its rations and distributed them to the troops of other corps. Thus the provisions and in twenty-four hours the resources of months were consumed. The soldiers, left to their own discretion, abandoned themselves to all sorts of debauchery; the wine was forgotten by those whom it had protected. While we had the means of subsistence, we had not known how the magazine was made; when my regiment entered the town it was but without a morsel of food."

During the whole of the calamitous retreat, M. de Fezensac served as aide-de-camp to Ney, commanding the rear, a succession of Ney by his cool, patient, and heroic conduct. Some idea may be formed from the losses of this corps of those of the whole army. Ney's division, 5000 strong, on leaving 200 men, more dead than alive, without arms, clothing, or accoutrements, were all who were mustered upon the Vistula.

In the following campaign, when Napoleon's Empire was lost on the field of battle, M. de Fezensac served as Colonel of Brigade in the first corps, commanded by Vandamme, and, having witnessed the disaster of Culm, became a prisoner of war. His account of this affair coincides with the general opinion that Napoleon's discomfiture, although precipitated by the defection of his German allies, should be ascribed to the errors of his own last lieutenants to the exhaustion of his conscript army, and to the break-down of the military system that depended for its existence on victory. Strategical skill and military genius were not wanting; his position astride upon the Elbe appeared calculated to keep in check the Allies concentrating in the rear in the master's hand, and he was overthrown at last by generals, none of whom, with the single exception of Bruchen, showed any military capacity.

The volume is written in a spirit of candor which renders it very valuable to the student of military history.

Suicide in the French Army.—A Paris correspondent of the London *Army and Navy Gazette* thus refers to a recent case of suicide :

"A soldier of the 3d regiment of Grenadiers of the Guard, quartered at the fortress of Mont-Valerien, near Paris, was found the other day to have strangled himself in a small room, in which he was engaged in special work. It was a most singular method which this man adopted to make away with himself. After having procured some cane rods necessary for the execution of his fatal project, he fastened himself to the floor. It appears that he then tied his feet in such a manner that he could not kick about, placed a chair on a bench, put a cord round his neck, and at each end of the cord fastened a weight; he then threw himself on his back, and the weights causing the cord to press on his throat, he must have been shortly strangled. Perhaps there never occurred a more determined case of suicide: the preparations showed a good deal of calculation; then the tying up of the feet, and lastly the non-employment of the suicide's hands, which must have been left free, and with which he might of course up to a very late moment have removed the cord which was choking out his life. Not long ago some distinguished guards were published, and French men were much surprised at finding that the crime was far more common in France than in England. A Parisian remarked to me, 'Ah, but, Monsieur, in England people do nothing else all day long than kill yourselves.' He saw London fogs and gin flowing crowds of people into the Thames, he would have had very little difficulty in proving by drunkenness. The Frenchman generally kills himself out of love, or from an overweening confidence in a better life to come. Hardly a week passes without some unbefriended soldier on suicide being re-issued to the army, when that crime at times assumes the character of a violent epidemic."

AN ENGLISH OFFICER AT GETTYSBURG.

Extracts from the "Diary of an English officer," who was with the Confederates during their invasion of Pennsylvania, are published in the September number of *Blackwood's Magazine*. He was also present at the battle of Gettysburg, and records some interesting experiences of that engagement. The rebel staff officers whom he met "were all confident of the fight, "spoke of the battle," "as a certainty, and the "universal feeling in the army was one of profound contempt for an enemy whom they had beaten so constantly, and under such great disadvantages."

This overweening confidence, he tells us further on, was the ruin of the rebels, causing the loss of the battle upon which they had staked so much. The fight of the second day, as he claims to have the best reason for supposing, was one of premeditation on the part of Longstreet who insisted that it should have begun that day. Their plans were deranged, he also thinks, by the events of the first day. General Longstreet informed him, "that the "mistake they had made was in not concentrating the "army more, and making the attack the first day with 30,000 "men instead of 15,000. The result would in that case have been decisive." Their artillery practice was not confirmed by the fact that he had failed to capture the ammunition he needed from the enemy, as he had confidently counted upon doing so, the ordnance wagons of the Federal commissariat with Virginia were intercepted, he was compelled to fall "back to Winchester, and draw his supplies from thence."

The conduct of General Lee at the battle of Gettysburg, is described as perfectly sublime :

"He was riding about quietly, encouraging the broken troops, and was riding about a little in front of the wood, quite alone—the staff of the Army of Northern Virginia remaining further back in the rear. His face, which is always placid and cheerful, did not show the least sign of anxiety. Occasionally a word or two would fall as he was addressing to every soldier he met, a few words of encouragement, such as, 'Never mind, General, all this will be well in a day or two afterwards;' but, in the mean time, all good men must rally. We must have more ammunition, and we will get it.' Every time a wounded man passed him, and the slightly wounded he exhorted: 'Go to the rear, my man, and get your wound dressed in this manner.' Very few failed to answer his appeal, and I saw many badly wounded men who refused to leave the field."

"I saw General Wilcox (an officer who wears a short round beard and a slouched hat) ride up to General Lee in Virginia, and describe, during the state of his brigade. General Lee immediately shook him with both hands, and said, 'General Wilcox, I congratulate you; this has been my fault—It is I that have lost this fight, and you must help me to get out of the scrape as well as you can.'"

"I saw General Lee several times encouraging and reanimate his generals dispirited troops, and commanding them in person on the shoulder the whole weight of the repulse."

We have also a personal description of General Lee, who is spoken of as follows :

"General Lee is almost without exception, the handsomest man of his age I ever saw. He is 56 years old, but looks considerably younger, very well made, well set up—through soldier in appearance; and although rather above the middle height, he looks like a man of medium in every respect. I imagine no man has so few enemies, or is so much respected and beloved throughout the South. He agrees in pronouncing him to be as near perfection as a man can be. He has none of the reserve which generally characterizes Southern gentlemen, and his bitterest enemy never accused him of any of the greater sins. He is as free from pride as from reserve, and has a high black felt hat, and blue trousers tucked into his Wellington boots. I never saw him in any other dress, and he generally wears a large gray cape buttoned on his collar. He rides a handsome horse, which is extremely well managed, and is remarkable for the high state of health, and the almost arduous manner he always looks smart and clean.

"I have seen him under the hottest fire when he commanded the Virginia army, and he invariably declines all offers of hospitality, for the sake of his men, and will not even accept a tent, but lies down and sleeps sheltered the Rebel General. The relations between him and Lee are more as equals than as subordinate and chief. Jackson and Lee were very much attached to each other, and it is impossible to praise the former more than by praising Lee. I believe these two generals were as fine a pair of soldiers as ever commanded troops in any age or in the world. Both long for a successful termination of the war, in order that they may retire to their farms. Jackson's great ambition in his death the third in command of their army was just such another man as himself—a religious man, and a thorough soldier. Lee looks as if he is a religious man, though not so demonstrative in that respect as Jackson was, while the latter was a Presbyterian, Lee is a member of the Church of England. His only faults, so far as I can learn, arise from his extreme generosity."

General Longstreet is described as an Alabamian—a thickset man, forty-three years of age; he was an infantry major in the old army, and now commands the 1st corps d'armée. By the soldiery he is invariably spoken of as the best fighter in the army, and as the most unpopular officer. Stern discipline; he seems to require neither food nor sleep."

"Gen. Ewell is a remarkable looking old soldier, bald, with a prominent nose, and rather a haggard, sickly face, having no idea of being above the knee, he is still a complete cripple, and falls off his horse occasionally. Directly he dismounts he has to be put on crutches. He was Stonewall Jackson's confidant during his celebrated valley campaign, and proves an efficient successor to that General, who was much beloved by him, as I have been told by General Jenkins, for many of his victories. He used to be a great swearer—in fact, he is said to have been the only person who was unable to restrain that propensity before Jackson; but since his late (rather severe) wound, he has (to use the American expression) 'sworn off.'"

"General Pendleton, Chief of Artillery was West-Pointer; but in more peaceable times he is the priest of Episcopal clergyman in Lexington, Virginia. Unlike General Ewell, he is a Virginian, and has a fine soldierly appearance, and continues to preach whenever he gets a chance. On these occasions he generally wears a suit of black broadcloth."

"General Pendleton commands one of Longstreet's divisions. He is Rhodes, a North Carolinian, a tall, handsome, dark, and rather good looking character. He is the officer who, as Captain Probyn of the 17th Lancers, was sent by Sir Frederick Stovin to the United States in the San Juan Island affair, under General Harney, four years ago."

"General Ed. Stuart is a good-looking, jovial character, exactly like his portraits, and is a very popular officer, and a fine soldier. In quiet times he are relished by his handsome adjutant and proclivities. He is a Virginian, and is a thorough soldier, and a fine cavalry officer with garlands of roses. He also departs considerably from the severe simplicity of dress observed by the rest of the commands; but as no one can deny that he is the right man in the right place."

While bestowing great praise upon the rebel cavalry officers he is very severe upon the rebel cavalry itself, and evidently no great opinion of either the rebel cavalry or our own. Every impartial observer, he tells us, agrees that—

"These cavalry duties are miserable affairs. Neither party has any idea of reconnoitring with the least system, and the troops are provided with considerable boldness, until they get to within shout forty yards, when they all fire at once, and then retire. This is generally and the same alone should be used, they hesitate, halt, and commence a desultory fire, which is the most dangerous thing they can do, as it gives the enemy a chance in the surprise sense of the word; but on the other hand, the country in which they are to act renders any other system impracticable, as a rule."

General Hood is a tall, thin, wiry-looking man, with a grave face and fine intellectual head. He is only thirty years old, and has served in the best and most promising officers in the army. By his Texas and Georgia brigade he is said to be adored. He commanded the Texas Brigade, but his now been promoted to the command of a division of Longstreet's corps, and his brigade is still the pet. The best proof we met is the great object of the chiefs to check their innate glengarry and pugnacity, and to make them wear the regulation hat. They seldom succeed, as a rule, in in spite of his many virtues, the most incorrigible beings in the army of the world."

Of the Pennsylvania Dutch, with whom our author came in contact, he seems to have formed a very poor opinion :

"The Dutch are a very fine race, and are unquestionably people I ever met, and evenly state that they don't care which party gets the upper hand they will always be left about in the same circumstances."

In conclusion he informs us that, in the course of three months and a half through the entire length and breadth of the Confederate States, including Texas and the trans-Mississippi country,

"I have never met with one who was not anxious for a termination of the war; and I have never met a man, woman, or child, who contemplated the possibility of the success of the North with any feeling from this one destroyed Yankee. I have never been asked for mine or a single dollar, by man or woman, and I have left the country as I came when I was, and all spoke to me with the greatest confidence. I have always heard that the Southern people were hospitable, but this has befallen so many. All are prepared to undergo still greater sacrifices than they have yet made, and to continue the struggle as long as it is impossible to avert. They look to a successful termination of the struggle, and they look to it with confidence. I have left the country, date for it, and nearly all bargain for its lasting at least till Lincoln's proclamation is out of force, and that is the end of the struggle, which are as distinct from one another as the British is from the American Army, and I am sure that they are as much in earnest as either."

On returning across the lines, by flag of truce, to New York, Blackwood's officer was struck by the fact that

"I heard every one talking of the total demonstration of the Rebels as a certain fact, and all seemed to anticipate their approaching downfall. Even the Yankee officers agreed to the same effect, and in many four day's previously so full of fight as ever—much stronger in every respect than when I left it, and I am sure that the Rebels will find it a very different matter to what they have yet had to deal with."

In its own opinion, Lee's army had not lost any of its prestige at the battle of Gettysburg, but was in the highest spirits on the many refreshments tendered by the whole army of the Potomac, which it passed on its march to Virginia, or as approached its force within hail a mile of the Confederate artillery."

The U. S steamer *Nansemond*, blockading, all well, was spoken 18th inst., off Cape Lookout.

The U. S. steamer *Tioga* had the notorious steamer *Scanter*, alias *Gladiator*, run the blockade off Charleston on the morning of the 23d inst. Her commander, Acting Volunteer Lieut. Geo. Rich, had a hard fight of three hours.

The *Gladiator* took a great quantity of dry goods, boots and shoes, crockery, silk, cutlery, &c., &c., the cargo of the prize-ship *Chastelar*, recently captured by the *Tioga* off Cape Fear. The goods sold well and readily, realizing prices beyond the appraisement.

The British schooner *Julia Crocker*, from Old Harbor, Jamaica, bound to Nassau, was captured by the U. S. steamer *Ella and Annie*, off Long Island, Bayti, at noon on Sept. 1. A bark-rigged propeller, with high bulwarks, and a long, low hull, painted black, was discovered in chase with great speed heading for the prize. The *Ella and Annie* was hove to, and the vessel bended for Tortugas under slow head of steam. At 2 P. M. the chase gave up the pursuit, put off and headed eastward, and was lost in sight at sunset, steering north.

The schooner *Robert Crocker*, Captain Jones, arrived at Philadelphia on the 23d inst., from Nassau, and was captured by the Peconic Bay gunboat *Grand Point Jr.*, for violating the blockade of the Southern Confederacy. The *Robert Crocker* is a fine vessel, and is principally engaged in the trade between Nassau and Wilmington, N. C. She is also fitted out with sails, and has a tiny capped without one or two arrivals from Nassau, and is now in charge of a prize crew. The vessel at the time was accumulating at Bermuda, in consequence of some of the heavier vessels not being able to get over the bar. The *Robert Crocker* being deemed now rather dangerous owing to the Federal cruisers.

The U. S. steamer *Ella and Annie*, Acting Master's Mate, Sept. 15, states that the vessel had encountered a storm, in which she was dismasted, and lost her boats, and had her deck swept of all fixtures, and the storm occurred on the 13th. The ship finally weathered the storm, and subsequently arrived at Port Royal, where she has since been repairing. Other vessels of the squadron have also been in the same condition and many to repair here. But afterwards, through the correspondence of the Commodore, it appears that the vessels were now near being blown up. The consternation of all on board cannot be described when this had been discovered. We are now under orders to proceed to some northern port for repairs." The *Fort Jackson* is also detained here for repairs. The following officers are on board of her :—Captain, James Alden ; Lieutenant Commander, Thomas Pattison ; Lieutenants, Wm. Budd, Jr., Frederick Pierce, Acting Masters, W. A. Bradford, Acting Ensigns, Wm. Hoffman, Jr., Stephen Pennington, Acting Chief Engineer, Wm. M. Mann, Jr., Acting Assistant Engineers, Wm. Hoffman, Jr., Stephen Pennington, John L. Wilson, Acting Chief Engineer, H. Wakefield, Wm. W. Pierce, Chas. Wines, Jos. H. Eppes ; Acting Gunner, Thomas Reed.

NAVY YARDS.

BROOKLYN NAVY YARD.

The Yard has been hastily cleaned preparing for sea the following vessels, which the Department has ordered to be put in commission as soon as possible: The steamer *Paul Jones*, from the South Atlantic blockading squadron; the steam gunboat *Seneca*, which arrived here some time since; the steam transport *Fish Ark*; the steamer *Rich*mond, late of the Mississippi fleet; the *Mary Sanford*, Adam's Express steamer, and other vessels. The number of vessels entering from squadrons lately has rendered it incumbent on the authorities to fit out ships to replace them, which keeps our yards very busy.

Another new fast steamer, besides those mentioned, is to be built. Orders have been received from the Navy Department to commence as soon as convenient. That portion of the Navy Yard from which the steamer *Osceola* was launched is being cleared away, and the new building-ways are in course of construction to facilitate the building of the new vessels. Already the Westbourne, a large vessel, is under way at this Navy Yard, under the superintendence of Mr. Delano.

Mr. Secretary Welles, accompanied by Navy Department, instructing Lieutenant-Commander Fillebrown, the Executive Officer of the Navy Yard, to prepare for sea service. Five officers are attached to the New York Station have made so many friends for themselves as Mr. Fillebrown.

The United States steamer *Fort Jackson*, on account of some too prudence on part, we publish elsewhere, arrived on the 21st inst. in a disabled condition.

Last week, two hundred or more seamen of the *Brooklyn* marched down opposite the Navy-yard and discharged their pay. They stated that they had been ashore since the 26th of August, and had only received two months' pay, since which time they had spent the rest of them of the money due. Captain Meade, of the *North Carolina*, ordered them, and stated that he himself, in the absence of the Admiral, had taken arrangements to which they could have resorted to relieve half the pay due them. The *Brooklyn* has had no commanding officer permanently attached to her for some time. Captain Rumsey, who formerly had her, was detached a few days since on account of his leaving he told the paymaster to give the men one month's pay and no more. In obeying this order the crew have suffered some hardship, which they would not have done had they had a commander.

The C. S. sloop-of-war *Macedonian*, Lieutenant-Commander S. B. Luce, commanding, from Madeira, August 26, arrived on Monday. She had some very severe weather on the passage. The *Macedonian* left Newport in June last on purpose to take out the recent 215 midshipmen. No accident has occurred during the cruise. She left on Wednesday for Newport.

The *Western* troop and transport ship is now at the Brooklyn Navy Yard, taking in stores and provisions for the East Gulf squadron, Admiral Bailey. She will sail in a few days for the rendezvous of the blockade off Key West, Florida, South. Lieutenant and other masters sent to the Brooklyn Naval Lyceum before the departure of the *Vanderv* will be forwarded and delivered to the officers and men of that squadron.

The United States gunboat *Rhode Island*, Commander Norton from St. George, Bermuda, and 29 hours from Portsmouth Monroe, arrived at this port on the 21st.

PHILADELPHIA NAVY YARD.

A Naval General court-martial has been in session for some time at the Navy Yard, Philadelphia. Several cases have been brought before it, tried and condemned for various terms of imprisonment.

The U. S. gunboat *Ladona* arrived on the 10th from off Charleston. She carries seven guns, including two 30-pounders. She has been actively employed on the blockade off Charleston and Bull's Bay. She has had eight of her crew during the summer sent to the hospital in sight of the 8th instant. She returned to the Navy Yard for repairs to her machinery and hull.

The *Vixen* steamer arrived on the 21st, in tow of the United States steam frigate *Powhatan*, according to local papers. The *Antonia* will be fitted up for sea in such a manner as may seem best to the naval authorities.

The United States steamer *Conemaugh*, Captain Shufeldt, from Port Royal 16th inst., arrived on the 19th; she touched off Charleston, with despatches for the Admiral.

The *Wachusett* has been taken from the dry-dock. The *Conemaugh* has been taken to the first wharf above Morris wharf, where she will undergo repairs.

BOSTON NAVY YARD.

The United States steamer *Sassacus*, Commander Montgomery, the commanding officer at the Boston Navy Yard, to put the United States steam frigate *Niagara* in commission forthwith. She is to have stores, provisions, ammunition, and all other necessaries supplied for a six months' cruise, and to be commanded by Commodore Craven, late of the Mississippi Squadron. Several vessels in this yard are under immediate orders to go to sea.

VARIOUS NAVAL MATTERS.

The U. S. sloop-of-war *Macedonian* was cruising at the entrance of Gibraltar on 15th ult.

The U. S. steamer *Tuscarora* was at Rio Janeiro, ult of well, on the 23rd of August, on her homeward passage from the Southern fishery.

The U. S. sloop *St. Louis* left Madeira, August 26, for Cowes, ult still.

Rear-Admiral Farragut met the leading merchants of New York on Thursday, at the Chamber of Commerce.

A paragraph is copied from the Charleston *Courier* wherein it is stated that the rebel steamer *Sumter* was recently sunk between Matamoras and Tampico, in mid-summer by her crew, and since.

The new gunboat *Gazela* had a trial trip on Sept. 15. The naval correspondent pronounces her a perfect success. She is a screw, armed with two 11-inch guns in a revolving turret.

Work on the iron-clad battery *Puritan* is being pushed forward very rapidly. The turret is now being placed upon the vessel, and will be in operation in the entire completed, ready for service, in a few weeks.

A despatch from Paris announces that his majesty—It is asserted that the French government will redistribute the naval forces on the coasts of the Atlantic, in consequence of Lancaster-in Sonry.

Rear-Admiral de Lagrandiere has been appointed to take command of the French naval forces on the coasts of the United States of America, in place of Rear-Admiral Reynaud, whose term of service has expired.

The examination for candidates for admission to the Naval Academy will be resumed on the 25th. A large number of applicants are likely to appear, as the Government has taken measures to secure appointments from all sections of the country, so far as it can be done under present circumstances.

Captain Rhoades, commanding U. S. steamer *Shenandoah*, reports, under date of the 19th inst., off Key West, that C. U. S. blockade runner attempted to come out on the night of the 18th, but was driven back, and now lies a wreck at the mouth of the harbor.

Admiral Farrag writes from Cairo, Sept. 18, that all seems quiet on the Mississippi: there has been but one attempt to interrupt navigation, and that was by the guerrillas under the rebel Colonel Logan, which they attacked. Our gunboats are constantly picking up Rebel deserters.

A letter from Portsmouth, England, of the 21st inst., says:—"The *Admiralty* screw iron steamer, Commander Lethbridge, re-entered the outer moorings at this port for conveyance to Canada, to fill up vacancies in regiments now serving in that colony."

Colonel Mc'Cann Pleas, of the 165th Imperial navy, visited the Woolwich (Eng.) dockyard on the 7th inst., and inspected the various works in progress, and the arrangements connected with the establishment.

Paul Kanagawa, August 19, we learn that Japan continued unsettled. A British fleet of twelve vessels had sailed for the western coast of Japan to look after British interests. The Japanese had recently been taken to task by the American and French naval forces.

The Navy Department has received information of the capture of the steamer *Hattie* by the United States steamer *Sagamore*, on the 13th inst. She was from Brazos, Texas, loaded with cotton. The U. S. bark *Grey of the Sea*, on the 14th inst., off the Brazos, also captured the sloop *Richard*, five tons burden, loaded with eight and a half bales of cotton.

The construction of immense packet ships for transatlantic navigation is rapidly progressing in the yards of Mr. Webb, Williamsburg, one of these gigantic vessels will be ready for launching, it is thought, about the month of October next.

Extensive alterations are being made by the officers superintending the construction of the iron-clad vessels *Puritan* and *Dictator*, at the yard, to have them finished as soon as circumstances will permit. The engines (Ericsson's) of the *Puritan* will be ready to place on board and forward with all convenient speed, and the four navy iron-clads now in the yard will be pushed to their completion. The *Puritan* is 400 tons in naval circles that a whole fleet of ocean iron-clads is to be completed at the shortest possible moment.

A commission is being organized by the French Minister of Marine to be composed of engineers and officers of the navy, to proceed to the iron-clad frigates assembled at Cherbourg. Vice-Admiral Penaud, Captain of the Imperial yacht *Reine Hortense*, has been appointed president of the commission. The members of the commission were, it was said, to proceed to Cherbourg on the 15th inst.

The Russian frigate *Oriiske*, which has been in our harbor for some days past, has received orders to proceed to two vessels of the same nationality—the steam frigate *Alexander Nevsky*, Captain Feodorovsky, and the *Peresvet*, Captain Lessovsky, both fully fitted for the Cronstadt. The *Alexander Nevsky* is the flagship of Rear-Admiral Lessovsky, who commands the Russian fleet in our waters. She is of 800 horse-power, and mounts 51 guns. The *Peresvet* is of 850 horse-power, and mounts 44 guns. The following additional Russian vessels are expected to arrive in a few days:—Caroiite Voring, Captain Kroener, of 16 guns, 350 horse-power; Clipper Amerika, Captain Vitzoo, Capt. Kremer, of 18 guns, 300 horse power; Clipper Almaz, Capt. Kolodny, 8 guns, 300 horse-power; Clipper Lahtad, 8 guns, 300 horse power; Clipper Lahtad, 8 guns, 300 horse power.

NAVY GAZETTE.

NAVAL ORDERS.

NAVY DEPARTMENT,

September 16, 1863.

General Order No. 19.

An examination having been made of the engines and boilers of the steamers recently arrived at this port from the blockading squadrons of the Navy Yard, Philadelphia, the examining officers report that "salt and oxide have been found in the boilers to such an extent as to endanger the boilers" of the *Mercedita*, and "the bad condition of the boilers" of the *Sonoma*, and "the corroded state of the boilers" of the *Augusta* endanger the engine of the *State of Georgia* is reported as having been "in use only about two hours, when the boilers were found to be so much clogged up with hard dirt" the condenser nearly filled with yellow sand," a blackened tube broken and "the boilers of the *Wissahickon* in the air pump."

In consequence of this report, and in conformity with the determination heretofore announced by the Department, in General Order No. 16, August 29, 1863, the following officers are detailed for duty at the Navy Yard, Philadelphia, the examining officers report that "salt and oxide have been found in the boilers to such an extent as to endanger the boilers" of the *Mercedita*, and "the bad condition of the boilers" of the *Sonoma*, and "the corroded state of the boilers" of the *Augusta* endanger the engine of the *State of Georgia* is reported as having been in use only about two hours, when the boilers were found to be so much clogged up with hard dirt" the condenser nearly filled with yellow sand," a blackened tube broken and "the boilers of the *Wissahickon* in the air pump."

In consequence of this report, and in conformity with the determination heretofore announced by the Department, in General Order No. 16, August 29, 1863, the following officers are detailed for duty at the Navy Yard, Philadelphia, as Inspectors of the Engines and Boilers of Steamers recently arrived at this port from the blockading squadrons:

Chief-Engineers Isaac Bates, Wm. Wood, and Wm. Agnew.

The attention of the Department has been called to the almost universal complaint of defects in machinery and boilers of vessels returning from service. That they have been in the part of Engineers are not requiring defects as they occur, but waiting until they have to be reported on the return of the vessel, whereby the time for repairs is lengthened.

Engineers will hereafter understand that the condition of the machinery and boilers of vessels on the arrival of the vessel from a cruise, will be considered as a test of their efficiency and fidelity to the duties of their station, and that any defects which, in the examination then made, will determine whether they have discharged their duty to the service, or whether they have neglected it, or been guilty of gross neglect or incompetency, as to render their expulsion from the service an act of justice to the public.

GIDEON WELLES,
Secretary of the Navy.

REGULAR NAVAL SERVICE.

DETACHED.

Lieutenant-Commander R. H. Wyman (sick), from the South Atlantic Blockading Squadron, and awaiting orders.

Lieutenant-Commander J. P. Foley, from the Navy Yard, Philadelphia, and ordered to command the *Galena*.

Surgeon John S. Fox, from the *Brooklyn*, and ordered to the Receiving-ship.

Assistant-Surgeon Arthur Matthewson, from the *Wyoming*, and ordered to the New York Navy Yard.

Assistant-Surgeon Edward M. Wells, from the *Brooklyn*, and ordered to the *Niagara*.

Assistant-Surgeon Arthur Smith, from the *Rescue*, and ordered to the receiving ship, *North Carolina*.

Paymaster Henry Walker, Fleet Paymaster M. Mitchell; Paymaster, Charles Abbott; Passed-Assistant-Surgeon Henry C. Fraser, Jr., and James Atkins; Third-Assistant Engineers, Joseph Walton, Wm. Hall, Wm. Moore, Benjamin Hamilton, Frank H. Scribner; Gunner, Thomas H. Forrest; Carpenter, W. C. Long; Sailmaker, Thomas Hall, from the Receiving-ship, *North Carolina*, and ordered to the *Brooklyn*.

First-Assistant-Engineer B. E. Chessing, from the *Brooklyn*, as Chief-Engineer of the Receiving-ship, *Ohio*, at Baltimore, Md., and awaiting orders, or that vessel.

Second-Assistant-Engineer Herman A. Delius, from the Philadelphia Navy Yard, and ordered to the steamer Fulton.

Second-Assistant-Engineer Wm. Hall, from the *Neptune*, and ordered to the *Richmond*.

Third-Assistant-Engineer Webster Lane, from the *Minnesota*, and ordered to examination.

Commander Wm. K. Howell, from the command of the *Monocacy*, and ordered to command the *Nyrea*.

Lieutenant-Commander F. J. Severing, from the *Nahant* (sick), awaiting orders.

Lieutenant T. G. Corbin, from the Naval Academy, and ordered to the Receiving-ship at the Philadelphia Navy Yard.

Lieutenant-Commander J. C. Howell, from ordnance duty at the Philadelphia Navy Yard, and ordered to ordnance duty at the Washington Navy Yard.

Surgeon Charles Page, from the New York Navy Yard, sick leave, California (sick), and awaiting orders.

Assistant-Surgeon Wm. Longshaw, from the *Hires* (sick), and awaiting orders.

CONFIRMED.

The appointment, as Acting-Masters, of W. King, John Davis, W. A. Mitchell, Wm. H. Richmond, Henry Rogers, and C. S. Williams.

The appointment as Acting-Masters of Chester, A. F. Bush-ford, and F. W. Sumner; as acting-Engineer of Thomas Holland; and as Acting-Third-Assistant-Engineer, of H. S. Brown.

REVOKED.

The appointment of John W. Adams as Acting-Third-Assistant-Engineer.

RETIRED.

Active Assistant-Paymaster M. H. Simons.

Active Third-Assistant-Engineer John Still.

Acting-Master W. D. Mason.

LEAVE OF ABSENCE.

Granted to Active-Master's Mate Wm. Chesley, A. F. Bush-ford, and F. W. Sumner; as acting-Engineer of Thomas Holland; and as Acting-Third-Assistant-Engineer, of H. S. Brown.

REVOKED.

The appointment of John W. Adams as Acting-Third-Assistant-Engineer.

RETIRED.

Active Assistant-Paymaster M. H. Simons.

Active Third-Assistant-Engineer John Still.

Acting-Master W. D. Mason.

LEAVE OF ABSENCE.

Granted to Active-Master's Mate Jesse Miller.

Granted to Acting-Master's Mate Isaac Miller.

Granted to Acting-Master's Mate Lemuel Chester.

Acting-Master George E. Thurston, Acting-First-Assistant-Engineers, D. B. Foles, and Henry Hall.

DEATHS.

Deaths in the Naval Service, reported during the week ending September 19, 1863:

Charles Clinton, seaman, chronic diarrhœa, September 7th, Mississippi squadron.

James Lasher, landsman, chronic diarrhœa, August 31st, Mississippi squadron.

Frank Washington, contraband, remittent fever, September 2d, Mississippi squadron.

James Smith, seaman, chronic diarrhœa, September 5, Mississippi squadron.

Joseph Mccray, marine, intermittent fever, September 9th, Mississippi squadron.

Denis Donovan, landsman, peritonitis, June 12th, United States steamer *Sonoma*.

H. J. Richards, seaman, pneumonia, September 8th, Naval Hospital, Key West.

Charles Webster, Quartermaster, scurvy, September 16th, Naval Hospital, Key West.

James McMahon, coalheaver, disease of the heart, August 29th, United States steamer *Sonoma*.

John Keck, marine, yellow fever, August 31st, United States steamer *Sonoma*.

Thomas J. Jones, landsman, tonsilitis, August 27th, United States steamer *Sonoma*.

William E. Bad, Paymaster's clerk, remittent fever, August 24, United States steamer Colorado.

Charles A. Waters, marine, yellow fever, August 30th, United States steamer Colorado.

Stephen Cockburn, Acting-Ensign, congestive fever, August 19th, United States steamer *Sonoma*.

Thomas Hall, seaman, chronic scurvy, seaman, bronchitis, September 19th, Naval Hospital, Key West.

Joseph Hall, ordinary seaman, yellow fever, September 20th, Naval Hospital, Washington, D. C.

Robert M. Cleary, Chief-Engineer, exhaustion, September 19th, Philadelphia.

ARMY GAZETTE.

OFFICIAL DISPATCHES.

THE OCCUPATION OF LITTLE ROCK.

LITTLE ROCK, September 10, 1863.

To Major-General HALLECK, *Generalissimo-Chief*—

GENERAL—We have just entered Little Rock. The cavalry, under Davidson, is pursuing the enemy, who are in full retreat South.

Respectfully, F. H. STEELE, Major-General.

THE NORTHWEST EXPEDITION.

MILWAUKEE, September 17, 1863.

To Major-General HALLECK, *Generalissimo*—

The following dispatch, dated Headquarters, Northwest Expedition Camp, White River, September 15, 1863, is received:

GENERAL—Yesterday we surprised over four hundred lodges of hostile Indians, fought and dispersed them, killed over one hundred, and destroyed their camp and all the property. I have in my hands many prisoners.

Brigadier-General Commanding.

To JOHN POPE, Major-General Commanding.

OFFICIAL ORDERS.

WAR DEPARTMENT,

ASSISTANT ADJUTANT-GENERAL'S OFFICE,
WASHINGTON, Sept 24, 1863.

General Orders No. 396.

I. By direction of the President of the United States, Brigadier-General Joseph K. Mansfield, Inspector-General, is relieved from active service. His name will be entered on the retired list of officers of the grade in which he belongs, to take effect from and after the 1st of the act approved July 17, 1862; this order is to take effect September 15, 1863.

II. Colonel George D. Ramsay will assume the duties of the Chief of Ordnance, at Washington Arsenal, on receipt of this order.

III. Captain James O. Benton is relieved from duty in the Ordnance Bureau, on the completion of the duties with which he is charged.

By order of the Secretary of War:

E. D. TOWNSEND,
Assistant Adjutant General.

DISMISSALS

During the week ending Saturday, Sept. 19, 1863.

Captains Alexander McHenry, 19th Pennsylvania Cavalry; H. C. Beaman, 54th Massachusetts Infantry; and Wm. H. Lyon, 2d New Hampshire Volunteers, to date August 24, 1863. For absence without proper authority, having failed to report at headquarters Provost Marshal, and failing to appear before the Commission.

Captain Wm. H. Lyon, 2d New York Cavalry, and Lieutenant John C. Dodd, 7th Indiana Volunteers, to date August 24, 1863, for absence without proper authority, having failed to report at headquarters August 24, 1863, and failed to make satisfactory defense before the Commission.

Lieutenant William Calhoun, 154th New York Volunteers, to date August 24, 1863, for absence without proper authority, having failed to report August 24, 1863, and failing to appear before the Commission.

Captain Otto Diedrich, 29th New York Infantry, (dishonorably,) with loss of all pay and allowances, as a punishment for his base desertion of his command in the face of the enemy, and failing to the Government, and for desertion.

Lieutenant Samuel Wilson, 29th New York Cavalry, (dishonorably,) upon the recommendation of a military Commission, convened by Division Gen. Orders, No. 49, of the Army of the Cumberland, for the enlistment of drafted men, also within 70 feet of 317 to escape, and for general habits unbecoming an officer and a gentleman, to date Nov. 1, 1862.

Colonel Andrew A. Lechler, 79th Pennsylvania drafted militia, (dishonorably,) with loss of all pay and allowances, as of the date at which the regiment went out of service, for receiving compensation from the enlisted in the regiment for a separate organization, neglecting to show use rations drawn for the enlisted men of the regiment, and taking from the men and developing upon them expenses of his own offices and men.

Lieutenant-Colonel George Pilsington, 79th Pennsylvania drafted militia, (dishonorably,) with loss of all pay and allowances, as of the date at which the regiment went out of service, for receiving compensation from the enlisted in the regiment for a separate organization, neglecting to show use rations drawn for the enlisted men of the regiment, and developing upon the men and developing upon them expenses of his own offices and men.

Lieutenant-Colonel George Pilsington, 79th Pennsylvania drafted militia, (dishonorably,) with loss of all pay and allowances, as of the date at which the regiment went out of service, for receiving compensation from the enlisted in the regiment for a separate organization, neglecting to show use rations drawn for the enlisted men of the regiment, and developing upon the men and developing upon them expenses of his own offices and men.

Colonel Andrew A. Lechler, 79th Pennsylvania drafted militia, (dishonorably,) with loss of all pay and allowances, as of the date at which the regiment went out of service, for receiving compensation from the enlisted in the regiment for a separate organization, neglecting to show use rations drawn for the enlisted men of the regiment, and taking from the men and developing upon them expenses of his own offices and men.

First Lieutenant W. Reeder, Invalid Corps, to date September 17, 1863, for selling commissary stores and appropriating the proceeds to his own use.

RESTORED TO COMMISSION.

The following officers restored to their commissions, received the vacancies have not been filled by the Governors of their States:

Lieutenant-Colonel H. C. Hobart, 26th New York Cavalry, with rank and pay from the date of dismissal.

Lieutenant Benjamin Hodges, 26th New York Cavalry, with pay from date of rejoining regiment, provided the regiment is not deprived of its organization, to date August 24, 1863, and assigned to the 2d Regiment, U. S. cavalry arms.

Captain Alexander Hall, 3d Indiana Cavalry, with pay from the date at which he rejoins his regiment for duty.

RESIGNED CONSEQUENTS.

The following named officers, having been reported at the headquarters of the Army of the Potomac as absent without leave, and having notified that they will stand dismissed from the service of the United States unless they shall tender their resignations, or shall appear before the Military Commission in session in Washington, of which Brigadier-General Joseph K. Mansfield, U. S. Inspector, is President, and make satisfactory defense to the charges against them:

Failing to report at Annapolis, Maryland, as ordered, is charged.

Captain H. L. Crawford, Commissary Subsistence of Volunteers.

Lieutenant-Colonel Jos. S. Smith, chief Commissary Subsistence, second army corps.

Captain E. P. Alexander, Assistant-Quartermaster of Volunteers.

Surgeon H. S. Hewitt, United States Army.

Second Lieutenant Edward Quirk, 2d United States Cavalry.

Failing to report at Washington City, D. C., &c.

Lieutenant F. H. Tyron, additional Aid-de-Camp to General Fremont.

Major William McMichael, Assistant Adjutant General of Volunteers.

Captain M. C. Brown, Assistant Adjutant-General of Volunteers.

Being in the City of Washington without authority and failing to report at Headquarters Military District of Washington, as ordered.

Second Lieutenant M. Marjoe, 9th United States Cavalry.

Absence without proper Authority.

First Lieutenant George K. Brady, Regimental Quartermaster 14th United States Infantry.

First Lieutenant William Falck, Second United States Infantry.

Surgeon Edward C. Mandy, 12th New York Cavalry.

Captain Charles H. Whittemore, 9th New York cavalry.

Captain P. Lacy Goodlard, 8th Pennsylvania Cavalry.

Captain D. W. Beattie, 12th Pennsylvania Cavalry.

Captain C. B. Morgan, 12th Pennsylvania Cavalry.

Lieutenant J. A. Stewart, 12th Pennsylvania Cavalry.

Captain John Orahood, 4th Kansas Cavalry.

Captain Jeremiah Murphy, 1st Missouri Light Artillery.

Lieutenant C. M. Fuller, 16th New Jersey Volunteers.

Second Lieutenant Martin Field, 4th Connecticut Volunteers.

Desertion and appropriating to his own use money belonging to enlisted men of his company placed in his charge for safe keeping.

First Lieutenant Alfred Reid, 173th New York Volunteers.

Disobedience of Orders and conduct to the prejudice of good order and discipline.

Lieutenant-Colonel Edward H. Rigby, 1st Illinois Light Artillery.

Second Lieutenant Nat Smith, 2d Illinois Light Artillery.

Conduct unbecoming an officer and gentleman, drunkenness, breach of arrest, and desertion.

Second Lieutenant John D. Hart, 1st Kansas Volunteers.

DISMISSALS REVOKED.

The order of dismissal in the case of First Lieutenant George W. Spencer, 44th Indiana Volunteers, has been so amended as to honorably discharge him from the service of the United States, to date Sept. 7, 1863.

The order dismissing First Lieutenant Isaac Hastings, 7th Virginia Volunteers, from the United States service has been suspended in Special Orders from the department of the Rappahannock, May 29, 1863.

The order dismissing Captain John Jenk, battery A, 1st Virginia Artillery, has been revoked, and he has been honorably granted like at its date March 8, 1863.

The order dismissing Second Lieutenant Stuley Moorton, 2d United States Infantry, has been revoked, and Lieutenant Moorton ordered to duty with his regiment.

EXEMPT FROM BEING DISMISSED.

Captain J. S. Wilson, 2d Missouri Cavalry, to September 1, 1863, for failing to report at Annapolis, Maryland, as ordered, is exempt from being dismissed the service of the United States, having made satisfactory defense in his case.

ERRONEOUSLY REPORTED.

WAR DEPARTMENT,
SECOND COMPTROLLER'S OFFICE,
September 18, 1863.

SIR—I have respectfully to state that it appears that Major J. S. Dewey, Corps A. and I. G. Maj. Gen. W. T. Sherman, Engineers, and Captain James Curtis, C. S., were erroneously reported for failure to render their quarterly returns of property for June 30, 1863.

With great respect, your obedient servant,

J. BRANNAN,
Acting Comptroller.

To EDWIN M. STANTON, the Hon. Secretary of War.

MEDICAL DEPARTMENT.

ORDERED.

That the sick and wounded soldiers of the regiments named below, and those who may hereafter require medical treatment, be forwarded to the General Hospitals named:

The 2d, 3d, 4th, 5th, 7th, 9th, 9th and 10th U. S. Infantry, to Fort Columbus, New York.

The 1st U. S. Artillery, serving as shore, to Fort Hamilton, Md.

The 2d U. S. Artillery, serving as shore, to Fort Delaware, Del.

The 3d U. S. Artillery, to Fort Monroe, Va., Fort Washington, Md.

The 5th U. S. Artillery, to Fort Hamilton, New York.

The 1st, 2d, 3d, 4th and 5th U. S. Cavalry, to Carlisle Barracks.

The Regular Regiments serving in the Department of the Cumberland, to Nashville.

Those serving in the Department of the Tennessee, to Newport Barracks, Kentucky.

That so much of Special Orders No. 465, September 17th, be rescinded, as directs Acting Assistant Surgeon Roy to report to Major General Foster, commanding Departments of Virginia and North Carolina, and that he report to Major General Burnside in charge of Division No. 1, General Hospital, Annapolis, Md., and by letter to the Surgeon General, Washington, D. C., for assignment.

That the following ordered men be discharged the service of the United States, and ordered to the General Hospital Stewards of the United States Army:—

Private Edwin Kelley, Nine' 2d Massachusetts Battery.

" James Fry, Company G, 17th New York Volunteers.

" A. H. Hutchinson, Company K, 17th New York Volunteers.

" James Jones, Company E, 4th Pennsylvania Volunteers.

" Wm. Hoffman, Company K, 4th Ohio Volunteers.

" L. M. Sage, 9th Michigan Battery.

" Wm. Hall, Company B, 9th Pennsylvania Cavalry.

Sergeant T. H. Wagner, Company D, 7th Massachusetts Cavalry.

Commissary Sergeant Wm. Bell, 63d New York Volunteers.

Sergeant Joseph Wagner, Company K, 1st Virginia Cavalry.

Private C. G. Curtis, Company K, 10th Conn. Volunteers.

" Wm. Hall, Company B, 9th Pennsylvania Cavalry.

" James Parks, Company G, 63d New York Volunteers.

Sergeant Wm. Bell, Commissary Sergeant, 63d New York Cavalry, whose appointment was revoked by Special Orders No. 275, Current Series, from this office, is restored to duty from the date of revocation, it having been ascertained that he has not been blind, and that the reipient of his appointment has been discharged from the requirements of General Order No. 184, Current series of the War Department.

Surgeon Edward C. Mandy, 12th New York Cavalry, to Fort Independence, Boston harbor.

Surgeon Mandy to the 12th Regular Infantry, to Fort Hamilton, New York harbor.

Surgeon Mandy to the 14th Regular Infantry, to Fort Trumbull, Connecticut.

Surgeon Mandy to the 17th Regular Infantry, to Fort Preble, Me.

Surgeon T. A. Worrell, U. S. Volunteers, to report in person, without delay, to Major General Rosecrans, Chief of Staff, for temporary duty.

That so much of Special Orders No. 382, August 26, 1863, from the War Department, as honorably discharged from the service of the United States Surgeon Wm. H. Forwood, U. S. Volunteers, to report anew with General Order No. 184, 1863, from the War Department, be and the same is hereby revoked, and that he be ordered to report to Major General Halleck, for duty in the service of the United States, on account of physical disability.

That so much of Special Orders No. 382, dated 26th of the War Department, as remains out of service Surgeon William Arnold, 27th Volunteers, be honorably discharged the service of which he was mustered in, is revoked, and he is honorably discharged the service of the United States, to date July 13th, 1863, he having shown satisfactory evidence that he performed duty up to that date.

ASSIGNED.

William Nicholson, a third class clerk in the Surgeon General's office, has been assigned to temporary duty in the Bank of Capitals.

A Military Commission to consist of Surgeon U. S. Tripler, U. S. Army, Major J. S. Dewey, Corps A. and I. G. Major General W. T. Sherman, Maj. H. L. Industry has been appointed to meet at Chicago, Illinois, on the 1st day of October, 1863, for the purpose of examining and reporting upon the following subjects:

1. The plans for the purchase and the supplies of the City Hospital, at Chicago.

2. The abuses relative to pay received for soldiers' discharges, at the same hospital.

3. Everything connected with the management of that hospital during the time it has been occupied as a military hospital.

4. All matters in any way connected with the same.

The following enlisted men have been discharged the service of the United States and ordered to the General Hospital Stewards of the United States Army:—

Private C. B. Hall, Company E, 1st Minnesota Volunteers.

" E. Bowman, Company A, 10th New York Volunteers.

" E. B. Demary, Company A, 103d New York Volunteers.

" Wm. Hall, Company B, 9th Pennsylvania Cavalry.

" H. W. Jessup, Company G, 83d New York Volunteers.

LEAVE OF ABSENCE.

Surgeon Samuel B. Ward, U. S. Army, granted leave of absence.

Surgeon M. F. Bewell, 20th New York Volunteers, granted 30 days' absence for three days.

By direction of Captain George C. Gose, U. S. Army, granted leave of absence for 20 days.

Assistant-Surgeon S. S. Comstock, 124th New York Volunteers, for 30 days.

Acting-Assistant-Surgeon Maurice Tauber, U. S. Army, for 10 days

Assistant-Surgeon C. H. Hasbrouck, 5th Penn. Cavalry, for 7 days.

Assistant-Surgeon J. C. Allen, 7th Penn. Cavalry, for 7 days.

Acting-Assistant Surgeon J. Wilson, U. S. Army, for 10 days.

RESIGNED.

Surgeon S. M. Hamilton, U. S. Volunteers, September 19, 1863.

Surgeon William Moss, U. S. Volunteers, September 19, 1863.

MUSTERED OUT.

By direction of the President of the United States:

Surgeon M. A. Gosnell, U. S. Army, to take effect September 15, 1863.

Hospital Chaplain J. W. Hilton, U. S. Army, to take effect September 15, 1863.

DISMISSED.

Assistant-Surgeon Alexander Colins, on account of physical disability, and for previous dishonorable leave, as reported by the roles of his regiment.

DISPOSITION OF INSANE SOLDIERS.

(Circular, No. 15.)

SURGEON-GENERAL'S OFFICE,
WASHINGTON, Sept. 19, 1863.

The attention of all Medical Officers is especially called to paragraph 168, Revised United States Regulations, and to the General Order No. 15, dated Headquarters, Department of the Cumberland's Office, November 15, 1861, in regard to the disposition to be made of insane soldiers.

No insane soldier can be discharged the service on Surgeon's Certificate of Disability, unless his friends are known to be provided for and receive him.

JOS. K. BARNES,
Acting-Surgeon-General.

THE NEW ARMY REGISTER.

The new Army Register, after the long delay is at length completed. It is dated April 1, 1863, and contains no record of the numerous changes which have taken place since that date. The new register was published, 36 Major-Generals and 128 Brigadier-Generals of Volunteers; 1 Major-General and 19 Brigadiers of the Regular Army; and 250 of the latter; 275 commissioned officers have been promoted in the Regular Army, and 1,000 in the Volunteer Service. Of the 275 Regular Army:—

Adjutant-General's Department, 5; Inspector-General's, 18; Colonels, 16; Lieutenant-Colonels, 16; Majors, 16; Captains, 107; Adjutants, 30; Regimental Quartermasters, 30; Regimental Commissaries, 30; Aides-de-Camp, 3; Judge Advocate, 1; Quartermaster-General's Department, 5; Assistant Quartermasters, 255; Second Lieutenants, 90; Military Storekeepers, 25; Hospital Chaplains, 30; Medical Department, 5; Surgeons, 16; Assistant Surgeons, 30; Quartermasters' Sergeants, 31; Commissary Sergeants, 7; Drum Majors, 9; Principal Musicians, 9; Hospital Stewards, 30; Ordnance Sergeants, 30; Sergeants, 300; Corporals, 300; Privates, 3,000; Musicians, 300; Artificers, 150; Buglers, 150; Hospital Stewards, 30; Artificers, 150; Buglers, 150; Hospital Stewards, 30; Artificers, 150; Buglers, 150; Hospital Stewards, 30

A VISIT TO THE FLORIDA.—A correspondent of the London *Times*, writing from Brest, describes the appearance of the corsair *Florida*. "She lay at anchor among some of the giants of the French Navy, a long, low, black, rakish-looking craft, not overmuch in appearance, yet useful, every inch of her, a pigmy among those monsters, and yet a formidable pigmy, even to the unpractised eye, the Palmetto flag flying proudly from her mizzen." He paid his respects to Captain MAFFITT at the earliest possible moment, and was very hospitably received. That occurred at the interview which this record:

"The Captain is a slight, middle-sized, well-built man, about forty-two; a most gentlemanly man, with a determined air, full of life and business; apparently in the prime of health, and equally ready for a fight or a jollification, and whose preference for the latter would by no means interfere with his cruelliest duties as the former. His plainly furnished little stateroom looked as business-like as a merchant's office. The cool inside in the cabin was strewn with books and innumerable manuscripts, and on the shelves were fetishes of looking-rows of account books, charts, &c. In any observer of the cabin, as of every part of the *Florida*, that none of it appears to have been built for ornament, all for use.

Captain MAFFITT forthwith began an animated recital of his cruise and adventures, which is forty-two years old, and is the oldest officer on board. All the others are under it. Of the Confederate States, and most of them were officers in the United States Navy before the outbreak of the war. The oldest of the lot, then, is not more than twenty-three. The men are more mixed. There are one hundred able seamen on board the *Florida*, and about fifty officers. Four fine fellows are from the neighborhood of Boston. Captain MAFFITT says he has hardly ever taken a prize, but what some of the crew of the prize have come forward to say, they would like to join us. Generally so speaking, he has to refuse; but if he sees a very likely fellow to take him on.

The English vessel that I spoke to say about his successful feat at Mobile. In his opinion it has been the greatest naval feat of modern times. He described and went over all the incidents of the affair, and pointed proudly to the marks of shot and shell on the mainmast enough, upon the masts and smoke-stacks. The *Florida* was struck with three heavy shots in that encounter, one cue striking the mainmast in the side of the ship where the mischief caused by the 11-inch shell had been repaired. The *Florida* made her escape to Pensacola, for which she received, the sea running too high to admit of her entering, and the pilot refusing to being too much occupied in the management of the ship. The Captain showed a watercolor sketch, and drawn by one of the (now midshipmen) of the *Florida* running the blockade. It would not have disgraced a professional artist.

The only broadside which the *Florida* has fired in anger was against the Federal armed merchantman, which she encountered some forty miles from New York. The *Everett*, a very large vessel, did not carry her guns in the best of her way of, and succeeded in escaping. When they ventured within forty miles of New York they did not know that the Admiral of the *Tycoon* (one of their 'outfits') had put New York under the guard, and they soon found that there were about seventy armed vessels out scouring for them, and so they made off. "We never saw a prize after that," said Captain MAFFITT, 'and we don't avoid one. You see we've only two vessels against fifteen hundred. All we could stand a good chance of. Our object is merely to destroy their commerce, so as to injure the enemy. We've taken altogether seventy-two prizes, and consider the value at about $15,000,000. The *Jacob Bell* alone was worth $2,000,000."

MARSHAL NEY.—Among a number of interesting sketches appearing from the pen of LEON'S army, in a recent work by a French veteran, is the following in regard to Marshal NEY: "Marshal NEY had a fine figure at a distance. In his marches he was always unbridled, and never spoke to a soldier except when necessary. The side-de-camp for the day could not enter his room except on duty, or when ordered to do so, and it was only then that the Marshal exchanged a word with us. He ate his meals alone, and never invited one of his aides-de-camp to partake of them. Such was his new situation and his anxiety to preserve his rank. The first Marshals of the Empire appointed in 1804 had been generals of the Republic, and the transition had been sudden. In 1796 Lieutenant NEY had ordered his officers to address each other as 'monsieur' for years later and these generals became dukes and princes. That change, however, raised the new-made Marshal, who believed, moreover, that his dignity was envied. He thought he could only make himself respected by standing aloof, and he went a great deal too far in this direction, for this mode of conduct was very injurious to the service."

CLAIMING EXEMPTION.—Yesterday, says a late Philadelphia paper, a man in one of the districts claimed exemption on account of near-sightedness. Without glasses he said he was quite blind, at a distance, and at night was wholly helpless. Glass after glass was given him, but, on their use, it was found that none suited him. With near-sighted glasses he could not make out the face of a friend across the street, and with far-sighted glasses he couldn't read a line. At last, however, a pair of spectacles was found which seemed to suit him to a nicety. He could read with them, ran with them, and in fact they were exactly the thing. That being the fact, and seem to, the Doctor informed him that he was entitled to only ordinary window pane, and that his claim for eye-disease could not be allowed. The spectacles on the Surgeon, and the youth was held for duty, and passed out the back door, a sadder and a wiser man.

USE OF RUBBER IN SURGICAL OPERATIONS.—The Scientific American, published by MUNN & Co., Solicitors of Patents, publishes in the *American Medical Times*, a tabular statement of thirty-three surgical operations performed by him, with the use of sulphurine either as an anæsthetic. These operations are given to show the falsity of the objection urged against the use of ether by the advocates of chloroform, on account of the danger of fire and explosion from electricity when the former is used. Some of these operations were among the gravest in surgery, and in all the anæsthetic effects were perfect, and the removal of large tumors: a number of these tumors were of great size, and after having been removed during the etherization, the time required, however, in no case exceeded that which is usually required for the removal of a tumor of one-and-a-half minute. The quantity varied from one-and-a-half drachm to sixteen drachms. The agent used by Dr. L. is a pair of scissors and stiff towels, folded in the shape of a cone, and a handkerchief or soft cloth, on which sulphur is poured, is thrust into the apex of the cone.

GENERAL THOMAS.—The rebel Colonel ROBERT C. HILL publishes a card in the Richmond *Enquirer* defining his position, in which he says:

"I am opposed to peace on any terms except independence. I am willing to fight to the last as we may dictate; which, in my opinion, will be after the fall of Washington. Meanwhile, the exclusive navigation of the Mississippi below Cairo, full indemnification for all losses sustained, and the unconditional and unrestoration of Fortress Monroe, Jefferson, Key West, and all other strongholds which may be in the hands of the enemy at the close of the war. If they are unwilling to accede to these terms, I propose an indefinite continuance of the war, or the recognition of the secession of the old Union break to pieces from mere rotten ness, and not lose them. I see nothing in the step in the only first-class power on the Western hemisphere, and take possession of the country as subjugated and conquered provinces."

OLD AND NEW WORLD BLOODSHED.—The general supposition that the war in which we are now engaged is the bloodiest that has been waged in modern times, is in fact erroneous. It appears from the best historical evidence that in the battle of Leipsic, fifty-four thousand men enrolled in the armies of France in 1811, only one hundred thousand were alive in 1813, and that in the loss of the Russians in the wars with NAPOLEON, was, according to the London *Times*, not less than "five millions! as seen in the grave of life." Frauce in the same period lost about six millions. We have not yet approached the old world in wholesale butchery.

"BORDER AND BASTILES" is the name of a new English work by the author of Guy Livingston. It is an account of his "offering his sword" to rebels, after considering the reason about his intention to do so, not only in the light of a duty, but the highest duty. The work speaks particularly of "a matchless pair of riding boots" he purchased of Fagg, and of his wearing as a part of his military equipments. He was arrested while attempting to cross our lines to the enemy's, and sent to Washington, where after his return to England, he published his experiences.

THE THREE GREAT NAVIES.—The *Journal of Commerce* thus states, in the aggregate, the navies of the three leading commercial nations, compared last year with these:

	Iron-clads.	Steam vessels
France	10	322
United States	24	427*
England	36	341†

* All classes, 427. † Including 63.

France and England each have four iron-cased ships at sea. The former has two more nearly, if not quite, ready for sea, and ten on the stocks. England has four more nearly ready, and eight in an advanced state of construction. The United States, at the date of the last annual report of the Secretary of the Navy, had fifty-four iron-clads, including thirty-two armored iron vessels, (many of which were unfinished,) and a number have been added since.

INDIGNATION AGAINST JEFF. DAVIS.—The Charleston (S. C.) *Mercury*, of September 2, says:—Although carefully covered over with the mantle of sanctuary by Congress, enough has been disclosed by sharp realities, to show the total incompetency of President DAVIS to govern the affairs of the Confederacy. He has not the confidence of the army, and not of the people; and if an election to-morrow was to be held for President, we believe that he would not get the vote of a single State in the Confederacy. Yet if the Provisional Congress should do its duty, Jeff. Davis would be elected President of the Confederate States for six years.

DESERTION.—While the continental army was operating on the North river in 1779, desertion prevailed to such an extent as to chafe the interference of the Commander-in-Chief. Orders were accordingly issued by General WASHINGTON, that *all spies, deserters, and every deserter* taken in the fact. Colonel REED, when afterwards a member of Congress from Pennsylvania, appealed to the floor of the Representatives, in a debate on the Seminole war, in favor of a more humane and discriminating action, because a deserter, taken in the fact, to be executed on the spot.

The attention of our readers is respectfully called to the advertisement of Messrs. M. WARD & Co., which will be found in another part of this paper. They are importers and dealers in the best articles of this firm, and can vouch for their responsibility. They have unsurpassable facilities for any make, as we have a thorough knowledge of their goods, which enables us to speak reliably to our patrons. This notice, of course, is intended for such of our readers who are acquainted with this firm; to all who know them, no recommendation will be necessary.

[Advertisement.]

We refer our readers to the advertisement of E. K. Conklin, 320 North Front street, Philadelphia. This house has been established for the sale of Fine and Unadulterated Wines and Spirits only. Settlers in Kansas, Minnesota, and the Pacific Territories, in the settlement of the Army and Navy, should give this house a call. Their goods are strictly and favorably known in the wine trade, is connected with the firm.

MARRIED.

Announcements of marriages and deaths should be paid for at the rate of fifty cents each.

JOCELYN—MARSHALL.—On Wednesday, May 8th inst., by Rev. HILL, Lieutenant-Colonel GEORGE C. JOCELYN, Signal Officer, United States Army, to Miss ELIZABETH, daughter of the late H. L. MARSHALL, of Georgetown, D. C.

MARSHALL—JOCELYN.—At Roxbury, Mass., 8th inst., by Rev. Dr. Thompson, Colonel HENRY M. FLAGG, of Concord, N. H., to Miss SUSAN, daughter of the late Colonel THOMAS JOCELYN, U. S. A.

JACKSON—REED.—At Bristol, Pa., 10th inst., Mr. CHARLES ANTHONY JACKSON, U. S. N., to Miss EMILY F., daughter of Captain A. J. REED, of Bristol.

DIED.

LIGGETT.—Died on the 30th inst. of the Regt. Infantry, while commanding within the limits of the Department of Kansas, Brevet Major General WILLIAM S. HARNEY, in the 76th year of his age.

WARD.—In this City, on Saturday, September 19, at the residence of her father-in-law, Commodore LOUIS, Surgeon Navy, in the 23d year of his age.

OBITUARY.

THE DEATH OF GENERAL SAM HOUSTON, of Texas, is announced by rebel papers. General HOUSTON was born in Virginia in 1793. For a time after arriving at age he was made a Lieutenant in 1814. He was a District Attorney in Tennessee, Representative and last Governor of Tennessee. He lived for a number of years among the Cherokee Indians in Arkansas, and subsequently emigrated to Texas, where he took lead in the struggle for liberty against Mexico, and was twice elected President of the young republic. After the annexation to the Union, General HOUSTON represented many years in the United States Senate, and was a prominent candidate for the Democratic nomination for a time, resisted Secession, but was over-ruled by events. He was the best known man in Texas, and the Richmond papers, it is suspected this General HOUSTON is the author of the Confederacy, which has the old friends in other Loyal States have no doubt. He was a man of great natural ability, and his has been clustered with all sorts of incidents.

NAVY DEPARTMENT,

BUREAU OF PROVISIONS AND CLOTHING, August 31, '63.

SEALED PROPOSALS will be received at this Bureau until 3 o'clock p. m. on the 15th day of October next, to supply the Navy Agents at the Fifth and seven hundred barrels of Navy Beef—to be delivered at the Brooklyn Yard within sixty days after bids are opened. Each barrel of beef to contain of the quarters, one-half to be composed of the hind quarters, and one-half of the fore quarters, and to be of the kind commonly known as "Navy Mess." Each barrel to contain two hundred pounds of beef, and to be packed in the manner now required by the Navy Regulations. The beef to be subject to the inspection of such person as may be appointed by the Navy Agent at Brooklyn, and no beef will be received which shall not be pronounced by him to be of the first quality. The beef to be delivered in such quantities as may be required by the Navy Agent at Brooklyn, and the same to be delivered at the Navy Yard, Brooklyn, free of cost to the Government. Bidders are requested to state the price per barrel for which they will contract to furnish the beef, and their bids must be accompanied by the written guarantee of two responsible persons, that if the contract be awarded to the bidder, he will enter into bond, with sufficient sureties, for the faithful performance of the same. Payment will be made in such funds as may be furnished to the Navy Agent at Brooklyn for the purpose. Bidders are requested to write their names in full, giving the Christian name at length, and their residence, and to distinctly state in their bids the number of barrels they propose to furnish. Bids must be addressed to the undersigned, and endorsed "Proposals for Navy Beef."

☞ The Brooklyn Daily Eagle will please insert the above advertisement once a week until the 15th day of October, and send their bill to this Bureau for payment.

W. H. GLENDY,

Commissary General of Subsistence.

TREASURY DEPARTMENT OF THE STATE OF NEW YORK.

COMPTROLLER'S OFFICE,

ALBANY, August 31, 1863.

WASHINGTON, August 10, 1863.—Whereas, by satisfactory evidence presented to the undersigned, it has been made to appear that the Second National Bank of the City of New York, in the County of New York, and State of New York, has been duly organized under and according to the requirements of the act of Congress, entitled "An act to provide a national currency, secured by a pledge of United States stock, and provide for the circulation and redemption thereof," approved February 25, 1863, and has complied with the provisions of said act required to be complied with before commencing the business of banking:

Now, therefore, I, Hugh McCulloch, Comptroller of the Currency, do hereby certify that the Second National Bank of the City of New York, County of New York, and State of New York, is authorized to commence the business of banking under the said act aforesaid.

In testimony thereof, witness my hand and seal of office, this thirteenth day of August, 1863.

[SEAL.] HUGH McCULLOCH,

Comptroller of the Currency.

UNITED STATES INTERNAL REVENUE, FIFTH COLLECTION DISTRICT, NEW YORK.—Whereby notice is hereby given that the lists containing the valuations and assessments of taxes above the sum of $600, for the year ending 30th June, 1863, in the Fifth Collection District, comprising the Seventh, Tenth, Thirteenth, and Fourteenth Wards of the City of New York, will be open for examination at the office of the Assessor, No. 58 Broadway, for the term of fifteen days from the date thereof, and that the Collector will hear appeals at the office above named, after the expiration of the said fifteen days, until the 30th day of September, between the hours of 10 A. M. and 4 P. M., relative to any overcharge or excess alleged to have been made by the Assistant Assessors. Provided, That the question to be determined by the Assessor, on an appeal respecting the valuation or examination of property, or objection to duty or taxation, shall be, whether the valuation complained of is or is not in a just relation to the like property, or other valuations in the same assessment district, and whether the considerations be or be not sufficient to show that the duty or assessment complained of should be made in writing, and shall specify the particular matter complained of, and the reasons for the objection so requested, and shall, moreover, state the ground or principle of valuation contended for by appellant.

O. D. F. BELLOWS, Assessor.

Dated New York, Aug. 31, 1863.

D. VON NOSTRAND,

192 Broadway, New York.

UNITED STATES

ARMY AND NAVY JOURNAL;

A WEEKLY NEWSPAPER, DEVOTED TO THE INTERESTS OF THE ARMY AND NAVY, AND TO THE DISSEMINATION OF CORRECT MILITARY INFORMATION.

On Thursday, the 27th of August, the undersigned will commence the publication, under the above title, of a weekly newspaper, devoted to the military and naval affairs and to the discussion of subjects relating to the defence of the United States. The Army and Navy Journal is established in the interests of no party: it will be controlled by no clique. Its independence will be absolute. Avoiding all personal and political bias, its endeavor will be directed solely to the establishment of a sound military and to the elevation of the public service in all its departments. Its pages will be devoted to impartial military criticism, to the publication of authentic and reliable discussion of topics coming within the scope of its observation, and to a full and faithful record of all subjects of interest to those in any way connected with military or naval affairs, or interested in the art of war. The Department of the Army, which now has an enthusiastic association with warlike operations, will receive adequate attention in this connection, and the interests of the Commercial Marine will be looked to at appropriate place. Among other matters the columns of the Journal will contain from week to week:

1st. Full official lists of all appointments, promotions, changes of station, deaths, resignations, dismissals, and other changes in the personnel of the two services.

2d. A full and reliable record of all active operations by the Army and Navy.

3d. A summary of all official orders proper for publication.

4th. A full account of the operations of the Coast Survey and the Reverse Service, and of all changes connected with the Light-House Establishment.

5th. Changes in the medical department of the two services, and such matters relative to military surgery and the sanitary condition of the Army and Navy.

6th. Descriptions of inventions and improvements relating to the Art of War, and of experiments and discoveries illustrative of military science in this department of progress.

7th. Narratives of military and naval exploits and adventures, accompanied by authentic reports of the services. Answers to questions in regard to difficult or disputed tactical matters, or other subjects suggested by correspondents.

8th. An account of important movements of foreign armies and navies, with notices of new works in the several of the services of foreign nations.

9th. Notices of literature, of the drama, art, or science to the Army and Navy.

10th. Notices of military and naval engineering.

11th. Station of the Naval vessels in commission; and, in general, all matters relating to the Army and Naval service.

The editorial discussions upon subjects of interest to our soldiers and sailors.

The publication, in short, of whatever comes in all parts of the world of value to our Army and Navy.

The Journal will be prepared to meet the demand, Military and Naval quarrel, but at the same time a thoroughly independent and impartial spirit will be in with interest by the families and friends of those connected with the military and naval service of the country, and by the public generally.

The publication which Military and Naval affairs have assumed in the public mind renders apparently unnecessary that they should have in the press an adequate representative. The Army and Navy Journal will undertake in the discussion of subjects coming under its notice, the difficult position that the Army, according to the National Union, shall command itself to the people. It will show that the Army of the country is necessary in every war, barrack, hospital and warship, and that it is the duty of every citizen to support such a demand, and it shall be the purpose of the proprietors of the Journal to make it such a paper that every citizen will be proud to recognize as their organ, and which will be found in the hands of every officer and soldier in any of its class in the world. Arrangements for obtaining the most reliable information from the seat of war, from detached officers on Military and Naval affairs in the various departments of the service, and from correspondents in all parts of the country, have been made, and no pains will be spared to render the Journal worthy of the confidence of the public.

The Journal will publish Military and Naval affairs from the standpoint of the service, respectively as officers of

SCHUYLER, HARTLEY & GRAHAM.

WHOLESALE AND RETAIL.
BY
ROBERT, BOURNE AND AUTEN,
Stationers,
Printers,
Lithographers
and Blank-Book
Manufacturers.
174 and 176 Pearl street,
NEW YORK.

THE SECRETARY OF THE TREASURY
Has authorized me
TO CONTINUE MY AGENCY
FOR A BRIEF PERIOD,
And until further notice, I shall continue to receive
Subscriptions to the
5-20 LOAN AT PAR,
BY MY OFFICE,
And at the different Sub-Agencies throughout the Loyal States.
JAY COOKE,
Subscription Agent,
114 South Third Street,
Philadelphia.

WALDEN & WILLARD,
Late of U.S. Navy,
ARMY AND NAVY BANKING AND COLLECTION OFFICE,
187 FULTON AND BROOKLYN,
and 54 WATER STREET, CHARLESTOWN, MASS.
Prize Money, Bounties and Pensions Secured and Paid—Pay, Accounts and Claims Collected.

☞ All Government Claims promptly collected. Communications by mail will receive immediate attention.

WE RESPECTFULLY REFER TO THE OFFICERS NAMED BELOW:
Commodore William Bodford, Captains James F. McKinney, Stephen C. Rowan, A. Ludlow Case; Commanders Alexander Gibson, C. R. P. Rodgers, John Rodgers, Lieuts. Lloyd Phoenix, Reading, Ed. Barrett, T. S. Fillebrown, W. D. Whiting, Geo. Brown, Geo. Dutch, J. Antisell, Surgeon's Steward Conroy, W. S. Eaton; Master William H. Brownell, Assistant Master W. Jenkins, Wm. Ian Hayes, S. Browne, C. W. Leaman, S. S. Gray; Acting Paymaster G. Brown-den Redfield.

BALL, BLACK & COMPANY,
569 and 507 Broadway, NEW YORK,
Manufacturers and Importers of
MILITARY GOODS.
FINE PRESENTATION SWORDS constantly on hand, and made to order, which, in style of finish, and elegance of design, are unsurpassed.
REGULATION SWORDS for the Army and Navy.
EPAULETTES, SASHES, BELTS, EMBROIDERY, &c.
REGIMENTAL STANDARDS, NAVAL FLAGS, GUIDONS and PENNONS of Every Style. Designs furnished, and Orders promptly executed.

HORSTMANN BROTHERS & CO.
Fifth and Cherry sts.,
PHILADELPHIA.
Manufacturers and Importers of all kinds of
MILITARY GOODS,
Staff, Field, and Line Officers' Equipments, on hand, a trade to order in an elegant style.
Sashes, Belts, Cords, Swords, Spurs, Buttons, Sword Knots, Epaulettes, Shoulder Straps, Fatigue Caps, Clothe, Embroideries, Presentation Swords,
Only Contractors for Navy Revolvers.
Navy and Marine Officers supplied with everything on their Requisitions. Army Regulation Caps, Patents, Epaulettes, Swords, Belts, &c. Also, Silk and Dress Hats, Regulation Caps, Feathers, &c.

PRESENTATION SWORDS,
REGIMENTAL COLORS, Etc.
BALL, BLACK & CO.,
550 & 552 Broadway, New York,
DEPOT OF GENERAL EQUIPMENT,
Completing everything pertaining to the PERSONNEL or CAMP FURNITURE of the SOLDIER. Offers to supply the necessaries of Officers and Soldiers, the purchase of uniforms and material, will do well to examine this stock. Depot of Foreign and Domestic Arms, Uniforms and Miscellaneous Trappings.

EVANS & HASSALL,
MILITARY FURNISHERS,
448 Arch street,
PHILADELPHIA.
Swords, Sashes, Belts, Pascals, and everything necessary for the complete outfit of Army and Navy Officers; Hats, Caps, Feathers and Company Flags. A liberal discount to the trade.

SMITH & SPALDING,
(Late James & Smith),
Nos. 15 Dutch and 122 Broadway,
NEW YORK.

THE MILITARY SITUATION.

THE situation during the past week presents one of those momentous transition periods when the elements are rushing to new combinations—when the pieces on the great chess-board of war are undergoing rearrangement preparatory to a new and stupendous game. There is every indication that the rebels, chagrined at the failure to annihilate ROSECRANS in Georgia, but still feeling the thorn he must be in their soil, so long as he holds Chattanooga, are preparing for another and still more determined movement to drive him out. Nothing could more plainly reveal the high value the Richmond chief set upon the possession of the position and lines which General ROSECRANS has gained, than the fact that, notwithstanding our heavy losses in the battles at Chickamauga Creek, and the loss of prestige which the Army of the Cumberland (beaten for the first time by BRAGG, whom they had already half-a-dozen times defeated) must suffer as the result, in the failure to drive ROSECRANS from East Tennessee, is regarded as equivalent to a rebel defeat and a Union victory. The Richmond *Whig* in an editorial article, under date of the 23d September, gives such pointed expression to this conviction that we put it on record here:—

"Situated as ROSECRANS is," says that journal, "the victory that does not dispose or capture his whole Army, is a lost opportunity. If he is permitted to hold Chattanooga, then our victory will be fruitless, and we have only to mourn that so many brave men have died in vain, and bitterly that that fatal battle has sealed his faith with his blood. ROSECRANS must not only be beaten in battle, but he must be destroyed or driven from East Tennessee; otherwise the battle might as well not have been fought. If this stronghold is not wrenched from him now, it will hardly be hereafter. If he holds it, he holds a *point d'appui*, from which he may at any moment strike at the very vitals of the Confederacy. He holds a region pestilent with disaffection, that needs only the presence of a Yankee Army to ripen into full-blown treason. He holds the country that must supply meat for our Army, nitre for our powder mills, and coal and iron for many of our manufacturing establishments. The possession of that country is of indispensable necessity to us. It is the prize for which BRAGG is contending. Until he has won it we can but rejoice with fear and trembling over what he has done. Should he win, it will be the superbest achievement of the war."

To meet the massing of troops by which the rebels are preparing to carry out this design (to which JEFF. DAVIS has committed himself, by a declaration lately made by him in the Capitol at Richmond, that he will "snatch Tennessee from the Yankees if it takes all the armies of the Confederacy") the one resort is the powerful reinforcement of General ROSECRANS. It is gratifying to be assured that this work is being energetically pushed forward. Thus two great Armies are collected in Southern Tennessee, each of those armies in great measure, and certainly more than on any other battle, will hang the issue of the war. A fortnight has now passed since the battles of Chickamauga Creek, and it is not improbable that within the coming week the two great armies will have met.

Of the immediate situation at Chattanooga there is but little to be said. General ROSECRANS' Army is well massed at that place, and the completion of the line of earthworks and rifle-pits, which the rebels had planned and partly constructed for the protection of the Southern approaches of the city, is being pushed on. There are two lines of defence on the road to Chattanooga, six hundred yards apart. All the dispatches from Chattanooga dwell on the strength of the position; and a declaration of Quartermaster-General MEIGS was the other day cited to the effect that it "cannot be taken short of a regular siege." We regard these views of the strength of the position as greatly exaggerated, and, besides, they have no bearing on the relations which the attack and defence would most probably assume. The facilities for turning Chattanooga are very great, and it is probably a movement of this kind threatening ROSECRANS' communications which will be attempted by the rebels when they feel strong enough, unless anticipated by a forward movement of the Union Army. Spite of opposing rumors General BURNSIDE still holds Knoxville. A dispatch to a Richmond journal from Bristol, Tenn., under date of September 28, states that the Union force burned the railroad bridge, at CARTER'S Station, twenty miles from Bristol, on the Virginia and East Tennessee Railroad, on Saturday; evacuated the place, and retreated in the direction of Knoxville, the rebel forces pursuing. Their cavalry was stated to have occupied Jonesboro' on the 27th. Our latest dispatches from General BURNSIDE are up to Wednesday afternoon, when no offensive movement had been made by the enemy. The rebel lines are advanced within four miles of Chattanooga, and the enemy holds Lookout Mountain. Two flags of truce which General ROSECRANS sent in, asking permission to bury the dead and relieve the wounded, are said to have been refused by General BRAGG.

THE urgency of the situation which has compelled the War-Department to request the journals to withhold the publication of military movements, puts an estoppel on military speculation. Nothing has been developed as to the attitude of the Army of the Potomac; and we sincerely trust the rebels are as thoroughly ignorant of its position and prospects as we are. The tone of the Richmond papers seems to imply the expectation of an advance by the Union forces. "While "events linger in Tennessee," says the *Enquirer*, "the situation in Northern Virginia has become critical. The enemy is preparing for a general attack on "the lines of the Rapidan. In the past few days the "enemy has been massing his troops and forces at Culpepper. His positions have been reconnoitered, "and his encroachments on the railroad and river "indicate very plainly the determination to fight. "Large forces of the enemy already occupy the rail"road between Mitchell's Station and Rapidan Sta"tion. There may also be observed from our position "three lines of encampment in the neighborhood of "Pony Mountain and Shephardsburgh. This latter "division of the enemy's forces fronts the Rapidan in "the vicinity of Somerville and Raccoon Ford."

THE Richmond *Examiner* says LEE's policy is the defensive, and then he awaits an attack by MEADE. The rebel army is said to occupy the strongest defensive position ever attained by it since the war commenced, and that, inspirited by the recent rebel successes in the West, it is confident of defeating MEADE when he makes an attack. BUFORD's cavalry reconnoissance was looked upon by the rebels last week as the prelude to a general advance by the Army of the Potomac.

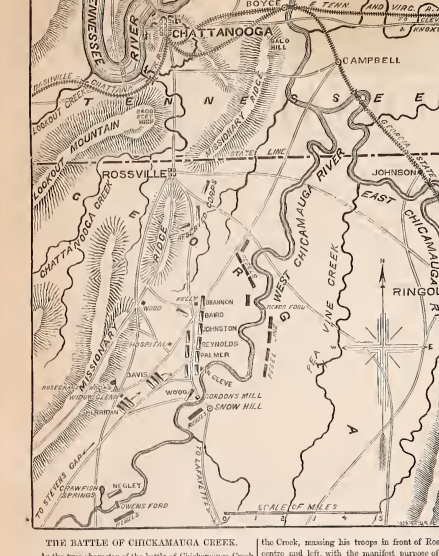
THE Richmond *Examiner* of the 29th contains a report, which is stated to have been communicated officially by General LEE, to the effect that "the "Army of the Potomac was reinforcing ROSECRANS to "*the extent of part or the whole of two corps—Hooker's and Slocum's.*" "We know not," adds that journal, "what amount of truth there is in the report "so far as it relates to MEADE; but are satisfied that, "if it has occurred, General LEE is advised of it, and "will act as his military judgment best dictates." Probably!

THE situation at Charleston Harbor remains unchanged. Officers from Morris Island state that it is felt General GILLMORE has already done all that he could do, and that it only remains now for the Navy to enter on its part of the programme. At latest advices, however, there was no prospect of activity by Admiral DAHLGREN. A Charleston despatch to the Richmond papers of Sept. 29, announces that General GILLMORE, the first time for several weeks, had the day previous reopened fire on the ruins of Fort Sumter. Utterly worthless though Fort Sumter now is in itself to either the rebels or us, it is desirable to get possession of it; for it forms an important rebel signal station, whence they are able to communicate to the other works intelligence of any movement our forces may make in the harbor. The rebel batteries on James and Sullivan's Islands still continue greatly to annoy the working parties on Morris Island. General GILLMORE is hard at work remodeling Batteries Gregg and Wagner; and, in addition to the defences of Morris Island, he has erected palisades around his works to guard his position against any attempt to assault by the rebels. A gentleman direct from Morris Island states that, a few days before he left, seven deserters left there from Sullivan's Island. Their story is, that after the blowing up of the magazine in Fort Moultrie by one of our shells, and fully expecting a continuance of the shelling on the following day, the rebels made preparations for the removal of their best guns, with the intention of evacuating the Island. But finding the next morning that the shelling was not renewed, they concluded to wait a little longer.

THE advance into Texas, which met with its first repulse at Sabine Pass, is still an onward movement. For a fortnight or three weeks past Brashear City has been the base of concentration for the new expedition. Men and supplies have been forwarded as rapidly as possible by railway, while ordnance stores and ammunition in large amount have been sent by way of the Gulf to Berwick. At latest advices nearly the whole of the 19th Army Corps, under the immediate command of General WEITZEL, had crossed and camped on the other side. The 13th Army Corps, was to follow, leaving, of course, sufficient force to hold the base at Brashear. It is presumed, with the experience of the past, that an effort will be made, not only to accomplish the advance successfully, but to hold the Lafourche while the new movement is in progress.

FROM the Army of the Frontier we have good news. On Sept. 19, between Perryville [in the Indian Territory, where Gen. BLUNT defeated the rebels under STEELE and COOPER] and Fort Smith, Col. CLOUD, with five hundred of the Second Kansas Cavalry, and ROSE's battery, attacked two thousand rebels, under General CABELL, in a strongly fortified position, and routed them with considerable loss. The rebels retreated toward Arkadelphia. Five days later advices from Western Arkansas, say the rebels COFFEE and HUNTER are encamped on Cowskin Prairie with one thousand men. KIRBY SMITH is at Arkadelphia with the main body of the rebel army, which is said to number 25,000 men. General CABELL, with Texan troops and Arkansas conscripts, has joined him. Great dissatisfaction is said to exist with KIRBY SMITH. General CABELL is regarded as the best man in the State. A powder mill at Arkadelphia, containing upwards of 100,000 kegs of powder, exploded on the 16th. The loss is looked upon as fatal by the rebels.

THE SCENE OF THE GEORGIA CAMPAIGN.



THE BATTLE OF CHICKAMAUGA CREEK.

As the true character of the battle of Chickamauga Creek begins to reveal itself, it is plain that that contest must take its place in history as, thus far, the most memorable of the war. For the stake at issue was not the petty battle-field on which the contending hosts were marshalled, but the possession of a whole State—an entire theatre of war. The rebel military chiefs saw clearly that unless the Union Army could be dislodged from the region and lines of which the rapid and brilliant advance of General ROSECRANS had given the National arms the possession, the fate of the Confederacy was sealed. To accomplish this supreme object, overwhelming forces were accumulated in Northern Georgia, and, in a position of their own selection, the rebels met the Army of the Cumberland in a battle whose tactics now plainly showed a determination to plant the rebel army between the Union force and Chattanooga, forcing it out of the mountain region, and ultimately, doubtless, back on its base at Nashville. In this design, thanks to the cool courage of the commander of the left wing of the Army, they were foiled; and though the results of a battle which show on our side a loss of men and material double that of the first battle of Bull Run may serve, to some extent, as a salve for the late rebel defeats, yet the failure to achieve the end sought and the stinging fact that the Union force still holds the central citadel of the South, leaves them in the attitude of men who have been foiled and baulked in their great design.

By Wednesday, the 16th of September, the Army had been concentrated on West Chickamauga Creek, about ten or twelve miles northwest of Lafayette, Ga., headquarters being established at a place named Crawfish Spring [see diagram]. The attempt of our advance to debouch through the passes of Pigeon Mountain, to continue the march southward, showed that the enemy held a strong position in our immediate front, beyond the Creek. General ROSECRANS held the rising ground west of the stream (his left resting on Gordon's Mills) while the enemy held a similar position east of it. The intervening stream would of course serve the rebels to mask their movements, and it became necessary for General ROSECRANS to watch with extreme wariness what the designs of the rebels might be. Reconnaissances on Thursday and Friday showed that BRAGG was moving up parallel with the Creek, massing his troops in front of ROSECRANS' left-centre and left, with the manifest purpose of executing a turning movement that would place him between the Union Army and Chattanooga. To meet this, the Union General effected a corresponding movement of his force by the left flank, wheeling the whole Army back down the Creek. During Friday night, THOMAS' Corps (14th) forming the centre of the Army, together with JOHNSON'S Division of MCCOOK'S Corps, had moved to the left, past CRITTENDEN'S, thus becoming the left wing of the Army, and making CRITTENDEN'S Corps (the 21st) the centre. The two other divisions of MCCOOK'S Corps (DAVIS' and SHERIDAN'S) were to move into the position abandoned by THOMAS' Corps, but had not time to assume it fully before the commencement of the action of Saturday morning.

On the morning of Saturday, the Union line of battle, as formed, ran along the Rossville and Lafayette roads due north and south, the right resting at Gordon's Mills, the left at Kelly's House. On the extreme left, BRANNAN, next BAIRD and REYNOLDS, with JOHNSON in reserve in the centre, PALMER on the right of REYNOLDS, VAN CLEVE on his, and WOOD'S at Gordon's Mills—the line completed by DAVIS' and SHERIDAN'S Divisions, faced a little east of south. NEGLEY formed a defensive cordon at Owen's Ford, higher up the valley. Detached from this line, covering the Ringgold approach to Rossville, the reserve corps, under General GORDON GRANGER, was stationed, but not operating with the main column, can hardly be said to have formed part of the line of battle. For whole line of battle see diagram.]

The early forenoon of Saturday, the 19th, passed away, without forewarning of the approaching conflict; but shortly before 11 o'clock the storm that had been brewing all the morning on the rebel side burst forth in the expected situation. At that time a long mass of rebel infantry was seen advancing upon BRANNAN'S Division on the extreme left. It first came upon the second brigade, Colonel CROXTON commanding, and soon forced it back despite its determined resistance. The two other brigades of the division at once came to its assistance, and succeeded in checking the progress of the rebels and driving them back; but their column being in turn strongly reinforced, they advanced again with wild yells. So powerful was the momentum of the assault that it pushed BRANNAN back to and beyond his position in the line, thus uncovering the left of BAIRD'S Division, which at once became fiercely engaged. The storm rolling from left to right fell next upon JOHNSON, and almost simultaneously on REYNOLDS', who wavering at times, but again regaining their firmness, gave back a little, but again advanced, until the troops of BRANNAN and BAIRD, rallied by the leaders, came up once more to the work.

Then the order was issued for the entire line to advance, and nothing in military history exceeds in grandeur the charge of that powerful corps. LONGSTREET'S HOST, from Virginia, were directly opposed to the troops of THOMAS, and although they fought with stubborn determination, they could not for a moment check the steady march of the veteran battalions. They had already pushed the enemy before them for three-quarters of a mile, recovering all the lost ground and much of the material of war lost in the morning; and LONGSTREET was threatened with annihilation, when a new danger caused THOMAS to halt.

While our left was driving LONGSTREET'S corps, POLK on HILL threw themselves impetuously upon PALMER and VAN CLEVE, of CRITTENDEN'S Corps, who, failing to advance, let a gap between himself and THOMAS. These divisions were speedily broken in pieces, and their complete rout was imminent, when DAVIS' division came to their support, and for a time restored the fortunes of the day. But the enemy, knowing that all depended upon his making a diversion in favor of the defeated LONGSTREET, massed nearly the whole of his available force, hurled it upon VAN CLEVE and DAVIS, drove the former to the right and the latter to the left, and entered boldly the opening thus made. In this juncture, General ROSECRANS called up the divisions of WOOD and NEGLEY, and threw them into the gap. After a brief contest the rebels found themselves matched; an advance was ordered, and by sunset the original position of the morning was gained.

THE SECOND DAY'S FIGHT.

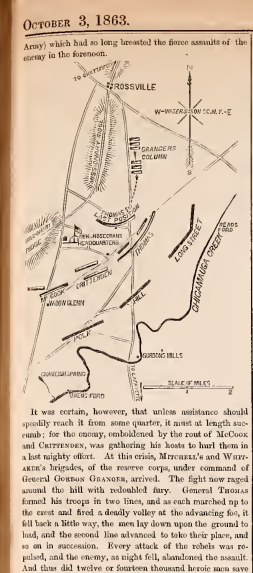
During the night of Saturday-Sunday, General ROSECRANS made some changes in the disposition of his forces, and the line was so far withdrawn that it rested along cross-road running northeast and southwest and connecting the Rossville with the Lafayette road. By this change the line was contracted by a mile, and the right wing caused to rest on a strong position at Mission Ridge. The different divisions were disposed in this order:—From right to left, the brigades of NEGLEY, JOHNSON, BAIRD, PALMER, REYNOLDS, two brigades of NEGLEY, WOOD, SHERIDAN, and DAVIS, with the mounted brigades of WILDER and MINTY covering the right flank. As before, THOMAS held the left, CRITTENDEN the centre, and MCCOOK the right [see diagram]. Upon the right of General THOMAS' line, he held by REYNOLDS and BRANNAN, was a slight rise in the plain and from the top of this the whole field could be commanded. It was the key to the position. During the night THOMAS' troops had built a rude breastwork of logs and rails for their protection.

The battle of Sunday opened at 10 o'clock in the morning, the enemy repeating the tactics of the previous day, by throwing themselves first upon the extreme left of the line, formed by General BEATTY'S brigade, of NEGLEY'S division THOMAS' Corps, and their two lines of fierce fire swept along the line of THOMAS, who held it without budging an inch. Again and again the rebels, advancing *en échelon* by brigade from the cover of the woods into the open corn-field charged with impetuous fury and terrific yells towards the breastwork of logs and rails, but each time the fiery blast from our batteries and battalions swept over and around them, and their ranks were crumbled and swept away.

Meantime, as General REYNOLDS was sorely pressed, General WOOD was ordered to march instantly by the left flank, past BRANNAN, and form on his right of DAVIS of SHERIDAN were to shift over to the left, and thus close up the line. WOOD, though fiercely attacked by the rebels succeeded in passing on to his destination; but DAVIS, coming up to fill WOOD'S place, was taken with great suddenness and fury, and pushed to the right in some disorder. Simultaneously, the weak remnants of VAN CLEVE'S and PALMER'S divisions, exposed by the withdrawal of DAVIS, were attacked with equal vehemence on the right, and forced back in great confusion. The rout of the right and centre was now complete, and the last fatal break, the line of battle was not again re-formed during the day. The army was in fact cut in two—MCCOOK, with DAVIS, SHERIDAN and WILDER, being thrown off to the right, CRITTENDEN, except one brigade of WOOD'S, being broken in pieces, or driven in confusion, and pushed to the rear. The remnants of MCCOOK'S, remaining alone upon the left. But THOMAS' corps also had been fearfully shaken, and retreat was now the only resort. Retiring his command, accordingly, he took up a new position along the base of Missionary Ridge, the line being so formed that the left rested upon the Lafayette road, and the right at the Gap, represented an arc of a circle, and a southeast hill about its centre formed the key to the position. [See diagram.] Here were collected the shattered remnants of the powerful corps (not a fourth of the

* See diagram on the opposite page.

Army) which had so long breasted the fierce assaults of the enemy in the forenoon.



It was certain, however, that unless assistance should speedily reach it from some quarter, it must at length succumb; for the enemy, emboldened by the rout of McCook and Crittenden, was gathering his hosts to hurl them in a last mighty effort. At this crisis, Mitchell's and Wittaker's brigades, of the reserve corps, under command of General Gordon Granger, arrived. The fight now raged around the hill with redoubled fury. General Thomas formed his troops in two lines, and as each marched up to the crest and fired a deadly volley at the advancing foe, it fell back a little way, the men lay down upon the ground to load, and the second line advanced to take their place, and so on in succession. Every attack of the rebels was repulsed, and the enemy, as night fell, abandoned the assault, and thus did twelve or fourteen thousand heroic men save from destruction the Army of the Cumberland. At night, General Thomas fell back to Rossville, four miles from Chattanooga. Our loss in killed, wounded, and missing reaches twelve thousand, and fifty pieces of artillery and much material of war fell into the hands of the enemy. The enemy's loss, also, is extremely heavy. Saturday's fight resulted in a drawn battle—Sunday's in a defeat, which was only saved from utter disaster by the coolness and courage of General Thomas and his gallant command. And thus the battle of Chickamauga Creek, with its gloom and its glory, passes to record on the pages of history.

THE MEDICAL STAFF OF FOREIGN ARMIES.

PRUSSIA.

On the 12th of February, 1852, a royal edict was promulgated reorganizing the medical staff of the Prussian Army. By the first terms of this edict it is enacted that the medical staff shall be exclusively recruited from among the graduates of the Military Medical College of Frederick William, at Berlin. Before being received into the service the candidate must possess the degree of doctor in physic, surgery, and obstetrics.

Army surgeons form a distinctive corps under the command of the Surgeon-General-in-Chief, from whom emanates all orders relating to the medical service, and who alone has the general control and superintendence of all hospitals. Surgeons wear the uniform of the line officers of corresponding rank. Promotions up to the rank of Battalion-Surgeon are based upon seniority; for all others, upon choice from among candidates. The Surgeon-General-in-Chief is chosen from the rank of Surgeon-Generals.

A corps of hospital-assistants (sanitary-companies), composed of intelligent soldiers of approved courage and character, is attached to the medical staff. They are instructed in minor surgery, and in the compounding and administering of medicines; are under the immediate command of the medical officers, and after having been duly educated in military hospitals, are attached to regiments, in the proportion of two or three per company. Their services have been found of great utility.

SARDINIA.

Under the first organization of the Medical Staff of the Sardinian Army, which occurred in 1833, the three departments of *Medicine, Surgery,* and *Pharmacy,* were made distinct from each other, and the candidates for all vacancies therein were recruited from among government scholars educated in the military hospitals. But in 1850 all distinction between physicians and surgeons was abolished, as also government scholarships in the hospitals. The pharmaceutical corps, which had been created by this new arrangement was, however, re-established in 1853.

The Physician-in-Chief, the two Medical Inspectors, the Pharmaceutical Inspector, and the Medical Secretary, constitute the Medical Board of the Army.

Candidates for admission into the Medical Staff must enter as Battalion-Physicians of the second class, and serve a year in some hospital before being attached to any corps. After two years' service they may be promoted to the first class without examination. For advancement to this grade two-thirds of the candidates are selected according to *seniority,* and one-third according to *merit.* Regimental physicians of the third class are selected by competitive examination from among the three oldest battalion-physicians. Promotions to the second class are based upon seniority; promotions to the first class, two-thirds upon seniority, one-third upon merit; and in either case only after having served for one year in the next lower rank.

For promotion to the rank of Division-Physician of the second class, candidates must have served two years as regimental physicians of the first class, and have given proofs of qualification in a competitive examination, at the close of which promotions are made according to the merit-roll. Promotions into the first class are made in the same way, from those serving in the second, at least in the second class. The forms of examination and the subjects to be studied there, are selected by the Medical Board of the Army.

A central Military Pharmacy is also established, but its Superintendent and two assistants are considered only as civilians, having neither rank in, nor any immediate connection with the army.

HOLLAND.

The Medical Department of the Dutch Army constitutes a separate corps of itself, and is presided over by an Inspector-General who is in immediate relation with the Minister of War. The Inspector-General is also Physician-in-Chief of the Medical Staff, has the sole and absolute charge and control of all the details of his department, acting also as adviser to the Minister of War in whatever relates to the sanitary condition of the army.

Surgeons are taken from among the graduates of the Military Medical College at Utrecht. Promotions up to the rank of Health Officer of the first class are based upon *seniority;* for all grades superior to that, they are founded upon choice among the most meritorious candidates. The pensions of retired officers, and the allowances to the widows and orphans, are exactly similar to those of officers in the line of the same grade. Health officers are simply attached to regiments, though forming no integral portion of them, and are consequently rated as staff-officers.

In no army, perhaps, is the Medical Staff enjoy such independence of position and comfort as in that of Holland. Discovered from anything like regimental subordination, and allowed to direct and control their own immediate departments with little or no hindrance, they may be considered as enjoying very rare privileges indeed.

ADDRESS TO NAVAL CADETS.

The following admirable circular address, sent by the Secretary of the Navy to those applicants for admission to the United States Naval Academy, will be read with interest:

"Application having been made on your behalf for admission to the United States Naval Academy, I transmit, herewith, the enclosed permit, a statement of the requisite qualifications for admission. Should you, on examination, show a fit preparation for the studies and discipline there indicated, and comply with the other conditions, you will be received as a midshipman, and become thereafterward an officer of the Navy of the United States. Before, however, you proceed at this step, not merely to yourself, but to the public, that the Secretary deems it his duty to address to you counsel as to the obligations which you assume in this new and honorable character.

You will bear in mind, then, that the Government, in receiving you into its Naval Academy, undertakes to furnish you, at the public expense, with a superior scientific and practical education, fitting you for becoming a thorough accomplished teacher. This is a privilege which, in the nature of things, can fall to the lot of but a small portion of the youth of the country; and it is one which, in all probability, many of the pupils of the Academy would otherwise not receive. It is, therefore, a privilege which the public Government does for you. In admitting you to the Academy, it secures to you an adequate provision, in a most honorable position, for the remainder of your life, while you live, nothing but incapacity or misconduct can deprive you. This great benefit, however, is not conferred on the pupils of the Naval Academy from any motive of favor, but from great public motives. In the present state of the world, the duty and honor of a country

the Navy has performed its herculean labors with an energy and success that reflect the highest credit on all belonging to it, officers and men, and which the Secretary takes great pleasure in looking up to the standard of the coming year at the Academy, who will hereafter be called upon to sustain the well-earned reputation of this branch of the service.

Especially let the young men, now entering the Navy, impress upon their minds, as the great lesson of the day, that of all the duties of a faithful officer, the first and foremost is that of fidelity to his flag—the sacred symbol of the Government which has trusted him to wear it, and has conferred its honor to his keeping. Let him, as he sets his foot on the threshold of the Academy, form the firm resolve that living or dying, he is faithful to that great trust. Let him, in advance, steel his mind against the wretched sophistry under the influence of which a portion of the Naval officers of the rebellious States (but by no means all of them), deceived and misled, against their own better impulses, by the craft of politicians, have allowed themselves to be made parricidal arm against their country, employing the fruits of the education received at its expense and of the experience gained in its service, in aid of an attempt to destroy it by rebellion. Before he enters on actual service, the young officer takes a solemn oath "to support, protect and defend the Constitution of the United States against all enemies, whether domestic or foreign," and the Secretary would earnestly impress upon the young men, on the same occasion to the Naval Academy, that no human power can absolve them from that obligation. The madness of the hour may cause a misguided man to forget that he has taken this Oath, to deal with him as he shall keep or break his oath, but the time will come, even in this world, when the sin of perjury will be heavy on his soul.

But the Secretary is confident that no one of the young gentlemen now entering the Naval Academy has already them, will ever incur the foul reproach of betraying the flag of the Union. They will uphold it on every sea and on every shore. Every effort and every sacrifice to sustain the honor of the elements or the storm of battle. They will live for it and die for it—if need be—with the last breath of life. While it floats they will stand by it, and if it must sink, they will go down with it, rather than disgrace or betray it.

The Secretary forbears to enter into any more special statements as to the studies, exercises, and discipline of the Academy. The intelligent officer, charged with the superintendence of that institution, and who possesses the entire confidence of the Department, aided by his able and efficient associates, will, from time to time, call your attention to the various details of duty; and the ordinary confidently trusts that under their guidance you will, by the faithful improvement of your special opportunities, prepare yourselves for earnest usefulness and high honor in the service of the country.

GIDEON WELLES,
Secretary of the Navy.

CORRESPONDENCE.

THE SOLDIER'S HONOR.

To the Editor of the Army and Navy Journal:

SIR:—It is with pleasure that your able sheet has been and will be read by intelligent officers, who are not only enduring upon your time too much, I beg respectfully to state a few more causes of our military inferiority.

First, the three prominent motives which actuate those who engage in a military life—pride, glory and recognition. The first of these has been the most absurd; and why? Because our Government does not sufficiently uphold it. Anyone can, with impunity, put on an officer's uniform, of almost any grade, without being questioned as to his warrant therefor, or state to what corps he belongs, and why he is not with his company, regiment or corps. This should not be. The Government owes it to itself, to the army and to the Nation, to make its uniform a *pre ce* passport to good society, and certificate of character. Look at the armies of continental Europe. An officer has the entree to any society. The national uniform is the passport to the throne, and unless the Army of the United States is raised to that same standard it is inferior.

To accomplish this, positive orders from the War Department should be issued, forbidding, under severe punishment, the wearing of the National uniform, unless the man has actual documentary evidence *that he is what he pretends to be.* This should particularly include soldiers discharged and regularly furnished officers. Uphold the pride of the soldier, and he soon begins to feel that it is a privilege to belong to the Army. Heretofore, he who could raise the most men, or had the most "cousins at court," has obtained position for which he is not fitted either by natural or acquired ability. A card can be made to understand that *secret* (moral and military) is the only road to position. Promote from the Army upon this principle only, and the Army will soon be the terror of the people.

It is well known that speculation has been, and is to some extent now, the motive actuating a certain class of officers enlisting or remaining in the service. Recent orders from departments show that the authorities at Washington hold this mane degrading view, by requiring an officer to make affidavit to certain statements of his. This strikes at the very root of military honor. Gentlemen may be required to do the only oath required of an officer, and let disgrace in ignorance, to attach to him who has perverted it to any falsely certified. Let the Government take the deponent at his pledge, and declare publicly that he is devoid of honor, and, as such, unfit to wear its uniform, and the effect will be that a certificate upon honor is more reliable than an affidavit; for are we to think that, unless such prescribed returns or reports are furnished, pay will be withheld, or that there is a value other than the oath. The Government endorses and upholds, by such orders, the principle that money is the primary motive that will make an officer do his duty. Let me tell you, Mr. Editor, that such a course is humiliating in its effects, and, as such, should at once be stopped. But let delinquents understand that they will not only lose their present position, but that the Army Gazette will have a complete record for the public to see and know why "So-and-so" is relieved from his position. It is a common practice among officers on leave to endeavor to obtain civil offices—and why? Because in the large cities you will find a certain class of men wearing the National uniform of an officer who have either been deprived of their former position, or who never did serve: these whose vocation comes under the classification—"Bummers and dead beats."

You, Mr. Editor, can do much to elevate the standard of the Army, by upholding those who deserve it, and the National uniform. Battle for that respect due the men and officers, who are ready to uphold their country's flag at all hazards, and you will soon see the wearer of Uncle Sam's coat take his regular 28-inch step with that firmness indicative of pride, and consciousness of maintaining the ground he first honored.

I must leave the other points, glory and recognition, for some future time.

A COLONEL IN THE U. S. SERVICE.
NORTH CAROLINA, Sept. 16, 1863.

NOTIONS ABOUT RECRUITING LANDSMEN.

To the Editor of the Army and Navy Journal:

SIR:—The privates employed in the Navy are classed in the following order:

1. Seamen.
2. Ordinary seamen.
3. Landsmen.
4. First-class boy.
5. Second-class boy.
6. Third-class boy.

Men embraced in the rates of seaman and ordinary seaman possess certain degrees of nautical knowledge and acquaintance with the technicalities which belong to the vocation; and, in order to render their professional knowledge practically available, they must be in sound health and possess the physical ability or full-grown men.

The landsman should be a fully developed adult in good health, capable of performing the duties of a common laborer on shore. He need have no knowledge of the sailor's trade; but with good limbs, a fair heart, and docile mind, he may soon acquire enough of the art and mystery of the sailor's vocation to be advanced to the rate of ordinary seaman, and of course.

A fully qualified landsman, on his first admission into the naval service, should be not less than five feet seven, nor over twenty-eight years of age. He should measure at least five feet two inches in height, and weigh not less than 120 or 130 pounds. His chest should be of that size above the nipple, immediately after expiration, should measure not less than thirty inches, and immediately after a deep inspiration, at least thirty-two inches. A man who is more than six feet high, or who weighs more than 200 pounds, is not suitable for the service. Such a man would probably be in possession of vigorous health at the time of inspection.

Landsmen are the ship's laborers, and are valuable in proportion to their physical powers. They are employed in coaling or working heavy guns, to haul them up to the ports after being charged, to trim them, &c., and also to pull and haul in working ship.

Now, if, for the sake of illustration merely, we estimate the average muscular force of an adult man to be equivalent to 150 pounds, and that twenty per cent of average strength are required to work a piece of heavy ordnance; or, in other words, an expenditure of muscular force of 30 pounds, the efficiency of the gun's crew will be diminished in proportion to the number of pounds of muscular force it is deficient. If the required 30 pounds of muscular force could be concentrated in fifteen men, the fighting power would be augmented; but it would be lessened very much if it were necessary to employ twenty-five men. Twenty men are to obtain the 3,000 pounds of muscular force required, because the muscular force of some men is not in action, and the greater are the chances of its being disabled by part of its crew being killed or wounded from the enemy's fire.

These notions are the result of what the writer from seeing very many individuals of from 16 to 19 years of age, weighing from 90 to 110 pounds, received into the service as landsmen, and of course, unfitted for seamen, have recommended by a recruiting officer on the ground that these likely lads would in time become lost to the service, because he could not enlist them as boys.

It did not seem to occur to the gentleman, that to give the wages of a man to a boy of from 16 to 17 years of age was, in fact, an act of injustice to able-bodied men enlisted at the same rate of compensation, to say nothing of the impropriety of thus encouraging the Government to pay an excessive rate for a part of the muscular power employed.

It seems that zeal in the rendezvous to increase the number of boys enlisted for the Government service of the shipping officers in judging of the qualifications of the persons they engage. They encourage the enlistment of a large number of men discharged on account of physical disability soon after enlistment, is possibly attributable to such reasons.

It is to be inferred from the fact that the Government has established three rates of boys to be employed in the Navy, that a landsman is considered to be a fully grown and developed man in all respects, and not a dwarf, or a boy under the age of twenty-one. Such men are not fit for the places of adult laborers, it would be judicious to employ them, provided they can be employed at boys' rates of wages; but it is unreasonable to require from the full compensation of men. To rate a boy as a man does not make him an adult, nor confer upon him the muscular force of the developed man.

NO NAME.

VOLUNTEER AND REGULAR NAVY OFFICERS.

To the Editor of the Army and Navy Journal:

SIR:—Your correspondent "JUSTICE," in the JOURNAL of the 12th inst., appears to be disturbed by the article of "H," in a previous number, in relation to the claims of Regular Naval officers to promotion above the rank of lieutenant. Now, while I consider "H" fully capable of handling the subject without my humble assistance, I would beg to inquire the reason for this great fear of volunteers in the Navy, when the system has been so successfully adopted in the other branches of the service, unless it be through dread of being entirely eclipsed by them. I do not mean to say this would be the case, neither do I believe it, but such would seem to me to be the natural conclusion of a disinterested person. If, as "JUSTICE" asserts, the merit is almost entirely confined to the Regular officer, what danger can there be of the promotion of volunteers injuring his prospects, when to obtain such promotion it is necessary to be recommended by the Department to their superiors, who are themselves Regulars.

He mentions the fact of volunteers having been honored with commands, as though that in itself was surprising. Perhaps he would like to see all the vessels in the service commanded by Regulars—I would not. Far from it; me, however, to detract from the merit of the regularly-educated Naval officers; among whom I have many friends who are classed with volunteers, and who have my high appreciation for their eminent worth. This, however, is not by any means universally the case. All that is asked, as I understand, is that volunteers be promoted when they can stand in the way of the worthy, capable, and well-qualified volunteer.

We have now in our Army, Major-Generals, and good ones, who were entirely without military education at the commencement of the rebellion. It was their duty to them to obtain the knowledge of military matters they now possess, than for a thoroughly educated seaman to obtain the requisite knowledge of navigation to enable him to be fitted for a higher rank than Lieutenant? I think not; but it such should be the case there will be none to promote, and the Regular will be left in statu quo. Such, however, I do not have only shown his incompetency. If, on the contrary, there should be one among them who is fitted for a higher station, then the Government does both itself and him an injustice in keeping him in an inferior position.

About eleven years ago, I had the pleasing suffered the martyrdom of the Naval Academy to obtain his professional education. It seems to me that the boy who, without any experience in the service, works his way up, step by step, from the lowest to the highest rank in his profession, maintaining it for years with credit to himself and profit to the employers, is entitled to more credit than a country needed him, and retiring when his object is achieved, is entitled to almost unqualified censure. Such is who owes everything to the bounty of his country, and who is assured of his position for life, with pension to his family when dead.

In conclusion, I would say that I am prejudiced in favor of a separate line of promotion for volunteer officers. This cannot conflict with the old line, and will undoubtedly tend to send a more efficient officer to the front. This is the system we believe is to be found among these gentlemen. I know that this project was favored by many of the best officers in the service, among whom I mention Admirals FOOTE, DAVIS, DARTGREN, Commodore WARD, and I understand the stout old hero of New Orleans, Admiral FARRAGUT. They have certainly had an opportunity of judging of its practicability, and their opinions are entitled to consideration. Let it be borne in mind that this plan has been strongly supported not only by the friends of the volunteers, but by all the old line officers, and, if carried through, a system of rapidity rarely be evidenced, of infinite advantage to the service, the officers, and the country.

YOUNG AMERICA.

WHITE PLAINS, Sept. 19, 1863.

A STAFF.

To the Editor of the Army and Navy Journal:

SIR:—The question of the necessity of a staff for the Commander-in-chief of the Army and Navy (the PRESIDENT) and for the Commander-in-chief of the Army, Major-General HALLECK, has been often discussed in New York, Boston, and Washington ladies, and the wasted amount of confusion in Washington, for the want of it, is infinite. The services of several generals have been mentioned by the press as a staff of the PRESIDENT. I doubt if any of them are properly qualified for such a position, and if they are, they are ill-calculated for a military council *ad latus* to the PRESIDENT. Such a council exists in Russia near the person of the EMPEROR; but it has existed for centuries, and is the result of habits, or with the intellectual qualifications for such duties. The project of such a council here was many months ago submitted to the Secretary of War, but I doubt its being, even as mentioned above—one fighting and manœuvring on paper or making plans in his office—because it would be open to constituting a genuine military, scientific or practical soldier —to whom field and staffs are uncongenial or improper—to those who are in the habit of living in such a manner—such a chief is at the best but an imitation of the English military organization, and certainly it is only in this country that clothes of every cut and color are worn by military men. Such a Commander-in-chief might have been of some small benefit to him our Army had it existed in 1861 to 1862, when scattered over the country, or warred only with Indians on the frontier. But all the great and highly perfected military systems on the face of the earth have been the result of commander s wholly unnecessary luxury, and not even Austria indulges in it now.

During the campaign against NAPOLEON in 1813-14, the allies were commanded by a generalissimo, the Prince SCHWARTZENBERG; but he moved with the army, and active-service staffs were unknown.

The Continental sovereigns of Europe are born Commanders-in-chief of their armies and navies, and, therefore, as such, each of them has a personal staff; but such a personal staff must not be confused with a general, central staff, the command necessarily being in the hands of a military council, it similar to that of the nervous system and the brain for the human body. Special extensive studies as well as practical familiarity with the use of the drill and the tactics of infantry, cavalry, and artillery, constitute absolutely essential requirements for the office of such a staff. The necessary military special information also, as well as the duties are very varied and complicated (see "*Logistics*," by Jomini and others). The West Point engineer corps and the West Point matter instructs nor provides the Army with officers for staff duties; and of course the difficulty now to obtain efficient officers for a staff, if not insurmountable, is appalling, and is only to be mastered by a great deal of good will, by insight and by discernment.

Many months ago, I pointed out, in the press, this paramount deficiency in the organization of the Federal Army. The Prince of Canino, Lieutenant-General MCCLELLAN'S military failures to the paramount inefficiency of that General's staff. Any one in the least familiar with military organization and military science is thunderstruck to find how the

Federal military organizers deal with staffs, and what is their comprehension of the qualifications for staff duties.

It reserves a mention that engineers and engineering constructs what is rather a secondary element in the organization of a special or of a general central staff.

Plans of wide, comprehensive campaigns are generally elaborated by such general central staffs. In the campaigns of 1813-14, the sovereigns of Russia and Prussia were accompanied by their respective general, and not only personal staffs. With the Colonels Toutchkof and Toll, of the Russian general staff, originated that Moscow campaign, the issues whose results changed the destinies of Europe. Other smaller, although not so mighty, facts are easily found in general military history.

WASHINGTON, 1863. G.

ENGLISH AND AMERICAN GUNS.

We make the following extract from a leading article, on the ordnance used by General Gillmore in the bombardment of Port Sumter, in the London *Army and Navy Gazette* of September 5:

"It may be concluded as certain, that the guns used by Gillmore were Parrott's rifled ordnance. Their work has been effective from the first such power has been available in the trenches before Sebastopol, the allies would have made short work, not only of the Redan and Malakoff, and *bastion du mat*, but of the shipping and of the whole of the north side of the harbor. It must not be supposed that Sumter was a flimsy, gingerbread fort. It was constructed of a peculiar kind of brick, which, when the shot had worn away the surfaces of the casemates and the supporting pillars were for eight and nine feet in thickness. The defences provided for breaching batteries must have extended at 3,500 yards an exceedingly small angle, and the elevation of the fort was low. But no artillery practice can be so bad as to prevent a proportion of the shots struck it; so great the penetration, that the brickwork was perforated like a rotten cheese. Now in the trenches before Sebastopol, the guns were brought, passed through the fort, and made clean breaches through both walls. Now the guns that did this work cost, we believe, just one-fifteenth of Parrott's guns, and are by no means light, and very easily handled. The gun itself is finely rifled, with great scarping. The grooves are few in number for small calibres, to six and seven for the larger; but as Mr. Parrott is still 'experimenting,' no settled plan has been arrived at. All the projectiles are of iron, and are as sharp as is the case in our rifled guns. The projectile is like the conical Armstrong, and has a leaden sabot not coating—at least, it does not appear to be coated with any metal.

"In this general the attention of the Government authorities has been called again and again to the Parrott and Dahlgren guns. The Americans have constructed cannon of calibres which, in the present state of our knowledge and probable attainment, and they have armed batteries hundreds of miles from their arsenals with the most powerful guns ever seen in the world. They have worked by sea and in stormy waters to the enemy's shores. Before such projectiles as these guns carry, the breaching of masonry, whether of land or sea forts, is a matter of mere time. Indeed in face of these facts we are obliged to record that our scientific officers are of opinion that our 'best gun for breaching purposes is our old 68-pounder.' Why we cannot tell what can do! We know that at 3,500 yards its fire would be about as effective as that of a 32-pounder, and as good work as most of our existing fortifications, and infinitely less cost 'to splinter up' than a work of granite or rubble masonry. A rubbish-mound would be as effective as marble towers on the beach at Blythe. Have we any gun which could breach one of these at 3,500 yards? If so, pray, gentlemen of the Ordnance Committee, better yourselves, get a gun as good as with results. Let Mr. Wentworth or Sir William, Captain Palliser, Captain Blakely, or Captain Scott, or Mr. Thomas, say one, give us a gun as good and as cheap as the Parrott to begin with, and then we can rest content while you are improving and developing your gun. One thing is certain—that any forts which may be assailed by such artillery as the Americans have employed at Sumter must be faced with iron plates. We are yet in doubt as to the mode in which stone works can be coated with iron; but it is obvious that stone cannot long withstand unprotected against the heaviest order of rifled projectiles. Do not let us pooh-pooh the Americans. If we are wise, it is the last thing we ought to do. Gillmore's success has been simply to the matter of the Dahlgren guns: for breaching purposes they may be, but unquestionably the Admiralty would be rather nervous about the result of firing a 450-lb. shot at the sides of the *Warrior*, at the distance of 200 yards, notwithstanding the experiment, which seemed to indicate that large shot with comparatively small charges of powder were inefficient. The authorities have had no experience of the effect of such guns. The Americans have had. They have not got the guns to discharge them. When next the Ordnance officers and gentlemen meet, let them apply these facts to the fine experience the Americans have been making for their benefit at Sumter."

SEBASTOPOL EIGHT YEARS AFTER BOMBARDMENT.

The following account of the appearance of Sebastopol and its neighborhood in the summer of the present year, eight years after the retirement of the allied forces, appeared recently in an English paper, communicated by a gentleman who had just returned from a brief visit to the Crimea:—

"On arrival at Sebastopol one is struck with the desolation that prevails on each side of the harbor. There are, indeed, a few guns still mounted on Fort Constantine, and the Russian ensign waves over it; but the other forts on the north side are entirely dismantled, and not a gun nor a soldier is visible along the whole range of these grand fortifications works. At the entrance of the harbor are the few stone-step huts lately raised by Colonel Dew, and off South Bay bre the admiral's steam yacht: while a few coasters are lading with shot and broken shell, the *relique Danoum* of 1854-55, at the further extremity, and these are the representatives of the Russian fleet at the Black Sea in 1863. Landing at the quay, where no Russian officer accosts the suspicious stranger, a walk of two hundred yards leads to the hotel, kept by one M. Wyrrek, formerly head-waiter of the club-house, the ruins of which are immediately adjoining. The rooms are scrupulously clean, and the green soup and young mutton are not the worse because they are the staple delicacy in a hill of fare of prodigious length.

"From an interior window visible from the sunny a distant fireside in England, must always be the British cemeteries. It is a task of several days to inspect them all, scattered as they are on or more hillsides, and many of those we were not able to visit; but it will be gratifying to the survivor of that memorable campaign to learn that all we visited were scarcely found one that had received any injury beyond the unavoidable decay which eight Crimean winters must bring on the wood. The Redan, the Malakoff, and the site of the cemetery of the Russian Barrack, the late and present consuls at Kertch. Around each enclosure, small or large, is a neat wall of stone, which is now kept in good repair. On Cathcart's hill, though the grass has grown up over many of the graves, headstones remain, and one headstone that had been injured; it was one which marked the grave of a colonel of the 55th regiment, and on inquiry we found that the colonel had died in his bed, not under. It splintered to pieces, and the words, 'Colonel, 55th Regiment,' were all we could collect. In the adjoining cemetery, where some hundreds of the 55th regiment rest, it is gratifying to see that even the round shot, which eight or nine years ago were friendly hand placed as a border to the comrade's grave, remained undisturbed. What has been said of Cathcart's hill applies equally to the graves of the light division, and to that of the 97th regiment. Wild flowers spring up luxuriantly about them all, and there is no appearance of any intrusion, either of man or beast.

"General Codrington's headquarters and Raglan's house are inhabited by Tartars, who have taken great pride in preserving everything that tells of their departed glory. The latter house, with the garden in front, from which once sheltered his staff, a small tablet in the room where he died commemorates the fact. Everything else is as quiet as the graves, some few small boats lying idle in the harbor, our quay rotting to pieces, and our huts now occupied by the remnant of the Russian army, who assemble in the line to-day for the treasure-trove, and sad mementoes of the awful gale of November 14, 1854. A hagful of sovereigns was fished up; a few days before our visit, the 'Pearl,' and 'Castle Bay,' in bold English letters on the rocks, still meet the eye, and several old barges savor still strongly of the Saxon.

"The field of Balaklava is now dotted with vineyards, and is by no means good galloping ground in '63. All our batteries remain as they were left, while the trenches can be traced for miles. They have fallen in, as might be expected, but every position is recognisable at a glance. Inkerman's Heights are thickly covered with wood, though the batteries are easily discerned; and the camps are also well distinguished, the ground having been left in the exact streets that intersected the lines. The principal occupation of the Tartar women and children consists in digging for bullets, of which they find many, in the ever crumbling soil of the batteries. Great quantities of grape-shot and shell still lie about the principal points of attack.

"In Sebastopol the principal change is seen on the north side than on the south side. You can traverse the whole line of fortifications on the south side without once quitting the ramparts are falling into their fosse, the walls have not, though the general appearance is that of desertion rather than destruction. The Round Tower is entirely erected in memory of Prince Gortschakoff and the Russian army, which stands well above the large Russian cemetery near the Karabelnaia suburb, and is seen from a thousand inhabitants now in Sebastopol; we scarcely met thirty. The shops consist of a long line of open huts, on which English fortune-hunters would look with disdain. Some few have opened a ground where Fort St. Nicholas once stood. Some few of the houses have been repaired, and the Russian fleet was agreeably surprised to hear one evening the strains of music which brought our nearly one hundred well-dressed people to the promenade. The band was good, and the troops looks proudly down on the shattered town, but whence they came, and whither they returned we never exactly found out. Music used so much ears jarred strangely on the ear.

THE EFFECTS OF TOBACCO ON HEALTH.—A physician named Dr. Richardson has been making smoking researches with regard to the effect of tobacco on health. His conclusions, which are founded principally on individual experiment, are as follows:

1. The effects that result from smoking are due to different agents included by the smoker—viz., carbonic acid, ammonia, the empyreumatic oil, nicotine, and prussic acid in a bitter extract. The more common effects are traceable to the carbonic acid and ammonia, the more rare and severe to the nicotine. The prussic acid is present in the smoke only.

2. The effects produced are very transitory, the poison finding a ready issue from the body.

3. All the evils of smoking are functional in character; and no confirmed smoker can ever be said, so long as he indulges in the habit, to be free. But it does not follow that he is becoming the subject of organic and fatal disease because he smokes.

4. Smoking produces disturbances in the blood, of the stomach, of the heart, of the organs of sense, of the brain, of the nervous system, of the respiratory system, and more especially of the mucous membrane of the mouth, and of the mouth, and of the bronchial surface of the lungs.

5. The statements to the effect that tobacco smoke causes specific diseases—such as insanity, epilepsy, St. Vitus's dance, apoplexy, organic disease of the heart, cancer and consumption—have been made without any sufficient evidence or reference to facts. All such statements are devoid of truth, and can never accomplish the object which those who make them have in view.

6. As the human body is maintained alive and in full vigor by the oxygen contained in the purest limits to combine with and apply oxyges, as the process of oxydation is most *active and most rapid* in these periods of life when the structures of the body are attaining their full development, and as tobacco-smoke possesses the power of arresting such oxydation, the habit of smoking is deleterious to the young.

7. In the main, smoking is a luxury which any nation of natural habits would be better without. The luxury is not directly fatal to life, but its use conveys to the mind of the man who looks upon it calmly the unmistakable idea of physical detriment.

8. But as a luxury tending to this condition, it is probably one of the least harmful of luxuries. It is on this ground, in fact, that tobacco holds so firm a position. It is nearly every luxury it is the least injurious. It is innocuous as compared with alcohol; it is less harmful than hemp; than sugar (?); it is in no sense worse than tea; nearly by the side of high living, altogether it contrasts most favorably. It is most easily controlled.

9. Tobacco may also be considered, in certain cases, as a remedy for evil, and to be better than its own, and as such a remedy it will persist in holding its place, unless those evils be removed.

We will space permitted us to do more ample justice to Dr. Richardson's inquiry. The striking paradox involved in his statement regarding sugar, however, requires explanation.

NAPOLEON'S NOTE ON CESAR.—It is well known that the present Emperor of France is writing a life of Cæsar, which is soon to appear in print. A correspondent of the *Independance Belge* says that the Empress's benefit the following incident, calling his attention to a work which he might find of some interest:

The work was not a hobby for collecting autograph letters of historical interest, and had purchased a large number of letters written by King Joseph and Louis Bonaparte, who is the present death. That was addressed to the ex-Queen Caroline of Naples (a Bonaparte) while on a visit to England on the beginning of the reign of Louis Philippe, who expressed a wish to see them. The possessor of the letters readily acceded to her wishes, and had an interview with the Queen, when she asked him to dispose of them to her, saying she attached great value to them. Although unwilling to part with them, he said, "I understand, Madame, the high value which makes you wish to obtain them, and take pleasure in offering them if you will give me in exchange a letter of your brother, Napoleon I." "I have something more than that to give you," replied the Princess, "my brother's letters are at Milan, but here are his own private memoirs, and these I beg you to accept." This was a copy of "Cesar's Commentaries," in eight duodecimo volumes, bound in calf, their dilapidated state showing the constant use that had been made of them. They had been read continually by Napoleon during his stay at St. Helena, and almost every page was covered with notes written by his own hand; a great many of certain parts the text was positively hidden by the manuscript notes of the august commentator. The gentleman looked upon these volumes of a treasure far superior to all my letters, and he had what he calls the want of tact to display his eagerness to obtain them; consequently, when he returned with the documents to make the exchange, the Princess Caroline only offered four of the volumes. Looking upon a complete work as those volumes of Napoleon's notes, he refused to accept a part, and consequently received nothing. The Princess shortly after returned to Italy, and died not long after from the effects of a cold. Since, the Empress would have preferred to be informed of the existence of these volumes, as they would have been of much employed, which shows the ex-Queen in a most unfavorable light; her ex-majesty making a species of merchandise of them without the slightest scruples in a way little creditable to the family name and dignity.

CAPTAIN James MacMillan, of the 2d United States infantry, (Regulars,) was married to Miss Fanny Randolph, of Georgetown, Va., in St. John's Church, in that city, on Monday evening.

THE aggregate of captures made by our Navy since the beginning of the war, amounts to thirty millions of dollars, of which $650,000 thus far have been awarded to captors. Awards will be made more regularly hereafter and delays avoided.

MAJOR F. B. Clarke, 5th U. S. Artillery, is under orders to proceed to Boston, Mass., and take post there as Superintendent of Recruiting Service, and Chief Mustering and Disbursing officer for the States of Maine, New Hampshire, 15th U. S. Infantry, goes to Louisville, Ky., on similar duty.

AS the attention in regard to the physical condition of our people, revealed by the draft, appears to have excited much astonishment, it may be well to call attention to the fact that about thirty-five per cent. of those who present themselves for medical examination, as recruits in the British army, are rejected on account of physical disability. When we remember that so large a portion of those who have sufficient confidence in their own physical condition to undertake military service prove unequal to its requirements, it will not seem surprising that a body of recruits, selected at random from the community, should reveal so large a percentage of men unfit to do military duty. The standard of physical perfection considered for the army is necessarily greatly in advance of that required for the ordinary avocations of life; as many have learned, to their cost, who have undertaken, without due consideration of their physical capacity, to discharge the duties of a soldier. The army has suffered too much already in this matter, to permit any laxity in the preliminary medical examination of recruits and conscripts. Fewer men, but better, should be the motto.

ARMY PERSONAL

WILLIAM A. JAMES has been commissioned Quartermaster of the Eleventh regiment, R. I. M.

COLONEL WILLIAM H. SEWARD, JR., is likely to recover from his dangerous illness.

CAPTAIN W. S. Long, of Baltimore, has been promoted to the rank of Major, for meritorious conduct at Port Hudson.

CAPTAIN N. K. BRAY, of Sussex, has been appointed to a Captaincy in the 33d N. J. Regiment.

SURGEON SAMUEL M. HAMILTON, U. S. Volunteers, and WILLIAM HAMILTON, M. D., have resigned.

LIEUTENANT COLONEL Joseph C. Abbot has been made Colonel of the 7th N. H. regiment, vice Putnam, deceased.

SECOND LIEUTENANT Albert Jones has been promoted to be First Lieutenant in the Fourth regiment R. I. V.

FREDERICK METCALF has been appointed Second Lieutenant in the Third regiment R. I. H. A.

CAPTAIN CHARLES Woodruff, Co. K, 20th Illinois Volunteers, was killed on Morris Island, S. C., September 25th.

BRIGADIER-GENERAL J. W. Ripley, late Chief of the Ordnance Bureau, has been placed on the retired list.

MAJOR THOMAS H. Haley, Paymaster of Volunteers, has been ordered to the Department of the South.

CAPTAIN GEORGE D. RUGGLES has been ordered to duty in the Ordnance Bureau, as principal assistant to the Chief of Ordnance.

COLONEL HAYS, of the Eighteenth Massachusetts regiment, was recently thrown from his horse, and his right shoulder dislocated.

COLONEL Washington Seward, U. S. A., has left for San Francisco, Cal., where he will report to General Wright for duty.

MAJOR-GENERAL Hooker has left Washington to enter upon active service. It is understood that General Butterfield continues as his Chief of Staff.

SERGEANT-MAJOR George L. Kibby, of the Fourth R. I. V. regiment, has been promoted to a second Lieutenancy in the same.

THE officers and men of the Forty-seventh New York Volunteers presented Colonel Alfred L. Pelouze a magnificent eagle, caught in Onslow Sound last spring.

BRIGADIER-GENERAL Doubleday and Brigadier-General Rufus King were in Washington in the early part of the week.

COLONEL Michael S. Donohoe, of the 10th New Hampshire regiment, has returned to the service of the Colored, N. H., and took after the transportation of conscripts.

DURING the absence of Major-General Schenck, Brigadier-General R. C. Tyler assumes temporary command of the Middle Department.

LIEUTENANT-COLONEL C. C. Tevis, 3d Maryland Cavalry, is detailed to the temporary command of the north-western defences of Baltimore.

OVER 1,000 people are employed in gun shops and foundries in Baltimore, including Springfield muskets and Dahlgren guns for the Government.

LIEUTENANT Colonel Puff, of the 3d Regular Cavalry is to be tried before the General Court Martial now in session in Washington for fraud in the purchase of horses.

CAPTAIN Thomas J. Halsey, of Co. E, 11th New Jersey regiment, has been promoted to be Major of the regiment. Captain H. was severely wounded at the battle of Gettysburg.

CAPTAIN Thomas Murdock, son of James E. Murdock, the actor, was killed in the battle of Chicamauga. He was on General Van Cleve's staff.

CAPTAIN Thomas Simms Dunnett, Assistant Quartermaster in the Department of the Gulf, died at New Orleans on the 12th inst. He was a native of Portsmouth, N. H.

COLONEL McAllister, of the 11th New Jersey regiment, severely wounded at Gettysburg, has recovered from his wound, and will rejoin his regiment in a few days.

CAPTAIN J. W. Ames, of the Regular Army, has been appointed Colonel of a colored regiment just raised in Pennsylvania.

MAJOR Ulysses Doubleday, of the 4th New York Heavy Artillery, has been appointed Lieutenant-Colonel of the 3d United States Colored regiment, now forming at Elmira.

LIEUTENANT-COLONEL Enoch Steen, 2d Cavalry, and Major Edward W. B. Newby, 3d U. S. Cavalry, have been placed on the retired list.

CAPTAIN William M. Barrett, of Co. A, 8th regiment, has been appointed Lieutenant-Colonel, in place of the late Oliver W. Ladd.

BRIGADIER General G. R. Paul, who was so severely wounded at Gettysburg, and has been remaining at Washington, is improving very rapidly. His sight is coming back to him very slowly indeed.

LEAVE of absence until further orders is granted to Captain W. H. Lawrence, 14th U. S. Infantry, to enable him to take command of the 34th New Jersey Volunteer Infantry.

MAJOR Bruce Cameron, Paymaster U. S. Army, Captain John W. Geary, 7th U. S. Infantry, and Lieutenant John H. Markley, 2d U. S. Infantry, have been ordered to appear before the Retiring Board.

A NEW steamer is built to run on the United States military railroad, has been christened with appropriate ceremonies "John W. Geary," in compliment to the General of that name.

JAMES Halleck, grandfather of Major-General Halleck, died last week at the age of one hundred and three years. He has been for many years a resident of Western Oneida county, in New York State.

COLONEL Ulric Dahlgren, who was promoted from a Captaincy for his bravery at the battle of Gettysburg, has been ordered to report to the Secretary of War, as his wounds will not enable him to take the field at present.

LIEUTENANT P. K. Montgomery, of the Seventeenth Infantry, has been relieved from duty as mustering officer at General Heintzelman's headquarters, and has been made Chief Ordnance Officer of the Department of Washington.

MAJOR-GENERAL Meade, accompanied by the Mexican General Corder, on Monday reviewed the Fifth Corps. The weather was splendid, and the review passed off in a most satisfactory manner.

MAJOR C. W. Seely, aid to the Governor of Pennsylvania, and chief of transportation and the telegraph, died at Harrisburg on the 30th of September, after an illness of several hours.

FIRST-LIEUTENANT D. L. Montgomery, 17th U. S. Infantry, has been ordered to duty on the staff of Major-General Heintzelman as Chief Ordnance Officer for the Department of Washington.

Brigadier-General Fitz Henry Warren has been ordered to report to Major-General Banks, and will leave for New Orleans after a ten days' leave just granted him has expired.

DURING the temporary absence of Brigadier-General Jacob Brown, the powers of Provost-Marshal-General of the Department of the Gulf will be exercised by Colonel E. G. Beckwith, commanding Corps d'Afrique Brigade.

Brigadier-General H. H. Naglee has been relieved from the command of Norfolk, Va., and ordered to report to Major-General Grant at Vicksburg. Major-General Dix has been commanded at Norfolk.

A GENERAL court-martial, convened on Morris Island, S. C., found Second Lieutenant Hiram Hopkins, Massachusetts regiment, guilty of drunkenness, while on picket duty, and sentenced him to be cashiered. The sentence was confirmed.

LIEUTENANT Merriam, of the United States Volunteers, is engaged upon and has nearly completed a work for the press, to be entitled "The Recruiting Service of United States Volunteers in the War of 1861." It will be made up chiefly of personal, biographical and anecdotal matters.

COLONEL S. H. Leonard, of the Fifth Massachusetts regiment, commanding a brigade in the First Army Corps, and who was severely wounded at Gettysburg, the effects of which he has not yet entirely recovered from, has been temporarily detailed for duty in Boston harbor.

MR. MARCUS L. W. Kitchen, of Newark, late Adjutant of the 1st N. J. Cavalry, has been appointed by Governor Parker Colonelcy of the 2d N. J. Cavalry, now in camp at Trenton. A brother of General Reeves, and sons of Hons. T. J. Yorke and Peter D. Vroom have been appointed Captains.

THERE are now 2,497 men in the Dismounted Cavalry Camp near Washington. Within two months over seven hundred men have been returned to their old regiments. The camp occupies ten acres of ground, and is commanded by Major Naylor, Second N. Y. Cavalry.

SURGEON Joseph Pancoast, United States Volunteers, in charge of the 3d Division General Hospital at Alexandria, was last week the recipient of a handsome gold watch, suitably inscribed, and chain, the gift of the stewards, attendants, and patients under him.

BRIGADIER-General Gilmore recently visited all the hospitals in Portland, Maine, complimenting the wounded soldiers by the hand and speaking kind words to them. The poor fellows were overjoyed to see him, and his visit did them a world of good by cheering them up.

CAPTAIN W. R. Price, Third Pennsylvania Cavalry, and acting Ordnance Officer Cavalry Corps, Army of the Potomac, has been relieved from duty with the cavalry to report to Major-General Stoneman, Chief of Cavalry in Washington, for duty with the Cavalry Bureau.

THE following Ordnance Officers on Morris Island are reported:—Second Lieutenant E. A. Swain, Company F, 3d S. C. Volunteers, Sept. 14, typhoid fever; Sept. 7, First Lieutenant Charles H. Tyler, 3d U. S. Artillery, came in breast by shell; Captain Conlay D. Baker, Co. I, 9th Maine, killed by solid shot, Sept. 7.

LIEUTENANT H. Williams, Co. D, 14th Brooklyn Volunteers, while riding on Saturday towards Rickeyville, was attacked by two guerrilla in citizen's dress and shot through the leg, as stronger reinforcements will become necessary. This affair happened on the west side of the Rapidan, eight miles from the headquarters of the Army of the Potomac.

By special order from the War Department, dated September 23, Captain John D. Johnson (military detective) is relieved from duty on the staff of the Governor of the District of Columbia, and ordered to his regiment, the 10th New Jersey. The same order relieves Lieutenant Whiteside, of the 6th Connecticut, from duty with Governor Seward, N. Y.

LIEUTENANT Wood, aid to General Canby, Chief of Ordnance and Artillery of the Department of the East, and Superintendent of the Rock Island Arsenal, has been ordered to and in the harbor of New York, has recently been promoted to the rank of Captain of the regular Army, with accommission dating from July last.

THE new French Consul at the port of New York, M. Gaudins Bodan, is a brother-in-law of Major-General Frémont, his former wife having been a daughter of the late Senator Benton. Some years ago he was Secretary of Legation under M. Sartiges, the French Minister, when he formed the acquaintance of Mr. Lincoln.

A PAIR of Government shoes was last week made in Boston for a Norwegian, a man of gigantic proportions. The shoes in N. are 20 inches long, 7 inches and 16 inches wide, ankle 12 inches, instep 12 inches, toe 11 inches. He is a color sergeant in an artillery regiment of the Army, and is at present at Fort Lafayette, New York harbor.

COLONEL J. H. Petter, who was confined for a long time in Washington by a severe wound received at Chancellorsville, where he was taken prisoner by the Confederates, and subsequently paroled by them, has been exchanged. He commanded the Twelfth New Hampshire Volunteers, and now ranks as Major in the old Army.

CAPTAIN John Darrow, Eighty-second New York Volunteers, has been dismissed the service by court-martial "for conduct unbecoming an officer and a gentleman." Captain James G. Hughes, same regiment, to be dismissed for similar offence. Second Lieutenant Hallagh, Sixty-second New York Volunteers, and Assistant Surgeon Henry Rockwood, Fifteenth Massachusetts Volunteers, have been sentenced to be dismissed the service for similar causes.

GOVERNMENT has received information that Colonel Streight and all his officers and men have been removed from Georgia dungeons to Richmond, and are now treated as other prisoners of war. This change in their condition has been brought by retaliatory measures adopted by our Government. John Morgan will be held for exchange for General Neal Dow.

THE President has pardoned and returned to duty Capt. B. J. McMahon, of the Seventy-first Pennsylvania Volunteers, who was convicted and sentenced to be shot for killing Capt. Andrew McManus, of the Sixty-ninth Pennsylvania Volunteers, near Falmouth, last May, in consultation of the gallant Irish officer, while a prisoner at Gettysburg, and upon the recommendation of Major-General Meade.

COLONEL W. F. Lynch, of the 58th Illinois, succeeds General Burford to command of the post of Cairo. Dr. Derby, Surgeon of Cairo, is relieved, and Dr. Hall, and son Derby, Surgeon of Cairo, is relieved, and Dr. Hall, and son of Dr. Hall, of Cairo. Colonel James K. Mills, of the 24th Missouri, commands at Union City, vice Colonel Fox, ordered to St. Louis on court-martial business. Captain Bowen, of the 2d Iowa, commands at Island No. 10, vice Captain Gordon, who has gone to Nashville. Major W. B. Crowley has gone to Vicksburg to resume his duties as Provost Marshal of the department.

CAPTAIN William Brian, Third Pennsylvania Reserve Corps, who was wounded at the first battle of Fredericksburg, subsequently a prisoner at Richmond, and who lost a leg and was taken prisoner at the second Fredericksburg fight, while confined in the Invalid Corps, and is in charge of the West Philadelphia Hospital. Lieutenant Walters, of the same regiment is in the hospital at Corps, Walters, of the same regiment is in the hospital at Corps, Walters, of the same regiment is in the hospital at Corps,

will be commanded by Lieutenant Baker of the United States Marines. The *Niagara* will soon go into commission at Boston.

ITEMS AND INCIDENTS.

MOSBY, now a Lieutenant-Colonel, has recovered from his wounds, and led the recent raid upon Burke's Station.

HOWELL COBB has gone to Atlanta, Georgia, where he has been assigned the duty of raising eight thousand men for service in the field, and where he has been put in command of the whole State force.

A SEVERE 8-inch breech-loading gun, after Maine's pattern, has recently been tested at the works of Treadwell, Ely, & Co., Lacomtire Works. The local papers represent the trial as successful.

IT is calculated that the expenditure of the Quartermaster's Department for the fiscal year ending June 30, 1863, will amount to somewhere in the neighborhood of $375,000,000 or $400,000,000. The Clothing Bureau alone will exceed up-ward of $100,000,000.

THE Savannah *News* of a recent date says :—" Lieutenant Cagnal, of Charleston, has been appointed Consul at Cork, Commissioner to Ireland, to represent the Confederate cause in that country, and counteract the influence brought to bear by the Lincoln Government, to induce them to enlist in the Yankee crusade."

THE wife of Major-General Rosecrans, who for several weeks has been the guest of her brother, William Hepburn, Esq., of New York, in the mansion at Llewellyn Park, New Jersey, was honored with a serenade by the residents of that place on the evening of the 28th. A number of patriotic airs were also presented to her—Theodore Tilton making the presentation speech. She responded in a pleasant manner.

GENERAL William Preston, one of the rebel Generals wounded at the Chickamauga battle, was the former United States Minister to Spain. He had also been a member of the rebel Conference way to visit Richmond as a Commissioner from the secession State government of Kentucky, which was formed by a so-called Sovereignty Convention which met at Russellville.

IN concurrence with an opinion given by the Judge-Advocate-General, the Secretary of War has directed that commandants of militia companies to require their commands to meet for drill twenty-six times in each and every year, on each days as may be designated by them, and they are empowered to assess as a fine for non-attendance the sum of fifty cents.

THE statement going the round of the press that 118,000 men were absent without leave from the Army of the Potomac alone—in other words, had deserted—is declared to be incorrect. From the Provost Marshal-General's Bureau, it is ascertained that on the 1st of July, 1863, there were but 92,789 deserters from all the armies in the field. Since the commencement of the present year, however 15,000 of these "sculkers" have been turned over to their regiments.

A GENERAL order from Brigadier-General Gillmore, dated September 17, states that it has come to the knowledge of the Brigade-General Commanding that detachments of rebel troops, called Indian Rangers, have been organized, and are now in active at least, to prepare camps and perform menial duty for white troops. Such use of these details is unauthorized and improper, and is hereafter expressly prohibited. Commanding officers of colored regiments will, therefore, not permit any of their headquarters, any violations of this order which may come to their knowledge.

A PETERSBURG, Va., paper of the 16th, says:—Major-General George E. Pickett, Confederate States Army, the hero of Gettysburg, was united in matrimony yesterday afternoon at St. Paul's church, to Miss Sallie C. Corbell, beautiful and accomplished daughter of John D. Corbell, Esq., of Nansemond county, Rev. Mr. Platt, the Rector, officiating. The bridal party took their tea with the bride's parents, where a short respite from military duties will be observed. A salute of twelve guns was fired in honor of the event, by a battery attached to the General's command on Dutch Hill.

IT is stated that the Government at the present time has on hand in the different armories and arsenals *upwards of seven hundred thousand* stand of arms, five hundred thousand of which are rifled. The number is rapidly increasing, the Springfield manufactory alone turning out three hundred muskets every month. Under the contract made by Secretary Cameron, only two cannon were to be made per week for 200,000 rifled arms, only 25,000 have as yet been delivered to the Government—the muskets manufactured by contract costing one hundred and twenty dollars per thousand. There are also on hand about 2,400 24 and 32-pounder smooth-bore cannon, which are rapidly being converted into effective rifled guns of the latest style.

THE New York correspondent of the London *Times*, writing under date of August 28th, makes the following suggestion as regards the defence of that city :—

It might be worth the while of the Government, if it needs counsels as surely as it pretends, to station two or three regiments on and in the streets *in the immediate vicinity of Wall street, William street and Exchange place*. Every day from 11 o'clock until 2 or 3 p.m. they are congregated at the corners of those streets from 600 to 600 men, mostly young and vigorous, in the very pride and flower of life, who are engaged in gambling in stocks and shares. This place is a perfect Babel for the uproar and confusion of tongues, and scarcely a week passes but a Broker is dragged from his counter and his office, and has to undergo personal violence at the hands of the mob. Should a serious riot break out in this city, it is here that the first blow will be struck. The assembling of such a force as I suggest would be a signal for the whole of the Stock Exchange to rally to the defence of their property, and would be a check upon the lawless and ruffianly element which is always ready to take advantage of the first opportunity to commit violence and plunder.

THE Savannah *News* of a recent date says :—" Lieutenant Cagnal, of Charleston, has been appointed Consul at Cork, Commissioner to Ireland, to represent the Confederate cause in that country, and counteract the influence brought to bear by the Lincoln Government, to induce them to enlist in the Yankee crusade."

Should a serious riot break out in this city, it is here that the first blow will be struck. The assembling of such a force as I suggest would be a signal for the whole of the Stock Exchange to rally to the defence of their property, and would be a check upon the lawless and ruffianly element which is always ready to take advantage of the first opportunity to commit violence and plunder.

THE HASLAR GUNBOAT—THE HISTORY OF A ROTTEN FLOTILLA.—During the Russian war, a famous lot of gun and mortar-boats were ordered to be built, of great expense, for the British navy. They were to be used in the Sea of Azoff, one of the Russian war, the only solid advantage that remained to us after all our expenditure. We had not only learned that a steamer could carry three guns where besides like-of-battle ships, but we had actually got a strong fleet of those vessels ready for the Russian emergency. There they were all hauled up safe and sound, all paid for, and fit to be launched at an hour's notice in strength sufficient "to sweep the Russians off the face of the sea" to our expectations! The flotilla was hardly built before some of the vessels began to fall to pieces, and eventually all of them were sold for a song. Now that we have begun to see and buying in the Haslar Yard, says "that on those Haslar slips

Ten vessels which, in 1855, were spick and span new, and of which each was to be the counterpart, feet with the greatest possible ease. This is literally true; you may actually stand beside one of these terrible engines of war, and send your toe through it as if it were tissue paper. Nay, more; a little while back the officials at Whitehall wanted a specimen of the timber of which these boats were constructed, and the shipwrights cut out five different pieces before they could get one which would hold together sufficiently to be sent up to the office. Two of these precious craft actually tumbled into a heap of rotten wood while launching, and the Haslar Yard is full of them a few years ago since the last of Sir FRANCIS DRAKE'S ships was sent as a Thames barge, and was sound and whole down to the last. Now, the Haslar boats are very well, in view of the facts he relates, to suggest to his patriotic countrymen not to be "over hard upon American shoddy-contractors." For, he says, "even if the seams" of the beams of those gunboats out of our own eyes before we are so sharp upon the motes in our neighbor's. An American friend of mine, a shipwright, had put up quantity of money was thrown away in repairs. All with the best of wood, and the most skilful of workmanship, and taken to pieces, and even new fragments of their poor rotten skeletons may be met with in obscure corners of the Haslar Yard, one of which is composed of a tale of fraudulent copper bolt fastenings and sappy timbers. Forty-seven are still on the blocks, and six more are in process of building. Every one of these will be rebuilt in its turn, in order condemning seventeen of them to be broken up, fifteen to be surveyed, and for sale or breaking up, directing nine to be held for repairs and ten to be fitted for coal depots. An ingenious fate for "the best legacy of the Russian war!" Truly, the Haslar boats have "strength sufficient to sweep the Channel of an enemy."

The above list only includes the Haslar gunboats, but in addition to these there are a number of gun, and mortar-boats of vessels afloat in the home ports and on foreign stations, all of which must be looked upon by the light of present experience as worthless, and in a condition worse than average of condition than even those quoted above. It is not to be wondered, therefore, at the loud complaints of the seamen, lence of the Admiralty, and the inefficiency of the present system of dockyard administration.

CAPTAIN COLES ON IRON-CLADS.—Captain COLES writes a letter to the *Times*, discussing, among other things, the fight between the *Atlanta* and *Wechawken*. He says :—

"Without supposing either of those iron-clads to be a perfect specimen of what we ought to have, we have at least the *Atlanta* was at least three times as large as the *Wechawken*, and carried a greater number of guns, and that the Confederates had such confidence in her powers that they felt certain of capturing two of those turret ships and doing great damage to the remainder. But instead of this, she was captured by one turret ship in the short space of 15 minutes, from the effect of only five shots.

"If the *Wechawken* was not, as I said, very 15-inch guns, throwing shot of 440 lbs. weight, took the *Atlanta* in 15 minutes, how long will it take the *Bonnets*, with three times the number of guns, and nearly twice the power or be stop any broadside-port iron-clad that we have, armed with 15-inch guns, from destroying any number of the wooden ers (if paralysable terrorist policy, being at present the heaviest guns which we have for service in the navy ?

"If the Americans have not already done so, I for while the Americans are manufacturing these 440-pounders at the rate of one per day, and are daily gaining experience in the manufacture of guns of that power, we have not yet got beyond a trial gun, and have not a ship afloat that can carry it.

"The Americans have thoroughly accepted the necessity of having three heavy guns, and of having ships of special construction to carry them. They have a turret ship built in England, at sea, and other foreign Governments are having them rapidly built in our yards.

"If the Americans take a new step in advance, as the commencement of the last war, and it is a matter of history how our navy suffered in consequence. War is, I trust, for distant, but we have no right to pass over what may be a possible peril and in the event of such a misfortune befalling us, we should be liable to the most overwhelming censure for a beautiful and costly iron-clads, which we have made our pride and boast, would be able to engage on equal terms a smaller turret ship."

THE INEFFICIENCY OF THE BRITISH ADMIRALTY.—The *Mechanics' Magazine* complains bitterly of the weakness of the present condition of the British Admiralty, comparing it unfavorably with that of France. It contends that the blunders and the inefficiency of this Board give rise to a dangerous misunderstanding in France itself. Ill-informed people imagine in Paris—judging England by what they can see at home—fancy that the Admiralty is the true representative of England's power." The main source of this weakness it finds in the fact that of the six Lords of the Admiralty, two are members of Parliament professionally connected with the Navy, and the other four are exclusively and simply captains of man-of-war. Not one of the other important specialties composing the naval establishment of a nation is represented at the Board. The four naval counsellors are in the majority, and are the actual "masters of the situation." The other branches of maritime affairs—such as hydraulic works, ship-building, ordnance, sanitary and hygienic questions, &c.—are not directly represented at the Board. The *Magazine* declares that, both in quantity and quality, the work performed is behind that of the French, which is headed by a Board that is constantly progressing toward improved means of attack and defence; since the days of Napoleon I. and Napoleon III. have forced it to improve its artillery; while the British Admiralty has contented it in what it vainly imagined was an overwhelming force of iron-clads, and left most of its naval construction and warfare. The fit of the Admiralty, it says, seems to be passed in a deep and peaceful slumber, only occasionally disturbed by the familiar sound of the snoring of the Lords of Commons. At the end of every seventh year, the Sleeping Beauty of the Admiralty Service is subject to a period of wakeful, and even nervous anxiety, to again subside into the enchanted seven years' sleep.

EXTRA SURGICAL AID ON THE BATTLE-FIELD.—A correspondent holding a prominent and very responsible position in the Army writes as follows to the *Medical and Surgical Reporter*, on the subject of extra surgical aid on the battle-field. His remarks are worthy of attention, as a source of great evils in this connection, much to the annoyance of the Regular Army Surgeons, and to the injury of the wounded sufferer:—

"As a sequel to your article on 'extra surgical aid,' why do you not urge that the Governor orders them *at once to their personal stranding*, and not deluge us with a lot of he and she surgeons, who, if they are there, is devout uninterpreted, so they have done heretofore. The majority of these Governors sent us have had more pretensions than brains, more impudence than surgical knowledge, and cost much. Many of the really educated men, too, seem to think that we insist at once relinquish our knives, handing them over to them. For my part, I am willing to relinquish my privilege, claim the right to have absolute dictation over my own patients. If a new operation is to be performed I need help, but I choose him, but I don't propose to hand over to him the knife and direct me as his assistant, unless, indeed, he is some prominent surgeon, whom I wish to watch, and I am willing to concur it, and the men who, unknown to fame except in their own county, come down to us, expecting us to play second fiddle to them, are generally ignorant pretenders, and find out their mistake, and then go home and talk about 'Army butchers' and 'conservative surgery,' simply write themselves down asses. Then the surgeons are too evident. Of course they can get a lot of kind-hearted stewards and nurses together, but they can't make up a horse twelve years, but whoever saw a homeopath, or any other quack, who did not have the same backers? For my part, I always prefer a doctor whose reputation depends on grey hairs and old women."

THE LESSONS OF OUR WAR.—The London *Times* draws a discussion of these topics as follows:—

"We find two great principles steadily preserved in American ship-building. The first is the size of the guns and the weight of the shot are made as great as possible; in shipbuilding, the turret pattern prevails over every other. These principles, which appear to be in accordance with reason, if we are to assume—what has not yet been proved—that only turret ships can carry very heavy guns. But neither the one nor the other of these principles is universal in this country. We are building turret ships, it is true, among our ironclads, but we have not given them any preference, while such a thing as the broadside rifled 18-pounder ship has not been conceived. Our artificers, indeed, have explicitly declared against the turret system. The broadside system of ordnance is based—that of throwing heavy projectiles with low velocity—and prefers to rely on velocity rather than weight of shot. The turret system, on the other hand, is stationary, in some degree, of the contrast between the two systems, that the Americans are shaping all their efforts according to the former principle, and we to the latter exclusively. They build their ships for coast work and harbor service only, and we for general service, and that any one of the ironclads engaged in the siege of Charleston could be sent to sea with safety. They were intended only for such work as they have been practically employed in, whereas the use of our experiments are far more extensive. Nevertheless, until our inquiries have been aided by further evidence, it would be unsafe to assert that we are in the right or the Americans are wrong. The iron-clads were once beaten off by the Charleston forts. They have now been more successful, but it seems as if the three forts have left them and inflicted part in the performance. Before we can form, however, any sound opinion as to the comparative merits of the rival systems, we must see how the two systems of ordnance of pattern work, and we are by no means sure that it was effectively armed. We therefore suspend our judgment, and content ourselves with indicating the successive incidents which this war produces for our instruction and guidance."

THE electric light has been adapted for surgical purposes. A great difficulty in many operations is the want of light, and by means of a small vacuum tube, heat into a kind of arrow, a kind of luminous cylinder is formed, which may be introduced in very narrow cavities. Carburetted hydrogen, carbonic acid, or nitrogen are used in the vacuum tube to produce whiteness in the light.

NOTICES TO CORRESPONDENTS.

The Editor of this Journal will always be glad to receive from officers in the two services, correspondence and general communications of a character suited to its columns. It is necessary that the name of the writer should, in all cases, accompany his communications, not for publication, but as a guarantee of good faith.

Officers are especially requested to give us early notification of all personal matters of general interest; of the movements of vessels; of casualties among officers; and military and naval events.

The Editor will, at all times, be pleased to respond, in these columns, to enquiries in regard to nautical and other matters.

From gentlemen in the medical service we shall be glad to receive communications on military hygiene, practical surgery, and reports of notable operations and novel forms of wounds.

The subscription price of THE ARMY AND NAVY JOURNAL is FIVE DOLLARS a year, or TWENTY-SIX for six months, invariably in advance. Remittances may be made in United States funds, or Quartermaster's, Paymaster's or other drafts, which should be made payable to the order of the Proprietor, W. C. Church.

Subscribers who fail to receive their paper promptly, will please give immediate notice of the fact.

The Editor does not hold himself responsible for individual expressions of opinion, in communications addressed to the Journal.

The postage on the Journal is twenty cents a year, payable quarterly in advance, and office address required.

All communications should be addressed to the ARMY AND NAVY JOURNAL, New York.

U. ARMY AND NAVY JOURNAL.

NEW YORK, SATURDAY, OCTOBER 3, 1863.

THE GEORGIA CAMPAIGN.

All the indications go to show that, for the future, the main weight of military operations will centre on the Armies in Tennessee. There has been, in fact, virtually a transfer of the chief theatre of war from Virginia to the centre zone. The rebels feel that until they regain possession of Chattanooga and the mountain system of Eastern Tennessee, the Confederacy is anything in its most vital part; and although chagrined at the failure to throw General ROSECRANS from the region, they are now accumulating troops for a fresh and more energetic effort. The National Government, on its part, alive at length to the supreme importance of preserving the positions and lines which General ROSECRANS has gained, is rapidly sending forward to that commander powerful reinforcements. We may, therefore, look forward to a speedy renewal of the onward movement. This ought to be inaugurated as soon as possible, for a successful advance upon Northern Georgia, with a force sufficient to retain possession of the key-point of that district is an absolute necessity of military success. We need hardly say that such an advance can be attended by permanent results, only by a strict adherence to correct strategical principles, and only by being made at each decisive point in force proportioned to the exposure of the point to attack, and its connection with the general position.

The importance of Chattanooga, including under that name the whole region now the sphere of operations, is geographical and artificial; geographical in this, that the mountains of the Blue Ridge, which recede extremely difficult or impassable from Cumberland Gap in Northern Virginia or Tennessee into Eastern Virginia, or North Carolina, here fall into the plain. These mountains consist of a double chain; the Blue Ridge proper, extending northward from latitude 34° to the Potomac.—Rome being 34° 10′, Dalton and Lafayette 34° 45′, and Chattanooga 35°—and the Allegheny Ridge which, starting from Cumberland Gap in latitude 36° 30′ to the Potomac. In the valley between them lie the Shenandoah and the Tennessee. The James and the Kanawha rise also in the summit point of this valley, and, bursting through the mountain gaps, pour their waters, the one into the Atlantic, the other into the Mississippi.

The possession of these mountains and the valley between them depends upon the possession of their flanks. The most important flank is the centre of the line now occupied by the rebels, which, resting with its right on the sea, follows the Rappahannock and Rapidan to the mountains, runs southwest through this valley to the Southernmost point of the Tennesee at Warrenton, and thence nearly due west through the head-waters of the Tombigbee, and along the line of the Pearl river into the Atlantic.

Viewed as a military position, this line may be said to be a line of battle with its left thrown back *en echelon*, its right advanced to attack, protected from the right to the centre by the mountain chains. From this right has come all the serious advances against the Northern States. Behind it lies their capital and the centre of their political and military power. The rapids of the valley lying between the Blue Ridge and the Alleghanies, is the district of Eastern Tennessee from Cumberland Gap to Chattanooga, of which Knoxville is the centre. That district—the mountains and the valley—are held when Cumberland Gap, Knoxville and Chattanooga are held. The flank of this mountain chain can be turned, and the rebel centre forced back until their defensive line becomes concave, hugging the coast closely from Richmond to Mobile; and either flank can be attacked at pleasure in force, with but little prospect of receiving assistance from the rest of the line.

The artificial importance of Chattanooga is its geographical position. It is the centre of four main lines of railroad—one to Virginia, leading northeast through the valley; one northeast to Nashville, and one west to Memphis; and one due south to Atlanta, where it separates to Charleston and Mobile. Thus the two railroad systems, resting upon military basis—at Nashville and Memphis for our right wing, and at Richmond, Charleston, and Mobile for the rebel line of defence—meet in one common solution at Chattanooga; and the possession of that salient enables either party to operate against the other with perfect security ha to his communications. It affords us that inestimable military advantage—a single line of operations, combined with a double line of supplies—enabling us, if unsuccessful, to fall back upon them if necessary; but does not give the same advantage to our opponent, because the salient of their triangle is very large—135° —while ours is very small—45°—and therefore one of their lines (that through Knoxville) is exposed to flank attacks during the whole of that portion of it south of Cumberland Gap. If this railway run southwest to Savannah, or even west to Charleston, and that point were the right flank of the rebel line, their position would be exactly analogous for offence and defence to that of the right wing of our army of eastern operations under ROSECRANS.

Two other considerations are of importance in determining the line by which such a position should be approached. Two main lines of railway connect the extremities of the rebel position. The one passes through Lynchburg, Knoxville, Chattanooga, and Atlanta to Mobile; the distances from Richmond to Chattanooga being 600 miles, to Atlanta 750 miles, to Mobile 1,150. The other passes from New Richmond, through Petersburgh, Goldsboro, Wilmington, Augusta and Atlanta, to Chattanooga and Mobile. The distances by this route are—to Wilmington 300 miles, to Atlanta 850 miles, to Chattanooga 1,000 miles, to Mobile 1,250 miles. The carrying capacity of this shorter line is doubtful by reason of the entire distance, except 350 miles between Atlanta and Mobile. The shortest line for reinforcing the centre is thus the Virginia and Eastern Tennessee line through the valley. For military purposes in defending this line, this railroad gives one-half the carrying power of the Southern railway system. The coast line is easily accessible by steamers and other places. The entire line being in the possession of the enemy, they are compelled to hold Chattanooga in force, and to defend with a smaller force the line of this railway as long as possible. The position of Knoxville is valuable also, in that it gives an opportunity of operating against our communications by Nashville, and of assailing Kentucky. The force at Knoxville can retire either upon the right at Richmond or upon the centre at Chattanooga.

The Tennessee river, flowing past Chattanooga, makes a large bend south at Warrenton, where it is within 80 miles of Rome—an important depôt of stores and arsenal of construction.

In advancing upon Chattanooga, ROSECRANS, taking advantage of the double line of supplies which enabled him to extend to this right flank, placing himself on the Memphis railroad, crossed the river south of Chattanooga, and, by threatening Dalton, compelled BRAGG to evacuate Chattanooga without a battle. BRAGG had three courses open to him: to retire on Atlanta, to attack ROSECRANS in the passage of the river—calling in BUCKNER if necessary—or to leave a small force to defend the gap and retire fighting before ROSECRANS while with the main body he reinforced BUCKNER and operated upon ROSECRANS' communications.

The last was the best and the proper course, if BRAGG's strength had admitted of it. He would have been 500 miles nearer reinforcements from Richmond, and ROSECRANS could not have advanced beyond Chattanooga. His reply would have been to have left a small force to defend the Tennessee, and, joining with BURNSIDE, to drive BRAGG back into the mountains.

BURNSIDE's *rôle* was to prevent such a flank attack by any small force. He had two courses open to him: to follow ROSECRANS' operations at an interval of one or two days' march, waiting to seize the railway until BUCKNER should have been recalled by BRAGG, or until it should have been shown that he would retire upon Richmond. This would cover ROSECRANS' flank effectively, and enable him to form a junction with the main column, if BRAGG attempted to turn by way of Knoxville; or to have advanced more rapidly than ROSECRANS, beat BUCKNER or compel him to retire and secure the railroad. He chose the latter, and this gave BRAGG no opportunity to execute the flanking movement by way of Knoxville, with the advantage of being certain of bringing a portion of ROSECRANS' army to bay with the bulk of his forces.

In all cases of lines of double operation, such as these were, on both sides, each opposing army consists of three portions—that which on each line may be left to observe the opposing column, fight a defensive battle if a position offers, and retard an advance as much as possible, and a reserve which is moved rapidly from one line to another when it is desirable to resume the offensive in either direction.

If BRAGG called in BUCKNER and then retired from Chattanooga, showed either lack of enterprise or generalship, or exceeding weakness—most probably the latter.

To attack Chattanooga successfully with the main army, the force of the main column operating upon Rome also, is sufficient to cope successfully with any force that can be brought against it from the direction of Atlanta, leaving on the left flank a sufficient column to hold the valley and Cumberland Gap against any force which could be sent down from Northern Virginia. The more strongly the army of Northern Virginia is pressed by the army of the Potomac, the less force is it necessary to leave in the valley, and if it were possible to force that army into Richmond, it would only be necessary to observe this flank with a few cavalry.

The district to be held in order permanently to protect the railroad, the mountain ranges and the valley between, and the entrance into the great seaboard plains of Georgia and the Carolinas, without being open to flanking attack, is a triangle of which the Tennessee from Warrenton to Chattanooga is the base, and Rome the salient; and the possession of this latter place is essential to the full security of the strategic position which commands the rebel centre. Their operations are then confined to an advance direct from Atlanta, with all the advantages of manœuvre in our hands.

JOINT COMMANDS.

JOINT military commands, however necessary they may sometimes be, are rarely ever other than an unmitigated evil. When not absolutely necessary, they should be avoided. This is true of all joint commands, as history abundantly shows. To go no farther back than the late war in the Crimea, the union of RAGLAN and ST. ARNAUD in command paralyzed the Allies and prolonged the siege. Everything was done in council; there was no head, no responsibility; and when ST. ARNAUD died, the *médiocre* mind of CANROBERT was sensibly weakened by the duality of authority; so much so that the English soldiers called him by the augmentative *shirquet*—"Robert Can't." There, too, besides the distrust evils, there were rival nationalities. "Our noble Allies" watched each other with the greatest jealousy, lest either should gain some notable advantages over the enemy and—each other. "Our ancient foe" was paying back former scores by greater gallantry at Inkermann, and by a terrible contrast of success at the Malakoff, for by this time PELISSIER was the joint commander, and was entirely too smart for stupid SIMPSON.

But in this present war we have been more than once the sufferers from joint naval and military commands. Without seeking further illustration, look at the Peninsular campaign. There never has been a proper understanding—we will not say *entente cordiale*—between the naval and military commanders there. It never seems to have been thought—we speak in a popular sense—that both services were to do their utmost to reduce that place.

Some idea of task-work there seems to have been: that the Navy were to do so much, while the Army did the remainder, or *vice versa*; but to combine to plan, in daily suggestion, in rapid developing execu-

tion, has certainly not been the *apparent* effect of the united service in Charleston Harbor, in the earlier days of the investment.

DUPONT began with the splendid naval action at Hilton Head. Where then was the Army, and why were there months of inaction, ending indeed, just at the time of SHERMAN being recalled, with the capture of Fort Pulaski, which was Great-Gun GILLMORE's work?

SHERMAN recalled, HUNTER went down, and did nothing. AFTER recalled, MITCHELL was placed in command, and while he was perfecting plans for offensive movement. GOD took him. HUNTER once more, and not the sound of a pick, shovel or weapon of war: only quarrelsome inactivity. He looked on to see DUPONT's "forlorn hope" of Monitors under the concentrated fire of three hundred guns, and then wrote him a pretty letter to say how well it was done, instead of helping him by a vigorous, strong and practical land attack. This, we say, was at least the *appearance* of things. Now, in these cases, whose was the fault? Who was the real commander? Even if *one* were appointed to the chief command, the difficulty seems to assume another form. The land officer is ignorant of the details of sea service and manœuvre; the admiral does not understand the movement of troops and the art of the military engineer. Besides, there is the rivalry of services: each has BACON's *idola tribus*; each is anxious that his branch should gain the greater glory.

All that we have written is *apropos* of the statement recently made that there is some want of hearty coöperation between General GILLMORE and Admiral DAHLGREN. We hope this is not so; but, if it be, it is only a new phase of the old question.

There is but one way to remedy this, and this, as we have insisted, would be but a partial remedy; it is for the President to give one officer the supreme command, and let him be responsible for the result.

In such a siege as that of Charleston, the land officer should be the man; and then when he says to his naval colleague—" Let your Monitors, or so many of them, attack a certain point," let the attack be made, unless insuperable obstacles, like torpedoes, &c., render it impracticable. Better risk a little on the score of technical ignorance, than do nothing, or fail in whatever is undertaken.

When on the return of NAPOLEON from Elba in 1815, the Duke of WELLINGTON urged the Allies to pour their troops into Belgium, they gave him the supreme command; the Duke of BRAGA gracefully consenting to serve under him; and thus Waterloo was won. And even admitting the ignorance of details, the same should be done where the two branches of the service come together: in nine cases out of ten the result would be admirable.

Great care should, of course, be taken in selecting a proper person for so responsible a command, and then he should have supreme power and the unlimited confidence of the government. "In general," says MARMONT,* "there are only two parts to play—to obey and to command. Let the Government give the command to those whom it thinks the worthiest, and, at the same time, let it concede to them an unreserved confidence; otherwise it should replace them."

RIFLE CORPS.

A CORRESPONDENT, signing himself G. E. P., presented in the columns of this journal, a week or two since, some of the arguments that are convincing all impartial men of the necessity for a thorough reorganization of the Militia throughout the loyal States. The case is not easily calling for argument here. To every military man the defects of the present heterogeneous system of militia organization are sufficiently obvious. Even New York, which is in advance of the other States in this matter, is unable, under the operation of the present militia laws, to make a tithe of its strength effective in case of need; and in Pennsylvania, an actual invasion of the State did not bring to the field so much as one effective regiment of militia. Throughout most of the States militia organizations exist only on paper, and have no force except to give rank and title to gentlemen, who, however estimable in other positions, have not the military qualifications for the command of a corporal's guard.

We need a system which shall bring home to every citizen the duty of military service as directly and as imperatively as the duty of paying taxes and the demand for jury service. As nothing can be more imperative than the necessities of the public defence, so no duty can be more universal or more sacred in its demands than that which has this for its object. The teachings of the times are fast bringing all true men to see this; but we must see the slow growth of public conviction, in opposition to the instincts of private selfishness, and the slow progress of reformatory legislation before we can hope for change. Meanwhile, we need to encourage every movement which looks to the awakening of a proper military spirit among our people. A project for the organization of rifle corps, upon a plan similar to that which has been so successful in England, has been submitted to the Governors of the several States by Colonel WILLIAM S. ROWLAND, late Major of Berdan's sharp-shooters, who is now engaged in forming organizations of this character in New Jersey, under authority received from the Governor of that State. The details of the plan we give elsewhere. It has features which commend it to the consideration of every one interested in this subject of military organization. How far it will be possible to make it succeed in this country is not yet certain. But the "champion contest" is a good one, if it will only prove successful in awakening the same interest in the movement as has been excited in England. We certainly need something to arouse a proper military spirit among our young men, whose necessities or whose preferences compel them to remain at home, while others are battling in the field. In New Jersey, we are informed, the movement has been so far successful that the rifle corps commenced in that State about the first of July now number fifty companies, averaging 90 men each.

THE staff of a General officer, regulated according to his rank, is composed of a number of officers, generally young, who are supposed to do every thing by his real direction, as they certainly do by his nominal order. He is the head, and his the mind; they are only the hands and feet to execute. Were this always so, in the characteristics the staff officer would be only common intelligence and good system combined with energy and valor. But in reality it is far otherwise: a staff-officer exercises a real command. Very much is left to him by the General; and in many cases, to spare his chief, he assumes jurisdiction of minor matters; that is, he does the work and then signs it "by order of General ——." With this we can find no fault; it is often a necessity. But it has its attendant evils. These young officers have often a natural temptation to exercise their functions with all the spirit and manner of individual command, and thus old colonels or brigadiers are virtually ordered to do their specific duty by junior officers, acting frequently with only nominal authority. When this is known to be the case, it awakens a bitter antagonism.

It has occurred to us that for many reasons the general staff should have higher rank than at present. In the first place, their duties deserve it, being usually of a high order, and, in the second, "all appearance of evil" would be avoided.

To obviate the difficulty, let the arrangement be made somewhat as follows: Let the chief of a Brigadier-General's staff be a *Colonel*, who shall really rank every Colonel in the brigade: this would give double force and sanction to orders.

The chief-of-staff to the commander of a division should be a *Brigadier, ex officio*, ranking every brigade officer in that division, while the chief-of-staff to a corps commander should be a Major-General. These of course are but suggestions which occur to us, in attempting to improve the general staff.

The remaining staff officers would be aides-de-camp, whose duties would be restricted to the details of the office and carrying explicit orders on the field of battle, and their rank is comparatively unimportant.

In the distinct general staff there should be regular instruction, similar to that of the *état-major* of the French service, and a corps thus organized and instructed would be the very best body of officers from which to select important generals; not to the detriment of distinguished line officers; but in such a school, under the very eye and direction of the general—the very hands of his thoughts—they would have been a party to all his plans, and ready to imitate all his praiseworthy actions.

AN order, published elsewhere, announces that the War Department has ordered a Court of Inquiry to investigate the conduct of Generals MCCOOK and CRITTENDEN in the late battles near Chattanooga. This is a very proper measure, and we are glad it has been so promptly resolved on. It is due to the Generals themselves, to the Army of the Cumberland, to its commander, and to the country. Whatever judgments we may have formed as to the matter, we of course hold them in abeyance until the developments to be made before the Court shall be made public.

THE presence of the Russian squadron of five vessels now lying in the mouth of the North River, is giving rise to a great deal of very silly speculation as to its object here at the present time. That the fleet has a "mission" is assumed as a primary postulate. That mission is unknown, and as, in the Latin proverb, the "unknown always passes for the marvellous," our quidnuncs are busy assigning all sorts of marvellous missions to the arrival of these vessels here. We are told by our daily contemporaries that the five Russian vessels now in the harbor of New York are here for the following, among other, purposes: First, to intimate to France that, if there is to be an intervention in the affairs of Poland, the Russian fleet shall not be locked up in the ice-bound harbor of Cronstadt. Second, that Russia desires the world to know that the MONROE doctrine on this continent must be respected. Third, that she wishes to proclaim that the alliance between the great autocratic empire of the East and the great Republic of the West is a real, practical alliance, and not a mere empty effort by these five wooden ships, at pleasure, as fortune may invite.

We understand that the officers of the squadron, amused at first at the mystification they produced, begin to feel a natural humiliation at being made the cynosure of such absurd speculations. This fact should be a check to these impertinences. There is no doubt a very hearty desire to extend all possible hospitalities to our Russian friends, and it is perfectly proper that this should be done towards the representatives of a power between which and ourselves there is much amity and good-will. But the political mission which is attributed to them is the sheerest bosh. The Russian fleet has no possible employment at home, and it has been ordered to an Atlantic voyage as a test of the vessels (some of which, by the way, were built here), with the ultimate view of seeking the northern seas of Asia, where Russia presents her true maritime front.

The five vessels of the Russian squadron range from 2,000 to 4,000 tons, carry about 170 guns, and are manned by 2,400 men. Two other vessels—corvettes —belonging to the squadron of Admiral LISOVSKY, are, we understand, expected presently, and it is not impossible that two or three additional vessels of the CZAR may before long join those already here.

IT is with no ordinary regret that we announce the accidental death of Major EDWARD B. HUNT, of the Corps of Engineers. It appears that while engaged on Wednesday last, at the Brooklyn Navy Yard in some very gratifying and successful experiments with his submarine battery, Major HUNT, immediately upon the discharge of the gun, descended into the caisson of the battery. It is supposed that while there he was overcome by the gas from the gun and the confined air; as, in attempting to ascend, he fell backwards, striking on the back of his head so violently as to produce concussion of the brain, from the effects of which he died, on Thursday afternoon.

Major HUNT was appointed to the Military Academy from New York in 1841, and graduated as Second Lieutenant of Engineers in July, 1845. From 1846 to 1849 he was acting Assistant Professor of Engineering at the Academy. His appointment as Major of Engineers dates from the 3d of March, 1863. Going beyond the actual requirements of his position, Major HUNT has rendered valuable service to science by his able contributions to scientific periodicals. In this department this JOURNAL will long miss Major HUNT as a contributor of ex-Governor WASHINGTON HUNT, of this State.

WHEN our honest cousins over the water wish to *bluff* for the rebels, they say, that "*eight millions* of "people can never be conquered," and all that. And when they wish to depreciate the victories of our armies, they say, "The Federal Americans, in two years "and a half of war, have, after many defeats, obtained "some advantages over an army whose numbers "have never amounted to *four millions*."

* Coppée's Translation of "*L'Esprit des Institutions Militaires.*"

FOREIGN NAVAL AND MILITARY MATTERS.

SOME alterations are ordered in the sights of the pattern Armstrong guns. The frail traject-sight is abolished, and the system of double-sighting on the trunnions of all field guns is to be adopted.

A PAPER was read by Mr. GEORGE RICHARDS before the British Association upon a new invention of a square bore gun. The invention embraces two principles:—In the first place, the square bore gave at least 30 per cent. more initial velocity than the round bore of the same calibre and strength; the gain of this gaining increased velocity to any extent was by means of projections or ribs in the interior of the bore on which the shot or shell rested, to cause the necessary amount of twist to give the shot the rifled motion. In both cases the subsots would be used to an air-tight sabot, which might be attached either by using wedge-like shoulders on the periphery of the shot, to fill up the angular spaces of the bore and also to give the shot the necessary rotation, or by the sabot itself. This principle of preventing an increased surface to the propelling power of the gas was considered to admit of an extra power in and of velocity of 15 foot to the square inch. These forms of bore would admit of shot whose transverse section might be either square, hexagonal, octagonal, cylindrical, or other convex or polygonal forms of cross. The same gentleman showed a method of loading heavy ordnance by means of a loading-rod passing through the powder in the breech of the gun, and thence to the muzzle. The cartridge used was also made with a perforation through which the loading rod passed. The loading-rod was quickly attached to the base of the projectile at the muzzle of the gun. Both rod and charge were rapidly drawn into the breech, and the rod withdrawn in readiness for loading, and the breech was then closed by a small apparatus, such as a revolving dis.

MESSRS. BLAKELEY and VAVASSEUR have lately obtained a patent for their improvement in projectiles for ordnance. The object of the invention is in forming projectiles with grooves on the body and at the rear end, for receiving lead or other soft metal. These grooves are formed on an oblique line in relation to the axis, and in the reverse direction to that of the rifling of the gun in which it is to be used: but the grooves may run parallel to the axis, and may be cut or less long deep, according to requirements. When the projectile is ready for use, there are alternate brass or zinc rings, and lead or tin, or other soft metal of which the projectile is formed, round the circumference, the iron or other metal thus protecting the lead or soft metal from injury.

THE British *Naval and Military Gazette* is vexed beyond relief at the superiority of vessels built for other people—the rebels, for instance—by English ship-builders, to those formerly built for the British navy. It says: "It seems that "these vessels go to sea, not unfrequently as a "shipof war under foreign flags—that they are never "turned back by the hand that has created them—that "they stand the wear and tear of years, fulfilling every "condition of the contracts, and return to this country "in a more perfect state than they were when they "started on the voyage—and yet it is known that this is "carried out at a minimum cost, when every work brings "an receipt at the ground of 'labor' and 'Dock-yards'!" "These yards," it declares, "turn out vessels which move with such a miserable degree of speed that, in the event of hostilities, it would tend to risk the safety of the flag which waves over such a discreditable specimen of inferiority, passed and delayed by every merchant steamer she encounters." "Millions," it continues, "have been "squandered, and yet we are unable to show—if we demanded it—a vessel that will be a match for—that "is that masterly manner which the flag of Great Britain *should command*." The same journal has great faith to find with the improvements made in the Dock-yards!" "These yards," it declares, "turn out vessels which move with such a miserable degree of speed that, in the event of hostilities, it would tend to risk the safety of the flag which waves over such a discreditable specimen of inferiority, passed and delayed by every merchant steamer she encounters." Millions," it continues, "have been squandered, and yet we are unable to show—if we demanded it—a vessel that will be a match for—that is that masterly manner which the flag of Great Britain *should command*." The same journal has great faith to find with the improvements made in the Dock-yards!"

THE British *Naval and Military Gazette* is vexed beyond relief at the superiority of vessels built for other people—the rebels, for instance—by English ship-builders, to those formerly built for the British navy. It says: "It seems that "these vessels go to sea, not unfrequently as a "shipof war under foreign flags—that they are never "turned back by the hand that has created them—that "they stand the wear and tear of years, fulfilling every "condition of the contracts, and return to this country "in a more perfect state than they were when they "started on the voyage—and yet it is known that this is "carried out at a minimum cost, when every work brings "an receipt at the ground of 'labor' and 'Dock-yards'!" "These yards," it declares, "turn out vessels which move with such a miserable degree of speed that, in the event of hostilities, it would tend to risk the safety of the flag which waves over such a discreditable specimen of inferiority, passed and delayed by every merchant steamer she encounters." Millions," it continues, "have been "squandered, and yet we are unable to show—if we demanded it—a vessel that will be a match for—that is that masterly manner which the flag of Great Britain *should command*." The same journal has great faith to find with the improvements made in the Dock-yards!"

THE French steam-frigate *Montezuma* was lost a short time ago on a sand-bank not far from the Mexican coast. A Mexican pilot was on board at the time, and, as the bank was well known, it is supposed that the man ran the vessel on it on purpose, trusting, during the confusion which would naturally follow, on being able to make his escape. He was out in his reckoning, for he was at once placed in irons, and will be tried. The vessel was a paddle-wheel steamer, about to be struck off the lists of the navy, so that the loss was not a great one.

THE experiments with ordnance, at Newbaven, England, have been of a varied kind. The 110, 70, and 40-pounder breech-loading Armstrong guns were tried. Under the somewhat quicker firing of the last duty, the defects of these guns began to be more growing every day, and they too apparent, the whole of the rifling of these guns leading on their becoming warm, and impairing the accuracy. The 40-pound in the previous practice with a full charge of 12 lbs., several of the shells burst at the muzzle, and one in the gun itself, cutting up the grooving, which in the 110 and 70 were strips of iron let in and coating and fell short. It was shown that the 110-pounder could not be depended upon in the hour of greatest need for these hundredpound cartridges, as established was that the peculiar nature of the Armstrong rifling rendered it very difficult, if not impossible, to obtain a safe base for the ring.

AN alarmed Englishman writes to the London *Times* to know why English fortifications are being mounted with the old 68-pounders, while the United States and other nations are fortifying with huge 15-inch guns.

THE London *Times* of the 16th has a long article condemnatory of the action of England in the Southern Confederacy with a piratical navy, and arguing the question up to the point of its involving a breach of neutrality. It charges against the design of the government to hinder the sailing of LAIRD's rams, and assumes that Lord JOHN RUSSELL must, in default of direct evidence to the contrary, have been cognizant of the circumstance, have had good ground for interfering with their departure.

THE *Magenta*, the new French steam ram which has lately sailed from Brest to Copenhagen, is described as having the appearance of an ordinary ship of the line. She is higher out of the water at the bows than at the stern: her masts are short and thick, and she bears considerable resemblance to a gunboat. The upper deck is flush, and with the exception of the two bow-chasers there are no guns upon it; close to the smoke-pipe is a small turret whence orders can be communicated to every part of the ship. In action the crew are all below, and the captain, his signal officers, and the helmsman alone occupy the turret. The *Magenta* has two gun-decks, each armed with 24 breech-loading guns, throwing a 60-pound shot with the powder charge of 12 lbs. The guns are mounted on iron plates, but the iron casing stops short at the bows and stern. The great innovation of the *Magenta* is, that the quarters of the officers and crew are spacious, airy, and well ventilated; the sad experience of the *Normandie* (so board of which ship the crew was decimated by fever) has taught the French authorities the stifling atmosphere between decks) having shown that the mortality among the seamen more than compensates any advantage gained by the compression of these invulnerable vessels. The engines (1000 horse power nominally) can be worked up to 2700 horse power. Her speed on an even keel is from 13 to 14 knots, and her consumption of coal 120 tons per diem. She can ship 300 tons of fuel. Her length all over is 90 metres; length 295 feet; extreme breadth about 57 feet; load displacement 6000 to 7000 tons. The spar weighs 15 tons, and her crew on the war footing is 700 men.

THE London *Post* of the 14th September, says:—The name of Rear-Admiral Sir JAMES HOPE, K. C. B., has been mentioned in connection with the West India command. The service will allow that if the health of Sir JAMES be sufficiently restored, so as to enable him to undertake the duties *of a command which is likely to have more responsibility attached to it than any other on the list*, he is the best officer, there is no officer in existence who has a greater right than the captain of Pelio to a preference in the matter.

RIFLE CORPS IN AMERICA.

COLONEL WILLIAM S. ROWLAND, formerly of BENDAL'S sharp-shooters, has just before the Governors of the different States a plan for the organization of a Volunteer Rifle Corps, upon a plan similar to that of England and Switzerland, for the purpose of creating a force of well-drilled men, who shall become expert in the use of the Infantry Arm of the United States, the Springfield or Enfield Rifle. It is proposed that the men be enrolled in each State under its militia laws, uniformed, armed and equipped by the State, and under the supervision of the Adjutant-General appointed by the Governor. A full report to be made annually to the Adjutant-General of the State, and by him forwarded to the Quartermaster. Each State is authorized to appropriate a sum sufficient to pay for encampment, prizes, ammunition and incidental expenses.

The plan further provides that certain days in the year be designated for rifle practice and drill; rifle test or standard to be made by the Commissioned officers of a State, appointed by the Governor of each State, and rules for the government and discipline of the corps shall be established. It also proposes that the encampments shall take place annually, at which the several companies shall meet for inspection and target practice. The following standard shall be made for at least four State prizes, as follows:—

The first, or Champion company prize, to be awarded to the company producing the largest number of hits at all-hand rifle shots.

The second Champion prize to be awarded to the best rifle shot in the whole non-commissioned officer or private.

The third prize to be awarded to the second best rifle shot, non-commissioned officer or private.

The fourth prize to be awarded to the company showing the highest state of efficiency and drill.

To give the Government at the same time a National character, it is further proposed to ask that Congress shall make an appropriation every three years for a National prize, to be awarded for the Champion company of the several States.

Rifle corps on this plan, are in process of formation in New Jersey, by Colonel ROWLAND, under authority received from the Governor of that State. Fifty companies, averaging 100 men each, are required to be raised and weekly for drill; and target grounds for practice are being prepared. The Hythe system has been adopted for the instruction of these corps, with slight modifications.

MASSACHUSETTS VOLUNTEERS.

The following Commissions were issued during the week ending September 26, from the Executive Department, Boston:

TWENTY-THIRD REGIMENT.—Second Lieutenant John R. Lakeman, of Boston, to be Second Lieutenant, June 5, 1863, vice Hemenway, promoted.

Second Lieutenant Walter D. Keith, of New Bedford, to be First Lieutenant, August 29, 1863, vice Barnard, discharged.

TWENTY-FOURTH REGIMENT.—Second Lieutenant Thomas M. Dewsel, of Boston, to be First Lieutenant, August 27, 1863, vice Perkins, discharged.

TWENTY-FIFTH REGIMENT.—Alpheus E. Hoyt, M. D., of Milford, to be Surgeon, August 24, 1863, vice Bullard, resigned.

TWENTY-SIXTH REGIMENT.—First Lieutenant James Fleming, of Boston, to be Captain, May 23, 1863, vice Hall, discharged.

First Lieutenant Leo C. Brackett, of Boston, to be Captain, May 13, 1863, vice Fleming, discharged.

Second Lieutenant Charles F. Smith, of Northampton, to be Captain, June 4, 1863, vice Brackett, promoted.

Second Lieutenant James A. McIntyre, of Lynn, to be Captain, June 27, 1863, vice Smith, promoted.

Second Lieutenant Charles H. Bradley, of Lowell, to be Captain, July 4, 1863, vice McDonald, transferred to Invalid Corps.

Second Lieutenant Thomas F. Cahill, of North Brookfield, to be Captain, July 23, 1863, vice McKeever, discharged.

Second Lieutenant Thomas Nelson, to be First Lieutenant, May 13, 1863, vice Fleming, promoted.

First Lieutenant William Lyons, of Boston, to be First Lieutenant, May 23, 1863, vice Carruthers, discharged.

Sergeant Michael Nelson, of Boston, to be First Lieutenant, April 16, 1863, vice Bracey, discharged.

Sergeant William Cahill, to be First Lieutenant, April 3, 1863, vice Stitt, discharged.

Sergeant Michael Kirby, to be First Lieutenant, September 4, 1863, vice Quigley, discharged.

THIRTY-FIRST REGIMENT.—Second Lieutenant George H. Lone, of Charlestown, to be First Lieutenant, August 25, 1863 vice Collingwood, deceased.

Second Lieutenant George W. Pope, of North Bridgewater, to be First Lieutenant, August 27, 1863, vice Bowker, resigned.

THIRTY-FIRST REGIMENT.—Second Lieutenant James M. Stewart, of Boston, to be First Lieutenant, August 27, 1863, vice Lowell, who is dead.

THIRTY-FOURTH REGIMENT.—Second Lieutenant George R. Goodwin, of Dedham, to be Second Lieutenant, August 26, 1863, vice Bigelow, declined.

Sergeant George L. Murdock, of West Roxbury, to be Second Lieutenant, September 6, 1863, vice Goodrich, promoted.

THIRTY-FIFTH REGIMENT.—Second Lieutenant Jacob A. Rice, of Worcester, to be Second Lieutenant, July 30, 1863, vice Tucker, discharged.

Commissary-Sergeant Edward F. Emery, of Fitchburg, to be Second Lieutenant, July 30, 1863, vice Hosmer, discharged.

THIRTY-EIGHTH REGIMENT.—First Lieutenant George S. Bennett, of Lynn, to be Captain, August 16, 1863, vice Kingsley, discharged.

First Lieutenant Charles C. Howland, of Boston, to be Captain, August 26, 1863, vice Bennett, promoted.

Second Lieutenant William H. Whitney, of Cambridge, to be First Lieutenant, August 26, 1863, vice Howland, promoted.

Second Lieutenant James T. Davis, of Cambridge, to be First Lieutenant, August 27, 1863, vice Whitney, promoted.

Sergeant George H. Copeland, of Cambridge, to be Second Lieutenant, July 30, 1863, vice Davis, promoted.

Sergeant Herald L. Mercantor, of Lynn, to be Second Lieutenant, July 30, 1863, vice Bennett, promoted.

Sergeant Charles H. Bigelow, of Boston, to be Second Lieutenant, August 26, 1863, vice Day, discharged.

Sergeant Thomas Nelson, of Boston, to be Chaplain, September 12, 1863, vice Thayer, discharged.

Second Lieutenant Charles H. Bradley, of Lowell, to be Captain, July 26, 1863, vice Purdy, discharged.

Second Lieutenant Edward A. Wood, of Middlesborough, to be Second Lieutenant, July 25, 1863, vice Cox, promoted.

FORTY-FIRST REGIMENT.—Sergeant Alexander Campbell, of Chelsea, to be Second Lieutenant, August 26, 1863, vice Webb, killed in action.

Second Lieutenant Charles O. Rogers, of Shrewsbury, to be Second Lieutenant, September 1, 1863, vice Howland, discharged.

FORTY-SECOND REGIMENT.—Second Lieutenant Edward H. Howland, of Boston, to be First Lieutenant, May 31, 1863, vice Smith promoted.

Sergeant Charles G. Chipman, of Salem, (24th Regiment Volunteers, to be Second Lieutenant, May 31, 1863, vice Howard promoted.

FIRST REGIMENT OF HEAVY ARTILLERY, (LATE 3RD.)—Edward H. Cutler, M. D., of Sudbury, to be Assistant-Surgeon, September 25, 1863, vice Marion, promoted, and since deceased.

SECOND BATTERY OF LIGHT ARTILLERY.—Second Lieutenant Warren Haskell, of Lowell, to be First Lieutenant, July 30, 1863, vice Hall, discharged.

Sergeant Joseph W. Greenleaf, of Boston, to be Second Lieutenant, July 30, 1863, vice Haskell, promoted.

FOURTH BATTERY OF LIGHT ARTILLERY.—Quartermaster-Sergeant Charles H. Bigelow, of Boston, to be Second Lieutenant, August 6, 1863, vice Wecker, dismissed the service.

Sergeant George L. Murdock, of West Roxbury, to be Second Lieutenant, September 6, 1863, vice Goodrich, promoted.

THIRTY-FIFTH REGIMENT.—Second Lieutenant Jacob A. Rice, of Worcester, to be Second Lieutenant, July 30, 1863, vice Tucker, discharged.

Commissary-Sergeant Edward F. Emery, of Fitchburg, to be Second Lieutenant, July 30, 1863, vice Hosmer, discharged.

THIRTY-EIGHTH REGIMENT.—First Lieutenant George S. Bennett, of Lynn, to be Captain, August 16, 1863, vice Kingsley, discharged.

First Lieutenant Charles C. Howland, of Boston, to be Captain, August 26, 1863, vice Bennett, promoted.

Second Lieutenant William H. Whitney, of Cambridge, to be First Lieutenant, August 26, 1863, vice Howland, promoted.

Second Lieutenant James T. Davis, of Cambridge, to be First Lieutenant, August 27, 1863, vice Whitney, promoted.

Sergeant George H. Copeland, of Cambridge, to be Second Lieutenant, July 30, 1863, vice Davis, promoted.

Sergeant Herald L. Mercantor, of Lynn, to be Second Lieutenant, July 30, 1863, vice Bennett, promoted.

Sergeant Charles H. Bigelow, of Boston, to be Second Lieutenant, August 26, 1863, vice Day, discharged.

Sergeant Thomas Nelson, of Boston, to be Chaplain, September 12, 1863, vice Thayer, discharged.

Second Lieutenant Charles H. Bradley, of Lowell, to be Captain, July 26, 1863, vice Purdy, discharged.

Second Lieutenant Edward A. Wood, of Middlesborough, to be Second Lieutenant, July 25, 1863, vice Cox, promoted.

FORTY-FIRST REGIMENT.—Sergeant Alexander Campbell, of Chelsea, to be Second Lieutenant, August 26, 1863, vice Webb, killed in action.

Second Lieutenant Charles O. Rogers, of Shrewsbury, to be Second Lieutenant, September 1, 1863, vice Howland, discharged.

FORTY-SECOND REGIMENT.—Second Lieutenant Edward H. Howland, of Boston, to be First Lieutenant, May 31, 1863, vice Smith promoted.

Sergeant Charles G. Chipman, of Salem, (24th Regiment Volunteers, to be Second Lieutenant, May 31, 1863, vice Howard promoted.

FIRST REGIMENT OF HEAVY ARTILLERY, (LATE 3RD.)—Edward H. Cutler, M. D., of Sudbury, to be Assistant-Surgeon, September 25, 1863, vice Marion, promoted, and since deceased.

SECOND BATTERY OF LIGHT ARTILLERY.—Second Lieutenant Warren Haskell, of Lowell, to be First Lieutenant, July 30, 1863, vice Hall, discharged.

Sergeant Joseph W. Greenleaf, of Boston, to be Second Lieutenant, July 30, 1863, vice Haskell, promoted.

FOURTH BATTERY OF LIGHT ARTILLERY.—Quartermaster-Sergeant Charles H. Bigelow, of Boston, to be Second Lieutenant, August 6, 1863, vice Wecker, dismissed the service.

THE NEW IRON-CLADS.

WORK on the iron-clad *Tecumseh*, at the yard of Messrs. Secor & Co., Jersey City, is progressing rapidly. Six courses of the turret are up and being riveted. The original plan called for bolts through the whole number of courses—as to the Monitors already in service—but experience has caused this to be altered. The bolts, upon being struck fair by a heavy shot, were liable to fly through, thus becoming dangerous missiles in the crowded turret. The present plan is to employ rivets shouldering in the sixth course, the holes in which are countersunk from both ends. Its other courses These being driven in and upset in the larger holes, will, it is believed, prove secure. There are over seven hundred (700) of these rivets to be fitted, and as but few of them can be of longer job than driving the bolts, the remaining four of the courses will be somewhat delayed.

The *Manhattan* is nearly ready for launching, and will probably go off the stocks about the 7th instant. The bolts are in place, and the same plating on, except about of the bolts, which cannot be put in until the stock on the bolters is laid and caulked. The *Mahopac*, the third of the series, will probably be ready for launching about the 1st of November. The armor stringers are in their place, and the side armor being fitted.

These vessels are of the same class, and differ from the Monitors already in service in being larger, stronger, and better ventilated. The turrets are built of less coe-inch plates, instead of eleven of fifteen-sixteths, as in the others

ARMY GAZETTE.

RELIEVED FROM DUTY.

WAR DEPARTMENT,
ADJUTANT-GENERAL'S OFFICE,
WASHINGTON, SEPT. 28, 1863.

General Orders No. 322

I. The Forces of the United States serving in the 20th and 21st Army Corps be consolidated and called the 4th Army Corps, and that Major-General Joseph Hooker be the commander of the consolidated Corps.

II. It is also directed that a Court of Inquiry be convened, the duty of all to be hereafter made, to inquire and report upon the conduct of Major-General Howard, and the behavior of the troops of the 11th and 20th instant. These officers are relieved from duty in the Department of the Cumberland, and will report to Major-General Hooker, reporting their arrival by letter to the Adjutant-General of the Army.

By order of the Secretary of War.

E. D. TOWNSEND,
Assistant-Adjutant-General.

NAMING OF FORTS.

WAR DEPARTMENT,
ADJUTANT-GENERAL'S OFFICE,
WASHINGTON, SEPT. 29, 1863.

General Orders No. 325

The fort at Rocky Hill, on the east side of the Potomac river, two miles below Alexandria, will be called Fort Foote, after Rear-Admiral A. H. Foote, U. S. Navy, late Flag-Officer of the Navy, and whose distinguished services in command of the United States naval forces upon the Western rivers are well known to the country.

The Water Battery at Alexandria will be called Battery Rodgers, over Fort Ellsworth, in honor of Colonel Henry Rodgers, 169th N. Y. Vols., in a Naval attack upon Fort Wagner, Charleston harbor, S. C.

Fort Blenker, on the south side of the Potomac, will be called Fort Reynolds, after Major-General J. F. Reynolds, killed July 1, 1863, at Gettysburg, Penn.

Redoubt "A," near Fort Ilyen, will be called Fort Weed, after Brevet Brigadier-General S. H. Weed, U. S. Army, killed at Battery Wagner, S. C., July 21, 1863, at Gettysburg, Penn.

Redoubt "B," near Fort Ilyen, will be called Fort Farnsworth, after Brigadier-General E. B. Farnsworth, killed July 3, 1863, at Gettysburg, Penn.

Redoubt "C," near Fort Ilyen, will be called Fort Worth, after Brevet Major-General W. J. Worth, U. S. Army, late Infantry Officer, killed July 7, 1862, at Gettysburg, Penn.

Redoubt "D," near Fort Ilyen, will be called Fort Willard, after George L. Willard, 169th N. Y. Vols., Infantry Officer, killed July 2, 1863, at Gettysburg, Penn.

By order of the Secretary of War.

E. D. TOWNSEND,
Assistant-Adjutant-General.

DISMISSALS.

During the Week ending Saturday, September 26, 1863.

Surgeon J. Ewen, U. S. Volunteers, and Captain Charles H. Lambert, Assistant-Quartermaster, U. S. Volunteers, to date September 25, 1863.

Captain Moses G. Brown, Assistant Adjutant-General of Volunteers, to date September 25, 1863, for twice drawing his pay for the month of July, and for absence without proper authority.

First Lieutenant Sumner Howard, 17th U. S. Infantry, to date September 25, 1863, for absence without proper authority, and neglect.

Surgeon Matthew McEwen, 2d Virginia Cavalry, to date September 24, 1863, for misapplication of hospital property, selling whisky to sutlers, and making false returns of hospital property.

Assistant-Surgeon W. S. Ilch, 45d Ohio Volunteers, to date September 26, 1863, for absence without proper authority, having been discharged by a Military Commission convened at headquarters District of Memphis.

Captain William H. Forrest, 8th Pennsylvania Cavalry, and A. Assistant Quartermaster, U. S. Volunteers, to date September 26, 1863, for absence without proper authority, having been published officially August 31, 1863, as a deserter, by order of Major-General Meade, Commanding.

Chaplain Jeremiah Schadel, 130th Pennsylvania Volunteers, to date June 13, 1863.

First Lieutenant John Selmyer, 7th New York Volunteers, and First Lieutenant Benjamin F. Hall, 7th New York Volunteers, to date August 24, 1863, for absence without proper authority, having been published officially August 31, 1863, as deserters, by order of Major-General Meade, Commanding, and failing to appear before the Commission.

Second Lieutenant Robin A. Goodenough, 54th New York Volunteers, to date August 24, 1863, for desertion, having been published officially August 31, 1863, as a deserter, by order of Major-General Meade, Commanding.

Lieutenant W. H. Bricker, 2d Pennsylvania Cavalry, to date September 26, 1863, for neglect of duty in not taking proper precautions to prevent the sale of whisky to soldiers in camp, and thereby rendering himself to be surprised and himself captured.

Second Lieutenant George T. Beaumont, company B, Ringgold Battalion, Pennsylvania Cavalry, to date September 24, 1863, for absence without leave and neglect of duty.

Dishonorably discharged by direction of the President.

Colonel George Smith, 45th Illinois Volunteers, to date September 25, 1863, with forfeiture of all pay and allowances, for gross neglect of duty, drawing and collecting false and fraudulent accounts against the Government.

Captain Sigel Schmidt, 58th Pennsylvania Volunteers, to date September 22, 1863, for violation of the 60th Article of War, and for the more neglect of duty in leaving his picket, thereby being captured by the enemy.

DISMISSALS REVOKED.

The dishonorable discharge, at expiration of term of service, in the case of Colonel Ernest Baehr, 181st Pennsylvania (Buffalo) Militia, has been revoked by the President upon the special circumstances of his case, he has been granted an honorable discharge as of the date his regiment was mustered out of service.

The order mustering out of service Charles T. Dean, 56th Ohio Volunteers, as of service, to date October 7, 1863, has been revoked by the President, and he is honorably discharged as of that date.

The order mustering Surgeon William Arnold, 37th Ohio Volunteers, out of service, to date October 6, 1863, has been revoked, and he was mustered in, has been severed from the service, having shown satisfactorily that he performed duty up to that date.

The order of dismissal in the case of Captain William H. Edsall, 11th New Jersey Volunteers, has been revoked, he having been previously honorably discharged by Captain C. S. Drake, U. S. Army, headquarters sixth army corps.

The order of dismissal in the case of First Lieutenant E. W. Pike, 127th Illinois Volunteers, has been revoked, and he has been honorably discharged the service of the United States.

RECOMMENDED FOR DISMISSAL.

The following officers have been recommended by the Headquarters of the Army for the officers hereinafter specified, are hereby notified that they will be honorably discharged from the service of the United States unless within fifteen (15) days from September 28th, 1863, reasons be offered why they should not be so dismissed, by which, or whose Brigade-General Ricketts is President, and make-side Survey directed to examine into their cases, viz:

Failing to report at Columbus, Ohio, as Ordered.

Captain C. W. Littlefield, Assistant Quartermaster of Volunteers.

Captain D. W. Gilmore, Assistant Quartermaster of Volunteers.

Major E. N. Neill, Assistant Adjutant-General of Volunteers.

Captain James Sherman, Assistant Quartermaster of Volunteers.

Captain F. W. Fox, Assistant Adjutant-General of Volunteers.

Failing to report at Camp Chase, Ohio, as Ordered.

Lieutenant W. D. W. Miller, A. D. C., to General Hancock.

EXEMPT FROM DRAFT.

The following officers, having filed affidavits and heretofore published, are exempt *from being drafted the Service of the United States*, having made application to the Provost-Marshal-General:

Captain G. G. Hunt, 4th United States Cavalry.

Captain J. W. Mervine, Assistant Quartermaster-General, 3d Division 11th Army Corps.

Captain D. M. Hovey, 13th Massachusetts Volunteers, Acting Inspector-General 2d Division 1st Army Corps.

Captain Charles Hamilton, Assistant Quartermaster of Volunteers.

First Lieutenant James A. Hall, 1st United States Cavalry.

Second Lieutenant Thomas Byrne, 2d United States Infantry.

Captain S. H. Hurlbut, Assistant Quartermaster of Volunteers.

Lieutenant Colonel J. S. Smith, Chief Commissary 2d Army Corps.

Captain Alfred Hough, Assistant Quartermaster of Brigade, 2d Division, 2d Army Corps.

Major William McMichael, Assistant Adjutant-General of Volunteers.

Second Lieutenant Paul Quirk, 2d United States Cavalry.

Surgeon H. L. Smith, 45th Illinois Volunteers.

CONDITIONAL DISMISSALS.

The following officers having been reported at the Headquarters of the Army for the causes hereinafter specified, are hereby notified that they will stand dismissed the service of the United States, unless within fifteen (15) days from September 28th, 1863, reasons be offered why they should not be so dismissed, by which Brigadier-General Ricketts, U. S. Army, is President of the Board of Inquiry to inquire into the charges against them:

Absent without proper Authority.

Second Lieutenant Silas G. Latham, 8th Company, 1st Battalion, United States Sharpshooters.

First Lieutenant and Adjutant James B. Comstock, 21st Missouri Volunteers.

Desertion.

Captain William Fairbanks, 8th Pennsylvania Volunteers.

First Lieutenant Joseph Wilson, 8th Pennsylvania Volunteers.

Absence without Leave and Disobedience of Orders.

Captain John S. Bowman, 36th Wisconsin Volunteers.

Colonel H. Bertch, 45th Illinois Volunteers.

COURT-MARTIAL.

Acting Military Governor Tilghman has approved the sentence of the court-martial, of which Lieutenant-Colonel Smith, of 176th Pennsylvania Volunteers, was President, in the following cases:

Major Thomas H. Addicks, 1st Independent Battalion, charged with drunkenness on duty, and conduct unbecoming an officer, acquitted, and Major Addicks directed to resume his sword.

Second Lieutenant Charles H. Ellis, 2d Volunteers, drunkenness and demeaning Colonel Alexander as a "damned accountant," and other specifications, dismissed the service.

Private R. Conway, company L, 4th Pennsylvania Cavalry, absence without leave, sentenced to forfeit one month's pay.

Corporal Hilary Gregory, company K, 198th Pennsylvania, sleeping on his post, sentenced to be reduced to the ranks.

Private Joseph Company K, 198th Pennsylvania, sleeping on his post, sentenced to forfeit one month's pay

NAVY YARDS AND NAVAL STATIONS.

BROOKLYN NAVY YARD.

Captain John Rogers visited the Yard this week, accompanied by Chief-Engineer John Faron, Local-Inspector-General Eyan, of California, the Messrs. Isene and Mr. Hichbork. The Superintendent of the Yard made a thorough inspection of all three vessels. He expressed himself as highly pleased. Upon leaving the Yard, the workmen, upwards of a thousand in number, gathered together, and as the gallant Captain passed through their midst, they saluted him with nine rousing cheers, and through their foreman, Mr. Wm. Smith, thanked him for the kind and manner in which he had fought the Wabashes, the first Monitor constructed at their Yard.

The prize steamship *Jesse Hitchcock*, Master Franklin Hopkins, from Wilmington, N. C., September 22, arrived here on the 25th. The *Jesse* was captured September 20, off Wilmington, N. C., after a chase of four hours. She had a full cargo of naval stores, chiefly turpentine, which the Connecticut fired thirty rounds of shell and solid shot. The *Jesse* have overhauled part of her cargo of cotton. She is an iron vessel, one hundred and ninety tons burthen, built at Jersey City, Hudson, and is ten years old. Her engines are oscillating, and are about four hundred horse power. The cargo consists of two hundred bales of cotton, three tons of lubricating oil, a small quantity of turpentine, and is valued, together with the vessel, at $150,000. She is bound to Boston, but put into this port for a supply of fuel. She is in charge of Acting-Masters Franklin, Hopkins, and Charles Hall, and Acting-Engineer McArthur.

The steamer *Tioga* has one full set of ships—some days as many as thirty-five, and on others only six or seven. There are at work on these vessels at least five thousand workmen. There is in course of construction a large dredge completed to the hull, which will shortly be completed some time in December. It will occupy the place of the old wooden one. All the vessels overhauled and repaired in the Yard are pumped full of steam, which is used in the fire service. The three double-enders, the *Parish*, *Baltimore*, and *Algonquin*, are preparing with all possible speed for service, and will be ready for launching in the side of six weeks. The frigate *Wamsutta* is getting along as fast as possible. She is the largest vessel built by the United States Navy. The *Wamsutta* was launched last week, and is nearly ready for harbor-service. The *Mantanomah* is getting ready for sea. The *Shamrock* is getting her machinery in. The *Roanoke* is ready for sea. The *Macdonough* and *Saugus* are both ready for sea. These are the two vessels which ran the blockade at Vicksburg and Port Hudson. The *Richmond* was put in commission on Wednesday, with the old officers on board. The *Sacramento* is in the dock, under overhauling. Mr. W. Steele, the master carpenter, has 1,100 men employed in his department alone.

PORTSMOUTH NAVY YARD.

The gunboat *Alabama*, which arrived at New York some weeks since, arrived in this port from the New York navy yard, bound to this yard, is now lying at quarantine, but will be brought up as soon as the weather becomes cool and frosty, so that she can be thoroughly cleansed. The new side-wheel steamer *Passaconaway* is now in use on the shores, and is shortly to be fitted up as a receiving ship. An steamer which is to be used as a dispatch boat for Admiral Dahlgren will soon be built at this yard. She is under the charge of Lieutenant Commander Bradford, and is bound for Fortress Monroe, where she will receive orders. It is expected that she will be ready for service in a week. Having made thirteen knots with great ease. While proceeding to sea a few days since, she unfortunately broke her propeller, and is detained until a new one can be procured. She is a fine, staunch vessel, and her engines, which are very fine specimens of machinery, were made at Hartford. The *Iroquois* is armed with one 200-pound pivot gun, two 9-inch guns, and four 24-pounder howitzers.

The *Shawmut*, also built at this yard, and of the same class as the *Iroquois*, is now in the dry dock. She will go to the Brooklyn Navy Yard in a short time to receive her armament. The *Shawmut* has been received to fit out with all possible dispatch the old frigate *Alabama*, which has lain in the ship-house for many years. She was first commenced in 1818, and caulking was begun in 1826, since which time very little if any work has been done on the vessel. It is expected she will be launched in less than three months, when she will be fitted up as a receiving ship.

The frigate *Franklin* still remains under cover, and is an object of great attraction. She is still 100 tons short of her allotted load, and but will, when launched, carry an additional armament of heavy pivot guns, rendering her one of the heaviest armed naval vessels afloat. Orders were received by the commandant of this yard, that she can be accomplished in about six months. She will be a full-rigged frigate, but may be used as occasion requires as a steamer, which were made at the Atlantic Works, East Boston, are now ready.

One of the iron-clads—the *Agamenticus*—is building at this yard, She is 60 feet keel, 225 feet on deck, and 45 feet beam over all. The *Monadnock*, now building at the Charlestown Navy Yard. Workmen have just commenced putting on the plates, and it is probable she will be ready for launching early next spring.

Preliminary orders have already been received to build three wooden gunboats, of about 1,000 tons each. They are to be built for speed, and will be a very busy season for workmen.

Additional workshops are being built for various branches of labor, and the capabilities of the yard will be much enlarged. The yard is under the superintendence of Commodore Charles Henry Bell.

Soon. About 1,200 men are now employed.

At Fort Gaines, Dauphin Island, a short distance from the yard, are barracks, which are at present occupied by negroes, who are daily drilled in duties pertaining to shipboard. They number 341, and are kept as tractable, well-behaved persons, as is required of them, and taking great interest in their new employments. The fort is an earthwork, which was thrown up during the war of 1812.

NAVAL STATION, NORFOLK, VA.

This station for fifteen months past has been under the command of Commodore John P. Levingston, who, at the close of the year 1862, found the Navy Yard once the finest in the world, but great havoc and ruthless destruction had been made by the fifteen months of labor, order began to arise from the ruins, and at the present time the Yard is capable of doing a large amount of work, and is constantly being reclaimed more and more efficient.

For some months after Commodore Livingston assumed command here, little could be done other than the boresome task of cleaning away the ruins, gathering together the masses of copper and iron which yet remained here, and preparing for, at least, a partial rebuilding of the Yard. But now the blacksmith department is in full operation; the shipwrights, the machinists, the men in the foundry, pumper and joiner departments are fully organized and at work; and the dock engine, a most powerful and admirable piece of work, has been rebuilt anew, from the shapeless ruin in which the Rebels left it, and now employs the dry dock in days or ten hours.

There are now lying at the Yard eight vessels of war—from the third-rate side-wheel steamer *Florida*, down to the little tug *Alert*, undergoing repairs—and the same remote back there has been, at least, this number of vessels at the station. The fact alone will give an idea of the amount of work which is now in progress, and the labor which has been required to reconstruct and repair, out of the ruins the rebels left, the machinery requisite to repair, build, and refit these vessels. During the past nine months a number of gunboats designed for service here have been fitted out here, with iron bulwarks and iron-plated pilot-houses, for the protection of the men while engaged in the working of the heavy armament. It is not, perhaps, discreet to give the number of vessels that have been re-modeled, repaired, or armed at this station, during the present season, but the number is not small, and is very large.

Gunboat *Morse*; steamer *Saint Washington*; gunboats *Commodore Jones*, *Commodore Barney*; *Tacit Blockade*; and the steamers *Commodore Hull* and *Delaware*. Monitors *Nahant* and *Sangamon*; side-wheel steamer *Hunchback*; screw-steamers *Mystic*, *Wyandotte* and *Fuchsia*; *America*; gunboats *Stepping Stone* and *Shackleton*, and many others.

Much credit ought to be given to the superintendent of machinery here, the Lt. W. H. Lynch, for the amount and excellence of the work in his Department. He rebuilt the dock engine at an expense of less than one-quarter of her original cost (searching less than $3,000, while her original builders demanded of the Government $30,000 to rebuild her.

There are about 350 mechanics and laborers now employed at the Yard. He says that he has two hundred more than he can employ. Commodore Livingston, that all that could be done preparatory to a present or partial rebuilding of the Yard, has been accomplished, and that everything now depends upon the appropriations, with considerable profit to the Government; and should Congress appropriate the money required, that the work of reconstruction could now be carried on with rapidity, ease, and cheapness.

The United States Naval Hospital is also under the control of Commodore Livingston. It is now in excellent order, and is constantly and generally receives from 20 to 25 new patients each week. Sick and wounded sailors and marines are sent here from all the coasts of the North and from the Mississippi Blockading Squadron, and from the fleet now engaged at Charleston.

The officers of the station now on duty here, are as follows: Commander, John P. Levingston; Lieutenant-Commander, Wm. Smith; *Surgeon*, Albert G. Gorgas: *A. A. Paymaster*, Louis Sands; *Assistant-Surgeon*, J. Oliver Barnett; *Assistant-Surgeon*, Wm. H. Jones; *Acting-Assistant-Surgeon*, Wm. H. Hall; *Acting-Assistant-Surgeon*, Wm. Hanson; *Actuy-Master*, Samuel F. Holbrook; *Carpenter*, William Hope. The U.S. screw-steamer *Wyandotte* is doing guard duty off Norfolk.

VARIOUS NAVAL MATTERS

THE U. S. steamer *Sacramento*, from Fortress Monroe, arrived at Boston on the 30th September.

The new steam revenue propeller *Kewanee*, was launched in Baltimore on the 24th.

Commodore Bell, commanding W. G. B. Squadron, reports that on the 21st of September the steamer *Ella* ran the blockade at Velasco. The rebels in April last, was chased into Matagorda Sound and burnt.

The *Ella* was built at Wilmington, Delaware, and in Bermuda the second week in September. At the town of Hamilton, the officers of the craft were dined and wined, and honored with every manifest attention.

The Bermuda *Gazette* confirms the statement that the steamer *Sumter* was sunk by the fire of Fort Monroitte, she having been mistaken for a blockade runner. Some fifty persons, it is said, perished. The vessel was a fine fast fore-and-after, and will be ready for service in about twenty days.

CAPTAIN DAHLGREN of the revenue service, is doing good work in his cruising ground in the waters of Georgia and Florida. Since the 1st of March in Brunswick, September 23d, having captured two blockade runners, the *Ella* and *Lizzie*, and destroyed a number of small vessels, without good armament, and without opposition.

The London *Celebration Mercury* says: "Another steamer, the *Alice*, has just cleared out from the Clyde, for the purpose of running the blockade. She is a screw-steamer of 400 tons burthen, and, like the same purpose, has put back to the Clyde for repairs. There are three screw-steamers lying at Greenock, which are also reported as ready to follow the *Alice*."

A Court of Inquiry is in session at the Washington Navy Yard with Lieutenant-Commander W. P. Jones, of the Ordnance, as President, Lieutenant-Colonel Wm. Ludlow, of the Engineers, and Judge Advocate, on the case of Acting-Master James Van Buskirk, of the steamer schooner *Commodore Read*, on the charge of drunkenness, with conduct unbecoming an officer.

A LETTER from the steamer *Commodore*, dated Rio del Norte, September 12, says: "In the most valuable prize of the war has been captured by the blockade. A steamer named the *Lizzie*, formerly a ferry boat in the British build, and over three hundred feet long, and showed British colors. She has evidently been built for the purpose of the rebel man-of-war.

The United States steamer *Crow de Lion* lately arrived at the Washington Navy Yard, from the lower river, and reports that decorating and repairing are being carried on rapidly on board. There are at some points many of them are in the woods watching an opportunity to return. Some have already returned. The steamers remain at the basin, and lately several have been captured.

U. S. steamer *Commodore Barney*, which has left the inner harbor at Newport, by the steamer *Perry*, and anchored off the east side of Goat Island, a short distance from the shore. The *Commodore Barney* will also be permanently moored for the winter. There are now lying at Newport, in the inner harbor, the following vessels, namely: the *Constitution*, *Sarato* and *Macedonian*, all attached to the Naval School. The *Constitution* is undergoing extensive repairs, and completing some necessary repairs in Boston.

THE U. S. steamer *Connecticut*, Captain Rich, reports that on the 23d of September, she drove on shore and destroyed the Confederate steamer *Florence*, loaded with cotton, and attempting to run the blockade at Wilmington. She was built in England, and is supposed to have been launched for a blockade runner. The steamer *Ella*, also about four hours, and finding she was now being captured, her officers ran her on shore, and set fire to her, and destroyed her.

MESSRS. Cramp & Son, of Philadelphia, are now constructing a steam-tug for the Government, to be employed in the Navy Yard, somewhat larger than the *Iroquois*, with all the improvements and accommodations which have been introduced since the *Iroquois* was built. The vessel will be laid outside of this harbor.

The *Sullee* iron-clad gunboat, the *Charleston*, has been launched and is nearly ready for service in Charleston harbor. Her guns and nearly all her machinery are in, and she is about to go into commission. She is a fine, strong vessel, and armed with Dahlgren guns. She has a large keel, a strong way, and armed with heavier guns. She has a large keel, a strong way, and armed with heavier guns. She has also a large spread of sails, and is a fine sea-boat. She is not as fast as the *Passaic* class, like the other iron-clads, will carry a heavy spar under sail, with a large complement of men. She is commanded by Lieutenant-Commander Bunce, and may propose to blow up our Monitors when they come into the harbor.

THE gunboat *Ozark* recently left St. Louis, and made a short trial trip up the river. The hull of the *Ozark* was built at Mound City, and was towed to St. Louis where it was fitted with her engines and machinery. The boat is built on the Monitor plan. The dimensions are as follows: 180 feet long, 50 feet beam, and 7 feet four inches hold. She has two engines, and four propellers—two fast in stern—the latter, from pulling around the turret and pilot house is not made very fast, back pulling are used, and side armor three inches. She has three main guns.

The prize *Atlantic*, of which much has already been published in the Northern papers, arrived here from Ocracoke Inlet, not heard from. There is no doubt but that the prize-crew and officers were overpowered by the persons on board. The prize is now at Beaufort, N. C., and the Executive Officer of the Gunboat *Underwriter*, Acting-Ensign Miller, said to have been on board of the *Atlantic* when she was captured. The Captain of the *Atlantic* and four of his crew are with Miller. The blockade Captains are all here, and have a consultation this morning on the business in the Crimean war.

The United States screw steamer *Hyacinth*, Lieutenant Commanding G. G. Bolles, while lying under the Virginia shore, Chesapeake Bay, was fired into by a party of rebels, on the 19th ult., from a body of guerrillas, who were handsomely repulsed in about twenty minutes. The *Hyacinth* was struck by seven shots, but not seriously so one was injured on board. It being dark the rebel sea could not be ascertained. The *Hyacinth* returned the fire with grape and canister with good effect, as the rebel fire was soon silenced and they returned.

The revenue steamer *Dallas* reported upon the coast of Florida, and her activity along the coast for some time past has deprived them of the services of all stores and provisions.

The gunboat *Kansas* was launched in Philadelphia this week. Her dimensions are as follows: Length between perpendiculars, 180 feet; length of keel for tonnage, 162 feet; breadth of beam, 30 feet 4 inches; depth of hold, 12 feet 6 inches; draft of water, 9 feet; burthen, and will, when loaded, draw nine feet of water, and will have an average speed of eleven knots an hour. She is armed with two of her guns on her gun deck, and one 11th-inch pivot-gun; her magazine is forward, and well supplied with shot and shell. She is furnished with an auxiliary pumping engine, with attachments to supply the boilers with water, and to wash the ship, and in case of fire, she also has an arrangement for throwing hot water if necessary.

THE BRIG *Rachel* has been captured by the boats and vessels of various rates, from a fifty-gun frigate to a four-gun despatch vessel. It is easy to see the number of vessels that will be required to blockade hermetically the coast, and the names of their commanders.

The steamer *Kennebec*, Acting-Master, Commander, Kennedy; *Greyhound*, 11, steamer, Hickey; *Juniata*, 14, steamer, Hancock; *Iosco*, 3, steamer, Commander Lanman; *Lamberton*, 4, steamer, Foley; *Mahaska*, 4, steamer, Harvey; *Moloo*, 6, steamer, Preston; *Nansko*, 5, steamer, Lee; *Nyack*, 4, steamer, Commander Baldwin; *Penobscot*, 4, steamer, Lieutenant; *Power*, 3, steamer, Corey; *Pyketa*, 21, steamer, Hood; *Resolute*, 6, steamer, Commander Cushing; *Sassacus*, 4, steamer, Lieutenant Gleason; *Stanton*; *Victoria*, 6, steamer, Hamilton. The *Fawn*, 12, screw sloop, has been ordered to the fleet off Charleston, Commander Oliver Hazard Perry Stockton.

A fine clyde-built side-wheel steamer *Jupiter*, a noted blockade runner, 194 feet long, 19 feet beam, formerly a passenger boat on the Clyde, was captured off Wilmington, N. C., by the steamer *Connecticut*, Captain Rich, at 3½ o'clock last Sunday morning, in attempting to run the blockade. She was bound to Nassau with a full cargo. She has a well-assorted cargo of liquors and medicines, among the latter a great quantity of quinine. Among the passengers, officers of the Royal Navy, an agent of the Confederacy named Weaver, and a correspondent of the London *Times*. Nassau and Bermuda officers were recognized by Mr. Lyman, Paymaster's Clerk of the United States steamer *Connecticut*, and Mr. Lyman was put in charge of the Rebel Officer at Dillon Head, the *Jupiter* was brought on St. Helena Sound, and anchored off the mouth of the Beaufort River with the rest of her captures.

The Russian vessels in New York harbor have been joined this week by the *Svir*, English line-of-battle ship, Captain E. K. Barnard, the flag-ship of Admiral Lessoffsky, and the *Oslabia*, a screw frigate of 2,600 horse power, 3,021 tons, 28 guns, and crew of 850. The *Svir* is

boy opened with eight guns, three of which were rifled. Almost at the same moment the enemy's gunboats were seen to get under way, ranging the vessels in stream. Then next being room to pass the station, the vessels were ordered to anchor, and a boat sent to the *Seneca*, which returned with Engineer Munroe and Firemen Linn badly scalded (since dead). The *Arizona* had now grounded by the stern; the ebb tide sought her bows and swung her across the channel; she was then quickly extricated from the pool-sun—using to the engine becoming heated by the collection of mud in the bilges.

The flags of the *Clifton* and *Seneca* were run down and white flags were flying at the fore. As all the transports were now moving out of the bay, this vessel remained covering their movements, and she also grounded and remained fast until the tide rose. Finding that there was no assistance could be had from any of the tugs or the transports. There are now on board the *Clifton* Acting Master Peter Benson, George W. Harris, Thomas Bowers, Samuel Smith, and George Hutton, of the crew of the *Seneca*.

Very respectfully, your obedient servant,

H. THERSTA,
Acting Master Commanding U. S. steamer *Clifton*.

Commodore H. H. BELL,
Commanding W. G. B. Squadron, New Orleans.

UNITED STATES STEAM SLOOP PENSACOLA, }
NEW ORLEANS, September 15, 1863. }

SIR:—My dispatch No. 6 informed you of the arrival of the expedition of Sabine Pass, and the capture of the *Clifton*, Acting Volunteer Lieutenant Crocker commanding, and the *Sachem*, Acting Volunteer Lieutenant Amesbee, by the rebels, and the safe return of the troops and transports to the Mississippi river.

Lieutenants Crocker and Johnson are reported to have fought their vessels gallantly, and each ordered a Court of Inquiry on the *Clifton* and *Sachem* in tow within twenty minutes after their surrender. The return of their dispatches is awaited.

The arrival of the *Sumter* this morning has given me the only reports from the West officers entrusted which have yet arrived.

The attack, which was to have been a surprise, and made at early dawn of the 7th, was not made until 9 P. M. on the 8th, after the enemy exploded the magazine and evacuated the works. Previously a reconnaissance had been made on the morning of the 8th by General Franklin in person, and Lieutenant-Commander Caldwell, when they decided on a form of attack different from that recommended by myself.

I have the honor to be your obedient servant,

H. H. BELL,
Commanding W. G. B. Squadron, *pro tem.*

Hon. GIDEON WELLES,
Secretary of the Navy, Washington, D. C.

THE CONSIDERED BEFORE FORT MOULTRIE.

FLAG STEAMER PHILADELPHIA, }
OFF MORRIS ISLAND, SEPT. 12, 1863. }

SIR:—On the 8th instant, at 10 A. M., the monitors of this squadron in the entrance to take of the services of the ship and ship's company, to be conducted against the enemy's batteries.

I have the honor to be, very respectfully, your obedient servant,

C. R. P. RODGERS,
Commanding U. S. B. Squadron.

U. S. S. NEW IRONSIDES, }
OFF FORT WAGNER, S. C., Sept. 9, 1863. }

SIR:—The *Weehawken* being hard aground on the pass between sumter and Moultrie, I ordered the *Passaic* to take her place and capture upon her. In obedience to orders, I moved this ship up, coming out of the channel, and anchored in the position assigned me, abreast of the *Keokuk*, unexpecting any ship, and not aware that the *Weehawken* had been abandoned by her crew. The moment we anchored and commenced firing, the rebels opened from Sumter and every gunned fire upon us, which was terrific. Fortunately, however, we succeeded in getting her guns engaged with those of Sumter, and in gotten our range. We opened slowly at first, to get range on Moultrie, when I directed my fire exclusively and concentrated on the fort, which compelled it to slacken. We also directed our attention to the parts where the guns appeared to be mounted, and as each new gun in these works was dismounted, and the fire of the others somewhat slackened, I fired at the next one, and continued to do so, till each of these forts, and directed the remaining fire to open on Moultrie.

The fire of all the forts slackened down to an occasional gun, when I directed my fire to the city, and fired at the forts as they discovered fire, he jumped from behind his embrasure and opened rapidly. I resumed my fire upon Moultrie.

It affords me great pleasure to bear testimony to the fine bearing, and gallant conduct of Commander Stevens, Captain Bunce, Lieutenant-Colonel Rodgers, Acting-Master Gov. W. Bennett, Acting-Master John M. Skillings, Acting Ensign Edward Hall, and the officers and crew of the *Passaic*.

The captains of guns and their spirited crews have my warmest thanks for the spirited manner in which they handled their guns. Engineer Faron, and the officers of the engineer department, were stationed at the post of honor and shelled the parapet, particularly Lieutenant-Commander Sutherland, of the engineer department, who, although Lieutenant-Commander Sutherland, of the engineer department, who, although not so much indebted, for his untiring efforts to make the ship efficient in every particular, and for his coolness and bravery in carrying out my orders as commander of the gun deck during the hottest time that with a gun-boat under the fire of the enemy's batteries.

The pilot, Mr. Benjamin Dorey, merits my thanks for the able manner in which he has handled this ship, particularly in working her up to Moultrie in the most effective position for battery.

I notice herewith the report of Mr. Bishop, carpenter, detailing the injuries.

I am happy to say I have but few casualties. The surgeon's report of these is herewith.

I have the honor to be, very respectfully, your obedient servant,

S. C. ROWAN,
Captain Commanding.

To Rear-Admiral JOHN A. DAHLGREN, Commanding S. A. B. Squadron.

NAVAL ORDERS.

REGULAR NAVAL SERVICE.

Captain Charles S. Boggs, from the *Sacramento* (sick), and awaiting orders.

Lieutenant Commander James E. Jewett, from the command of the *Saugus*, and ordered to the *Sacramento*.

Lieutenant Commander R. B. Lowry, from the command of the *Seminole*, and ordered to the command of the *Saugus*.

Lieutenant Commander Joseph R. De Haven, from the command of the *Southfield*, and ordered to the *Seminole*.

Lieutenant Thomas F. Kane, from the Naval Academy, and ordered to the *Sacramento*.

Assistant-Surgeon J. H. Tinkham, from the *Kanawha*, and ordered home.

Assistant-Paymaster Edwin Putnam, from the *Nahant*, and ordered north.

Assistant-Engineer Jessie B. Woodbury, from the *Passaic*, and ordered North.

Third-Assistant Engineer George W. Baird, from the *Kensington*, and ordered to the *Nahant*.

Assistant-Engineer Frederick Ewell, from the *Sacramento*, and ordered home for examination.

Third-Assistant Engineers Cipriano Andrade, Henry D. McEwen, Henry F. Bradford, and Richard T. Bostaw, from the *Lancaster*, Receiving Squadron, and ordered home for examination.

Lieutenant Commander John H. Russell, from the command of the *Nahant*, and ordered North.

Lieutenant Commander W. F. McCann, from the command of the *Kinsman*, and ordered to the command of the *Seminole*.

Horatio, 18th; Lieut. W. B. Rochester, 18th; Lieut. Benton, 6th; Capt. Floyd, 6th; Lieut. Lindsay, 18th; Lieut. Wm. Gresham, 6th.

GEN. REGIMENTS.—Lieut.-Col. Archer, 21st Ohio; Lieut.-Col. W. Allen, 21st; Lieut. Daniel Richards, 21st; Lieut. J. J. Miller, 21st; Lieut. J. W. Martin, 21st; Capt. A. J. Stelling, 21st; Capt. W. H. Free, 21st; Lieut. J. H. Calfrey, 21st; Lieut. Wm. Dye, 21st; Lieut. D. Bennett, 19th; Lieut. H. W. Barlow, 14th, Capt. Moore, 14th; Capt. Pugh, 14th; Lieut. J. G. Cobb, 14th; Lieut. R. Marshall, 14th; Lieut.-C. L. Van Meter, 14th; Capt. Sam. Pomeroy, 14th; Lieut. W. T. Bennett, 14th; Lieut. Lafferty, 14th; Lieut. Wm. Simmons, 14th; Lieut.-Col. Messer, 89th; Lieut. Rule, 89th; Lieut. Squires, 89th; Lieut. Colonel Hayes, 89th; Lieut. Col. Kellogg, 89th; Lieut. Col. Gilbert, 89th; Lieut. Col. Harlow, 89th; Lieut. Harman, 89th; Lieut. H. C. Hall, 89th; Lieut. Col. Hall, 89th; Lieut. Col. Hall, 89th; Lieut. Col. Hall, 89th; A.Q. Troop, 8th; Capt. Montgomery, 8th; Capt. C. H. Gilsbreer, 6th; Capt. James Hall, 6th; Lieut. Col. Wm. Sanderson, 6th; Lieut. Col. Wm. Lynch, 6th; K. Reeman, 9th; Lieut. J. Loomis, 9th; Lieut. Lefever, 9

WHY GENERAL BURNSIDE DID NOT REINforce General Rosecrans.—Parson Brownlow sends the following letter to a Western paper:

"As some reflections are cast upon General BURNSIDE for not having reinforced General ROSECRANS, I lay down, in vindication of the gallant Burnside, to state a few facts to men, who are ignorant of the topography of the country. I refer to how the country over-passed by both armies. I travelled through North Georgia as an exile, and fled by night with the Cherokees, before the whites occupied the country, and before there were good roads or any kind. I have been in Washington and Eastern and East Tennessee ever since, in every conceivable way, and therefore it is that I know the country.

First. It is one hundred and ten miles from Knoxville to Cumberland Gap, and passes for five miles from Chattanooga to Lafayette (in the neighborhood of where the fighting began), still further south. Hence, BURNSIDE, marching from Knoxville, burned the bridges behind him, rendering it impossible for General BURNSIDE to reinforce General ROSECRANS with any speed—besides, General BURNSIDE had to keep an eye to the East, when, in the event of defeat, an army of 20,000 men could be poured down upon him from Lynchburg, on the great Virginia and Tennessee railroad, in the possession of the rebels.

The country in North Georgia is rather a level country, with hills and ridges springing up at intervals, and separating one valley from another. The valleys are narrow, and the banks usually high. The country is thickly timbered, with a heavy undergrowth, making it rather impossible for the movement of a large army.

For my part, I have every confidence in our ultimate success. LET ROSECRANS be reinforced, and he will whip the whole Confederacy. The mediation I advocate is that of the sword and the sword; and let there be no armistice, or cessation, until all the rebels, front and rear, North and South, are killed or captured or disarmed. And then let condign punishment be promptly dealt out to the arch-traitors, even in this unholy crusade against civilization. My motto is, Greek fire for the masses and hell-fire for the leaders. And now let the loyal should be consulted in the great casting up of these accounts.

W. G. BROWNLOW."

LOUIS NAPOLEON'S APPEARANCE.—The Paris correspondent of the Providence Journal, on seeing LOUIS NAPOLEON for the first time, says that in the expression of his face is contained "the mystery of his life. He is the very image of the Sphinx, and that" he has a hooked nose, but its hook is more that of the hawk than of the eagle." He continues:

"My opportunity for seeing the Emperor was a favorable one, and I turned it to account by making a long inspection. I was returning to Paris from St. Cloud through the Bois de Boulogne. I came from the country and was walked for half an hour along the border of the great lake. I do not remember to have seen a face with a more profound expression of mental gravity, but I would not say of impassibility. The lines are slightly deeper than one would expect to see in a man of fifty-five, and the closely-cropped beard on the cheeks and chin is beginning to whiten. The whole physiognomy, in fact, is that of a man who has, and that before he has a hooked nose, but its hook is more that of the hawk than of the eagle." It continues:

"My opportunity for seeing the Emperor was a favorable one, and I turned it to account by making a long inspection. I was returning to Paris from St. Cloud through the Bois de Boulogne. I came from the country and was walked for half an hour along the border of the great lake. I do not remember to have seen a face with a more profound expression of mental gravity, but I would not say of impassibility. The lines are slightly deeper than one would expect to see in a man of fifty-five, and the closely-cropped beard on the cheeks and chin is beginning to whiten. The whole physiognomy, in fact, is that of a man who has a leathery bottom too, and the features bear traces of those pains which it is known he suffers. I am told that he sometimes in the gait as he leaned rather heavily upon the arm of his companion. The Emperor's malady is such that he is able to go to any breakfast without suffering intense pain, and all his visits to Mitchell Sydney Bay are said to produce no permanent effect. Happily, or unhappily, Emperors also are but mortals, and no lithotomists can be found to cure those wide-shouldered who are able to use the knife without causing pain. Think of LOUIS NAPOLEON bound to a surgeon's table after having escaped the bullets of Orsini and the other attempts upon his life."

[Advertisement.]

The attention of our readers is respectfully invited to the advertisement of H. K. CALKIN, 239 North Front street, Philadelphia. The house has made a specialty of the sale of Fine and Complicated Watches, and Chronometers and Chronometer Chronometers, who supply the Medical Department of the Army, and the Navy, and the Revenue Service as well. Mr. JAS. BROADBENT, long and favorably known in the wine trade, is connected with the firm.

HATFIELD.—At Washington, 21st instant, HENRY S. HATFIELD, M. D., Assistant Surgeon, U. S. N., aged 28 years.

OBITUARY.

CHARLES ALLEN, Captain and Commissary of Subsistence, died at Lexington, Kentucky, on the morning of Wednesday, September 9, 1863, and was buried with military honors from the residence of Mrs. Judge Bledsoe. In the interests of loyalty, Captain ALLEN had left his family in Louisiana, and with the Gulf Home, Louisville, and encamped here with the Army of the Ohio. He was a native of Cincinnati, Ohio. Upon the organization of the company, he was unanimously elected captain. Upon the muster of the company in camp, it was incorporated into the Third Regiment Kentucky Volunteers, and Captain CHARLES ALLEN was assigned to duty as quartermaster of the regiment, which position he held at the time of General Camp Dennison, the regiment re-enlisted for three years, and was mustered into the United States service for the war. Upon the reorganization of the regiment, Captain ALLEN was unanimously elected lieutenant-colonel, and subsequently colonel of the regiment, which position he filled with ability, courage, correctness and promptness. Upon the organization of the Army of the Ohio, under General BURNSIDE, Colonel ALLEN was made chief commissary of subsistence, which position he held at the time of his death. He was a brave officer, and a true patriot, and fell at the last session of Congress. His increasing devotion to the cause of his country, and the Army of the Ohio, was enforced from duty at Nashville, on the 11th day of August, 1863, by sickness, from which he continued slowly weakening, until, on Wednesday, September 9, he died calmly.

OFFICIAL DIRECTORY.

WAR DEPARTMENT.

Secretary of War.

Hon. EDWIN M. STANTON, Secretary of War, 2d Session House, P. H. WATSON, Assistant Secretary of War, 2d floor, Department of Over, 2d floor.

RICHMOND LIFE.

A thrilling Biography of the Great Generals of the South. An authentic Life of

STONEWALL JACKSON.

First Edition, 15,000 Copies.

Life, Services and Campaigns of STONEWALL JACKSON, from official Papers, Contemporary Narratives, and Personal Acquaintance. By a VIRGINIAN. Oct. Vol., 12mo. 325 pp. $1.25. Authentic Portraits of Jackson, and his successor, Ewell, on Steel.

Reprinted from Advanced Sheets of the Richmond Edition.

STONEWALL JACKSON has made too profound a sensation, for the public not to devour with avidity, an authentic life. Poor compilations may be gotten up by authors without access to authentic documents; but this is a life written by a Confederate officer (Hon. JOHN M. DANIEL), who knew him well served under him in his brilliant career, was assisted in the work by Mrs. JACKSON, and had access to all his papers. It gives minutely all the details of his campaigns, from which thrilling incidents and interesting narratives, and is written with great ability, forming a volume of intense and absorbing interest unequalled by any other yet offered to the public.

It contains the only authentic Portrait of JACKSON, taken from the last picture before the battle of Chancellorsville, for Mrs. JACKSON.

II.

Just Issued,

CONFEDERATE "OFFICIAL REPORTS OF BATTLES"

Published by order of Congress, Richmond, Va. Companion to the Federal "Blue Book." First Vol. of War. One Volume 8vo., 600 pp., Cloth $2.50.

Authentic Portrait of General Beauregard, Finely Executed on Steel.

An exact reprint of the official Confederate reports of battles, raids, and skirmishes of the war, of great interest and importance. They will command the attention of multitudes of readers in all parts, and are destined of knowing the Southern history of the war.

The NEW YORK *Times* says:

"This is a work of extraordinary interest, but nothing less than the rebel official statement of its line for the account of the war. We have hurriedness to rely upon the reports of our officers, and every line of newspaper correspondents.

The whole collection will be found exceedingly valuable as a companion volume of our own Reports of the conduct of the War; and Mr. Richardson deserves great credit for getting it out in this very convenient and handsome form.

III.

IMPORTANT STATEMENTS, AND A THRILLING NARRATIVE OF THE CAMPAIGN.

5,000 Copies Sold the First Week.

SOUTHERN HISTORY OF THE WAR.

FIRST YEAR OF THE WAR.

By E. A. POLLARD, Editor Richmond Examiner, and

R. M. DEWITT, Editor Richmond Enquirer.

One Volume, 8vo. Cloth, $2.50.

Authentic Portraits, finely executed on Steel, from Photographs of DAVIS, LEE, BEAUREGARD, and JACKSON.

PLANS OF BATTLES.

This is an *exact reprint* of the only History of the War published in the South. The value and importance of this connected statement of all civil, military, and naval operations, as planned to baffle readers, cannot be understood. It is well written, in detail, with many anecdotes, and includes the personal adventure, of the greatest interest.

It contains sketches of Southern Officers, the Constitution of the Confederate States, and a Chronological List of Battles and Events.

*** The importance and interesting character of the above works may be inferred from the fact that the publisher is obliged to use every facility to supply the unprecedented demand.

Agents wanted in every town and city.

TREASURY DEPARTMENT, OF-
FICE OF THE COMPTROLLER OF THE CURRENCY,
WASHINGTON, August 18th, 1863.—Whereas, by satisfactory evidence presented to the undersigned, it has been made to appear that the Second National Bank of the city of New York, in the county of New York and State of New York, has been duly organized according to law and associated for the purpose of the Act of Congress, entitled "An Act to provide a national currency, secured by a pledge of United States stocks, and to provide for the circulation and redemption thereof," approved February 25, 1863, and has complied with all the provisions of said act required to be complied with before commencing the business of banking:
Now, therefore, I, Hugh McCulloch, Comptroller of the Currency, do hereby certify that the Second National Bank of the city of New York, County of New York, and State of New York, is authorized to commence the business of Banking under the act aforesaid.
In testimony thereof, witness my hand and seal of office, this fifteenth day of August, 1863.
[SEAL.] HUGH McCULLOCH,
Comptroller of the Currency.

UNITED STATES INTERNAL
REVENUE, FIFTH COLLECTION DISTRICT, NEW YORK—NOTICE is hereby given to all persons concerned that the lists containing the valuations and assessments made for the year 1863, under the direction of the above named District, comprising the Seventh, Tenth, Thirteenth, and Fourteenth Wards, will be left for examination at the office of the Assessor, No. 55 Broadway, for the space of fifteen days from the date hereof, and that the Assessor will hear appeals at the same place, during the said period of fifteen days, and no longer, until the 26th day of September, between the hours of 10 o'clock A. M. and 3 o'clock P. M., from persons who conceive valuation or reassessments by the Assistant Assessors to be unjust, and the question to be determined by the Assessor on appeal respecting the valuation or assessment of the property of any person liable to duty or taxation, shall be, whether the valuation complained of be or be not in a just relation to proportion to other valuations in the same assessment District, and whether the reassessments be or be not uniform. And no appeal from any valuation aforesaid shall be made in writing, and shall specify in particular grounds of complaint, and whether such valuation is supposed, and shall, moreover, state the ground or principle of inequality complained of.
GEO. E. BELLOWS, Assessor.
Dated New York, Aug. 24, 1863.

UNITED STATES
ARMY AND NAVY JOURNAL;
A WEEKLY NEWSPAPER, DEVOTED TO THE INTERESTS OF THE ARMY AND NAVY, AND TO THE DISSEMINATION OF CORRECT MILITARY INFORMATION.
On Thursday, the 8th of August, the undersigned will commence the publication, under the above title, of a weekly newspaper, devoted to military and naval affairs and to the discussion of subjects relating to the interests of the Army and Navy. The Army and Navy Journal is established in the interests of no party or naval affairs, or interested in the art of war. The Department of Publishing, which now has so intimate an association with warlike operations, will receive adequate attention in this connection, and the interests of our Commercial Marine will also have an appropriate place. Among other matters the columns of the Journal will contain from week to week:
1st. Full official lists of all appointments, promotions, resignations, deaths, dismissals, retirements, and other changes in the personnel of the two services.
2d. A full and reliable record of all active operations by the Army and Navy.
3d. A summary of all official orders proper for publication.
4th. A full account of the operations of the Coast Survey and the Revenue Cutter service, and changes among the officers of those two departments.
5th. Changes in the medical department of the two services, with a sanitary routine to which hygiene, surgery and the sanitary condition of the Army and Navy.
6th. Descriptions of inventions and improvements relating to the Art of War, and of experiments and numerous illustrative of military science in this country and abroad.
7th. Narratives of military and naval exploits and adventures; reminiscences of campaigns of the two services. Answers to questions in regard to difficult or disputed points of history, or other subjects suggested by correspondents.
8th. An account of important movements of foreign armies and navies, with particular regard to the personnel of the services of foreign nations.
9th. Reviews of military and naval literature and art, of interest to the Army and Navy.
10th. Matters relating to religion and moral engineering.
11th. Station of the Naval vessels in commission; with the movements of the vessels composing the Home Squadron, and of the Flag Officers.
12th. Editorial discussions upon subjects of interest to our soldiers and sailors.
A summary, in short, of whatever occurs in all parts of the world relating to the Army and Navy. No effort will be spared to make the Journal complete in all its parts, and especially to render it a high-toned, reliable, lively journal, which will be read with interest by the soldier and sailor, and be respected with the public service and by the great body of the reading public.
The importance which Military and Naval affairs have assumed in the United States is imperatively demands that they should have the press an adequate representation, which, by its ability, entire impartiality in the discussion of subjects coming under its charge, its efficient corps of writers, and its relation to the National Union, shall command itself to the confidence of the Army and Navy, and which it becomes a necessity in every tent, barrack, hospital and warship to read. The Journal will be issued whenever there is such a demand, and it shall be the purpose of the proprietor to make it a paper which officers and soldiers will be proud to recognize as their organ, and which will be sure to find a welcome among the readers of any of its class in the world. Arrangements for collecting all the news from the seat of war, from correspondents in different parts of the country, and from the Army and Navy. Already, in advance of publication, numerous expressions of interest and good will from officers in the enterprise have been received from officers high in command, and the proposals for the first numbers subscription list, has received abundant assurance that the Journal will be sure of a large support from the two services.
The paper for the present will be FIVE DOLLARS A YEAR, PAYABLE IN ADVANCE. It will be published in a large-sized quarto sheet of 32 pages—two columns for binding, and printed in the best manner on the best paper. The first number will furnish a volume of over 800 pages, filled with information of indispensable importance to every officer in the service, and of great importance to every soldier and sailor. The publication will be issued every Thursday, in time for the mail of that day.
Subscriptions will be received at the office of publication, No. 645 Broadway, New York, where specimen subscription list, has received abundant assurance that the Journal will be sure of a large support from the two services.

cor. Court and Washington streets,
BOSTON.
Manufacturers, Importers and Dealers in every description of MILITARY GOODS, consisting of Swords, Sashes, Belts, Spurs, Sword-knots, Embroidered Shoulder Scales and Cap Ornaments, Gilt Cord, Buttons of 30dz. Field and Line Officers Equipments.
Officers of the Army and Navy, visiting Boston, are respectfully invited to call and examine our stock.

TOMES, SON & MELVAIN,
No. 6 MAIDEN LANE, NEW YORK.
Desire to everything necessary for the Uniform of the ARMY AND NAVY—Swords, Sashes, Belts, Shoulder Scales, Epaulettes, Chevrons, Gilt Cord, Insignia, &c., &c.; also a large and complete assortment of Fancy Goods, Hosiery, Gloves, Suspenders, Braid, Gums, and Sporting Ammunition in every variety.
Officers of the Army and Navy, visiting Boston, are respectfully invited to call and examine our stock.

ARMY AND NAVY EQUIPMENTS.
RICHLY ORNAMENTED.
Swords and Sashes in cases, with two Scabbards. Genuine Sabres, round Guards, &c. Extra quality gilt embroidered stripes, ready made and made to order. Gilt Cord, Gilt Buttons, Shoulder Scales, Army Regulation Caps, Presents, Medals, and other goods.
PALMER & BACHELDER,
172 Washington street, Boston.

MILITARY GOODS.
W. J. SYMS & BROTHERS,
300 Broadway, New York.
Importers and Manufacturers of
PRESENTATION SWORDS, SASHES, BELTS, EPAULETTES, CORD, PISTOLS, AND REVOLVERS.
Every article in the military line, wholesale and retail.

SOMES, BROWN & CO.,
Solicitors of Claims and Patents, and Attorneys at Law, Practice before the Courts, Washington, D. C., and 2 Park Place, New York City.
Refer to Hon. Reverdy Johnson, Baltimore;
Hon. Reuben Hamlin, Vice-President; Hon. Martin Van Buren, Kinderhook, N. Y.; Hon. Hugh Maxwell, New York City; Hon. John Goodwin, U. C., Minnesota; Thomas Ewing, Lancaster, O.; Hon. Benjamin R. Robins, M. C., N. B.; Hon. John P. Potter, M. C., Cincinnati, O.; Hon. Wm. Kellogg, M. C., Illinois; James H. Lane, M. C., Kansas; Hon. Cyrus Aldrich, M. C., Minnesota; Hon. Francis W. Kellogg, M. C., Iowa.

UNITED STATES 5-20 BONDS,
And other Government Securities, Treasury Notes, United States Coupons of 1881.
Gold, Silver, Uncurrent Money, Exchange on all parts of the United States and Canada,
BOUGHT AND SOLD
We are authorized to receive 5-20 bonds at par. Orders for Stocks and Gold executed in New York and Philadelphia Boards.
RITTENHOUSE, PANT & CO., Bankers,
No. 112 Third street, Philadelphia.

MILITARY AND NAVAL CLAIM AGENCY.
J. LOWENTHAL & CO.,
(Late LOWENTHAL & EVANS),
307 Pennsylvania Avenue,
WASHINGTON, D. C.
Authorized Agents for procuring Bounty Money, Back Pay, Pension, and collecting all kinds of Claims against the Government.

MCALLISTER & BROTHER,
No. 728 CHESTNUT STREET,
Cleverly opposite Masonic Hall, PHILADELPHIA,
Manufacture, Importers and Dealers in every description of
MATHEMATICAL AND OPTICAL INSTRUMENTS. Every variety of FIELD AND MARINE GLASSES, Pocket Compasses, Rifle Sights, Surveyors' Pocket Compasses, Rifle Cannon Sight Glasses, &c., &c., &c.
Our prices and illustrated catalogue furnished gratis on application, and by mail free of charge.

FRICK'S UNITED STATES
MILITARY AND NAVAL AGENCY.
Commissioner for all the States.
Established in 1846.
Bounty, Pay, Pension and Prize Money Office.
JOHN H. FRICK,
Office, No. 233 Dock St., Exchange,
PHILADELPHIA, PENN.
Pension, Bounty, Back Pay, Prize Money, Claims, Far Soldiers, Seamen, Marines, Minors, Orphans Sisters, Widows and Heirs, promptly collected.
CHARGES MODERATE.

AN ARMY AND NAVY
MESS AND READING ROOM.
No. 6 Bond street, near Broadway.
M. S. FREUND wishes to call the attention of his friends to the establishment of a depot for supplying both branches of the service with all articles of household use, and they respectfully ask a share of patronage.
WINES, TEAS, BRANDIES, CIGARS, AND STORE GOODS OF EVERY KIND,
Which will be carefully packed, and forwarded with despatch to any part of the country.
LIQUOR CASES, MESS CHESTS.
In connection with our wine department, A READING AND WRITING ROOM has been fitted up, supplying the Army and Navy with a quiet and comfortable spot for officers to have their letters directed, or where they can find the newspapers. *A Directory of the names of all officers in the service will be kept*, and any one desiring information in regard to them may be interest to gentlemen in the service.
The Table will be supplied with the choicest Delicacies that the establishment, newspapers and such matters of information as may be required, for the comfort of parties to whom they are sent.
Information sent by officers will always be cheerfully given, either personally or by letter, as far as possible. M. S. FREUND, Proprietor.

UNITED STATES
Army and Navy Journal,
A WEEKLY NEWSPAPER,
DEVOTED TO THE INTERESTS OF THE
ARMY AND NAVY,
and to the
DISSEMINATION OF CORRECT MILITARY INFORMATION.
Terms—$6 per annum in advance; $3 for six months in advance. Advertisements of a character suited to the columns of the Journal, will be inserted, for a liberal extent, at twenty cents a line each insertion. Advertisers are required to make their favors as short as possible.
All letters should be addressed to THE UNITED STATES ARMY AND NAVY JOURNAL, NEW YORK. Remittances may be made in United States funds or Quartermaster, Paymaster or other drafts, which should be made payable to the order of the proprietor.

THE MILITARY SITUATION.

OF the three theatres of war which divide the public interest—the army in Virginia, the army in Tennessee, and the army before Charleston—not one has during the past week presented any salient event. The attention of all who reflect on military affairs is more and more directed to Tennessee as the cardinal point of our military fortunes, though public expectation outruns the probabilities and even the possibilities of active operations. There is no present likelihood of General ROSECRANS resuming the offensive. He has yet to establish himself securely at Chattanooga, secure his line of communications, and accumulate supplies and material of war before he can profitably advance. In the meantime, three weeks have passed by and the rebels have not attempted to strike a fresh blow; though the menacing front presented by the army at Chattanooga commits them to make an effort to dislodge General ROSECRANS. There is every indication that they have in no wise diminished the force of BRAGG, but are rather bending their energies to add to it at the expense of the still further reduction of the rebel army in Virginia. The Richmond papers announce that BRAGG has twenty thousand men who have not yet fired a musket, and that all the reinforcements had not yet gotten up. There is, therefore, very strong intrinsic probability of their speedily attempting a movement to dislodge the army of the Cumberland from its present position. This is, however, every day being more and more strengthened, and now has three lines of defences. The works are not mere rifle-pits, but complete bastions, with numerous redoubts and lunettes of large dimensions, all strongly constructed. All the fords of the Tennessee river, from Bellefonte to Washington, are guarded by our cavalry.

In the meanime, they are doing what they can to annoy General ROSECRANS by cavalry raids on his exceedingly extended and exposed line of communications. On the 3d inst., a mounted force attacked the post at McMinnville, and on the 5th they destroyed the large railroad bridge a short distance south of Murfreesboro', and also cut the railroad line and telegraph. The damage to the latter was speedily repaired, but it must take some days to replace the bridge. This is a serious loss, and indicates a reprehensible lack of vigilance on the part of the commandant of the post at Murfreesboro'. Another party of rebels crossed the pike between Nashville and Murfreesboro', near Smyrna, on the 6th inst.; but, on being pursued vigorously when pushed by a force of Wilder's Mounted Infantry, retiring in the direction of Shelbyville. Colonel E. MCCOOK, commanding a cavalry brigade, killed and wounded a hundred and twenty of the enemy in his attack on the rebel force that made the demonstration on McMinnville. He took prisoners one colonel, two majors, nine line officers, and eighty-seven privates, and captured nine hundred mules and all the plunder they had previously taken. These raids indicate a determination on the part of the rebels to give General ROSECRANS all the trouble they can, by interrupting supplies, and, if possible, preventing the forwarding of reinforcements. We are confidently assured that they will not be able to accomplish the latter purpose. It is hopeless, however, to be able to keep so very extended a line entirely secure, and we presume General ROSECRANS will bend his attention to preparing strongly fortified depôts, for the purpose of lessening the amount of damage the rebels can inflict by these demonstrations. The rebels are well furnished with means for making these raids—having at least fifteen thousand cavalry, or rather mounted infantry, under command of Generals WHEELER and FORREST.

General ROSECRANS is every day receiving more and more reinforcements, from the West and elsewhere.

Reports of the operations of General BURNSIDE's column are important if they can be relied on. He is said to hold the country south from Knoxville to Calhoun, on the Hiawassee river, and the Western and Atlantic railroads, and only twenty-five miles distant from Kingston—the junction of the Western and Atlantic and Rome railroads. East of Knoxville, he holds as far as Greenville, on the East Tennessee and Virginia railroad. He is also said to possess all the passes into North Carolina. His right wing is in communication with ROSECRANS' left, and his position is pronounced "all that could be desired."

The Army of the Potomac still remains inactive on the banks of the Rapidan, like a horse fighting flies in Summer time, with nothing heavier than guerillas to occupy its attention. The Confederate Richmond press indicates a constant anticipation on the part of the people of that city, that an advance Richmond-ward will be made by the Army of the Potomac; but it seems as though this fine army were to rust in inaction, for the glorious October weather is being allowed to pass by unused, and another month will throw it into all the horrors of the "Mud Campaign."

INTELLIGENCE from Martinsburgh is to the effect that there are no rebels in the Shenandoah Valley—except a few guerillas skulking in the mountains. Our cavalry have scoured the valley as far as Strasburg and Front Royal, without finding any traces of the rebels. Information has also been received that there is no movement on the part of the enemy's cavalry toward Western Virginia, as was reported a few days since; and the statement in the Richmond papers that IMBODEN had cut the Baltimore and Ohio Railroad, thus preventing the forwarding of reinforcements, is contradicted. This important line is clear throughout.

It is understood that General LEE has but a small force in the immediate front of the Union Army. He has about twelve thousand men in reserve at Richmond, commanded by Major-General ELZY, of Maryland; eight thousand infantry, under command of Major-General JONES, in the vicinity of Abingdon, Va., holding the line of the Virginia and East Tennessee railroad, against any Union force that might debouch through the mountain passes held by BURNSIDE in East Tennessee; sixteen hundred cavalry under Brigadier-General IMBODEN, with about six thousand infantry under General GARLAND at Charlottsville.

The latest intelligence from Charleston harbor is to the 3d inst., on which date the blockade-runner steamer *Diamond*, recently captured by the gunboat *Stettin*, in St. Simm's Sound, sailed in charge of a prize crew. When the *Diamond* left, a portion of the iron-clads were engaged with the rebel batteries, and the batteries on Morris Island appeared also to be firing. The military and naval forces, it is stated, are still actively engaged in preparations for future operations. A Charleston despatch to the Richmond papers states that "the enemy's movements on Morris Island indicate permanent more than immediate operations," and that "two Monitors are kept close to the Island, "doing picket duty." Another Monitor keeps Fort Moultrie quiet. It appears from the Richmond correspondence of the London *Times*, that the Charlestonians had relied confidently on the equinoctial gales to drive the fleet of iron-clads from the coast, when BEAUREGARD promised to make an assault on Morris Island; they were greatly disgusted at their meteorological ally failing to accomplish what was expected.

WE have a report coming by way of Chicago, to the effect that FRANKLIN's Corps was repulsed in an attack upon the rebels at Brashear City; but that ORD's command (13th Army Corps) shortly afterward came up and completely defeated the rebels. No particulars or dates are given. The news is said to have been officially communicated to General SHERMAN at Memphis.

OF General GRANT's army, HERRON is now near the mouth of the Red River, watching the important interests which border on the Atchafalaya; RANSON is at Natchez; MCPHERSON is at Vicksburg; STEELE is at Little Rock, and SMITH at Helena.

General SCHOFIELD's report on the situation in Arkansas has just been made. He says that our troops fully hold the Indian country and all of that State, and that there are numerous evidences of good feeling among the people. Over two thousand Arkansas Unionists have joined our Army at different points. There is no large force of rebels in the neighborhood of Little Rock.

LIFE OF STONEWALL JACKSON, from Official Papers, Contemporary Narratives, and Personal Acquaintance. By a Virginian. Published by Charles B. Richardson, New York, 1863, 12mo.—This book is by a Southerner of Secession principles, and is announced as reprinted from the advanced sheets of the Richmond edition. We have read much from Northern sources upon the subject of this memoir, but the above work, being from a Southern standpoint and of marked ability, revives our flagging interest. It is characterized by the usual Confederate misrepresentation of the Union government and its aims, and the usual buncombe upon Southern valor and glory; but, nevertheless, gives many valuable and interesting facts, couched in eloquent words.

THE *Revue des deux Mondes* opens an uncomfortable prospective to France, in case of its persistence in absorbing Mexico. It considers that our civil war is not near its end, and that its prolongation will leave the necessary time to France to establish a basis for the New Mexican Empire. Notwithstanding this, it remarks that the resulting perils would be manifest, that the military elements will survive our troubles, that there will remain a number of unemployed Generals and Officers, and that a thousand influences will drive us to enforce the Monroe Doctrine. In other words, it thinks the new Mexican Government will be subjected to the assaults of a "vast Filibusterism, the most energetic, the most unbridled yet seen."

THE Spanish Progressists, or radical party, having retired, at present, from public life, has published a manifesto, expressing the hope of one day seeing the adoption in Spain of a truly constitutional regime. It protests against the illegal pretension of the Government to forbid the right of assembly, and asserts that while the right of electing its representatives belongs to the nation, the Government assumes the selection of candidates.

PORTUGAL, for the first time in her existence as a kingdom, has ordered a census to be taken of her population.

CANADA.

The trump card of the unscrupulous English sensation press is Canada. Almost as soon as our war began, this press announced that the North Americans were getting ready to shoot Canada. In proof of this assertion, our fortifications at Rouse's Point have been over and over described, with flattering minuteness of detail, and pronounced equal at least to Sebastopol, if not Gibraltar. Of course the object of this work is to threaten Canada. It has even been conjectured that we want to war with the Southern Secessionists on purpose to get a chance to fight Europe, and—swallow Canada. It has been the regular staple humbug, particularly of the *Saturday Review*, for nearly two years, to assume that Mr. Seward has made up his official position upon the simple principle of provoking England into a war, so that our foregone failure to put down the rebellion might be charged to foreign interference. This was Mr. Seward's entire system of statesmanship. Of course, the first step in this war would be to attack Canada. But the *Review* such a war would be to attack Canada. But the *Review* now gave further, and says, "The extravagant ambition "of the Northern Americans, and the malignity which they "cultivate towards England, alike prompt an early invasion "of Canada, either for the employment of victorious armies, "or as a compensation for loss and disappointment in the "South." Nothing will satisfy American cupidity but Canada—Canada; and whether we beat or are beaten, it will make no difference: we are bound to make a "spang" at Canada.

This nonsense is sedulously instilled into the English mind by several leading journals, and when we think how few opportunities there are in that country to obtain correct information, the only wonder is that there is so much misapprehension and so little knowledge or understanding of feeling towards us there, and as a consequence of their interest in our affairs. It is to be borne in mind that such statements are not made as conjectures, but as facts, and with a quiet impudence of assertion that has no parallel. Our legitimate and necessary military operations against the rebels are, in the same spirit, misrepresented or commented to be deposits, aggressive, and ambitious. The effort of a faction to detach a part of the territory of the United States, against the wishes and interests of a large majority of the population, is always spoken of as the struggle of an oppressed and peaceful people for independence. It is useless, therefore, to rebut such slanders. In blacklegs, the cunning players over the water hold all the cards, and we can do nothing. It is a pity that the English cannot know how perfectly free the American Government and people are from all but a feeling of self-defence. Government and people are fruitful but in retaliation for sedition that of course is always temporarily calculated to bring about the very collision, the responsibility of which they seek to fasten upon us, in advance. While there was scarcely an individual of any weight in America, two years ago, who would have desired a war with England, or cherished the hope, from the success of influential classes there towards war, that the thought comes to many minds—war is not always unwelcome. And certainly, in case of war with England—if they will have war—we should invade Canada. Then, what a shout would rise: "See those greedy Yankees—we told you so!"

As to the state of feeling in Canada, it is probably less favorable to a union with this country than it was several years ago. But great dissatisfaction exists in England, on account of the indisposition of the Canadians to maintain a military establishment at their own expense. As the two Canadas have always been substantially, and for several late years, in particular, a dead weight upon the mother country, it is not surprising that the old folk now and then indulge in some plain talk. The question is more serious than it now, whether Canada should not be absolutely left to her own charges, and the royal troops withdrawn, or reduced, at most, to a minimum. Probably, however, nothing of this kind will be done; for, although it is a proverb that a rich man can afford to go shabby, it is hardly to be supposed that English pride will give up even an expensive and distant dependency. There is, indeed, less probability than ever that Canada will be willingly relinquished, now that France has a foothold in Mexico; for it would hardly do for England to allow her old rival a monopoly of the benefits to arise from a successful defiance of the hated Monroe doctrine.

HEAVY ORDNANCE.

The English press continues to be largely occupied with the discussion of the great questions of solution to ordnance and armored ships, to which our experience in the present war is giving a practical solution. The following is from the *Saturday Review* of Sept. 19th:—

"Our Warriors are armed with nothing more formidable than the old 68-pounder, or the Armstrong 110; and, if anything is certain in the science of artillery, it is that such weapons will have no chance when pitted against the new rifle of throwing shot of four times the weight with something like the same velocity. Whether the American 15-inch guns entirely satisfy this condition may be doubtful, for the principle formerly in favor with the United States was to employ very heavy shot with comparatively low velocity. The tremendous havoc done by the 440-pounders seems to imply that the difficulty of uniting great weight and extreme velocity has since been overcome; but until more particulars are known as to the construction of these formidable guns, and the charge of powder which they are able to bear, it is not easy to estimate the strength of the most effective armament which could be put on board the very largest ships which the British navy possesses. The most effective armament which our iron-clads carry is far short of the extreme limit. In one form or another, it is essential that ships should be constructed to carry the most powerful guns that artillerists can build. Whether this end is to be obtained by the more general introduction of the turret principle, or by the improved arrangement of broadside batteries, we must leave Captain COLES and Mr. REED to settle.

It is not easy to understand why a broadside ship should not be made to carry guns as heavy as those of a *Monitor* or *Royal Sovereign*. It is true the weight is not so nicely poised amidships, but, as regards the fore and, necessarily heavy movable turret is dispensed with. For many reasons, it would be desirable to get rid of so cumbrous a mode of mastery. It is said that the turret of the *Royal Sovereign* will be protected by additional armor from such injuries as those by which several of the *Monitor* class were disabled in their encounter with Fort Sumter; and we have no doubt that everything which ingenuity can suggest will be done to make the turret as perfect as possible. But the peculiar casualties incident to this principle of construction. But there is inherent weakness in the plan. No one could have given up the advantages of the broadside of the mechanical details of the *Royal Sovereign* without trembling for the effects of a severe cannonade upon the fragile and complicated machinery which has to form the support of her movable turret. Still she is built to carry 300-pounders, and if no better mode of training guns of that weight can be devised than the turret principle, they must be given in company with a shield ten times as heavy, it is tolerably certain that, with the exception of the principle primarily involved, no other vessel of the same tonnage will be surrounded in the future. They will be many reasons, indeed, favorable to the more complicated Monitors. It is remarkable that the Americans seem to have given up the attempt to carry heavy guns to the bow or stern, and to have persisted in building Monitors, almost exclusively, and to have persisted in building Monitors, almost to the exclusion of every other pattern. The failure of the turrets originally fitted to the *Merrimac* was not accepted in America as at all conclusive against their principle of construction, and since that action, the far more numerous class of enlarged Monitors have been launched at Boston. The true lesson to be learned from the trial of actual war ought to be better understood than it is. The armament that is to be borne in the comparatively imperfect information which is accessible here. We know their judgment from their acts, and it certainly does not imply any high or formed condemnation of all cupola ships which was generally pronounced in England in consequence of the result of the first engagement with the *Merrimac*.

On the question of the best mode of constructing heavy artillery, it is possible that we may learn something by lessons from the Americans. All the experiments tried in this country have pointed at one broad conclusion—that the penetrating power of shot depends on the charge of powder, and that it makes comparatively little difference whether the power is utilized by impressing a very high velocity on a comparatively light shot, or by imposed upon such masses of metal as are hurled from the DAHLGREN guns. The shot, after all, is only a means of carrying the force of the powder from the gun's mouth to the target; and it is not surprising that the resulting effect should depend more on the amount of original impulse than on the mode in which it is employed for its transmission. Still, there must be certain proportions between the charge and the shot which will produce the greatest effect, and it is possible that English and American views have long been divergent. Our artillerists have thought more of increasing velocity, while the Americans have attached more importance to the bulk of the cannon-ball. It may deserve consideration whether (especially for long-range firing) the Americans have not come nearer than ourselves to the best model. While practical trials are being so freely made across the Atlantic, it would be a pity if we should be content so finally to any plan, either of ship-building or gun-building, until the full benefit of foreign experience has been reaped; but the time is surely critical for the adoption of some one line in perfecting their own experimental ships and guns, and putting the navy in a position to meet satisfactorily with the most powerful vessel that any foreign country can produce.

BORDER AND BASTILLE.[*]

A FAINT recollection exists in the public mind of a valiant Englishman named WARREN, who endeavored to pass, some months ago, from our lines into those of the rebels, and was brought to a summary stand by the suggestive shot of a picket. This individual had combined, when in England, the patronage of the prize ring with a love of literature, and Richmond, he rendered himself an object of suspicion by a loud-mouthed sympathy with the South and its treason.

Caught in his attempt in the manner above mentioned, he was marched to the Old Capitol prison, which he denominates a "Bastille," and expresses deep indignation at the ingenuity of his examination and subsequent conviction by the Judge-Advocate-General, whom he describes as possessing a "portly presence, nervous voice, and eyes that twinkle merrily through gold-rimmed glasses."

The British Legation at Washington, without pretending to exonerate his culpability, used their good offices in his behalf, and in view of his unfortunate "delicate health," obtained permission for a few months of incarceration, on condition of his return home. Chafing with imaginary indignities, he has relieved himself by a book entitled "Border and Bastille," to which he not only indulges in fancy upon discrepancies in our military service, but throws in a great deal of gratuitous criticism in the aggregate, besides drawing a due amount of comment upon the "sporting" phase of our existence. The stable of the trotting mare Flora Temple he calls a "boudoir of honor, rush straws like the tiring-room of some ancient *Chatelaine*," but brilliant with polished wood and metal, and gorgeous with stained glass." At our fox-hunting, "where three or four couple of cross-bred hounds occasionally worry to death their unhappy quarry," he expresses unmitigated contempt, coupled with intense disgust at our snake fences, with their "projecting zig-zag rails," which he says "will are a hazardous jump, and involved him in the trouble of dismounting. American trotting horses he describes as wondrous, their "clean sinewy pasterns shoot forward, well outside of the fore hood-track straight and swift as MACE'S arm in the prize ring." He spends a page in describing our rails on his riding-boots and his apparel, and bestows the usual amount of irrelevant egotism upon his readers, from which English travellers in the country are rarely free; interpolating these lucubrations with a threat that should he ever meet the Judge-Advocate-General on any neutral ground he will "say in his ear five short words, not hard to understand." We are left in a painful state of doubt as to what the portentous words will be, but fear they will savor of profanity.

The book has not yet appeared in this country, and we trust it will be allowed to remain on the other side of the Atlantic, that we may be spared the infliction of its presence.

MILITARY TRAINING.

In our commonly received idea, military training extends no further than the very monotonous routine of squad, company, and battalion drill, the excellence of which lies for its measure the mathematical precision with which each movement is executed. This precision is only acquired after a long course of the most constant and laborious practice. When it is considered that the object of all this labor is to fit the soldier for duty on the field of battle, and enable his to perform his part, without confusion, in such changes of position or formation as may be expedient for the general movements of the line, it becomes a serious question whether this absolute precision of movement which is so inspiring and admirable on the parade ground, is essential to efficiency in the field; or, to go further—whether the system of training which aims at mathematical precision of movement, is not in its tendency absolutely injurious to practical efficiency.

It will be readily understood how an apparent perfection may be really an imperfection. If it be considered the first condition of success on the field of battle does not admit of the preservation of perfect unbroken order, nor of perfect mathematical precision of movement. Is it not likely the troops so taught will, when first placed in circumstances requiring a departure from the conventional rules of drill, be capable of all deviations from the precision of parade as evidences of mismanagement and failure? The more perfect the parade training has been, the greater will be the influence of this idea of their incapacity for acting together with effect, under conditions which had not been anticipated in their previous experience. It is not unlikely that a highly-drilled battalion, which a long course of assiduous training in the art of parade evolutions had rendered a model for an army, might, when first brought in contact with an enemy, be found incapable of the simplest change of deployed levy, having no other training than such practical lessons in united action as could be acquired during a few months of actual warfare.

Campaigning experience soon teaches the soldier the unity of action is not incompatible with broken ranks and considerable looseness of movement. But this knowledge is acquired in the field, and does not constitute any of the lessons which both officers and men have spent so much time in learning on the parade ground.

It seems to me that in order that troops may be fitted by their training for the actual operations for which they are destined, the method of executing battalion movements on the parade ground should be so modified, as to be made to resemble, as nearly as possible, the manner in which actual conditions of war render it necessary that these movements should be executed in the field. This will not only re-

[*] BORDER AND BASTILLE. By a Gentleman who has seen both. London, Trinity Brothers, 1863.

cation the soldier to those irregularities and deviations from accuracy which must occur during field service, but will divest the process of teaching troops field exercises and evolutions of the laborious character it now has. After recruits have been drilled to set together, and have been taught the few and simple methods by which all possible changes of position and all useful changes of formation may be effected, very little time, compared with what is now required, need be devoted to the practice of these methods.

The modifications which I have made in the present system of drill, in order to facilitate the management of troops when they are required to move loosely, and with the order of their formation more or less deranged, cannot be particularized here; but a few of the expedients which may be made use of may serve as suggestions for the modification of a system of drill more consonant with the requirements of the service.

The equalizing of companies when practicing battalion movements should be avoided, particularly where double-column movements and the formation of squares constitute the exercise. The latter being required on the field of battle, after the troops have been for some time under fire and many casualties taken place, the manœuvre has to be executed under circumstances which render the symmetrical formation of the parade ground impracticable: consequently, it is very essential that the formation of squares should always be practiced with companies of unequal strength.

Changes of front and other manœuvres should be practiced by successive as well as simultaneous movements of companies, in order that the former may become by company without a general word of command being given.

To enable the captains of companies to properly superintend the movements and correct the errors of their men, to make the necessary changes in the order of the formation of their companies, for the purpose of keeping the true dress of the commands are properly executed, it is essential that they should be permitted to use their own discretion in changing their places and going to whatever point may appear most convenient for the proper government of their companies. This is an innovation which has for some time been strongly urged by many officers of the British army, for introduction into that service.

Battalions should be practiced at deploying with intervals between the companies. The line should then be marched to the front, the rear of each company moving out on the march to fill the intervals. At the command "halt," they should close on their right files. This will teach the soldier that a certain degree of looseness and irregularity of movement has no tendency to create confusion, and is entirely compatible with the necessary rapidity and perfect accuracy of formation.

CORRESPONDENCE.

SYSTEM IN PROMOTIONS.

To the Editor of the Army and Navy Journal:

SIR:—An article in your paper, heading appeared somewhere ago in your paper, signed "Staff Officer," upon which I propose to remark, with your permission.

"Staff Officer" thinks promotion according to merit and in doing so, has selected a popular theme, because, in the first place, every officer feels that his own promotion would be secured if merit alone was the rule of advancement so as to gain an any other portion of humanity, even including the "fair sex"—and secondly, because such a system would be *soothing syrup*.

In our Army, we have, for the regular branch, an established system of promotion, and for the volunteer force an established want of system, which is, in my opinion, as new a system of promotion *according to merit* as can be attained. For the regular service it is, I think, generally conceded that "all vacancies in established regiments and corps, to the "rank of colonel, shall be filled by promotion according "to seniority, where the officer is qualified to fill the accompa"nying."

By the same authority, it is also required that all non-commissioned officers or citizens shall be examined by a board of officers before being deemed eligible for commissions. Here is a system of promotion adopted by experience. If the original appointments were conferred *according to the regulation*, the line of promotion would not be encumbered by incompetent officers, and where all were competent, length of service should of course be rewarded.

The causes of war, the exposure of service or sun or officer's own bad health, are all causes for which there is no further advancement, but for the position he may have. Here you make the exception, "*except in case of disability or other incompetency.*" At this, "except in case of disability" but two causes enumerated, the officer is honorably retired, or if from the last-mentioned cause, dismissed is the proper remedy.

It can justly be remarked that citizens have been commissioned in all grades of the volunteer service of the regular Army, during this war, *without examination*, and that many of these officers are known to be more or less incompetent, now command officers of regiments graduated at the Military Academy, or have served several years as officers of the Army, after having passed the required examination on entering into service. These facts, however, prove the justness of the system as established, and show the evil of any departure from it.

In making appointments of general officers, or of officers of new regiments or corps, there should be a liberty to *select*, and it is neither disrespectful nor untruthful to say that in the exercise of this discretion very many mistakes have been made by an honest appreciating power, *whose interest* it is to render our arms efficient by putting the best men in the highest positions.

In our State troops, promotions are made by selection. Patriotism, State and personal pride ought in this case surely to induce the respective Governors to appoint and promote men who will bring credit to their States. But I need hardly ask whether or not, in any of our volunteer regiments, *rank* is a sure indication of *merit*.

Of course, promotion would secure much greater efficiency, but such a system, being perfection, would be superior to the direction of humanity. If party feeling, favoritism, and other prejudices were banished from the counsels of our various appointing powers, we would still have a country worthy to be the *cynosure of all hearts*.

And now, Mr. Editor, you need not "squelch" my effusion if I say that the existence of "Army Correspondents," as a class, would defeat the very working of the proposed system. Even though we know who are deceived by the daily papers, we cannot help reading and generally believing them. The "correspondent" system is the "official reports" to bring the people and our leaders in their views of an officer's claim to promotion.

How can we possibly, as human power to distinguish between men or really equal worth, when rattle-brained or ill-educated correspondents write their "battle reputations," not at the cannon's mouth, but out of the ink-stand of "our correspondent," who rarely has military knowledge enough to understand what he sees? Let the "spirit of the narration is just about as reliable as the information derived from his imagination.

The old soldier who has received more hard knocks and "McCLELLAN's pies" than fame or greenbacks, can point out brave officers—officers who, while unknown to fame, are appreciated by the gallant men who follow they have directed, and who are strangers to the public because they have not been "correspondents" in the presence of our foes, amid the din and smoke of battle. Our successes in arms prove that we are fast learning our trade, and under any system *older officers* must be selected.

My humble preference is for things as they are, and I cannot advocate the specious system so ably urged by "Staff Officer," for saying that "distance lends enchantment to the view" will once more apply. No, Mr. Editor, I am for the "old regime" styles, as by the French soldiers as there is grumbling at ours, or the world of it. Grumbling is a soldier's privilege, and it aids digestion. So let us growl as well enough, but beyond that, let it alone.

JUNIOR.

VOLUNTEER AND REGULAR NAVAL OFFICERS.

To the Editor of the Army and Navy Journal:

SIR:—The discussion raised by your correspondent "R." will be productive of good, if it does no more. It should, however, be conducted fairly and without feeling on the part of Regular and Volunteer Officers.

As I understand it, "R." did not anticipate any comparison between the two lines of officers in our Navy. He proposed merely to have volunteers recognized as a class by themselves, and promoted to the line by seniority or merit, as is done in the Volunteer Army. I cannot see on what principle of "Justice" reflections are cast upon them, or why a rivalry should be created. The question is one of race, when all have done and are doing their best. I cannot admire the tact which "Justice" in his comment made by "JUSTICE" (?) in your issue of September 7, that the Regulars have done better than the Volunteers five to one, if true, which, speaking of the Army, I emphatically deny.

"R" was correct in the statement that volunteers are not promoted beyond a Lieutenancy. There is no Volunteer officer here with a higher grade than a Lieutenant in the service, and something should be done by the Government to encourage this most deserving class. The education of Regular officers is not to blame for their fate, but should not, I submit, be allowed to stand in the way of Volunteers. That there is room for all, and more than all, in the Navy, is not unlikely that there are many as Volunteers who would not fear to enter the lists for examination if such trials were ordered. The Navy Department, I apprehend should not object to any method or plan by which he holds so great an advantage as not to himself—but even this is not the great object. It is to have the best men in the army, merit or seniority being the standard of promotion; and then our best Volunteer officers will feel that they have something to stimulate their zeal, which, though never flagging, hugely now for recognition before the country.

THE COMPETENCY OF OUR OFFICERS.

WE are permitted to publish the following letter, addressed by Major-General CASEY to Mr. THOMAS WEBSTER, Chairman of the Supervisory Committee for recruiting colored regiments in Pennsylvania. The letter is dated at Washington, September 30, 1863:

DEAR SIR:—In conversation with you a few days since, I promised to elaborate somewhat the ideas which I expressed with regard to the appointment of officers for colored troops.

Military science and experience in handling large will agree in this, that to have good and efficient troops it is indispensable that we should have good officers. The material for soldiers which has been and is furnished during this rebellion, I have no hesitation in saying is the best that the world has ever seen. Such men deserve to have officers to command them who have been educated to the military profession. But few men are really fit to command men who have not had a military education. Even of this, as a sufficient number of such men cannot be found in the country, the number has to be made up from the best available material. The best material does not of course possess the proper knowledge and capacity for command, it is necessary that he should be examined by a board of competent officers. This fact, that the life and death of the men of the regiment is so intimately connected with the competence of its officers, is not sufficiently appreciated by the community.

The board for the examination of officers for colored troops, over which I have had these things in my mind, is independent before recommending an officer, viz: Good moral character, physical capacity, true loyalty to the country.

A person possessing these indispensable qualifications is now submitted to an examination as to his knowledge of tactics and capacity for command.

The following grades are entertained:—

	1st Class.	*2d Class.*	*3d Class.*
Colonel	...	...	...
Lieutenant-Colonel	...	...	...
Major	...	...	...
Captain	...	...	...
First-Lieutenant	...	...	...
Second-Lieutenant	...	...	...

and the recommendation for appointment made according to the applicant's merit.

We have endeavored, to the best of our ability, to make this recommendation without partiality, favor, or affection. We consider alone, in making our awards, the ability of the person to serve his country, in the duties appertaining to the office. If, in the opinion of the Board, a person is not possessed of sufficient knowledge or capacity to fill either of the positions, it does it to the advantage of his country, he is rejected, notwithstanding any influence he may be able to bring to bear in his case. Let it be remembered that *seniority is not sufficient*; but what we require for a good officer is zeal, combined with knowledge. No ordinary man can properly fill the office of colonel of a regiment. To acquire that knowledge of tactics which would fit him to command his regiment as it ought to be in all situations, requires much study and practice, and it is by no means easy. He should, besides, possess good administrative qualities, in order that affairs should run smoothly in the regiment, and the officers and men also be as contented and happy as the circumstances admit.

Nor can too much trouble be taken properly to prepare persons to fill the responsible positions of officers. Each State should have its Military Academy. In the meantime, much good can be done by instituting a school for the instruction of persons proposing that they have had some experience in the service, who may have the requisite capacity and zeal to serve their country with advantage. Reckless affi hunmbuggery, and mere pretension, and let merit be the test of advancement. Let it be impressed deeply on the consciences of every officer the importance of the trust when he places in command an incompetent officer he is guilty of *manslaughter*.

The country has lost millions of treasure, and thousands of lives, by the incompetence of officers. We have many enemies on the earth, besides the Southern rebels. The fate of free institutions, not only in our own country, but in other lands—the destinies of millions unborn—depend upon your ability to maintain the contest to a successful issue, against all our enemies, both foreign and domestic.

The system of examination instituted by this Board, in my opinion, should be extended to the white, as well as colored troops.

Many of those who have been unsuccessful in the examination before the Board have, no doubt, in some cases, felt aggrieved, as also their friends. We have established a system for examination of officers, the good effects of which are already apparent in the organization of the colored regiments in the front.

In the performance of the responsible and not always agreeable duties, as presiding over this Board, I have always endeavored to be guided by a conscientious regard for the good of the service, and I feel confident that only a just and intelligent public will award to us the just measure of their approbation. I am, sir, very respectfully,

Your obedient servant,

SILAS CASEY,

Major-General U. S. Vols.

THE FRENCH ARMY.—When all the changes of garrison are completed, the following will be, according to statistics lately published, the distribution and strength of the French army. With the exception of certain troops on active service, that army is now on what is called the peace footing, and consists of 412,000 men and 80,000 horses. There are two reserves, which may be called in at a moment's notice; one of old soldiers and another of young ones—men who have not yet incorporated, but almost ready to be dismissed from the ranks. These additions would bring the army up to between 600,000 and 700,000 men. The cavalry, infantry, and quite sufficient as a French paper lately observed, to meet all eventualities in Europe, 60,000 are those distributed—in Mexico, two divisions of infantry and a brigade of cavalry, &c., together nearly 34,000 men; in Cochin China, 1600 men and 1000 horses; in the war fleet, 20,000 men in Algeria, the footing of *remuiement* in the corps of occupation at Rome, about 20,000 men in one division of three brigades, with a few cavalry and artillery. In the peace footing divided into divisions and brigades, the Army of Paris (3 divisions of infantry and 1 of cavalry), the Army of Lyons (2 divisions of infantry and 1 of cavalry), and the division of cavalry at Lunerille, consisting of four regiments. There is also at Paris the Imperial Guard, consisting of 3 battalions and 5 squadrons, specially allotted to the garrison of the capital, and which never leaves it. These two armies, and the Lyons division, are kept on a reduced effective scale. The Imperial Guard forms a special corps, a reserve composed of two divisions of infantry, one of cavalry, three battalions of foot, a body of horse and foot artillery, together 33 battalions (34 just now, on account of the battalion of Tunisia), 16 squadrons, 6,000 men in the Spahis, a total of 39,000 men. The remainder of the French army is distributed in six great corps, five in France and one in Algeria. There used to be seven corps—French corps which remain there in garrison for a certain number of years and then return to France, and what are called indigenous corps, which never quit the colony except for fighting purposes. In these latter corps, however, it is to be observed, there are a great number of Europeans. They consist of three regiments of Zouaves, three of Turcos (*Tirailleurs Algeriens*), three of Chasseurs d'Afrique, and three of Spahis—about 18 regiments, 72 squadrons, and 3,000 horse. Besides these, there are the punishment battalions, popularly known as the battalions of *Zephyrs*.

PRIZE MONEY.

In order to correct the misunderstandings so current on the subject of collecting prize money, we would state that all claimants are to receive their respective shares through the Paymasters of the vessels to which they may be attached at the time the proceeds of the various prizes are ready for payment by the Fourth Auditor, and not through the Paymasters of the vessels making the captures. We give below a list of prizes, the proceeds of which are now ready for distribution by the Fourth Auditor. The list is completed to date. We shall, from time to time, publish additions to the list as fast as they may occur:—

List of Prize Cases ready for Payment, the proceeds of sales having been paid into the United States Treasury.

NAME OF PRIZE.	NAME OF CAPTOR.
Hallie Jackson and Cora Baker	Kalmar.
Frederick Gerstle and Augusta	Ida Clayton.
Grace E. Baker and Annie Hall	Parnell.
Sarah Ann Baker and Mallory	Kanawha.
R. C. Pike, Witness and Cor-	Kanawha.
Sallie	Penobscot.
Magnolia	Carondelet, South Carolina, Hussa, Mercedita and Huntsville.
Rose, Octavia, Victoria and Ida	Marcedita.
W. C. Bee, Lavinia and S. C. Holmes	Santiago de Cuba.
Newcastle and Swan	Bainbridge.
Emma and Adeline	Connecticut.
Leon	Kingfisher.
Cyrill and Methodius	Kingfisher and E. Allen.
Margaret	Sciota.
Isabel, W. E. King	Monongahela.
Spoelo and Mable	Sciota.
Princeton	Susquehanna.
Harriet Ryan and Ocean Wave	Tacony.
Isabel	Tacony.
Providence	Susquehanna.
Mary Celeste	St. Lawrence.
Rachel Seaman	Tacony.
Sea Serpent, Silver and Dixie	Wissahickon.
Wave	Sciota.
Shaver, (name unknown)	Anatolia.
Bridal Veil	Colonel Vernon.
Henry Middleton	Vandalia.
Vanguard and R. Hayes	Ethan Allen.
E. Smith and H. Weaver	Dakota.
Susan Ward	Harriet Lane.
Lucie Moore	Tahoma.
Adopted	Susquehanna.
Little Weston	Iosco.
Edward Cox	Ben Hopkins.
Sally	Albatross.
Benedict	Bienville.
Gracmo	Sumter.
Rose	Jocelyn and St. Louis.
Rose	E. S. Hamlin.
Volante and Anglia	Wissahickon.
Lodona	Bienville.
Isabella	Cambridge.
Pale Wave	Quaker City.
Aquilla	Huron and Augusta.
Wm. Wagle and Sarah	Wabash, Vandalia, Pine & Union.
Amelia	Kearsarge and Ethan Allen.
Curtiss, Fedalma & Olive Branch	Jacob Ager, Norwich, Seneca, Shepard Knapp & Rockwell.
Edward Barnes, Shiloh, Falcon	South Carolina.
Magnolia, Live Oak, etc.	Albatross.
Louise, and 1,203 bags of rice	Bienville and Magnolia.
Refiance and Eagle	Sumter.
Morning Star, Providence, La Criolla and Unknown	Bienville.
Fing, Susquehanna, Seneca, Pocahontas & Sonoma.
H. J. Waterman	Kittabunny and De Soto.
Major Barbour	Keystone State and Alabama.
Catalina	Wissahickon and New London.
Amy Warwick	Augusta and Huron.
Prize	Flambeau.
Panama	Ethan Allen.
160 casks rice	Alcatraz and Norwich.
Teresa	Seminole.
Ariel	Gemsbok.
Delight and Express	New London, R. R. Cuyler and Massachusetts.
Advocate and Osceola	New London, R. R. Cuyler and Massachusetts.
Annie	Kenaweh.
Corolla	Jonas B. Chambers.
Havelock	Commodore.
Tubal Cain	Octoroon.
Amelia	Commodore.
Zavala	Huntsville.
Crystal Stream	Bienville.

THE NAVAL ACADEMY.

The Fall examination at the Naval Academy, Newport, closed on the 2d inst. The following is a list of the midshipmen admitted into the Navy, and also those who have passed since the first of January last, at the Naval Academy. A list of those on probation is also appended:—

LIST OF MIDSHIPMEN PASSED THIS SESSION, AND SINCE JANUARY 1863.

J. C. Muhlenburg, Pennsylvania; Charles H. Ballance, Illinois; Wm. K. Butler, Connecticut; Richard H. Bunn, Maine; F. Y. Robinson, New Jersey; D. D. G. Brownell, Ohio; H. H. Perkins, New Hampshire; E. M. Day, Louisiana; W. O. Morgan, Virginia; W. H. Dana, Massachusetts; J. G. Dana, Massachusetts; J. H. Rogers, Georgia; C. T. Forse, Kentucky; F. Bourneo, Indiana; J. M. Hilliard, Maine; J. R. Copenhaven, Indiana; W. Ayres, Illinois; Wm. Hanschenchi; Theodore P. Wood, Kentucky; J. H. Sheldon, Kentucky; C. H. Stockton, New Jersey; Wm. McKinley, Wisconsin; W. Scott, Connecticut; E. P. McCullough, Illinois; G. C. Shaw, Rhode Island; Wm. Conway Shepherd; A. J. Phillips, Illinois; J. D. A. Reynolds, New York; F. Bunce, Indiana; J. M. Whitehead, Mississippi; Wm. Little, Pennsylvania; W. H. Jaques, New Jersey; W. E. Mortimore, Maryland; James Jones, Indiana; C. A. Stockbridge, Wisconsin; C. D. Heald, Maine; R. E. Jones, Indiana; Richard Bush, Pennsylvania; W. Cowgill, Delaware; J. B. Breckinridge, Louisiana; E. A. Poynton, New York; E. F. Weed, Ohio; D. F. Allen, California; J. W. Miller, New Jersey; B. Stevens, Jr., New Jersey; Francis W. Sugg, Washington Territory; C. A. Adams, Wisconsin; C. O. Allebone, New Jersey; E. H. Gopsill, Indiana; N. Ayres, Illinois; S. H. Barnes, Illinois; E. A. Benjamin, New York; D. P. Bennett, Massachusetts; G. Bridgman, Iowa; H. A. Brown, Massachusetts; J. C. Brown, Massachusetts; A. Bunnell, Illinois; L. L. Buttler, Iowa; E. W. Clay, Kentucky; C. Clemmons, Indiana; C. Cotton, New York; W. H. Cushman, New Jersey; P. Cotton, Maine; J. M. Crowell, Massachusetts; R. M. Cutts, Maine; Mahlon Dickerson, New Jersey; W. S. Foster, Massachusetts; J. Fowler, Massachusetts; Wm. Fowler, Massachusetts; Wm. Gibson, New York; W. B. Cohes, Connecticut; W. H. Fulp, Pennsylvania; Frank Fowler, Illinois; Edward Hooper, Massachusetts; Wm. Hall, Pennsylvania; F. W. Greenleaf, Minnesota; J. M. Grimes, Illinois; J. W. Hageman, Pennsylvania; Frederick Holton, Pennsylvania; B. Harrington, Massachusetts; J. C. Hoyte, Aaron Hayden, Maine; James Holmes, Jr., Maine; Mc. J. A. C. Hall, N. Y.; Samuel Hazard, New York; J. W. Kerr, Massachusetts; Wm. Kirkpatrick, Jr., Maine; Wm. Mc. Mervine, Pennsylvania; Wm. Mullin, Ohio; John Mitchell, Indiana; Alex. Martin, Maine; C. F. Norton, Colorado; John C. Mc. Whorter, Jr., Maine; T. B. Payne, New York; D. G. Palmer, Illinois; G. M. Ransom, Jr., Illinois; Wm. Rogers, Massachusetts; Geo. Preston, Connecticut; J. A. Rodgers, Maryland; F. G. Rodgers, Ohio; Henry; Albert Rice, Pennsylvania; Wm. Rockwell, Connecticut; W. W. Sherman, Michigan; S. A. Simpson, New York; W. S. Schley, Ohio; J. H. Sherburne, New York; H. Storey, New York; A. S. Southworth, New York; D. S. Smith, Michigan; Allen Smith, at large; Simpson Shipp, Virginia; Wm. Thompson, Jr., Nelson Taylor, New York; Jonathan Harrington, at large; Albert Weaver, Pennsylvania; Wm. Wallace, Pennsylvania; Wm. Wilson, Pennsylvania; T. S. Woodruff, Pennsylvania; E. W. Bridge, New York; F. A. Bridges; E. M. Brooks; J. C. Beaumont; Wm. Whittell, Nevada Territory; E. N. Orvey, Louisiana; E. Paul, Louisiana, New York; J. Wilkinson, Jr., Mississippi; Wm. Wilkinson, Pennsylvania; F. G. Hyde, Connecticut; F. Hyde, Connecticut; Geo. Austen, New York; Wm. Hunter, Pennsylvania; R. P. Thery, Rhode Island; E. W. Bliss, Dakota Territory; J. P. Nash, Ohio.

MIDSHIPMEN ON PROBATION AT THE NAVAL ACADEMY.

FIRST CLASS.

Age when admitted.	
Henry Glass, 18	16
Philip D. Cooper, 17	1
Ernest J. Dickinson, Wis	16
William W. Hunter, N. Y	16
Chas. McGregor, Ill	16
Lewis Clark, Conn	16
Dennis W. Mullen, Ky	16
Purnell Harrington, Md	16
Wm. H. Willey, W. Va	16
Charles Rudolph, N. Y	15
Charles L. Simms, Va	16
Arthur H. Wright, Ohio	16
Francis A. Cook, Ohio	16
Douglass P. Cassels, Ohio	16
Wm. S. Dana, Ill	16
Henry D. Wyman, N. Y	15

SECOND CLASS.

Louis Reinow, Va	17
Ed. V. Raven, N. Y	16
Geo. W. Delamater, N. Y	16
Geo. Talcott, Ohio	17
Robt. Tippy, Ohio	16
Francis M. Barber, Ohio	16
David D. Scott, Ill	16
William Smith, Ill	16
Wilson Shannon, Ohio	16
Godfrey M. Hunter, Ky	16
Wm. H. Preston, Pa	16
Henry B. Wilson, Pa	16
John S. Newall, N. Y	16
Wm. H. Brownell, R. I	16
Chas. H. Black, Del	17
Geo. W. Delamater, N. Y	16
Geo. A. Mcknell, Ind	16
Geo. H. Loughlin, Wis	16
David J. Clark, N. Y	17
Fernand. M. Leroy, Mich	17
Rich. G. Hooker, N. Y	17
A. N. Mumford, Virginia	16
Edwin S. Towle, Ind	16
Frederick Rodgers, Md	16
Joseph E. Craig, N. Y	16

Albert G. Caldwell, Ind	16
Albert L. Reiter, Ill	16
French E. Chadwick, Vt	16
John C. Kincaid, Ky	16
Chas. Kennedy, N. Y	16
T. H. Dunn, Ky	16
H. C. White, Conn	17
Arthur H. Pierce, Conn	16
Geo. S. B. Sullivan, Mass	16
Wm. H. Dorsey, Md	16
Herman C. Rucker, Ohio	16
George N. Hug, Ky	16
David C. Woodrow, Ohio	16
Benedict H. McClellan, Ohio	16
Edwin White, Ohio	16
Geo. D. Ammerman, Ind	16
Wm. M. Fahey, Ohio	16
Samuel Dickson, Ohio	16
Francis H. Shepherd, Mich	16
Charles W. Rockwell, N. Y	16
Charles W. Read, N. Y	16
Thomas M. Potter, Ill	16
Marcus B. Buford, Ky	16
Edward M. Taylor, Ill	16
Albert S. Snow, Me	16
Geo. C. Bolton, Ill	16
Benj. B. Long, N. Y	16
John C. Gowan, Ohio	16
George M. Book, Pa	16
Joseph A. Marshall, Ill	16
Isaac Hudson, Ohio	16
E. D. Dickinson, N. Y	16
W. H. Brownson, N. Y	16
W. H. Dana, Ill	16
Marcus R. Buford, Ky	16
Wm. E. Jaffry, Ill	16
Arthur E. Chudsey, N. Y	17

THIRD CLASS.

Seth M. Ackley, Mass	17
Hilton T. Adams, Ohio	17
James R. Adams, N. Y	17
Stephen D. Alden, Ill	17
Thad. F. Anderson, N. Y	17
William Bacon, Ill	17
James A. Barnes, Mass	17
Edward Bell, Ill	17
Buchanan Bode, D. C	17
Robert Boyd, Ohio	17
Andrew A. Bolt, Mo	17
Chas. Bonaparte, Md	17
John Calhoun, Ind	17
Jas. Cooper, Ill	17
H. G. A. Colby, Mass	17
Wm. Cushing, Wis	17
Jas. D. Custer, Mass	17
Wm. Dougherty, Ohio	17
Paul Dutton, Ill	17
Harvey H. Davis, Ill	17
Daniel Delehanty, N. Y	17
Geo. M. Dorrance, N. Y	17
Stephen D. Fuld, Mass	17
Wells Efford, N. J	17
Jas. Forsyth, Ill	17
Lucius E. Foster, Pa	17
Alfred Fuller, Ill	17
Lewis W. Frost, at large	17
Wm. Fitzgerald, Ohio	17
Edw. H. Green, Pa	17
Wm. Gibson, Ohio	17
Wm. W. Gilpatrick, Kansas	18

Geo. Gorham, Ill	17
Samuel Gilbert, Ill	17
Jas. H. Gibbs, N. Y	17
Chas. H. Jenks, Pa	16
Chas. J. Jewett, Ohio	17
Wm. Johnson, Mo	17
Albert G. Kellen, Pa	17
Albert J. Kenny, R. I	17
Simon N. Keeler, Pa	17
Franklin Kenon, Pa	16
Henry M. Lindsley, Conn	17
Wm. L. Marsh, Mo	17
Geo. A. Norris, Ill	17
George Maxwell, Ohio	17
Alfred M. Mullett, Ohio	17
John F. Meade, Pa	17
Thomas Mc. Kay, Ill	17
James Mc. Kay, Ill	17
Charles P. Morrow, Ohio	17
Thos. J. Mcknight, Ill	17
Colin P. Pond, S. C	17
Thomas C. Perkins, Ill	17
Charles H. Potter, Wis	17
Joseph Rodgers, Ill	17
Harry W. Price, Pa	17
Wm. H. Reed, Ill	17
Edw. W. Remy, Iowa	17
Amy T. Ridgley, Ohio	17
Alfred S. Robinson, at large	16
Thos. F. Rogers, Ill	17
Edwd. A. Stewart, Ind	17
Joseph L. Smith, Ill	17
Richard Stockton, Iowa	17
Chas. W. Stockton, N. Y	17
John T. Sullivan, N. Y	17
Jas. T. Swinburne, Ill	17
Geo. M. Symonds, N. Y	17
Wm. Sharp, Ohio	17
James S. Thebbet, Ohio	17
Wm. Thompson, Ill	17
Edw. F. Tilton, Ill	17
Perry M. Washburn, Pa	17
Chas. G. Wilbur, at large	17
Henry W. Wessels, N. Y	17
Wm. Wood, Ill	17
Samuel R. Whitall, N. J	17

FOURTH CLASS.

Edward L. Amyatt, at large	17
Thomas C. Anderson, Ky	16
Charles C. Adams, Ill	16
George A. Bailly, Mich	16
Alfred W. Bacon, Ill	16
Fred. A. Belknap, Mass	16
Wm. H. Beard, Ohio	16
Fred. H. Balcom, Mass	16
Wm. H. Brownell, R. I	16
Chas. W. Barnes, Ill	16
Murray S. Bay, Mass	16
Charles Bell, Ill	16
John M. Brinkin, Ky	16
Charles Z. Bay, Ill	16
Daniel Edgar, N. Y	16
Wm. Ellis, Pa	16
Francis D. Foster, Mass	16
Chas. H. Fox, Ill	16
James K. Gouldin, Mass	16
Wm. R. Groff, N. Y	16
Fordyce M. Keith, Ohio	16
Chas. H. Kelly, Ill	16
Morrow M. Lowry, Col. Ter	17
Caleb Lyon, Ill	16
Henry W. Lyon, New York	17
Martin Mc. Sweeny, Ill	16
Jesse T. Martin, Kansas	17
Wm. Mcmillan, Ohio	16
William J. Moore, Va	16
William B. Moore, Ill	16
Erastus W. Parker, Ill	16
Albert L. Speyer, Ill	16
John S. Talbot, Ky	16
Wm. H. Thompson, Ill	16
Edward Thompson, Ill	16
Geo. M. Totten, N. J	16
Wm. Thompson, Ill	16
Wm. Watts, N. Y	17
Wm. Wallace, Ill	16
Charles Wiseman, Ill	16
Edward Wilson, Ill	16
Jas. P. Wyman, Ohio	16

Samuel Lawrence, R. N. Y	18
Edwin S. Jacob, Va	17
Fred. A. Lindsley, Ill	16
Richard M. Lieb, Pa	16
Lewis J. Lull, Vt	16
Emmett McCormick, Ohio	16
Wm. Mcmillan, Ill	16
Wm. A. McKown, Mo	16
Wm. Mcmillan, Ohio	16
Lawrence Malloy, Ohio	16
Wm. H. Mcmillan, Ohio	16
Alfred M. Mullett, Ohio	16
Geo. A. Norris, Mo	16
Wm. H. Parker, Va	16
Wm. H. Porter, Va	16
Alfred M. Pleasonton, Ill	16
Harold S. Peck, Ill	16
Thomas S. Phelps, Conn	16
John R. Phelan, Pa	16
John E. Rodgers, at large	17
Richard Rowe, Ind	16
Wm. H. Rowe, Ill	16
Chas. S. Sedgwick, N. Y	16
Arthur T. Sedg, Ill	16
Edw. C. Smith, Mass	16
Louis H. Sharp, Ill	16
Lyman G. Spalding, at large	16

ITEMS AND INCIDENTS.

The 11th New York Volunteer Regiment has been disbanded by order of Governor Seymour, and the enlisted men have been transferred to the 17th N. Y. Vols., Colonel Grower. The Adjutant, Quartermaster, and Surgeon of the 11th will be mustered out of the service.

GENERAL GRANT, on the 22d ult., issued an important order, regulating the cotton-trade in his Department, south of Helena. Actual residents, and planters, of Mississippi may ship to any military post on the river cotton or other Southern products, of which they are the *bona fide* owners. Such shipments will be made only at the risk of the General. The concluding section of the order absolutely drives all cotton speculators out of the Department south of Helena.

A monument is about to be built in Boston to preserve the record for presentation to General Banks, as a special recognition of his services in taking Port Hudson. On the overall there is to be a map of Louisiana, on which will be will contain the autographs of the subscribers. The book will be embellished with a view of Port Hudson, a copy of the letter of thanks to the General, and of the General. The engravings are to be printed on vellum.

OPERATIONS for the erection of a strong earthwork on Sandusk Head, near Sandusky, Ohio, are now commenced. The work was planned by Major Bunt, U. S. A. It will be completed before cold weather. It will have a bomb proof, and be armed with eight guns. It will fully protect the town, and make the harbor a safe place of rendezvous for our fleet in the bay, and also prevent its occupancy by the rebel pirates.

A TERRIBLE boiler explosion occurred at Newburgh on Saturday afternoon, at the boiler-shop of the Washington Iron Works, where a pair of large boilers, constructed for the gunboat *Iroquois*, was being tested before placing it in proper place. Seven persons were killed outright, and a tremendous noise, tearing away a large portion of the adjacent building, shattering the dock in fragments for fifty feet around it, and severely wounding several others. Fire, adding much damage to others lying about. The boiler cost about $20,000, and flies in fragments in the water. One man was instantly killed, and several other badly hurt.

THE clerks in the Several Government bureaus are busy in making out lists for publication in the Blue Book. It is believed that the number will not be less, and will much exceed in size the very large one of 1861, which was contained in about eight hundred pages of print. The plan of the Blue Book is as follows:—"A register of officers and agents, civil, military, and naval, in the service of the United

From the London Mechanics' Magazine.

AMERICAN GUNS.

Attempts both England and France have done much toward the introduction of heavy ordnance into their forts and navies, the goddess of peace has hitherto prevented us from practically testing the capabilities of guns intended to throw shot, ten or twenty of which would make up a ton. In America the case is different; and we find that the resources of that country and the naval constructors have rendered a recourse to enormous ordnance all but indispensable; and compelled by practical difficulties to throw heavy shot with low velocities. The rival Governments have each distinguished the real value to be attached to range and accuracy, both as distinct from, and combined with, smashing effect and penetration. As a result, rifled guns of long range and extreme accuracy are rightly deemed of the utmost value, and have been adopted; while the smooth parks of artillery are usually distinguished by the presence of numerous guns, sufficiently like those of Wurtzwurm and Austerwurm to be called by the same nondescript name. Most of these field-pieces are heavy, or intended to throw shot of any considerable weight; but, being well served, they have often transmitted projectiles with such force as would be fatal on a fabulous fifty years ago. A just appreciation of what was required from the "Monitors" and iron-clad steamboats, has secured for the former, the great characteristic of which is immense smashing power at a considerable range, without any great pretensions to penetration; the reader can see well acquainted with the performance of these guns to require any elaboration of the results at our hands.

Hitherto we have only noticed the heavy production of any guns throwing shot much exceeding 100 lb. weight. This arises from a misapprehension of the mission which they have practically undertaken. It is, in fact, a faulty principle of construction following as a consequence; from the defective practice, and limited range, of the old smooth bore. In all these respects, our practice differs materially from that of the Americans. We attach little or no value to even a 68-pr. gun, if it be unable, at moderate elevation to obtain a smooth-bore of the kind, it is sent to the shops to be rifled—destroyed in consequence—pronounced a failure, and all these guns are thus finally condemnations. Our American friends, on the contrary, are content with the smooth-bore, well knowing that sharp rifling, heavy shot and sufficient charge, with long range, are incompatible in the present state of the iron manufacture: hence their papers treat as a matter of course, the fact that a gun is sent on to Dodrt, of the performance of 150 lb. and 200 lb. guns; spoken of, too, with a familiarity which shows that these use is not unusual, and that they are, in fact, the ordinary guns of the "Monitors" are armed with heavy rifled guns as well as smooth-bores; but we must remember that the American rifling is very different from ours. Their system of grooving applied to most of their heavy cannon would scarcely be considered to deserve the name here, so slow is the twist.

It is extremely erroneous to conclude that all these guns are made of wrought-iron. Even without the positive evidence on the subject, which we possess, we have the negative information, derived from our own failures, to prove that the wrought-iron system from wrought-iron is uncertain in the extreme. The American forges are certainly superior in no way to ours, in dealing with large masses of iron; and the Government factories of the United States was so well impressed—as far back as the year 1841—with the importance of perfecting the manufacture of castiron guns, that they instituted a series of very costly and foundry under contract with the Government, to conduct experiments, and see that all the resources of science and art were employed to produce the best possible ordnance. Some brands of American cast-iron are infinitely superior to anything we can produce, and, according to Major Rodman, the average strength of cast-iron cannon from 23,638 lb. to 37,774 lb. of transverse strain per square inch of section. The principle of the Rodman system of casting, in some experiments the transverse strength of the iron having doubled by four mittings. This principle, combined with a careful selection of the iron, and the slow expansion of the melted iron to a very intense heat for considerable periods, is found as for to improve its quality, that a smooth bore, composed of the Ringgold Foundry, N. Y., the density of which was 7.304, and its tensile strength 45,970 lb.; "when we add to these results the considerable ordnance. Some brands of American cast-iron are infinitely superior to anything we can produce, and, according to Major Rodman, the average strength of cast-iron cannon from 23,638 lb. to 37,774 lb. of transverse strain per square inch of section. The principle of the Rodman system of casting, in some experiments the transverse strength of the iron having doubled by four mittings. SICKNESS AND MORTALITY OF THE ARMY.

The following statement of the sickness and mortality of the Army during the first year of the war, prepared by Assistant Surgeon J. J. Woodward, of the United States Army, under instructions from the Surgeon-General, is one of the most valuable of the statistical papers that have emanated from that office, and we take great pleasure in giving it a place in the columns of the JOURNAL. The statement is addressed to Colonel J. K. Barnes, Acting Surgeon-General:

SURGEON-GENERAL'S OFFICE, }
September 2, 1863. }

COLONEL:—In accordance with instructions from the Surgeon-General, directing me to prepare a brief statement of some of the more important facts with regard to the industries of season and region on the camp diseases of the army, as exemplified by the statistics of the first year of the rebellion, I have the honor to submit for your consideration the accompanying tables and diagrams, with a few brief remarks.

The compilation of the medical statistics of the year ending June 30, 1862, has now been completed for some time, and the manuscript of the first volume of the medical history of the war, of which these statistics form a part, will, it is believed, be ready in time to be laid before Congress at its approaching session.

Elaborate statistical tables, with accompanying diagrams, have been compiled separately for each of the great armies in the field, all of which have important bearings upon the subject now under consideration. To present these tables would, however, require a volume of some size, and is therefore out of the question at present; I therefore merely offer certain general facts with regard to a few points selected, such as the mortality rates, the general sickness rate, and the prevalence of a few of the most important diseases during the first year of the war.

MORTALITY RATES.

The general mortality rate of the armies of the United States during the first year of the war, 1861-62, was 69 per thousand of mean strength, including with deaths from disease those from wounds and injuries. The mortality from disease alone was 58.4 per thousand; that from wounds and injuries of every kind 17.2 per thousand.

In contrast with these results, it may be stated that the average annual mortality from disease alone, in the United States army, during eighteen years of peace, was 24 per thousand. In the United States army, during the Mexican war, 107.8 per thousand. In the British army, during the Crimean war, 232 per thousand. In the British army, during the years 1859, 1860, per thousand. It is, therefore, that although the mortality of the army from disease during the first year of the present rebellion was far heavier than that of our army or of the British army in the Crimea, it was much less than that of the armies engaged in the Mexican or the Crimean wars.

The following table exhibits the monthly mortality rates of the army from July 1, 1861, to June 30, 1862. The armies have been consolidated for this purpose, and compared into three great divisions. The first consists of the troops operating on the Atlantic coast between the Appalachian range and the sea, and includes the Gulf coast operations and the various coast expeditions. The annual mortality from disease alone among these troops was 33.46 per thousand of mean strength.

The second consists of the troops operating in the central basin of the Mississippi, between the Appalachian and the Rocky Mountains; and includes Western Virginia, the armies under Generals Buell, Grant, and Pope, the department of Kansas, with the subordinate districts of Nebraska, New Mexico, and the northwest. The annual mortality from disease alone in this region was 82.19 per thousand.

The third division consists of the troops on the Pacific slope, between the Rocky mountains and the sea. It includes those serving in northern California, Oregon, Oregon and Washington Territory. The annual mortality rate was 31.5 per thousand.

It will thus be seen that on the Pacific slope the mortality rate was three times less than on the Atlantic coast, while that of the latter region was twice and a half less than that of the troops serving in the central basin.

The small amount of mortality on the Pacific coast is worthy of attention. The rate is a very general one, and is attributed by British and New England statisticians to young men of similar ages in private life. This exemption in part from disease can be no doubt, to the fact that at the Pacific coast our troops found themselves under conditions much more closely approximating those of peace than of war. This rate is so much lower, in fact, than that known in the whole United States army in time of peace, that an idea of the superior healthfulness of the Pacific coast is at once suggested. The greater mortality of the central region, as compared with the Atlantic coast, would appear to find a close relation with the greater prevalence of malarious diseases in the valleys of the Mississippi and its tributaries, which is indicated by tables III, IV and V, showing the monthly rates of camp fever, of intermittent fever, and of diarrhœa.

The three great regions above contrasted differ not only in their annual mortality rate, but the relations of mortality to season are also quite different.

Thus, on the Atlantic coast the mortality, after falling off a September, steadily increased during October, November, and December, diminished through January and February, and then again increased again through March, April, May, and June.

In the central region the mortality rates became gradually greater from July, 1861, to March, 1862, diminished in April, increased again in May, and diminished in June.

On the Pacific coast a much more fluctuating course was pursued, and quite unlike either of the others, as will be shown in the following table I.

TABLE I.

Monthly mortality rates of the armies of the United States during the year ending June 30, 1862, expressed in ratio per thousand of mean strength.

REGION.	1861.									1862.						
	July.	August.	September.	October.	November.	December.	January.	February.	March.	April.	May.	June.	Total.
Atlantic	3.36	3.07	3.26	3.27	4.47	5.62	4.61	3.71	3.55	3.53	3.07	2.79	44.07
Central	2.65	2.68	3.13	3.62	4.61	5.61	6.13	6.45	7.13	6.57	7.13	6.67	70.59
Pacific	1.40	2.20	1.07	2.29	3.31	1.49	3.73	5.09	9.15	3.39	2.82	1.10	36.75

This makes the per centage for the year 2748.83 on the Atlantic border; 4698.14 in the Central region, and 2556.60 on the Pacific coast.

CAMP FEVER.

Under the head of camp fever, all the cases reported to the Surgeon General's office, as typhus, typhoid, common continued, and remittent fevers, are here enrolled. Of these several varieties, typhus is the only one how far the cases reported as typhus were really of that character. From the details furnished by sanitary reports it appears probable that, with perhaps rare exceptions, what was regarded as typhus was, in fact, of a very different nature; severe typhoid fevers, bilious remittents, and even the adynamic intermittents in scorbutic constitutions being shown, in some cases at least, to have been regarded as typhus. In the error over typhus, there is no doubt, that the whole number of cases reported as typhus amounting to but a few hundred. As for the cases reported as common continued fever, the very name is misleading, as no different only in degree of severity from those reported as typhoid or remittent. Moreover, in the form of a mixed character, exhibiting undoubted enteric phenomena, variously combined with the periodicity and other peculiarities of malarial poisoning, they have been shown by the autopsy to be of frequent occurr, which is the ordinary concomitant of camp fever. To include them, therefore, between typho-malarial fever, which I had the honor to suggest to the department in June, 1862, appears appropriate, and, at the present time, is coming into very general use.

A correct understanding of the nature of these fevers is of the utmost importance, as they play a conspicuous part in the mortality of the armies. Nothing can be more different only to degree of severity from those reported as typhoid or remittent. Moreover, while in some instances of mixed character, exhibiting undoubted enteric phenomena, variously combined with the periodicity and other peculiarities of malarial poisoning, they have been shown by the autopsy to be of frequent occurr, which is the ordinary concomitant of camp diet. To include them, therefore, between typho-malarial fever, which I had the honor to suggest to the department in June, 1862, appears appropriate, and, at the present time, is coming into very general use.

A correct understanding of the nature of these fevers is of the utmost importance, as they play a conspicuous part in the mortality of the armies. Nothing can be more different only to camp fevers.

An examination of table III shows that the frequency and mortality of camp fever differ considerably in the three great regions. Thus, on the Atlantic coast, the annual ratio of cases was 238.99 per thousand of mean strength, and the ratio of deaths to cases was 71.9 per thousand, or one death to every 13.9 cases. In the central region the annual ratio of cases was 319.91 per thousand, and the ratio of deaths 101.8 per thousand cases, or one in 9.8. On the Pacific coast the annual ratio of cases was 46.2, and the ratio of deaths to the ratio of deaths to cases 46.2, or one in 22.1. The severity of camp fever in these several regions is thus shown to differ as considerably as their frequency.

An inspection of the table at once exhibits the autumnal character of the disease. On the Atlantic coast the monthly number of attacks steadily increased until November, 1861, then as steadily diminished until March, 1862; after which they once more increased in frequency. In the central region the maximum was attained in September, 1861, followed by a gradual diminution till March, and a subsequent increase on the Atlantic coast. On the Pacific coast, although there is less regularity in the fluctuates, it will be observed that October was the maximum month. The most superficial observer cannot fail to be struck with the similarity between these three waves and those of the intermittent fevers, of which malarial nature there is no doubt, and which are illustrated in the next table.

TABLE III.

Monthly rates of camp fever in the armies of the United States during the year ending June 30, 1862, expressed in ratio per thousand of mean strength.

REGION.	1861.									1862.						
	July.	August.	September.	October.	November.	December.	January.	February.	March.	April.	May.	June.	Total.
Atlantic	8.36	14.72	16.26	26.72	44.77	62.04	17.74	15.58	15.51	10.97	17.24	16.89	277.79
Central	14.61	20.26	31.13	39.67	49.61	56.61	26.13	20.45	17.13	14.57	19.13	11.67	370.91
Pacific	1.40	4.20	1.07	2.29	5.31	1.49	3.73	5.09	9.15	3.39	2.82	1.10	40.04

This makes the per centage for the year 238.99 on the Atlantic border; 319.91 in the Central region, and 60.36 on the Pacific coast.

INTERMITTENT FEVER.

Intermittent fever, although a very frequent affection, has not been the cause of any great mortality. On the Atlantic border the annual ratio of cases was 195.04 per thousand of mean strength, the rate of deaths to cases 6.6 per thousand, or one to 165.9. In the central region the annual ratio was 275.34, the death 5.3 per thousand cases, or one in 176.3. On the Pacific coast the annual ratio was 151.68 per thousand of mean strength and no deaths.

The relative frequency and character of the disease is well shown in the following table.

TABLE IV.

Monthly rates of intermittent fevers in the armies of the United States, during the year ending June 30, 1862, expressed in ratio per thousand of mean strength.

REGION.	1861.									1862.						
	July.	August.	September.	October.	November.	December.	January.	February.	March.	April.	May.	June.	Total.
Atlantic	10.52	12.36	20.32	34.42	23.58	14.16	7.87	8.62	7.00	12.48	15.10	16.01	195.04
Central	14.61	20.26	31.13	39.67	49.61	56.61	26.13	20.45	17.13	14.57	19.13	11.67	370.91
Pacific	8.38	6.45	8.49	12.88	12.39	2.49	17.28	30.54	31.47	9.04	12.22	1.10	151.68

This makes the per centage for the year 195.94 in the Atlantic border; 375.34 in the Central region; and 151.68 on the Pacific coast.

DIARRHŒA AND DYSENTERY.

Diarrhœa and dysentery are usually one-fourth of all the sickness reported. On the Atlantic border more than half the army suffered, and in the central region the number of cases reported annually was equal to the force. Although nearly so fatal as camp fever, affections of this class were an important cause of the mortality of our army. In the chronic cases of diarrhœa, especially, and dysentery, the colon was the seat of the chief lesion. The general symptom was a profound cachexia; there was a thickened, softened condition of the mucous membrane, with pigment deposit and enlargement of the solitary follicles, frequently terminating in ulceration, the ulcers being sometimes puriform, sometimes extensive, and irregular. In this condition the small intestine frequently participated, though in less, but often considerable degree.

It appears from table V that the annual ratio of diarrhœa and dysentery on the Atlantic coast was 646.01 cases per thousand of mean strength.

In the central region 994.77 per thousand, and on the Pacific coast 319.65. The annual mortality rate was, in the Atlantic region, 2.1 deaths per thousand cases, or one in 483; in the central, 9.6 per thousand, or one in 103.8; and on the Pacific, 0.9 per thousand, or one in 1,109.

TABLE V.

Monthly rates of diarrhœa and dysentery in the armies of the United States during the year ending June 30, 1862, expressed in ratio per thousand of mean strength.

REGION.	1861.									1862.						
	July.	August.	September.	October.	November.	December.	January.	February.	March.	April.	May.	June.	Total.
Atlantic	28.16	24.57	28.16	32.76	46.03	57.50	51.75	51.75	51.75	61.29	72.97	76.36	646.01
Central	85.53	101.72	94.14	96.53	99.05	97.65	77.65	68.84	81.05	84.89	92.37	93.83	994.77
Pacific	8.38	6.45	8.49	12.88	12.39	2.49	17.28	30.54	31.47	9.04	12.22	1.10	151.68

This makes the per centage for the year, 646.01 on the Atlantic border; 994.77 in the Central region; and 319.64 on the Pacific coast.

CATARRHAL AFFECTIONS.

Catarrhal affections of every class were exceedingly common, attacking nearly one-half the forces in the field. The relative frequency in the three regions of the country appears to have been about the same. On the Atlantic border 459.47 per thousand of mean strength. In the central region 427.2 per thousand, and on the Pacific slope 407.01. In all these regions the greatest number of cases occurred during the winter, and diminished during the warmer months. The maximum month being January for the Atlantic and Pacific regions, and February for the central. A large proportion of the severer catarrhal cases occurred as sequelæ to camp measles. The vast majority of the simple catarrhal cases terminated favorably. The rate of deaths to cases 1,137.8 cases on the Atlantic coast; one to every 550.9 cases in the central region, and one to every 1,109 cases on the Pacific coast. The deaths from pneumonia, as the cause of the mortality, were nearly equally distributed in each region under the head of catarrhal affections.

REGION.	1861.									1862.						
	July.	August.	September.	October.	November.	December.	January.	February.	March.	April.	May.	June.	Total.
Atlantic	15.84	13.27	21.10	32.76	41.39	51.75	51.75	51.75	51.75	53.58	70.90	76.36	459.47
Central	28.51	33.90	31.38	32.17	33.01	32.55	25.88	22.94	27.01	28.29	30.79	31.27	427.2
Pacific	8.38	6.45	8.49	12.88	12.39	2.49	17.28	30.54	31.47	9.04	12.22	1.10	407.01

RELIABILITY OF FOREGOING RESULTS.

In conclusion, a few remarks may be made upon the reliability of the statistics from which the foregoing ratios are deduced. It is frankly admitted that the data in the Surgeon-General's office, from the commencement of the first year of the war were compiled, are exceedingly incomplete.

This makes the per centage for the year 238.99 on the Atlantic border; 319.91 in the Central region, and 60.36 on the Pacific coast.

INTERMITTENT FEVER.

Intermittent fever, although a very frequent affection, has not been the cause of any great mortality. On the Atlantic border the annual ratio of cases was 195.04 per thousand of mean strength, the rate of deaths to cases 6.6 per thousand, or one to 165.9. In the central region the annual ratio was 275.34, the death 5.3 per thousand cases, or one in 176.3. On the Pacific coast the annual ratio was 151.68 per thousand of mean strength and no deaths.

The relative frequency and character of the disease is well shown in the following table.

TABLE IV.

Monthly rates of intermittent fevers in the armies of the United States, during the year ending June 30, 1862, expressed in ratio per thousand of mean strength.

REGION.	1861.									1862.						
	July.	August.	September.	October.	November.	December.	January.	February.	March.	April.	May.	June.	Total.

This makes the per centage for the year, 646.01 on the Atlantic border; 994.77 in the Central region; and 319.64 on the Pacific coast.

CATARRHAL AFFECTIONS.

Catarrhal affections of every class were exceedingly common, attacking nearly one-half the forces in the field. The relative frequency in the three regions of the country appears to have been about the same. On the Atlantic border 459.47 per thousand of mean strength. In the central region 427.2 per thousand, and on the Pacific slope 407.01. In all these regions the greatest number of cases occurred during the winter, and diminished during the warmer months. The maximum month being January for the Atlantic and Pacific regions, and February for the central. A large proportion of the severer catarrhal cases occurred as sequelæ to camp measles. The vast majority of the simple catarrhal cases terminated favorably. The rate of deaths to cases 1,137.8 cases on the Atlantic coast; one to every 550.9 cases in the central region, and one to every 1,109 cases on the Pacific coast. The deaths from pneumonia, as the cause of the mortality, were nearly equally distributed in each region under the head of catarrhal affections.

REGION.	1861.									1862.						
	July.	August.	September.	October.	November.	December.	January.	February.	March.	April.	May.	June.	Total.

RELIABILITY OF FOREGOING RESULTS.

In conclusion, a few remarks may be made upon the reliability of the statistics from which the foregoing ratios are deduced. It is frankly admitted that the data in the Surgeon-General's office, from the commencement of the first year of the war were compiled, are exceedingly incomplete.

No systematic effort appears to have been made to secure reports of sick and wounded prior to June, 1862, when already fourteen months of war had elapsed. The existing reports, referring to the three months men, are too few to enable the statistician to deduce any reliable ratio of sickness and mortality for that force, and for a long time after the three years volunteers were mustered into the service, many of their surgeons persistently neglected to furnish the reports required by regulations. In fact, up to the close of the first year of the war the sick reports received at the Surgeon-General's Office were exceptional, and only one month, more than two-thirds of the army actually in the field. In carefully attempting to compile the statistics of the several armies for the first year of the war, it has not been possible therefore to secure a perfect record for any one of them; the figures never represent the whole force, but always merely a certain number. In no campaign was this more conclusive, so far as they go, as is believed that these statistics are as accurate and reliable as any medical statistics ever published; and although it has not been possible to represent the whole army by them, they correspond to so vast a host that they possess high value in illustrating what is likely to be assumed to approximate, in the closest manner, the results which would have been obtained had the reports been complete.

In fact, the number of regiments reporting is so great that the statistics from which they are derived may be considered nearly safely be said to be the largest medico-military statistics every yet compiled.

Great efforts have been made during the fiscal year ending June 30, 1863, to secure completeness in the medical statistics; and these efforts, although not crowned with perfect success, have had the effect of securing the reports for that year comparatively complete, and the work of compiling them is progressing as rapidly as is possible with the clerical force employed.

It is believed that, as the attention of the medical officers in service is now fully directed to the subject, it will be easy to compile these statistics, their hearty co-operation may be relied upon, and that the figures for the present year may be hoped to be nearly complete as can be expected from any great army in time of war.

THE CHANNEL FLEET.

At a banquet at Liverpool, September 21, in honor of the officers of the Channel fleet, Lord STANLEY, in response to a toast, said:

"We have no contemptible naval reserve; and though we cannot pretend locally to compete with those magnificent vessels which are lying at our own doors, still I think we have a Navy of our own not greatly unworthy to compete even with them—a Navy existing indeed for purposes exclusively peaceable, but for a long series of years, both in activity and skill—in those vast ocean steamers which have placed them the world over, which cross the Atlantic with the regularity of boats crossing a ferry, and with a speed which is only surpassed by the railroad. But, gentlemen, it is not only as a Navy to be employed in time of foreign country he may be, that the sight of such vessels as we witness is not only interesting, but novel. We are seeing that which is literally an experiment in the way of a fleet—almost every vessel is an experiment, or, perhaps I may say, a combination of experiments. We have seen probably the last of those old wooden two-deck three-decker ships which will ever carry the flag of the British Admiral; and certainly a more splendid specimen than the *Victoria and Albert* never sailed the sea. We have seen the first of those new mighty engines of destruction which are revolutionizing naval war, and which may place on the ocean at such a cost as is not unkind enough to be trying so large a scale at their own expense and for our instruction. Gentlemen, I confess that I wish that the House of Commons, and the country at large, could see what you and I have seen, what you and I have witnessed during the last few days, and I am sure that every one would have impressed upon their minds two facts which have been very strongly impressed upon my own—one, that for the present we have enjoyed a greatly longer period of late years we have value received; the other, that in this matter of naval architecture we are literally feeling our way. I was told, of course, upon all hands that the new second haul, but if I may express what seems to me a very general opinion among those best competent to judge, it is more than probable that we have not yet got the ship which is to be the gun of the future; and it is, perhaps, open to doubt whether any of those ships visible in our own waters, whether we have got that exact model of a ship which is to be the man-of-war of the future. Now, I think it is our duty as a people to be the first to encourage such an experiment; but it is not less our duty at the same time to avoid that which would be a waste of money, that which would be idle, which while men remain what they are, it is always possible we may fall again—I mean the fault of being satisfied with what has been accomplished rather than in any case, and of assuming that what we consider the perfect model of to-day will be the equally perfect model ten years hence."

One of the English papers, alluding to this Channel fleet, expresses the same doubt as to these vessels being the model of the "man-of-war of the future." It says:

"That the Admiralty should take a pride in the new and magnificent vessels known as the Channel fleet is only natural, and these splendid fighting ships are now going the round of the British ports, to afford the inhabitants an opportunity of seeing and appreciating vessels which, in the event of war, are likely to be called on to defend our hearths and homes, and no doubt would defend them gallantly. They have cost enormous sums of money, have been fitted up with every modern appliance, are manned by crews who are a mere capable of repelling shot and inflicting punishment than any other vessels in the British Navy. But the experience of actual war as it has been recently exhibited in the American struggle, casts a doubt on the efficiency of their construction, and raises the question whether another and totally different principle may not supercede them. Science is always advancing, and when the actualities of war show the superiority of one system over another, we have no alternative but to adapt ourselves to the newest and best method."

ARMY PERSONALS

CAPTAIN A. J. S. Molinard, 2d U. S. Artillery, has been retired.

COLONEL Zabriskie, of the 9th New Jersey regiment, has come to his home in Jersey City on a short visit.

COLONEL S. H. Leonard, of the Massachusetts Thirteenth, has been detailed for duty at Boston Harbor.

FIRST-LIEUTENANT Crawford Allen, Jr., of Battery G, R. I. Artillery, has been promoted to be Captain of Battery H.

FIRST-LIEUTENANT James B. Cook, of the First R. I. Cavalry, has resigned.

COLONEL A. G. Browne, Military Secretary of Governor Andrew of Massachusetts, has gone to Port Royal.

COLONEL George N. Macy, of the 20th regiment, is in the city.

LIEUT. John Dessauer, of the 39th New York Volunteers, or Garibaldi Guards, has been promoted to a captaincy.

CAPTAIN Eaphaim Gayoll, A. Q. M., has been ordered to report in person to Major-General Stoneman, for duty in the Cavalry Bureau, of which he is Chief.

CAPTAIN Charles Wm. Foster, 2d U. S. 1st Mo. Artillery, is announced as Aide-de-camp on the staff of Major-General Schofield.

CAPTAIN E. Guy, 16th U. S. Infantry, has been appointed member of the Department Staff, and announced as Acting Assistant-Inspector-General, Department of the Ohio.

BRIGADIER-General Slough, of the New Mexican Corps, who for some time past has had command of the forces at and near Alexandria, Va., has left his post on a short leave.

FIRST Lieutenant Isaiah W. Dwelbis, of Company D, 7th Maryland regiment, and Lieutenant Patrick county, died recently from sickness contracted on the Rappahannock.

CAPTAIN Edward G. Parker, Assistant-Adjutant-General on General Martindale's staff, has been ordered to report for duty to the Department of the Gulf.

LEAVE of absence, until further orders, is granted Captain George S. Hollis, 17th U. S. Infantry, to enable him to take command of the 78th regiment New York Volunteers.

COLONEL Silas P. Richmond, of the Third regiment, M. V. M., has been appointed Colonel of the Fifty-eighth regiment Veteran Volunteers.

COLONEL Chickering, of the Third Massachusetts Cavalry, has been ordered to Battery Island, at Long Island, and will return to Fort Hudson within a few days.

COLONEL Percy Wyndham, who only a few days ago resumed command of his brigade of cavalry, has been relieved from duty on the 15th by Brig.-Gen. Buford.

MAJOR-General Parnes, the new Military Governor of Norfolk, has arrived in that city and entered upon the duties of his office.

COLONEL J. V. Dubois, A. D. C., by General Orders dated Sept. 29th, is assigned to duty as Chief of Cavalry, on the Staff of Major-General Schofield, commanding Department of the Missouri.

MAJOR G. D. Gregg, Assistant Adjutant-General, U. S. A., is assigned to duty as Assistant Adjutant-General in charge of the Adjutant-General's office at Headquarters, Department of the Missouri.

CAPTAIN Charles S. Burnham, of Nashua, of Company I of the Third New Hampshire regiment, has been presented by his command with a gold watch and chain valued at a hundred and fifty dollars.

MAJOR B. Rush Plumley, formerly of Major-General Fremont's Staff, is about leaving again for New Orleans, where he has been for several months past supervising the organization of negro troops.

GENERAL Frank P. Blair, Jr., lately left St. Louis, accompanied by his staff, to join his division. He goes to New Orleans, and will remain there until his duties call him elsewhere.

BRIGADIER-General Patrick has resigned his position as Provost-Marshal-General of the Army of the Potomac, but is to continue for a time to discharge the duties of that office.

A VICKSBURG letter of the 27th ult. says Major-General Grant is still improving, and it is hoped that a few days more will place him on his feet again. His weather is delightful, and will remain so until his duties call him elsewhere.

BRIGADIER-General Patrick has resigned his position as Provost-Marshal-General of the Army of the Potomac, but is to continue for a time to discharge the duties of that office.

A VICKSBURG letter of the 27th ult. says Major-General Grant is still improving, and it is hoped that a few days more will place him on his feet again. His weather is delightful, and will remain so until his duties call him elsewhere.

BRIGADIER-General Patrick

NOTICES TO CORRESPONDENTS.

The Editor of this JOURNAL will always be glad to receive from officers in the two services, correspondence and general communications of a character suited to its columns. It is necessary that the name of the writer should, in all cases, accompany his communication, not for publication, but as a guarantee of good faith.

Officers are especially requested to give us early notification of all personal matters of general interest; of the movements of vessels, of casualties among officers; and military and naval events.

The Editor will, at all times, be pleased to respond, in these columns, to enquiries in regard to official and other matters.

From gentlemen in the medical service we shall be glad to receive communications on military hygiene, practical surgery, and reports of notable operations and cases of treatment.

The subscription price of THE ARMY AND NAVY JOURNAL is FIVE DOLLARS a year, or THREE DOLLARS for six months, invariably in advance. Remittances may be made in United States funds, or Quartermasters, Paymasters's or other drafts, which should be made payable to the order of the PROPRIETOR, W. C. Church.

Subscribers who fail to receive their paper promptly, will please give immediate notice of the fact.

The Editor does not hold himself responsible for individual expressions of opinion, in communications addressed to the JOURNAL for insertion.

The postage on the JOURNAL is twenty cents a year, payable quarterly in advance, at the office where received.

All communications should be addressed to the ARMY AND NAVY JOURNAL, New York.

ANSWERS TO CORRESPONDENTS.

CITIZEN—The distinguishing marks of officers of the infantry in our service is sky-blue for the ground of the shoulder-straps—for the chevrons on the sleeves in non-commissioned officers—with the same color for the sleeve and the edging over down the leg. For the artillery, scarlet is the color, and for the cavalry, orange. The cap ornament in the infantry is a golden bugle, with the regimental number in the centre. In the artillery it is two cannons crossed, and in the cavalry two swords crossed. General and staff officers have a golden wreath on the cap with the letter U. S. in the centre. Their shoulder-straps are on a dark-blue ground, and have for insignia of the same color, with a golden cord down the leg for the staff, and no stripe for general officers. In the engineers the wreath on the cap has a silver castle in the centre. The sash is buff for General officers, and crimson for the other ranks, excepting in the Medical staff, who wear emerald green. Bugle-knotted coats, with nine buttons in front and three on each sleeve, are worn by Captains and all officers below that rank. Majors, and all above, have nine double-breasted coats. The buttons for the coat of a Brigadier-General, eight in all, are arranged in four pairs: a Major-General wears nine, arranged in threes. The shoulder-straps of a Second Lieutenant have no bars; those of a First Lieutenant one bar on each end; a Captain, two bars; a Major, a golden leaf; a Lieutenant-Colonel, a silver leaf; Colonels, a silver eagle; Brigadier-Generals, a silver star; Major-Generals, two stars, and Lieutenant-General, three stars. The uniform of the Commander-in-Chief of the Army and Navy, is a citizen's dress, including a cravat-pin and, as many believe, new double-breasted Generals-in-Chief has no distinguishing mark.

PRIZE MONEY—Your question in regard to the distribution of prize money is answered by an article in another column, in which a list of prizes ready for settlement is given. We shall from time to time publish similar lists.

U. S. ARMY AND NAVY JOURNAL.

NEW YORK, SATURDAY, OCTOBER 10, 1863.

WHAT THE NATION HAS DONE FOR THE WAR.

IN casting around to test the impressive spectacle presented by the armed uprising of the loyal population of the United States during the present war by like manifestations in the history of other nations, it is soon discovered that the circle of comparison really narrows itself down to one single historical point—the uprising of revolutionary France to repel invasion by the armed coalition in 1793-4. Nothing previously on record at all equals the savage energy with which the French people then rose to vindicate their newly-won freedom and independence; and as between our own situation and that of France during the Revolution there are many points of similitude both in the imminence of the crisis and the universal enthusiasm with which it was met on the part of the people, we will best appreciate the magnitude of the efforts of the loyal States when set side by side with that other and hitherto unmatched exhibition of patriotic ardor. The result will be to show that we have been able relatively to place in the field as many soldiers as France was able to raise then; while, if the results of a critical examination of the number of troops *claimed* to have been raised by France shall be accepted, it will appear that the number *really* set on foot by her has been doubled by the levies first spontaneously sprang forth in defence of the Union.

A tradition, derived from books composed by men mixed up with the Revolution, will have it that the Convention, after having declared war against the combined powers of Europe, threw at once *fourteen* armies, of a *hundred thousand* men each, upon as many different points of the frontier. This statement is still current in ordinary histories of that period; but it stands no examination, and it is not difficult to prove that there never were, at any period of the Revolution, either fourteen armies or fourteen hundred thousand men in arms. On the 10th of July, 1792, there were four armies—that is, the French army was divided into four corps, making a total of 190,000 men. On the 26th of January, 1793, the Committee of General Defence proposed to raise the contingent of troops to 502,800 men, and to divide them into eight armies. When, however, the Committee of Public Safety came to distribute the eight armies, we find that the total effective force amounted to only 296,553 men. On the 1st March, the effective force of the four into eleven armies; and according to the official returns of SAINT JUST to the Committee of Public Safety, these eleven armies formed an aggregate of 479,000 men. After this, no new forces were raised; other armies were "created," but it was on paper; and the total continent never reached the figure of 500,000 men.

We do not institute these criticisms with the view to make out a case: they are, in fact, not ours at all, but the results of the critical investigations of distinguished modern French historians. These investigations prove conclusively that at no period did the Committee of Public Safety succeed in putting on foot as many as half a million of soldiers; and such was the disorder in the organization of the army that, spite of the two hundred million francs per month which it cost, the troops were never either clothed, fed, or paid. It was to frighten Europe and cover up the malfeasance of their administration, that the Committee of Public Safety invented the "levies en masse," and that they afterwards declared through the *Moniteur* that the contingent was raised to one million eight hundred thousand men.

Passing, now, to the examination of our own military statistics, we shall not find the task of getting at the exact figures much easier than in the case of the French army. We do, however, know what contingents have been officially called for, and can form a proximate induction of the force that has actually been in service. First there was the call for 75,000 men. Then the call for 500,000. Then the three months levies, and lastly the two calls for an aggregate of 600,000 men. As we are estimating the voluntary levies alone, we stop short with them, and do not extend the argument to the contingents under the conscription. According to the returns of the Senate Committee on Military Affairs, it was ascertained, after a careful and laborious calculation, that in December, 1862, there were 575,000 troops in the service of the country. Additional volunteers continued to pour in up to April or May, 1862, when recruiting was stopped, by order of Secretary STANTON. This order was subsequently annulled, though we have no means of getting at the exact returns which volunteering produced. Of the two calls for three hundred thousand men each, however, we know that the whole of the first quota came forward, and even a considerable portion of the second. Besides, we must take into account the twenty or thirty regiments who obeyed the summons of the Secretary of War. In fact, without pushing the investigation to critical exactitude where we have not the data to guide us, it will be safe to say that during the first two years of the war, we have had from first to last not far from a *million* of men enlisted in the service of the United States.

If we accept these data, it will follow that we have put in the field *double* the army of Revolutionary France. This is assuredly a striking figure; but it of course depends on the *use* made of our resources whether they prove a glory or a disgrace to us. One thing we know, that France found her enormous levies a mere encumbrance until she obtained *leaders* for them—until CARNOT arose to organize, and NAPOLEON to achieve victory. But whatever verdict history shall pronounce on the conduct of those entrusted with power, the spectacle of the armed uprising of a MILLION of men must always remain an incomparable illustration of the fecund patriotism of a free democracy.

GENERAL LEE'S OFFICIAL REPORT.

WE publish in full on another page of the present issue General ROBERT E. LEE's official report of his campaign in Pennsylvania and Maryland, in June and July of the present year; and we need hardly do more than call the attention of our military readers to a document whose historical interest and importance are so marked.

The forty days' campaign of the summer of 1863—beginning June 3d, and ending July 13th—will take its place in history as, of all the offensive movements on the part of the rebels, the most audacious in its conception, the most gigantic in its proportions, looking toward the grandest ends, and bringing to those who initiated it only most disastrous results. Its vexatious, however, to those who seek to follow the progress of the war, that this "strange, eventful" campaign is surrounded with more obscurities than any other portion of our military history. There is very much in that wonderful countermarch from the Rappahannock to the Potomac, and thence through Maryland into Pennsylvania, that can only be half apprehended even by those who were actors in it, and still more—and especially the movements of the enemy—that cannot as yet be apprehended at all. To cover the series of events from the Union point of view, which are in LEE's report detailed from the rebel point of view, would require the reports of two commanding armies, neither the report of General HOOKER nor that of General MEADE, (if rendered), has as yet been made public.

General LEE's report is both satisfactory and unsatisfactory. It is satisfactory in the clear and detailed statement it affords of the march and manœuvres of his army from the time of leaving Fredericksburgh up to the period when, defeated, it recrossed the Potomac: but it is very unsatisfactory in the obscurity in which it leaves the general motive of the invasion, and the whole course of its military conduct. The rebel generalissimo promises a fuller exposition hereafter, but for the present much seems to be purposely left in haze; and it is only by a diligent reading "between the lines," that we can apprehend even imperfectly *what* he did and *why* he did it.

If we examine LEE's report with a view to learn the actuating motive of this invasion, we find ourselves greatly at fault in discovering any adequate reason for the movement which he made in his risk and labor. We may say, generally, however, that offensive operations are not excluded from the theory on which the rebel chiefs have conducted this war: this theory is what is known technically as "defensive, with offensive returns"—that is, such an attitude as will cover the local strategic points, but without neglecting any favorable opportunity for dealing a damaging blow. Such a favorable opportunity General LEE must have thought he discovered at the time the invasion of the Free States was determined on. But a few weeks had elapsed since the disastrous defeat of the Union force at Chancellorsville, and all reports concurred in representing that the army had been demoralized and dispirited, besides being considerably weakened materially by the expiration of the term of service for the two-year troops, and their consequent withdrawal from the field of active operations. Now, an offensive movement by the flank, on the part of General LEE, would draw off the Union army from the strong position opposite Fredericksburgh, where the rebels did not feel strong enough to risk a direct attack, would recover to the rebels the Shenandoah valley, and its rich harvests then ripening, and if successful, would transfer the scene of hostilities north of the Potomac. "It was thought," adds General LEE, "that the corresponding movement on the part of the enemy, which might be contemplated by us could probably give rise, might offer a fair opportunity to strike a blow at the army therein, commanded by General HOOKER, and that, in any event, that army would be compelled to leave Virginia, and possibly to draw to its support troops designed to operate against our capital and the country. In this way it was supposed that the enemy's plan of campaign for the Summer would be broken up, and part of the season of active operations be consumed in the formation of new combinations, and the preparations that they would require."

It must be confessed that the rebel General had a perfect right to reason in this way, and that the reasoning, so far as it goes, is quite correct: but withal the motive seems hardly adequate; and we are to seek the explanation under the veiled expressions we find scattered throughout the report—as, for example, that "it was hoped *other valuable results* might be attained by military success," and that he was "actuated by these and *other important considerations* that may hereafter be presented," etc., etc. No one can be at a loss to interpret these orphic utterances. The one crowning and paramount motive of the invasion—conspicuous in General LEE's report only by its complete absence—was the capture of the coveted capital, the ambition to defeat HOOKER, and dictate a peace at Washington.

In the execution of this design, General LEE first massed his troops—at least the corps of EWELL and LONGSTREET—at Culpepper Court House, leaving only HILL's command as a corps of observation to occupy the lines at Fredericksburgh. A rapid march was

then made by EWELL directly down the Shenandoah valley, and it was not until the rebels had reached as far as Winchester that the Union army was set in motion. The countermarch of our army to the Potomac is one of the most rapid and brilliant movements on record; for whatever General HOOKER's military capacity in other respects may be, no one fit to speak on the matter can deny him a great talent for moving masses of men. When Washington was at its prper point, HOOKER had, of course, the shorter line—had in fact the radius of a circle, of which the rebels had to describe a great segment. The Union army pursued the roads near the Potomac, seemingly with the view of taking up a position that would enable it to cover the approaches to Washington. "*With a view to draw him from his base*," adds General LEE, "LONGSTREET's corps was moved from Culpepper "Court House, and advanced along the *east* side of the "Blue Ridge." The object of this bit of strategy is plain, and very clearly reveals that a move on the capital was the governing motive of all LEE's earlier manœuvres; for if he had been able to draw HOOKER after him, and "away from his base," LEE's course would then have been a swinging movement by the left, on the north side of the Potomac, into Washington. This bait failed to draw, and we can read the mortification of the failure, though unexpressed, running throughout the whole of this part of General LEE's report.

We cannot discover in General LEE's operations after entering Maryland and Pennsylvania the proofs of any well-conceived military project. After failing in his manœuvres to induce the Union commander to commit a false step and give him an opening into Washington his movements seem to have been guided by the one purpose of getting out of the trap as quickly and as safely as possible. While he was making preparations to advance upon Harrisburg, intelligence was received by LEE that the Union army, having crossed the Potomac, was advancing northward, and that the head of the column had reached South Mountain. "*As our com*"*munications with the Potomac were thus uncovered*," declares General LEE, "it was resolved to prevent his "farther progress in that direction by concentrating our "army on the east side of the mountains. Accordingly "LONGSTREET and HILL were directed to proceed from "Chambersburgh to Gettysburg." Such is the philosophy of the Battle of Gettysburg—the one action of the campaign : an action which saved the country and the capital, and balked and blighted all the hopes of the invaders. After this engagement—so brilliant for the Union arms—the one object of the Confederate chief was to escape with his army and trains across the Potomac. The portion of his report referring to this part of the campaign presents a vivid picture of the embarrassments and perils that beset the rebels here, and reopens the unavailing regrets that they were not attacked at Williamsport. It will probably always be a matter of dispute whether General MEADE should or should not have attacked the rebels there; but the evidence which General LEE unconsciously renders in his report certainly goes strong for the affirmative.

There is so evidence in his report to show what may be General LEE's own view of the policy of this invasive movement. It has generally been understood that he regarded it as an error, and that the movement was commanded by the clamor of a class who make "on to Washington" their watchword. But it is very clear, both from what is said and what is not said, that Washington was the objective point of this audacious campaign, and that as a whole it was a very complete failure. We cannot close without thanking General LEE, in the name of history, for his report, which clears up much that has hitherto been obscure. May we not hope that the reports of Generals HOOKER and MEADE will now be made public?

A PIOUS PIRATE.

There are a great many curiosities in International Law, but we doubt if there be on record a bit of burlesque quite so monstrous as the rebel corsair SEMMES has lately put forth. The Cape Town *Mail* brings the intelligence that the *Alabama* had, early in August, reached the Cape of Good Hope, bringing with her several prizes, and capturing an American bark within cannon shot of Cape Town. Having finished up this little business, he put into Saldanah Bay, and there remained up to latest advices, painting, refitting, etc., in complete contempt of the Queen's Proclamation, and enjoying the hospitality of our very *neutral* British colonial cousins. But SEMMES, like a pious pirate, who insists that his victims shall say their prayers before they walk the plank, resolving to take this opportunity of easing his conscience, and fulfilling the obligations of International Law, proceeded to establish a prize court for the trial and condemnation of his captures. But where does he establish his prize court? *On the deck of his own vessel*, and in the form of "extracts from the proceedings of the Admiralty Court, held on board of "the *Alabama*, Captain SEMMES presiding," which are furnished in the *Mail* newspaper, form a travesty of the code of maritime law, which, we imagine, has hardly its match.

No point in International Law is more definitely settled than that there can be no Ocean belligerent without a port into which it can take its prizes. Any other rule would be absurd and leave the captor practically a pirate. But the modern law interposes an additional check upon lawless violence, by requiring the condemnation of a competent court. This rule, which is among the most authoritative of the British Admiralty, will be found in the famous letter of Sir WILLIAM SCOTT to JOHN JAY, as follows:—"*Before the ship or "goods can be disposed of by the captors*, there must be "a regular judicial proceeding, wherein both parties may "be heard, and condemned therefrom as Prize in a Court "of Admiralty, judging by the Law of Nations and "Treaties." But this rule is French as well as English. Indeed it is a part of International Law. M. HAUTEFEUILLE, in his elaborate work, (*Des Droits et Des Devoirs des Nations Neutres*, vol. 3, pp. 299, 323, 325,) says: "The cruiser is not recognized as the pro"prietor of the effects seized, *but he is held to bring "them before the tribunal, and obtain a sentence declar*"*ing them to be prize*." The rebels have neither port in which to constitute a Prize Court, nor Admiralty Court before which to bring prizes. Their corsairs are, therefore, pirates pure and simple. When it suits them they burn their victims, and the flames of the *Jacob Bell* and the *Conrad* light up the sea for distant witnesses to the reality of their piracy. But latterly they grow circumspect, and don the livery of the law. We fancy the picture of SEMMES, sitting in his cabin, which, like the wigwam of an Indian warrior adorned with the scalps of his enemies, bears on its walls "be"tween fifty and sixty" prizes, taken out of the different American ships captured by the *Alabama*," and there holding judicial quest on his victims, is worthy to live in history. The proceedings as recorded in the British Colonial paper form a burlesque on the forms of International Law, which should make the British Cabinet blush for their misguided concession to the rebels of Ocean Belligerency.

The position of General ROSECRANS at Chattanooga, daily more and more strengthened, gives good hope that the fall will see a big row. But considerable apprehension is felt lest Bragg and JOHNSTON, fearing to make a direct attack, should attempt to dislodge General ROSECRANS by a turning movement, grasping General ROSECRANS' communications. Such an exploit is certainly not impossible, but the geographical and strategical relations of the region in which the two armies are posted, make such a movement on the part of BRAGG extremely difficult and hazardous. It would be still more so should it be true that we still hold Lookout Mountain, in contradiction of the rebel statement that this important position, which may almost be pronounced the key to Chattanooga, had been carried by a portion of LONGSTREET's command. The mountain itself is a long range, beginning at Chattanooga, and running south by west to Gadsden, Ala. There are only three or four roads practicable for an army over this spur—one at Chattanooga (said to be in our possession), a second at Stevens' Gap, thirty-five miles south, another at Winston's Gap, fifty miles south; but these latter gaps were destroyed by an expedition which General ROSECRANS sent to blow up the roads and render them impracticable. This natural barrier, therefore, forms a good cover for his right wing. On the left wing, General ROSECRANS connects with BURNSIDE's right, and all the forces are strongly guarded. A flank march might be made by way of Kingston, threatening Nashville: but it will be a difficult and perilous operation, and the "Mountain fox" will not be caught napping.

The number of sick and wounded in the hospitals throughout the country, reported at the Surgeon-General's Office to date of September 26th, 1863, is 57,713. About 13,000 enlisted men (paroled prisoners) arrived at Camp Parole, Annapolis, Md., from Richmond lately. They were accompanied by a few civilians. The number of Rebel officers now in our hands is about 2,500 (an official estimate.)

We are very glad to observe that our suggestion, a fortnight ago, touching the importance of building more broadside iron-clads, is to be acted upon. Secretary WELLES has revised the plan for the 3,500 ton war ships under consideration in the Navy Department, and determined fully to test the principle of the casemate as compared with the turret. In this view he has accepted the plans of armored vessels submitted to him, and communicated to the Bureau of Construction his idea of these colossal ships on the broadside model. They will be at least 5,000 tons, and may be 6000 or 7000. The plates for the casemates will be from fifteen to twenty-four feet long, from five and a half to six inches thick, and fully three feet wide. It is hoped to be able to put them afloat in the course of eighteen months.

OUR sailors are eagerly waiting the general distribution of prize money by the Fourth Auditor of the Treasury Department. We publish in this paper a complete list of the prize cases ready for payment up to the 22d of October. The shares of some crews are very handsome. We are informed that the captain of the *Umbilla*, for instance, obtained as his share of the prize money for the capture of one vessel, (the *Lodona*), $11,000, while the share of each contraband on board was $440,00, 'and theirs was the smallest portion.

We publish this week an exceedingly important report by Assistant-Surgeon J. J. WOODWARD, on the sickness in the ARMY of the United States during the first year of the war. As a statistical document the report has the greatest value. It covers a broader field, perhaps, than any similar paper ever issued by the Medical Department of any other country, and is as near to completeness and accuracy as it is possible it will be. It shows that the figures show that the per centage of mortality was less during the period named than in our Army in Mexico or the British Army in the Crimea.

A CURIOUS contrast is presented in the fact that while the iron-clads stand quaking and quiescent before the batteries on Sullivan's Island, three or four slight wooden gunboats (two of them, we believe, improvised from old Staten Island ferry-boats) went boldly up the other day and attacked the heavily-armed batteries in Sabine Pass. We do not commend the example of throwing egg-shell ferry-boats head-on against fortifications, but neither can we see the wisdom of allowing a fleet of iron-ribbed pachyderms to stand idle in face of the enemy. *Might it not be possible to strike something like a fair mean between the two extremes?*

MASON, the rebel Envoy to the British Government, has closed his mission, and in a letter dated September 21, taking leave of Earl RUSSELL, he acknowledges that his work in England has failed.

ADMIRAL DARLGREN writes in private letters that his health is very much better, and he will be all right in a few days. "The work," he says, "has never taken the "steel out of me." He disposes of one of the assertions of the rebel press as follows: "I see by the papers that the "rebels not only declined my request to give up Sumter, "but called the demand puerile and unbecoming, which is a "lie outright. No such language was used. It is a poor "effort of some of the chivalry to brag up their coring "fabrics."

PROSPECTS for continued peace with England remain bright. The affairs of this country continue to be the great staple of the English press, and of conversation in private circles. They are also the subject of songs at places of amusement, and interpolated jokes in plays. English papers teem, as usual, with letters from secessionists abroad, replete with misstatements and fulminations against our Government.

COLONEL James D. Fessenden, A. A. D. C., and Captain Robert H. Hall, 10th U. S. Infantry, have been assigned to duty on staff of Major-General Joseph Hooker, U. S. Volunteers.

LIEUTENANT-Colonel C. C. Suydam, A. A. G., formerly on the staff of Major-General Keyes, is now Assistant-Adjutant-General of the Cavalry Corps, Army of the Potomac, to which he was transferred on the dissolution of the Fourth Corps.

FOREIGN NAVAL AND MILITARY MATTERS.

THE cholera continues to devastate the upper provinces of India, and to work destruction at the British military posts.

ABOUT thirty millions of francs are to be expended in the improvement of the Prussian fortresses, particularly those on the frontiers.

THE report is again revived that Admiral EDGERTON is likely to succeed Sir ALEX. MILNE in the command of the North American and West India station, in January next.

THE launch, first, on the system of construction at Portsmouth, the Southsea Castle, is, according to directions from the English War Department, to be provided with a cupola shield, on the plan patented by Captain COLES.

A FURTHER trial of French and English armor plates has been had at Portsmouth. The result was the same as at the former trial. The cupola of the Danish iron was superior, but the workmanship was inferior to that of the English foundry. The French use charcoal iron.

THE authorities of Chatham dockyard, England, have discovered that the iron-clad *Achilles* cannot be released from her position without serious injury to the beautiful deck on which she has been constructed, and it became necessary to cut away sixteen inches of the granite wall on each side of the entrance.

REAR-ADMIRAL WASHINGTON has formally resigned his post as Hydrographer to the British Admiralty, and shortly after—on the 16th of September—he died in Hesse. Captain BRIDGES, who has been attached for thirty-six years to the hydrographic department of the Admiralty, is named as his successor.

FORTY of the improved Armstrong 12-pounders, which were 9 feet 6 inches and a foot shorter, had a strong coil placed in front of the trunnions, and had been provided with thicker vent-pieces, and different patterns breech screws, sights, and fittings, were shipped from England to Canada in the early part of September; and a battery of similar weapons was to be forwarded by the 26th inst. with all despatch.

THE Italian army is distributed as follows:—Nine battalions at Genoa, 6 at Turin, 9 at Alessandria, 12 in Tuscany, and 12 in the valley of the Po from Milan to Ancona. The troops in the valley are composed by 24 squadrons of heavy cavalry, 36 squadrons of light, and 24 pieces of artillery. Naples there are 15 battalions of infantry, 2 of marines, 4 of bersaglieri; in the Neapolitan provinces 39 battalions of the line, 20 of bersaglieri, and 32 squadrons of cavalry; in all 81 battalions of infantry, 56 squadrons, 8 regiments of carabineers and different detachments of the garde mobile. There are also 32 battalions in Sicily.

THE naval force of France consists of 94 armor-clad screw vessels, mounting 1182 guns; 17 armor-clad, not armor-clad, carrying 5662 guns; 86 paddle-wheel steamers, carrying 554 guns; and 111 sailing vessels, carrying 1111 guns; that is, 308 vessels, with 8509 guns. The naval force of Russia consists of the Baltic fleet, numbering 9 ships-of-the-line, 14 frigates, 6 corvettes, 26 brigantines, and 5 yachts; the Black Sea fleet, numbering 42 steamers; of the Amoor fleet, numbering 6 corvettes, 7 schooners, and 11 transports; of the Caspian fleet, numbering 2 steamers and 3 transports; of the White Sea fleet, numbering 5 steamers; and of the Lake Aral fleet, numbering 2 steamers; or 72 ships of war.

ON the 4th British Channel fleet, Admiral DACRES, commanding the British Channel fleet, was entertained by the corporation of Glasgow. In responding to the toast of his evening, Admiral DACRES said that the "great question in case of war would not be how many iron-clads we had, but what nation would secure the sea of the two opponents. He had always contended "that could build a vessel in a year, he meant such a "vessel as the *Royal Oak*. These, however, were not the vessels we should want. We should want hundreds of vessels like the *Melbourne*, that everybody had heard of, and which the Americans were now "suffering from. He did not see any reason why the "Admiralty in adverting to this question of small "vessels. It would be very unbecoming in him if he "did, for he knew that the Duke of SOMERSET, in a "speech he made recently, was exactly of the same "opinion he had expressed."

MR. W. CLARK, a London engineer, has recently patented several improvements in marine iron plating. The vessels are built having the main body or continuous part of the hull but little above the load line, say some 3 ft., or 4 ft., or it may be quite to the water, so far the mould of the ship is much as in ordinary; from this level the hull of the ship is carried up in sections, say in convenient lengths for a ship about 100 in length) of about 100 ft. each in length, the one part commencing, say, some 30 ft. or 40 ft. from the stem, and the other some 20 ft. from the stern. The part of the lower body unoccupied by these raised sections or structures will be a kind of deck, which is covered over with strong iron plates to give the necessary strength to the hull and to resist the force of exploded shells or the graze of shot, to which alone it would be subject, being nearly or quite horizontal. In building these vessels a light upper deck may be carried over the entire area of the ship, which deck is carried between the raised parts of the hull on girders stretched from the one to the other, and is supported at each end by pillars from the exposed plated deck below. Besides covering the raised parts of the hull with armor plates, the patentee covers the main body from end to end with armor plates, say to the required depth of 3 ft. below the water line and over the whole of the lower part of the hull rising above water, which may be to the extent of 2 ft., 3 ft., 4 ft., or even 5 ft. For a ship of five or six thousand tons burden a saving in the weight of armor-plate to the extent of some 400 to 500 tons will be effected. The light parts of the ships are also pierced for guns.

A NEWLY invented steering screw propeller has been tried on the *Charger* gunboat, under the direction of the British Admiralty. By this system of the screw is, that a ring forming an universal, or ball and socket joint, is placed within the hollow boss of the screw, which is fixed on the propeller shaft, the inner shaft, the centre of gravity of the screw and the centre line of the rudder intersecting the centre line of the main shaft, so that the screw may be driven as usual by the shaft, and by means of the tail or spindle of the screw projecting from the boss, working in the rudder, whenever the rudder is moved by the rudder, it communicates an equal movement to the screw, which therefore becomes not only the propelling but also the guiding power of the craft. It is claimed that by this invention the retarding action of the rudder, and likewise the vibration, are removed, while the speed of the vessel is increased. The *Charger*, which before the application of this screw had made a run of 7.751 knots, gained .531, or about half a mile when it was tried with the new screw. The engines had been in a more effective working state, the gain would have been still more considerable. The inventor is a Mr. CURTIS, of Belfast.

A SERIES of experiments are being carried out in the gunnery ships, and in batteries manned by the Royal Marines, with 40 and 70-pounders, to test the value of the new Palliser shell. The breech-loading, in order to its substitution for the plan of closing the breech of the gun by the vent-piece, which has hitherto proved so unsatisfactory in practice. The result of these experiments is stated by the London *Times* of the 10th ult. as follows:—The general opinion which has been formed from the 40-pounder gun is, that in its present state it is not at all fit for sea service.

"In some of the earlier trials," says the *Army and Navy Gazette*, "the guns were shifted after every discharge, and in consequence they got thrown out of the gun with great violence, as escape of gas is taking place, and the projectile, which but even to the careful and skilful manner in which the guns have been lately worked, similar accidents have been avoided. Hence, the Admiralty prefer the self-acting closed breech of the muzzle-loader, which cannot get out of order, and two 70-pounders are being altered accordingly. This alteration will necessitate the abandonment of lead-coated shot, and the adoption of some other system of rifling—a change which, after the experience gained by the Armstrong gun, we consider to be highly necessary; for there, despite the attention of a skilled mechanic to the placing the tin cups and screwing up the vent-piece tightly, the loss of the 110 pounder became enlarged when the gun is warmed, and the escape of gas could not be prevented."

A VISIT TO LAIRD'S SHIP-YARD.

A correspondent of the Boston *Journal* describes a visit he had recently made to Laird's Ship-yard, where he saw and minutely examined the iron-clads now built there. He thus describes the unfinished one, which is like the other in all respects:

The length over all is 230 feet, breadth of beam about 45 feet, forming a double-ended, broad-bottomed boat. The main extends about five feet forward of the upper parts of the stem, is curved outward pretty sharply, and is quite thin on the edge. About two feet from the edge of the bow four eight inches thick is placed, to which is affixed the iron plates. They are, I was told, five inches thick along the bow, reduced to four inches at the ends. She was all plated excepting a small portion near the stern, and under the quarters, as far forward as the commencing plates. One of the men just ready to go on I found by actual measurement to be 10 feet 4 inches long, 2 feet 9 inches wide, and two inches thick. The plates are bevelled off 4 inches in the diameter inside, and 11 outside. Her stern is built very much after the usual manner of iron screw ships, considerably overhanging. The plates are bevelled off and rounded she must draw 15½ feet to cover the rudder in smooth water, which she will no doubt do when completed for service, as her draft now was nearly 12 feet without her turret or masts. These, with her armament, ammunition, coal and stores, used, I think, before she is ready for use that she will steer badly. Her upper deck beams are about 9 inches deep, less than an inch in thickness with the exception of the hanging knees, which are four feet apart. Over them is a layer of iron 8 inch, then the deck plank of oak 3 inches, covered with iron plates 1 inch, on the upper side of which are cast-iron projections, forming squares about 18 inches across, like an india-rubber door mat, to prevent slipping. The iron plates squares large wood screws confine the plate to the deck.

There are 2 turrets about 80 feet apart, which are made to revolve on the *Inere* deck on 12 rollers 2 feet in diameter. The part of the turret below deck is of course made to fit that space nearly, but the diameter of the part above deck is 34 feet less. The inside diameter is about 18 feet from top to bottom. The lining is half-inch iron, from which extend outwardly, at distances of about 18 inches, arms with the same thickness, extending from the top to the deck, and about 18 inches wide, to which are affixed the exterior plates, 14 inches thick. The turret is connected below with the deck to the outer circle, while the space between the plates and lining above the deck are filled with teak timber. The lower part of the turret has several elliptic apertures through both plates, 2 feet wide and 4 feet high, for convenient communication with the between-decks for the purpose of conveying ammunition. The portholes are about 18 inches above deck. A poop deck and topgallant forecastle, each about 50 feet long and 7 feet high, are constructed of three-eighths iron for quarters of officers and men. Between the bulwarks are about 5 feet high, made of quarter-inch iron on frames of 2 inches spring, in centres of 8 feet, each of them having 2 stanchions, with a joint or hinge at the foot, so that they can lay over the side while in action. Each stanchion is made with a double angle iron, 3 by 2½ inch, about 2 feet long, extending inward, all forged in one piece. The foot pieces are flat, about 3 inches wide, at the inner end of which is an oblong piece of iron, 3 inches over, a piece of iron secured in the deck through which a bolt that passes, holding the stanchion in its place. The upper parts of these bolts are knocked out and the bulwarks thrown over, laying against the side of the ship, affording no obstruction to protection to the hull. At least that is the *intention*, as I was told.

The masts, three in number, are made up of three-eighths iron, supported inside by iron ribs of 2 inches square, with iron fear inches wide, extending the whole length and placed edgewise. An iron bulkhead is built on the middle of ship, and one forward and aft of each of the turrets, divide the ship into six water and fire-proof compartments. Two apertures in each, 2 feet square, and 4 feet from the feet in width, have sliding doors moved by rack and pinion.

It will be seen that the poop and topgallant forecastle, being constructed of three-eighths iron, are not resistant to shot, and are also very much in the way of the guns in the turrets. Iron masts, although very desirable for their lightness, are seemingly deficient in strength, and durability, as, I conceive, very objectionable in a war vessel, for a wooden mast, struck with a shot, will splinter, and the *wreck is really dreaded among*; but the same shot would *bend* an iron mast, so that it would fall over the side, or on deck, and be a long time in getting it out of the way to clear the ship unmanageable, and place her at the mercy of her opponents. Falling across the turrets in that manner, the masts would render the guns in them useless, and the ship be fully powerless.

I noticed the masts of the *Royal Oak* (4000 tons) were of iron, but the *Warrior* and *Black Prince* (6,000 tons each) had wooden masts. Invulnerability appears not to have been thought of as the essential quality in the fighting of small beams and their coverings, as compared with the monitors there are several hatchways, the largest of which, I think, is about 4 feet square, with a flap, which are only five inches wide at the top, and the masts are railed like an ordinary ship with wooden stanchions. Where the anchors are stowed I did not learn, excepting where the spare part is *bending* than the *spare*, a shot or shell striking near the water-line would easily knock it in, so as to render the bolt or perhaps unpassable to move the turret. The circles round these turrets, to which the deck beams are riveted, are of iron, and the deck beams are of iron, and across the deck beam from a monitor would, I imagine, demolish the *iron* effectually, while the two-inch plates forward and aft, could not but cripple the steering gear. The *Royal Oak* is probably completely unmanageable by a single shot striking the rudder. Used as rams they would no doubt do great execution whenever they struck a vessel, but the danger would be taken in all their bearings they do not appear to be so formidable as the *Warrior* and *Black Prince*. Another second is being pushed to completion as rapidly as possible, as great a number of hands being employed as can work to advantage. The *Royal Oak* is expected to be launched will be tried by *British* how. Those who have the management of the said are confident of a conviction; but should the "Wooden Walls of England" prove triumphant, John Bull will rue the day that he construct it so loosely.

NOTE.—The above statements in regard to the plating of the turrets I believe to be incorrect. The sides are not flat as them. They were completed with the exception of affixing the plates and filling spaces with timber.

VENTILATION OF IRON-CLAD SHIPS.

The *Royal Oak*, says the London *Lancet*, would appear to be destined to play as important a part in the sanitary history of the Royal Navy, as the *Warrior* in the fighting line. Not long since among the Channel fleet, the *Royal Oak* had been given to the offensive and defensive powers of our armor-clad fleet, and the *Lancet* has had the benefit of the capabilities as dwelling places for a crew. True, ships would carry a smaller number of men than it was usual to assign to wooden ships of equal tonnage, but the same convergence would luxuriate in a larger cubic space between decks than he would have possessed in a wooden ship-of-war. But it has been ascertained that the *Royal Oak* is deficient in ventilated walls in acquiring and retaining heat, as well as the effects of a confined atmosphere upon outlets and inlets, which had been reduced by the necessity of weight in number, but also in capacity, consistent with the working of the vessel. In the Royal Navy, as in the mercantile marine, ships were exposed, in hot weather, to the risk of being suffocated (after the fashion of draughty knights of old), as well as, to many, less unpleasantly, but not less serious, evils, arising from the vitiated atmosphere of the between decks. To remedy these evils, a system of ventilation was suggested by Captain RAMSAY, of the Superintendency of Liverpool Dockyard, and it was carried out in the *Royal Oak* while that vessel was still in dock. The long ago urged idea that until the hygienic conditions of ships of war received into the consideration of naval architects, as fully as the sailing and fighting qualities, would not reach the full scope of the removal of those sanitary drawbacks which affect the crews. The results of the system of ventilation adopted in the *Royal Oak* would seem to confirm this view. The success is stated to be so great that the Admiralty has decided to ventilate all the ships of the armor-clad fleet on the same plan.

It is stated that the yellow fever has made and havoc with our fleet at Pensacola. Captain Spear of the transport *Northerner*, which left Pensacola, says the surgeon of the United States steamer *Relief*. Many of the crews have died

GENERAL LEE'S OFFICIAL REPORT.

HEADQUARTERS ARMY NORTHERN VIRGINIA, July 24, 1863.

General S. COOPER, Adjutant and Inspector-General, Richmond, Va.

GENERAL:—I have the honor to submit the following outline of the recent operations of this army for the information of the Department.

The position occupied by the enemy opposite Fredericksburgh being one in which he could not be attacked to advantage, it was determined to draw him from it. The movement of this purpose embraced the relief of the Shenandoah Valley from the troops that had occupied the lower part of it during the winter, and, further back, if possible, the transfer of the scene of hostilities north of the Potomac.

It was thought that the circumstances favored the execution part of the enemy, to which those contemplated by us could probably give one, parties of the latter having reached as far south as the Rapidan, which is commanded by General HOOKER, and that, in any event, that army would be interposed between us and Washington, and, if we were to be successful in turning it, we should be operating against the rear parts of the enemy's troops situated in the vicinity of the line of the Rappahannock. In the latter case, the enemy's defeat would be more complete, as the two armies intended to be operated against would be concentrated, and the pursuit be continued by the direct route to Washington.

The force of LONGSTREET and EWELL reached Culpeper Court-house by the middle of June, and was there joined by A. P. HILL, who was also encamped on the Rapidan.

Owing to a large force of Federal cavalry, strongly supported by infantry, having crossed the Rappahannock at Kelly's ford, on the 9th, and attacked General STUART. A severe engagement ensued, continuing from early in the morning until late in the afternoon, when the enemy was forced to recross the river with heavy loss, leaving 400 prisoners, both of cavalry and infantry, in our hands, and one piece of artillery.

General JENKINS, with his cavalry brigade, had been ordered to advance toward Winchester to cooperate with the infantry in the proposed movement. On the 9th, the day of the fight at Kelly's ford, General Imboden was directed, with his command, to make a demonstration in the direction of Romney, and to operate on the enemy's rear against Winchester, and prevent the enemy at that place from being reinforced. On the 10th, General EWELL moved from Culpeper Court-house by the route of Chester Gap and Front Royal, on the Manassas Railroad. Both of these gaps were in position when General EWELL left Culpeper Court-house, and the latter was occupied the same night. On the 13th, he detached Rodes' division to Berryville, with instructions to march thence to Martinsburgh, and carry out offensive operations between Winchester and the Potomac. With the division of EARLY, he moved to Winchester, and, on the 14th, drove directly upon Winchester, driving the enemy into his works around that place. On the same day, the brigade of General JOHNSTON, while left back before General RODES, retreating to Winchester. On the 15th General EARLY, with his division, moved to the left of the latter, the whole army of General MILROY was captured or dispersed, except such portions as succeeded in escaping by the roads leading to Harper's Ferry and Williamsport. The former point did not Harper's Ferry with a small party of batteries.

General RODES moved from Harrysite to Martinsburgh, crossing the latter place on the 16th, where he took 200 prisoners, five pieces of artillery, and considerable quantities of stores. Having at once cleared the Valley of the enemy, those at Harper's Ferry withdrawing by the Maryland Heights, with the loss of nearly all the pieces of artillery, 20 wagons and ambulances, with 300 horses, were captured, and a large amount of stores destroyed. Our loss in killed was small. On the night that EWELL appeared at Winchester the Federal troops on the line of the Potomac, from Williamsport to the Rappahannock and the next day disappeared behind the hills of Loudoun.

The whole army of General HOOKER withdrew from the line of the Rappahannock, and, on the night of the 14th, I had the first favorable opportunity was offered for attack. It seemed to be the purpose of General HOOKER, if possible to cover the capital and to fight it on the line of the Potomac. With a view to draw him further from his base, and to prevent the withdrawal of the corps of A. P. HILL, who, in accordance with instructions, left Fredericksburgh on the 13th, and on the 14th was encamped at Hazel river, LONGSTREET moved from Culpeper Court-House on the 15th, and encamped on the night of the 16th at Front Royal, on the line of Shenandoah's gaps. His force had been augmented while at Culpeper Court-House by the division of General PICKETT, which joined him.

The object of General EWELL was to place the mountains between LONGSTREET to watch the enemy, now reported to be moving into Loudon. On the 17th, the movement was continued, the cavalry under General STUART, near Aldie, and was driven back with loss. The next day the enemy was encountered in force at Upperville, and strongly supported by infantry, and General STUART was, in turn, compelled to retire.

The enemy advanced as far as Upperville and then fell back.

In these encounters with cavalry, which lasted for days, a hundred prisoners and a considerable number of horses and arms.

In the meantime, the corps of A. P. HILL, after having had entered Maryland, and the rest was about to follow. General JENKINS, with his cavalry, was directed to cross the Potomac at Shepherdstown, and, if practicable, to cross at Chambersburgh. As these demonstrations did not have the effect of causing the enemy to withdraw from the front of LEE, he did not deem disposed to advance upon the position held by LONGSTREET and HILL, and on the night of the 24th, the latter at Hagerstown. General HILL having already reached the Valley.

General LEE now moved with the main body of the mountains and across the movements of the enemy, whom he was instructed to harass and delay as much as possible, without risking a general battle, if the Potomac. In that event General STUART was directed to move into Maryland, passing between the enemy and his capital, and take position on his left, as soon as practicable.

The movement was conducted with as much secrecy as the nature of the army should be in supporting distance. LONGSTREET and HILL crossed the Potomac at Shepherdstown, and the former at Williamsport, and the latter at Sheppardstown. The columns re-united at Hagerstown, and advanced on the roads converging at Chambersburgh on the 27th.

No report had been received that the Federal army had crossed the Potomac, and the absence of the cavalry rendered it impossible to obtain accurate information. It was known, however, that the east side of the mountains after it should enter Maryland, and thus leave open communication with Washington. Between the Baltimore and Hagerstown, General EWELL had been instructed to and Gettysburgh, and, if practicable, to destroy the railroad between Harrisburgh and Carlisle.

General JENKINS, in pursuance of the instructions previously referred to, had been actively engaged on the left of General EWELL during the movements of the latter. On the 22d, he had driven the forces guarding the Baltimore and Ohio Railroad, destroying all the important bridges between the Cumberland Valley and Harper's Ferry, and capturing Cumberland, the Chesapeake and Ohio Canal.

He subsequently took possession of Hancock, on the Potomac, and, on the 26th, with his cavalry brigade was directed to march by way of McConnellsburg to that place.

Preparations were made to advance upon Harrisburgh, and on the night of the 29th information was received from a scout that the Federal army, having crossed the Potomac, was advancing North-ward, and that the head of the column had reached the South Mountains. As the position of the latter, if maintained by the enemy, would prevent his further progress in that direction, he was ordered to move with his corps to Cashtown, and, accordingly, LONGSTREET and HILL were directed to proceed from Chambersburgh to that point, and encamped on the night of the 30th, and were instructed to march from Carlisle.

Owing to the absence of cavalry, the movements of the Federal army south of the Potomac after our own had entered Maryland, and, in his efforts to impede its progress, advanced as far eastward as Fairfax Court-house. Finding himself unable to delay the enemy materially, he moved his command by Buckeystown and through Westminster to Carlisle, where he arrived after General EWELL had left for Gettysburg. By the route he pursued the Federal Army was interposed between his command and our main body, preventing any communication with him until his arrival at Carlisle.

The march toward Gettysburg was considered more slowly than it should have been but the movements of the Federal Army were known.

The leading division of HILL met the enemy in advance at Gettysburg on the morning of the 1st of July. Driving back these troops he within a short distance of the town, he there encountered a large force, with which two of his divisions became engaged. EWELL coming up, with his two divisions, by the Carlisle road, became engaged in the engagement. The enemy was driven through Gettysburg with much loss, leaving in our hands several thousand prisoners, several pieces of artillery.

He retreated to a high range of hills south and east of the town and there took up a strong position that afternoon the enemy's force being unknown, and it being considered unadvisable to attack with the rear of our troops not having arrived, and to hasten their march; and, in the meantime, every effort was made to ascertain the nature of the ground in front of the enemy's position, preparatory to making the attack. It had not been intended to fight a general battle at this place, unless the enemy should be encountered in force, but finding ourselves unexpectedly confronted by the Federal Army, it became a matter of military necessity to accept battle with the concentration of large trains. At the same time the country was unfavorable for collecting supplies, and the army was necessarily in a scanty body as he was enabled to restrain our foraging parties by occupying the centre of the mountains with his troops, and, from the latter point, thus became, in a measure, unavailable. Encouraged by the successful issue of the engagement of the 1st, and by the receipt of valuable results that would ensue from the defeat of the army of the Federal, I was induced to attack the enemy in his position.

The remainder of EWELL'S and HILL'S corps having arrived, and the division of LONGSTREET having reached the ground on the night of the 2d, the attack was made on the morning of the 3d, but was not materially further. General Hill was instructed to threaten the enemy's centre, and General EWELL to attack the extreme right, and take position on the left. A full account of these movements will be given in the reports of the several corps commanders that have been received, and I shall only offer a general description.

The operations of the 2d were not completed until the afternoon of the 3d.

The enemy held a high and commanding position which he had increased a long amount of artillery. General EWELL occupied the left of our line, and General HILL the centre, with LONGSTREET on the right. In front of General LONGSTREET the enemy held a position, from which, if he could be driven, our artillery would command and could be used to advantage in assailing the more elevated ground. The force guarding this point was that of General SICKLES, and, as he was directed to endeavor to carry this position, while General EWELL attacked the enemy's extreme right, and General HILL his left and directly been partially formed. General HILL was instructed to threaten the centre, but, if opportunity offered, to assail with vigor, movements being rest to either wing, and to avail himself of any opportunity that might present itself to break.

After a severe struggle LONGSTREET succeeded in getting possession of and holding the commanding position. The artillery posted on the strong positions which he assailed, and the result was such as to drive the enemy from his position, and to cause him to abandon the enemy. The battle ceased at dark.

The loss of the enemy in killed and wounded must be much greater than our own. Fifteen pieces of artillery, with three of his brigades, joined LONGSTREET the following morning after the engagement, and he moved to a position gained by him the day before.

The 4th was spent in reforming our lines, except that one division of the two brigades of HILL'S corps were ordered to support LONGSTREET.

The enemy, however, declined to renew the fight with our forces. The morning was occupied in necessary preparations, and the train movements of the army commenced at 4 P. M., through a great violence until sunset. Our troops succeeded in entering the advanced works of the enemy, capturing several pieces of artillery; but our artillery having nearly expended its ammunition, the attacking columns were withdrawn to the line of the hill. The enemy's position was the summit of the ridge, and, after a most determined resistance, he was driven from his line of entrenchments and abandoned to our possession, with seven guns.

The wounded of the army had been collected on the field of battle, and they received success so far as it can be deserved by heroic valor and fortitude. The army, however, failed in the full fruits of victory. It was not able to pursue, but my admiration of their noble qualities, and confidence in their courage, is unbounded. I am sure that they can be relied on abatement from the issue of the protracted and sanguinary conflict.

Owing to the strength of the enemy's position and the reduction of our ammunition, I deemed it inexpedient to renew the attack on the 4th, and the difficulty of procuring supplies rendered it impossible to remain longer in front of Gettysburg. It was, therefore, best for the army to withdraw to the mountains, and, as all supplies had to be brought from the Valley, the route by the road through Fairfield, and the rest by the way of Cashtown, were selected. The trains, artillery, and troops through the mountains, in advance of the column, the great length of the trains rendering it difficult to protect them. The cavalry, which captured a number of wagons and ambulances; but they succeeded in bringing off the greater part of their booty.

They were attacked at that place on the 6th by the enemy's cavalry, and a fight ensued, which lasted for several hours. The attacking force was subsequently encountered and driven off by General STUART, who had been ordered to report to General EWELL for duty. The army, after an arduous march, rendered more difficult by the rainy weather, reached Hagerstown on the 8th and 9th and encamped on the 7th July.

The position was found to be so much swollen by the rains that and fallen almost incessantly since our entrance into Maryland as to render the Potomac unfordable, and the army was, therefore, for a time interrupted, and it was difficult to procure other communication or supplies than those we had brought with us. The bridge at Falling Waters was destroyed by the enemy, and the pontoons rendered unserviceable. The wounded and prisoners were compelled to await at Williamsport the rebuilding of the bridge, which was commenced on the 10th, the pontoon bridge left at Falling Waters had been partially destroyed. The river had been greatly swollen by the rains of the 6th, and it was found impossible to obtain large reinforcements, and our situation, for the reason above mentioned, was extremely critical. Under these circumstances, I deemed advisable to recross the river. Part of the pontoon-bridge was recovered, and the army began to cross on the night of the 13th, and was thrown over the river at Falling Waters.

The passage of the river was completed on the 14th. A position had been previously selected to cover the Potomac from Williamsport to Hagerstown, and the line of battle was formed on the ridge, with a rolling day. This did not take place, though the two armies were in close proximity on the 14th, and every preparation was made for battle. Our preparations being completed, and the river, though still deep, being considerably fordable, the army recrossed into Virginia on the 14th, and the crossing was not completed until 4 P.M., when the rear division passed over. The enemy followed cautiously, and his movement was developed on the 15th, when his cavalry attacked our rear guard and the pieces of artillery, which the horses were unable to move through the deep mud. Before fresh forces could be sent back for them the rear of the column had passed.

During the night of the 23d, General A. P. HILL, in the midst of a violent storm of rain, some of the men lay down by the way to rest. Before each division had passed the ground was strewn with men for the night, and there, with some struggles, fell into the hands of the enemy.

Brigadier-General PETTIGREW was mortally wounded in an attack on the night of the 14th, while gallantly leading his brigade forward for our own and permitted to enter our lines. He was crossed to Bunker Hill, where he expired a few days afterward. He was a brave and accomplished officer and gentleman, and his loss will be deeply felt by the country and the army.

The following day the army marched to Bunker Hill, in the vicinity at which it encamped for several days. The day after its arrival a Surgeon of the enemy's cavalry, which had crossed the Potomac at Duggery, accosted township Martinsburgh. It was attacked by General FITZ LEE, near Kearneysville, and defeated with heavy loss, leaving a large number of its wounded on the field.

Owing to the well-known position of the Shenandoah River, the plan of operations which had been contemplated when we recrossed the Potomac could not be put into execution, and I determined to move with the main body of the army, and directed me to cross the Blue Ridge and take position south of the Rappahannock, if the enemy did not.

As soon as the reports of the commanding officers shall be received, a more detailed account of the operations of the army will be forwarded, but these will be taken to speak more particularly of the conspicuous gallantry displayed by the officers and men.

It is not in my power to give a correct statement of our casualties, which were severe, in the battle of Gettysburg, as a large proportion of distinguished and valuable officers. Among them I regret to mention Major-General PENDER, a most efficient officer. General PENDER and TOUDLE severely, and Major-General HEATH slightly wounded.

General PENDER has since died. This intended officer has borne repeatedly the thanks of the Congress of the army, and was promoted on several occasions while leading his command with conspicuous gallantry and ability. The conduct and services of General PENDER have rendered him a valuable acquisition as an officer were only equalled by the esteem and regard in which he was held by his friends and companions in arms. The intelligence, zeal and unwearying devotion of Brigadier-General BARKSDALE and his brigade in the battle of Gettysburg have already been mentioned in view of the high reputation of those troops with the courage that always distinguished them. These brave officers and soldiers fell in the battle of Gettysburg discharging duty, leaving the army to mourn their loss and emulate their noble example.

Brigadier-General KEARNEY, ARMISTEAD, SCALES, G. T. ANDERSON HAVIS, A. R. WRIGHT, and PERRY, were also wounded, and Brigadier-General ARCHER was taken prisoner. General PETTIGREW, though wounded at Gettysburg, continued on duty with his command, and gallantly wounded near Falling Waters.

The artillery has suffered severely, but from observation on the field, and his subsequent movements, it is supposed that he sustained severely.

(Signed) Respectfully submitted,
R. E. LEE, General

MASSACHUSETTS VOLUNTEERS.

The following Commissions have been issued by direction of Governor JOHN A. ANDREW, of Massachusetts:

Second Lieutenant Frederick E. Dalbeare, of Boston, to be First Lieutenant, July 28, 1863, vice Pelby, promoted.

Second Lieutenant George L. Lawrence, of Fitchburg, to be First Lieutenant, July 28, 1863, vice Dalbeare, promoted.

Second Lieutenant William H. Fletcher, of Waltham, to be First Lieutenant, July 28, 1863, vice Lawrence, promoted.

Second Lieutenant Wm. P. Drury, of Chelsea, to be First Lieutenant, July 28, 1863, vice Fletcher, promoted.

REGIMENT RESIGNED.—Assistant-Surgeon Henry W. Lincoln, of Hingham, to be Surgeon, September 21, 1863, vice Bowditch, resigned.

Assistant-Surgeon Charles Ellis, of Boston, to be Surgeon, September 21, 1863, vice Bowditch, resigned.

REGIMENT RESIGNED.—First Lieutenant David A. Granger, of Boston, to be Captain, September 21, 1863, vice Bowditch, dismissed the service.

First Lieutenant Joseph Lincoln, of Hingham, to be Captain, September 21, 1863, vice Granger, promoted.

First Lieutenant Charles Ellis, of Boston, to be Adjutant, September 15, 1863, vice Granger, promoted.

First Lieutenant Charles H. Bowditch, of Boston, to be Major, May 1, 1863, vice Macy, promoted. (Major Bowditch transferred to Fifty-fifth Regiment, July 28, 1863.)

ARMY GAZETTE.

ENLISTING OF VETERAN VOLUNTEERS.

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE,
WASHINGTON, September 25, 1863.

General Order No. 324.

I. The time for enlisting Veteran Volunteers under the provisions of General Orders No. 191, current series, from this office, is hereby extended to January 1, 1864. This extension will not be considered as securing rank and pay to officers after August 25, the limit fixed in paragraph VI of said order.

II. Under paragraph III of the aforesaid order, the first installment of bounty will be hereby increased to $50, thus making the "total payment on muster" $75; and the "remainder of the bounty" becoming $25, instead of "one hundred years' service, is reduced to $00.

By order of the Secretary of War,

E. D. TOWNSEND,
Assistant-Adjutant-General.

REWARD FOR DESERTERS.

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE,
WASHINGTON, September 25, 1863.

General Orders No. 325.

Paragraph 156, Revised Army Regulations, 1863, is hereby amended, to read as follows:—

A reward will be paid for the apprehension and delivery of a deserter to an officer of the Army, at the most convenient post or recruiting station. It will be the duty of the officer receiving him at the distributing office to the officer commanding the company in which the deserter belongs, or to the officer in charge of the party in order his trial. The reward will be paid on the presentation by the officer receiving the apprehending, securing, and delivering of the deserter.

All Regulations and General Orders in conflict with this are hereby revoked.

By order of the Secretary of War,

E. D. TOWNSEND,
Assistant-Adjutant-General.

UNDER-CLOCKS OF AFRICAN DESCENT.

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE,
WASHINGTON, September 25, 1863.

General Orders, No. 326.

In section 16, act of March 3, 1863, it is enacted "That the President of the United States be, and he is hereby, authorized to cause to be enlisted for each cook thus allowed by section 9 two under-cooks of African descent, who shall receive for their full compensation ten dollars per month and one ration per day; three dollars of said monthly pay and ration to clothing."

For a regular company, the two under-cooks will be enlisted; for a volunteer company, they will be appointed by the Governor of the State of their soldiers. In each case a remark will be made on their enlistment papers showing that they are appointed under the above act. Their names will be borne on the company muster rolls at the foot of the list of privates. They will be paid, and their accounts will be kept, like other enlisted men. They will also be discharged in the same manner as enlisted men.

By order of the Secretary of War,

E. D. TOWNSEND, Assistant-Adjutant-General.

OFFICERS ABSENT WITHOUT LEAVE.

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE,
WASHINGTON, Sept. 26, 1863.

General Orders No. 329.

The attention of General Courts Martial is directed to section 22 of the "Act for enrolling and calling out the national forces, and for other purposes," approved March 3, 1863, which reads:

"And be it further enacted, That courts-martial shall have power to punish without fine or imprisonment, during the pleasure of the court, any officer who may be convicted before them of absence without leave, to be reduced to the ranks to serve from such date as may be fixed by the court."

By command of Major-General HALLECK.

E. D. TOWNSEND,
Assistant-Adjutant-General.

ERRONEOUSLY REPORTED.

TREASURY DEPARTMENT,
REVENUE-CUTTER SERVICE,
October 1, 1863.

SIR:—I have the honor to inform you that the names of the following officers have been erroneously reported as having died, viz.:

Captain Alexander Fridge, killed;
Captain C. C. Bartlett, A. A. C. S.
Captain A. P. Jones, Engineers,
Lieutenant G. Watson, A. A. Q. M.
With great respect, your obedient servant,

G. HUMPHREYS,
Acting Comptroller.

HON. EDWIN M. STANTON, Secretary of War.

EXEMPT FROM DISMISSAL.

The following names of officers have been duly observed, and heretofore published, *are exempt from being dismissed the Service of the United States*, having been honorably discharged from their respective commands:

Assistant-Surgeon E. Dodd, U. S. Volunteers.
Lieut.-Colonel Thomas M. Vincent, Assistant Quartermaster, 1st U. S. Infantry.
Surgeon C. S. Kelly, 1st brigade, 3d division, 1st Army Corps.
Second Lieutenant Robert Swetnam, 5th U. S. Cavalry.

DISMISSED.

The following officers, having been reported at the headquarters of the army, the Secretary of War directs that they be dismissed from the service, for persistent failure in making to the Surgeon-General the monthly returns required by regulations, and for neglect to obey a circular of that office:

By direction of the President, Assistant-Surgeon L. H. Feaze, 10th Connecticut Volunteers, has been dismissed the service of the United States.

LEAVE OF ABSENCE

has been granted to the following officers:

Surgeon James S. Baldrich, U. S. Volunteers, for 15 days.
Acting-Assistant-Surgeon Wm. Hall, of Newark, for 10 days.
Acting-Assistant-Surgeon R. R. Wiseling, 1st Dist. of Col. Cavalry, for 15 days.

The leave of absence granted Surgeon W. B. Forbes, U. S. Volunteers, by Special Order No. 1, Medical Purveying Department of the Gulf, has been extended twenty days.

Surgeon Charles H. Crosby, U. S. Volunteers, 20 days.
Assistant-Surgeon J. H. Williams, 124d Ohio Volunteers, 20 days.
Surgeon J. H. Brinton, U. S. Volunteers, extended 15 days.
Assistant-Surgeon H. M. Sprague, U. S. Army, 20 days.
Surgeon E. B. Harris, U. S. Army, 20 days, on Surgeon's certificate.
The leave of absence heretofore granted Surgeon Robert K. Smith, U. S. Volunteers, has been extended 20 days.

DISCHARGED.

The following enlisted men have been honorably discharged the service of the United States, with a view to their enlistment as hospital stewards, viz.:

Corporal T. N. Robson, Company B, 5th Wisconsin Volunteers.
Private Charles Hoffman, Company B, 5th Ohio.
Private Charles N. Allen, Company K, 21 N. Y. Volunteers.
Private Thomas Hamilton, Company A, 2d Rhode Island, August 31.
Sergeant Rudolph Rauff, Company I, 42d N. Y. Volunteers.
Private Wm. Hall, Company A, 2d Rhode Island, August 31.
Private J. H. Russell, Company B, 2d Massachusetts Battery.
Private Wm. Hamilton, Company A, 2d Rhode Island, August 31.
Private Edwin F. Paul, Company D, 28th Pennsylvania Volunteers.

HOSPITAL CHAPLAIN HARVEY F. McGRETH, October 1st, 1863.
Hospital Chaplain William R. Goodwin, October 1st, 1863.

RELIEVED.

Surgeon E. J. Bailey, U. S. Volunteers, has been relieved from duty as a member of the Board to Retire Disabled Officers, now in session at Philadelphia, and ordered to report to Gen. Wolfe, U. S. Army, has been detailed to act in his place.

DETACHED.

Assistant-Surgeon Arthur H. Crosby, 7th Massachusetts Volunteers, has been relieved from duty at Newport, and transferred to Brigadier-General Wild, at Newbern, North Carolina.

ARMY MEDICAL BOARD.

SURGEON-GENERAL'S OFFICE,
WASHINGTON, D. C., October 2, 1863.

An Army Medical Board will assemble in the city of New York, on the 15th instant, for the examination of candidates for admission into the Medical Staff of the Regular Army.

Applicants must be between 21 and 30 years of age, and physically sound.

Applications must be made to the Secretary of War, or through the Surgeon-General of the Army, stating the residence of the applicant, and the date of his birth. Each application must also be accompanied by respectable testimonials of moral character.

Candidates will be required to pass a thorough examination, as it is an indispensable prerequisite to appointment.

Three of the most successful receive in the Medical Staff of the Regular Army.

By order C. H. CRANE,
Surgeon U. S. Army.

Captain William W. Winn, 16th Int'y, Murfreesboro.
Lieut. Col. Jno. Wilson, 4th Cav'y, Middleburg, &c.

NAVY YARDS AND NAVAL STATIONS.

BROOKLYN NAVY YARD.

The Admiral of the Fleet Bigelow arrived here, accompanied by the French Consul, visited the yard last Monday, and was received with due honors. The party were conducted through the various departments, and appeared highly pleased with all they saw here. The Navy Department has placed the Dry Dock at the disposal of the Admiral for the purpose of repairing the *Guerriere*. The frigate will probably come up in a day or two.

The Court of Inquiry in the case of Chief Engineer Stimers convened at twelve o'clock, Wednesday, after nearly two months' adjournment. It will be remembered that a commission was sent by the Court to the South Atlantic Blockade fleet to take the evidence of such officers whose duty at Charleston rendered their evidence is considered important, and the testimony elicited by them will be laid before the court. Captain Rhind, of the iron-clad *Keokuk*, and Lieutenant Commander of the *Nantucket* during the Naval Academy, who was also commander of the *Nantucket* during Dupont's attack on Charleston, appeared before the court on Wednesday, and will be followed in its examination.

The new gunboat *Nyack* was launched on Tuesday, October 6th, in the presence of a large number of spectators, among whom were several distinguished guests. The *Nyack* is acknowledged to be a most beautiful little craft, and is more of a navy yacht than any vessel in the service. She is 150 feet on deck, 32 feet wide, and 12 feet depth of hold. Her capacity is 800 tons. Her armament will consist of six beautiful 9-inch Dahlgren guns; she will also have a 200 pounder, on a pivot, and 30 pounder rifles. The first thing to be seen about the *Nyack*, a small screw steamer, not quite 600 tons burden, carries an ornament weighing over one hundred tons. The weight of her beautiful figure-head is one hundred pounds. Her crew will, of course, be on the spar deck. The accommodations for the crew are on the berth deck. The officers' quarters are as commodious and comfortable-like as the space will allow. Her complement of officers would permit.

The supply steamer *Neshaws*, Captain A. T. Harris, arrived at the yard on Friday evening from Wilmington Del, via Fortress Monroe 22 hours. She sailed again for the North Atlantic Blockading Squadron on Tuesday. The *Fulton*, Captain Walton, arrived on Monday from Port Royal, S. C., and Charleston Bar. The gunboat *Queen*, Acting Master Ernest Tise, arrived at the yard from the North Atlantic Blockading Squadron 38, and Georgetown Bar, September 28, where she left the *Don Ching's* mails. The *Sea Ching's* officers and crew all well. The steamer *Rhode Island* left the yard on Monday evening mails for *Memphis*. All well on board.

Government has purchased a new vessel called the *Victory*. She was constructed by the builders of the gun-boat-ram *Galena*, and arrived from Mystic, Conn., a few days since. She is a very fine propeller of 450 tons burden, her dimensions are—length 165 feet, width 26 feet, and depth of hold 16 feet. Her engines were made at the Mystic Iron Works; we have no particulars of their construction, except that her cylinders are 40 inches diameter. She is reported to be a swift vessel, having easily steamed 12 miles an hour on her way to New York. Her propeller is requiring in the city, and she will probably be ready for sea in two weeks. She is to be commanded by Lieutenant Commander Dimon, formerly of the *Monticello*.

The condition of the Navy-built iron-clads is as follows: the *Monadnock*, at Boston, is nearly ready for launching, her plates are going on, and all the work that can be done on the stocks will be completed before the end of the week. The *Tonawanda*, at Philadelphia, is not so near completion, but nevertheless will soon be ready. The *Agamenticus*, at Portsmouth, N. H., is progressing still more slowly. The *Manhattan*, at New York, is the only one of the four launched. When they are all about another fleet of vessels of large size will be commenced.

The following is a list of vessels at the yard in addition to those we published two weeks ago:—

Shamrock (10)	steam,	repairing.
Sassacus (5)	"	"
Maumee (7)	"	"
Pocahontas (6)	"	"
Dawn (5)	"	"
Sabago (8)	"	"
Supply (5)	store-ship	repairing.
Mantetonomah	iron-clad	lately launched.
R. R. Cuyler (1)	steamer	repairing.
Penobscot (5)	"	completed.
Kensington (3)	"	repairing.
Augusta (20)	"	"
Magnolia (3)	"	"
Carondelet (3)	"	"
Honeydew (3)	"	"
Hendrigs (3)	"	"
Rachel Seaman	schooner	"
Governeur	steamer	"
Ino (9)	sailing ship	"
Merrimack	steamer	"
Mary Sandiford	supply steamer	"
Sweet Brier (2)	steamer	"
Camelia (2)	"	"
Fort Jackson	sailing ship	"
Narcissus (2)	"	"
Courier	sailing bark	"
Gilmore	steamer	"
Gen. Buckingham	"	"

PHILADELPHIA NAVY YARD.

The following war vessels are now in port: *Princeton, Lodona, Quaker City, Meredita, Pembaken, ram Alaska, Massachusetts, Bazen, Wyandotte, Ashuelot, Keystone State, State of Georgia, Pocahontas, Mantilla, Chocura, Canonicus and Mount Vernon*; while the *Kansas, Galena, Tonawanda and Tuscia* are under process of construction.

The steamer *Alaska*, which is lying in the Navy Yard, still continues to draw immense throngs of people to the wharf. On account of the heavy guards upon the workmen she will not be hauled up for some time. The steamer arrived Monday and sailed again the next day. Her destination is not known.

VARIOUS NAVAL MATTERS.

The yacht *Parthenon* arrived at Hilton Head, S. C., October 3d, from Key West, Tortugas, St. Augustine and Fernandina, Florida. She reports no yellow fever at those places.

Mr. Ole Tyler, of Boston, has received a contract from the Government to build an iron vessel of war after his own design. She is to be 200 feet long and about half as broad.

A dispatch at the Boston Merchants' Exchange states that the ship-of-the-line *Alabama*, 90 guns, Capt. Hope, had on board two American Consuls and twenty-two prisoners. Captain Frost, of the ship *Crenshaw*, of Boston, destroyed by the pirate, has arrived in London.

A decree has been issued restoring the ship *Rambler* to her citizen owners, by order of Secretary Welles. The ship was captured *Nyaken*, and was suspected at the time of attempting to run the blockade of Charleston.

The statement that only $160,000 of prize money has been distributed to captors of vessels. The first official report on that subject, made to Congress in February last, states the amount ordered paid to be $1,705,000.

A dispatch at Port Royal, September 29, steamer *Diamond*, Captain Miles, with a cargo consisting of liquors and saltpetre, prize to the U. S. gunboat *Ethan Allen*, arrived in this port, while attempting to run the blockade to Savannah. The *Diamond* had cleared from Nassau, N. P.

The U. S. ship *Penn*, under command of Acting-Master E. G. Parker, encountered a heavy gale off the Florida Reef on 17th ult., while bearing up for Fernandina, Florida, and had to cut away her mainmast, foremast and bowsprit, and put into the United States steamer *Tuscumbia*.

One of the most City ferry boats, during a fog last week, ran into the U. S. steamer *Vega*, inflicting such serious injuries on the latter vessel that she was obliged to go into dock for repairs. The *Vega* was under orders to sail for Fortress Monroe, having been but just repaired.

The U. S. steamer *San Jacinto* reports the engineers on the 16th ult. of the gunboat *Tioga* took into Key West, on the 29th, the rebel steamer *Kate Dale*, from Havana to Mobile, with a cargo of 1,000 bales of cotton, with a capital of two millions for blockade running, on board. The *Kate Dale* was last year the fast vessel on the route.

The naval squadron of the Mississippi river now comprises upwards of thirty vessels of all kinds, including the so-called mortar brigade—a sort of nondescript, half naval, half military, organization. The *Red River* is also represented by a fleet of vessels of gunboats, that it is next to impossible for guerrillas to impede navigation, or successfully attack any vessel. Kinsaw is represented by the gunboat and New Orleans.

During the recent cruise of the revenue steamer *Reliance*, Captain Dodgen, a capture was made of the schooner *Alexander Solan*, Captain Wright, by the officers of Lieut. Virginia. The Captain's evidence of the schooner having in July last conveyed a cargo of merchandise to, over the South Western Virginia. The vessel has been brought to this port and given over in charge of the U. S. Marshal for adjudication.

A letter from the U. S. steamer *Seminole*, dated September 13, says: "The Confederate Commander Roussel, of that ship, took possession of the British steamer *Sir William Peel*, he having full proof that the steamer was owned by Confederates, and was about to fit out for a Confederate privateer. She is a large, fine vessel, and is to be converted into a gunboat for our service, which will render incalculable damage to our commerce.

The *Alabama*, which was commanded half a century ago at the battle of Lake Erie, is still afloat, and has not since been idolized, it now, in obedience to Secretary Welles' instructions, in order to preserve the relic. Orders to fit her out were issued some time since, but the work has been delayed. The *Alabama* is now lying in the *Virginia* and *New York* are vessels of the line, which were put on the stocks in 1820, and were launched in the year 1837—one at Sackett's Harbor, one at Kittery, one at Boston and one at Norfolk.

A letter from Key West, dated September 29, says that the steamer *Tioga* arrived there on the 26th, lying in that harbor—The steamers *San Jacinto*, *Tioga*, *Gemsbok*, *Kiowa* and *Sagamore*, together with the bark *Restless*, schooner *Bailey Bale*, *Bonnegrand* and *Jupiter*. The prize steamers *Lynx* and *Ceres* were also in port. The steamer *Tioga* left on the 27th. The *Bailie* had just returned from an expedition up the coast, where she captured a schooner, the English steamer *Ceres*, with cotton, together with two warehouses.

The steamer *City of London*, of the Inman line, plies intelligently between Liverpool and New York. The English ships by the plans *Atlantic*, *Arctic*, *Baltic*, *Adriatic*, *Pacific*, *Indian*, *Celtic*, *Belgian*, *Hibernian*, *Asia*, *The Express*, *Cuba*, *Africa*, *Canada*, *Columbia*, *Europa*, *Persia*, *Damascus*, *Java*, *Jura* and *Edinburgh*, Captain Townsley, from Liverpool, and *Etna*, Captain Brown, from New York, left the Mersey on the 3d inst. No one or other particulars given. The *Kedar* left Liverpool on the 3d inst. for Nassau, N. P., and Wilmington, N. C., in 1864, and was owned by S. G. Thwing, of Boston, and Mr. Murry, of Liverpool. She was built for a blockade runner, but was in the hands of the New England sailors was $10,000 on the vessel. The *Anna B. Schmidt* was rated A 2, 884 tons burden, built at Kennebunk in 1854, where she is owned. The New England office has also a war risk of $9,000 on the ship.

By a late arrival from Nassau, New Providence, we learn that the steamers of blockade runners in and from that port continue very active. From the 15th to the 20th of September, ten vessels had arrived at Nassau from Wilmington, and eleven had cleared from Charleston. It is a remarkable fact that those from Charleston had been able to clear out of port in less than 24 hours, while those without them eleven days after the occupation of Forts Greog and Sumter, while the vessels from Wilmington were detained 14 days from Charleston. These vessels brought full lots of Charleston papers, together with news of all that occurred to the last instant, the time of their departure. Our officers state that many Americans of eminence in the port of Wilmington (N. C.), awaiting an opportunity to run out. Although several have lately been captured, still there's but little diminution in the commanded trade in that port.

NAVY GAZETTE.

REGULAR NAVAL SERVICE.

DETACHED.

Lieutenant-Commander John H. Russell, from the command of the Kenebec Station, and ordered to the *Wyoming*.

Lieutenant-Commander Wm. P. McCann, from the command of the *Hunchback*, and ordered to the command of the *Kenebec*.

Lieutenant Arthur R. Yates, from the Pacific Squadron, and ordered to return North.

Ensign Le Roy F. Adams, from the South Atlantic blockading Squadron, and ordered to the *Wyoming*.

Paymaster Sebastian Schuyler Glen, W. Church, from the Pocahontas and ordered to the Receiving Ship *Ohio*.

Carpenter J. G. Thomas, from the Naval Asylum, Philadelphia, and ordered to the Wabash, from the Atlantic Blockading Squadron.

Surgeons Edward F. McSherry, from the Philadelphia Navy Yard, and awaiting orders.

Sailmaker Benjamin B. Blydenburgh, from the School ship *Constitution*, and preparatory orders for sea service.

ORDERED.

Lieutenant-Commander Henry Erben, to special duty, New York.

Second-Assistant-Engineer Benjamin Dodson, to the *Mendota*.

Third-Assistant-Engineer Wynn H. Kemp, to constructor.

Assistant-Surgeon J. O. Sgear, to the Philadelphia Navy Yard.

First-Assistant-Engineer Wm. G. Dunbar, to the *Sabine*.

Third-Assistant-Engineer Joseph Morgan, to the *Metamora*.

Sailmaker Edward F. Shaw, to the School ship *Constitution*.

VOLUNTEER NAVAL SERVICE.

APPOINTED.

H. H. Gurring, Acting Master, and ordered to the Mississippi Squadron.

Charles H. Rice, Acting Ensign.

APPOINTMENTS CONFIRMED.

E. R. Clarke and W. H. Woods, as Acting-Master's Mates.

Thomas Golding, and T. W. Rogers, as Acting Ensigns.

REVOKED.

The appointment of Acting-Master's Mate T. J. Sheets.

GRANTED LEAVE.

Acting-Master's Mate J. W. Goodrich.

ORDERED.

Acting-Master R. G. Lee, to the *Rosebud*.

DEATHS.

Deaths in the Naval Service, reported during the week ending October 3, 1863.

Acting Ensign A. Thompson, remittent, diarrhœa, September 25, Naval Asylum.

Master Mack, contracted, remittent fever, September 17, Naval Hospital, Memphis.

Acting Master's Mate, landsman, dropsy, September 18, Naval Hospital, Memphis.

Acting Master's Mate, third-assistant engineer, dysentery, September 15, Naval Hospital, Memphis.

John Beiks, first cabin boy, consumption, September 26, Naval Hospital, Chelsea.

Augustus Blunck, marine, intermittent fever, August 25, Marine Barracks.

Peter Hannes, e. marine, gunshot wound, September 19, U. S. S. *Wyoming*.

Warren B. Leach, landsman, dysentery, September 19, U. S. S. *Wyoming*.

J. J. Witherton, acting assistant-surgeon, August 30, U. S. S. *Cuyler*.

James D. Manning, ensign, September 25, U. S. S. *Carrier*.

John Bradley, ordinary seaman, gunshot wound, September 25, U. S. S. *Wyandotte*.

Thomas Maxwell, landsman, gunshot wound, July 16, U. S. S. *Wyoming*.

Michael Lynch, coal heaver, gunshot wound, July 16, U. S. S. *Wyoming*.

Charles Clark, seaman, gunshot wound, July 16, U. S. S. *Wyoming*.

Alexander Furlong, marine, gunshot wound, July 16, U. S. S. *Wyoming*.

James Edwards, landsman, scurvy syphilis, July 4, U. S. S. *Wyoming*.

Lawrence Fallon, ordinary seaman, remittent fever, August 13, Naval Hospital, New York.

John Bradley, seaman, debility, remittent fever, August 29, Receiving Ship *Ohio*.

Thomas Dowdle, landsman, typhoid fever, September 28, Naval Hospital, New York.

Peter Smith, W. Thompson, A. A. Paymaster, September 6, U. S. S. *New London*.

Thomas Coleman, landsman, hæmatinia, September 28, Naval Hospital, New York.

Wm. Wilson, seaman, assistant-surgeon, September 20, Mississippi Squadron.

Thomas Donohue, landsman, gunshot wound, September 21, U. S. S. *Connecticut*.

Charles Williams, quarter gunner, gunshot wound, September 29, Naval Hospital, Norfolk.

Benjamin Waters, landsman, gunshot wound, July 16, U. S. S. *Wyoming*.

Major-General Hooker and Staff, arrived in Nashville on the 26th inst. Major-General Howard, and his staff, were at the Louisville House, on the 4th.

Captain Edward Wallace, late A. D. C. to General Wallace, has been compelled to resign on account of loss of sight in one of his eyes.

The seventh company (D) of the 1st Connecticut cavalry regiment was mustered out of service on the 30th ult. The Hartford City Light Guard is composed entirely of rebel soldiers from Fort Delaware, who had taken the oath of allegiance.

In the Monthly report of operations of the Pension Bureau, it appears that during September, 1,324 invalid pensions were granted, 259 pensions were restored, and 1,583 without pension increased. Total number of pensions granted, 2,532, being 192 more than in any previous month.

A correspondent writes us from Covington, Ky., as follows:—"In the absence of Major-General Burnside, Brigadier-General Jacob D. Cox, some correspondent gave a list of officers on duty in the city in such terms as to create misapprehension. The Department of Ohio and Covington do not form a department but a post, of which Lieutenant-Colonel Kenner Lewis, 1st regiment Ohio Heavy Artillery, is Commander. Brigadier-General Hazard is Chief of Artillery of Burnside's army corps, and Major Ward B. Burnett, Assistant Adjutant-General, Department of Louisiana; W. W. Dana, Fifty Ninth Volunteers, A. A. A. G.; Lieutenant Wm. A. Pusey, 5d Maine Battery, A. D. C.; and Lieutenant E. W. S. Ney, 1st Ohio Heavy Artillery, A. D. C."

It has been decided by the War Department, that the item of fare in a sleeping-car is a legitimate charge among the incidental expenses of officers, and that officers in charge of, or in command of, troops under orders, if the journey be prosecuted by night.

THE FRENCH ARMY.—The Paris correspondent of the London *Times* says that the French military, with the exception of certain troops on the foreign service, is now on what is called the peace footing, and consists of 412,000 men and 90,000 horses. There are two reserves, which may be called in at a moment's notice, one of *élite* of old soldiers and another of young ones—the finest, latter not yet incorporated, but almost ready to be dismissed from drill. These additions would lad that the great Fortress on the Mississippi bring the army to between 600,000 and 700,000 men. Of the 412,600, three are in Mexico two divisions of infantry and a brigade of cavalry, altogether nearly 40,000 men. These, with the small force in Cochin China, are as we fearing. The gathered division of the French army is into camps, six in France and one in Algeria. The Imperial Guard forms a special corps.

GREEK FIRE.—An English writer, in a recent article upon "Greek Fire," thus expresses his views upon the probable result of the use of this inflammable preparation :" Liquid fire has found its way into Christendom, and the question to be asked is, Will its application stop there? It is folly to rest content with saying that the practice of civilized warfare barely pertains to the use of bayonets and swords and grenades, and all else ; the public to be recognized as fair-fighting by the Americans are using this liquid fire: that they will soon find the cause of improving means and attempts; that the successful employment of one liquid will suggest others, and that suddenly we may find ourselves in the possession of armaments that all our great armaments, all our forces, all our ships, all our men, are at the mercy of a few men who have learned a new art of war, in which science has supped courage, and in which brute force should count for next to nothing. Let us have no straining of a matter so essential to British interests as the application of liquid fire to warfare. Let us say that we hold it to be contrary to civilized warfare to use liquid fire where by it only kills and t

WEBSTER'S ARMY AND NAVY PICTORIAL DICTIONARY.

By ELIHU G. WEBSTER.

One Comprehensive 32mo. *Volume, on Fine Paper, with Pictorial Illustrations and Colored Frontispiece.*

TREASURY DEPARTMENT, OF

THE OFFICE OF THE COMPTROLLER OF THE CURRENCY,

WASHINGTON, September 26, 1863.

Satisfactory evidence presented to the undersigned, it having been made to appear that "The First National Bank" in the city of New York, in the County of New York and State of New York, has complied with all the requirements of the act of February 25, 1863, and has complied with all the provisions of said act required to be complied with before commencing the business of Banking.

Now, therefore, I, JOHN JAY KNOX, Comptroller of the Currency, do hereby certify that the said Second National Bank, in the city of New York, in the County of New York, and State of New York, is authorized to commence the business of Banking under the said act.

In testimony thereof, witness my hand and seal of office, this fifteenth day of August, 1863.

JOHN JAY KNOX,
Comptroller of the Currency.

[SEAL.]

UNITED STATES INTERNAL REVENUE.

Assessor's Office, Fifth Congressional District, City of New York.—Notice is hereby given to all persons concerned that the undersigned will commence making assessments made since the 1st of May, 1863, within the above named District, comprising the Seventh, Tenth, Thirteenth, and Fourteenth Wards, will begin the examination of the Books of Assessment in Broadway, for the space of fifteen days from the date hereof, and that the Assessor will be in session at the above named hours, after the expiration of said fifteen days. The 20th day of October, 1863, from 10 hours A. M. and 4 P. M., relative to any erroneous or excessive assessments complained of by the persons assessed, therefore. That the question to be determined by the Assessor, on appeal respecting the valuation or enumeration of property, or exemption liable to duty or taxation, shall be only the valuation complained of or so far as it is not subject to proportion to other valuations in the same collection District, and whether the enumeration is correct or not correct, and all appeals to the Assessor should shall be made in writing, and shall specify the particular cause, matter or thing respecting which a decision is required, and the reasons why the assessments or principle of inequality or error complained of.

DAVID NEW YORK, Aug. 31, 1863.

UNITED STATES

ARMY AND NAVY JOURNAL;

A WEEKLY NEWSPAPER, DEVOTED TO THE INTERESTS OF THE ARMY AND NAVY, AND TO THE DISSEMINATION OF CORRECT MILITARY INFORMATION.

The ARMY AND NAVY JOURNAL is established in the interests of no party. It will be controlled by no clique. Its independence will be absolute. Avoiding all personalities, it will aim to be the medium of fair discussion, and to the intelligent of sound military laws, and to the promulgation of such principles as will tend to the improvement of the corps will be devoted to impartial military criticism and to the publication of such facts as will be of interest to the profession, within the scope of its observation. Topics calling for reform will be fearlessly and earnestly treated, but in any way connected with military or naval affairs, or interesting to the Army and Navy, the Departments of Engineering, which now has so intimate an association with the military profession, will receive frequent attention in this connection, and the interests of the Militia throughout the country will also find appropriate places. Among other matters the columns of the JOURNAL will contain from week to week:

A summary, in short, of whatever occurs in all parts of the world of value to our Army and Navy. No effort will be spared to make the JOURNAL complete in all its parts, and communications on any subject within its province are at all times invited from those interested in the same. It will be the aim also of the Proprietor to make it not only a complete military and naval journal, but at the same time a highly-toned, reliable, lively journal, which will be read with interest by the family circle and find a welcome connected with the public service and by the great body of the reading community.

The importance which Military and Naval affairs have assumed in this country at the present time, and the large interest which is felt in the press as an intelligent representative, which, by the publication of reliable information, and by fair discussion of subjects subject to notice, its official recognition and encouragement to be the best medium of communication to the public and to the Army and Navy, and because a necessity is felt, hereby, for such a journal as this room. The JOURNAL is established in obedience to which it demands, and in the belief that it will be a benefactor to make a paper which our soldiers and sailors will be proud to recognize as their own, and which shall be unexcelled in completeness and ability by any of its class in the country. Gentlemen of the national and brave born minds with some of the most competent officers in the Military and Naval service in the country, and for such official and departmental assistance as will place in the hands of the JOURNAL reliable sources of changes, orders, &c.

The JOURNAL will receive the encouragement of approval the ARMY AND NAVY JOURNAL has awakened in the Army and Navy for the past year.

From Major-General GEORGE G. MEADE.

"I like the ARMY AND NAVY JOURNAL."

September 24th, 1863.

W. C. CHURCH, Esq., 192 Broadway, New York.

DEAR SIR: I have received a specimen copy of the ARMY AND NAVY JOURNAL, and have noted with satisfaction the general character of the paper and the ability with which it is conducted. It appears to me that the JOURNAL will be a valuable medium of communication between officers of the Army and Navy, and I cordially wish it success.

Very respectfully, your obedient servant,

A. A. HUMPHREYS, Brig.-Gen. and Chief of Engineers.

From Maj.-Gen. D. N. COUCH, *Department of Susquehanna,*

"I am pleased with the appearance of the ARMY AND NAVY JOURNAL, and I trust it will meet with such success as to ensure its long life. It is a publication much needed by the Army, and a work of the kind—one that shall be a standard—has been long wanted. I shall be pleased to see the JOURNAL on my table."

From Major-General W. H. FRENCH, *Commanding 3d Army Corps.*

"I fully and do most heartily approve the movement the ARMY AND NAVY JOURNAL to officers in my portion of the Army. I shall be pleased to receive it regularly, and shall endeavor to aid in its circulation."

From Major-General S. NEALY, *Second Division 10th Army Corps.*

"You possess my cordial support and official interest in your efforts to establish a publication the efficiency of success of the Army may be considerably promoted."

From Prof. Wm. H. Allen, Dahlonega, Pennsylvania.

"A good paper of the kind is needed by the Army and Navy. I hope you will receive the encouragement you deserve. Military men promise to be a brilliant success. He very useful and, admirable now, and pre-eminently reliable and honest, and every non-military officer should subscribe for it."

From Major-General H. G. WRIGHT, *Commanding 6th Army Corps.*

"I am glad the ARMY AND NAVY JOURNAL is about to be established, and shall be pleased to receive it regularly."

Of the numerous notices of the newspaper press, we have room only for the following:

The ARMY AND NAVY JOURNAL is an island to fortify and to defend the interests of the Army and Navy, and to promote the approval of sound of our most distinguished navy and military officers, and to the people. It will be devoted to the character and standing of those who lead the battles in the field, and to the defense of the country. It will be devoted to the defense of the country, and to the defense of the country, and to the defense of the country, and

SCHUYLER, HARTLEY & GRAHAM,

PRESENTATION SWORDS of original designs constantly on hand, and made to order.

A full assortment of FIELD GLASSES. Horse equipments of every description.

U. FIVE-TWENTIES.

The undersigned, as General Subscription Agent is authorized by the Secretary of the Treasury to continue the sale of this popular Loan, and Tax Payable notes will be received in payment of subscriptions.

About two hundred millions of dollars remain to be taken from the people, and it is hereby made a duty for the circulation of the National Banking Associations to dispose of the amount in every part of the Country. Full information about eligible forms into loan is wholly absorbed, the demand from Europe—Germany especially—being quite active.

As it is well known that the Secretary of the Treasury has the right and unlimited exercises in the duties on imports, internal revenues, and in the issue of interest-bearing Legal Tender Treasury notes, it is nearly certain that it will not be necessary for him, for a long time to come, to issue further interest-bearing Loans, the interest and principal of which are payable in Gold.

These considerations must lead to the prompt conclusion that the time is not far distant when the "Five-Twenties" will sell at a handsome premium, as was the case with the "Seven-Thirty" Loan, since it was all sold, and could no longer be subscribed for at par.

This is a

SIX PER CENT. LOAN,

the interest and principal being payable in coin, thus yielding about *Seven per cent* annually, at the present premium on gold.

It is called "Five-Twenty," from the fact that whilst the Bonds may run for twenty years, yet the Government has the right to pay the same at par, at any time after *five years.*

The interest is paid quarterly, on the first days of November and May.

Subscribers can have Coupon Bonds, which are payable to bearer, and issued for $50, $100, $500, $1,000, or Registered Bonds of similar denominations; and in addition of $5,000 and $10,000.

These "Five-Twenties" cannot be taxed by States, cities, local authorities, and the Government itself, as there is only one and a half per cent. on the amount of income, when the interest is paid in Gold and Silver per annum. Income from all other investments, as all securities, Stocks, Mortgages, &c., must pay from three to five per cent. tax on the income.

Banks and Bankers throughout the Country will continue to dispose of the Bonds, and all orders by mail or otherwise promptly attended to.

The Treasury Department having perfected arrangements for the delivery of the Bonds at par, orders will be rendered to receive them at the time of subscribing, as within ten days the Subscription will be grist, ing to parties who want the Bonds on payment of the interest due on the first of November next.

JAY COOKE, Subscription Agent,
No. 114 SOUTH THIRD STREET,
PHILADELPHIA.

UNITED STATES

Army and Navy Journal

A WEEKLY NEWSPAPER,

DEVOTED TO THE INTERESTS OF THE

ARMY AND NAVY,

AND TO THE

DISSEMINATION OF COMMERCIAL AND MILITARY INFORMATION.

Terms.—$5 per annum in advance; $3 for six months in advance. Advertisements of a character suited to the columns of the JOURNAL will be inserted, to a limited extent, at twenty cents a line each insertion. Advertisers are requested to make their favors as early as possible.

All letters should be addressed to The UNITED STATES ARMY AND NAVY JOURNAL, NEW YORK. Remittances may be made in Treasury drafts, Quartermaster, Paymaster or other drafts, which should be made payable to the order of the proprietor.

The Editor of this JOURNAL will always be glad to receive from officers in the two services, correspondence and general communications of a character suited to its columns. It is necessary that the name of the writer should, in all cases, accompany communications, not for publication, but as a guarantee of good faith.

THE MILITARY SITUATION.

THE military operations of the several theatres of war to be recorded since our last issue, though not of first-class magnitude or importance, have this in common, that they show the rebels everywhere seizing the initiative and assuming the aggressive. In Tennessee they continue to work assiduously on ROSECRANS' line of communications. Before Charleston they have made an extremely bold effort to destroy the iron-clads by torpedoes, assuming the offensive. In Virginia, their manœuvres for a flank movement on General MEADE's position, have compelled him to change his front and fall back behind the Rappahannock, and thence as far as the plains of Manassas.

With regard to the late movements of the Army of the Potomac, which for the time being resumes its old place as first in the public interest, we regret to find ourselves this week deprived of those resources of private information on which we rely to give truth and accuracy to our treatment of the military situation. The published accounts have been a most chaotic muddle, and, with the most diligent effort, we are not sure that we can bring them into coherence and comprehensibility.

It appears that towards the close of last week the enemy began demonstrations indicating the purpose of effecting a flank movement on the right wing of the Army of the Potomac. For two or three days he had been concentrating a heavy force at Madison Court House, and on Friday night and Saturday morning they moved out of town in a northwardly direction. The design seems to have been to throw the main body of A. P. HILL's corps from the left to the right of our front, preserving an obscure route near the Blue Ridge, with the design of making a rapid and secret flank movement, striking MEADE's right at Brandy Station, between Culpepper and the Rappahannock, thus cutting off his communications and forcing the Army of the Potomac to give battle under disadvantageous circumstances.

To counteract this movement, General MEADE determined to make a demonstration on the rebel right and centre, with the view of compelling them to abandon their enterprise, in order to protect their lines of communication with Gordonsville and Richmond. Accordingly, a strong force of cavalry was, on Saturday, the 10th, dispatched to Germanna Ford: infantry and cavalry in force were sent to the fords in the vicinity of Cedar Mountain; KILPATRICK was sent out to the right to engage the attention of the enemy at James City, ten miles southwest of Culpepper, and the First and Sixth Corps, strengthened by two divisions which had been encamped along the base of the Cedar River Mountains, advanced their lines to the river, and appeared ready to cross at several points simultaneously. These movements brought the Union cavalry into contact with the enemy at various points. Early in the morning a brigade of General KILPATRICK's command engaged the rebel cavalry at James City, but being instructed not to bring on a general engagement, but after half an hour's skirmishing, fell back towards Culpepper and took position near Rebel Church, where another brush was had, resulting in KILPATRICK's falling back on Culpepper. General BUFORD's Cavalry command, as before remarked, had been sent to Germanna Ford, on the Rapidan. Following the river to Hunter's Ford, he is said to have surprised the enemy in the fortifications, and captured sixty of them. General BUFORD occupied the works till the next morning, when he recrossed the Rapidan, followed by a large force of STUART's Cavalry, with which he had running skirmishes as he fell back through Stevensburg to Brandy Station, where he joined KILPATRICK's forces.

This rose on the part of MEADE, pretending to cross, had the desired effect. Immediately upon the discovery of our forces by the rebels, signals were displayed, calling upon the infantry to come back and check the advance. Accordingly, EWELL recrossed the river in the forenoon, taking up his line of march towards the Orange and Alexandria Railroad, where the rebels had a series of works, leaving only STUART's cavalry to demonstrate to the north of the Rapidan. Having thus checkmated his enemy, General MEADE determined to shorten his rear and change his front, for the purpose of falling back to a stronger position and better line north of the Rappahannock, where he might be in a position either to give battle or to prevent any further invasive movement meditated by the rebels. Early on Sunday morning the infantry force on the Rapidan and west of Culpepper commenced falling back toward the Rappahannock, the trains all having been sent back the night before, leaving General PLEASANTON's entire cavalry corps to cover the retreat. The interval between the two rivers by the roads over which the army passed is about twenty miles, and on Sunday night the whole army rested on the north bank of the Rappahannock. The crossing was made chiefly at Kelly's Ford.

The cavalry, which had been assigned the duty of covering the retreat, had during this countermarch of Sunday several rencounters with the enemy's cavalry, who pressed hard on the rear of our force. KILPATRICK and GREGG took up their line of march, and, skirmishing the while, advanced in the direction the infantry had taken. KILPATRICK came up by the way of Culpepper, while GREGG took the road toward Sulphur Springs. General BUFORD's cavalry fell back, as it appears, faster than KILPATRICK, who brought up the rear, so that the latter was cut off by STUART getting in his front and on both flanks. A charge was ordered, and General CUSTER's brigade drove the enemy into a thicket of wood, from which, however, they recharged in large force, and our cavalry then made a grand charge on their front and flanks, cutting their way through and joining BUFORD. General KILPATRICK's loss during the day was about a hundred and fifteen in killed, wounded and missing.

On Sunday night the whole infantry force, with all the trains, had been got in safely and in excellent order north of the Rappahannock. KILPATRICK and BUFORD had also arrived. GREGG had reached Sulphur Springs, and the whole army took up a position to contest the farther advance of the enemy, who appeared in strong force south of the river. The subsequent movements of our army, from Monday morning onwards, are, however, shrouded in obscurity. On Monday morning, two regiments of General GREGG's command, the Fourth and Thirteenth Pennsylvania, were sent forward to Jefferson, about five miles from Sulphur Springs, and the First Maine was sent out toward Little Washington to reconnoitre. The last regiment encountered a large force of the enemy just beyond Amissville and were surrounded, but cut their way out, and crossed the river at Waterloo Ford, about twelve miles above Sulphur Springs. About ten o'clock on Monday morning the enemy advanced on the Fourth and Thirteenth Pennsylvania, which were at Jefferson, with cavalry, showing heavy infantry supports in the rear; when our cavalry, seeing they were overpowered, fell back slowly, contesting the ground to a large forest this side of Jefferson, where General GREGG, who led these regiments in person, dismounted a portion of his men, and sent them out as skirmishers. After stubbornly contesting the ground for two hours, they were ordered to retire slowly, the enemy pressing heavily, breaking our centre and attacking both flanks. Our force, however, with great gallantry, cut their way out and escaped across the river with a loss of about 450 men in killed, wounded and missing.

On Wednesday 14th our rear guard, the 2d Corps, under General WARREN, was furiously attacked at Bristoe Station by the rebels, who were repulsed with the loss of an entire battery, two battle flags, and four hundred and fifty prisoners, while nearly five hundred more were left upon the field dead and wounded. Our casualties were not very large.

In General ROSECRANS' front of operations the general situation is unchanged, with the exception that the enemy have removed their artillery from Lookout Mountain, where they have had about ten pieces in position, and appear to have somewhat withdrawn their forces. It is supposed they will concentrate their artillery on Mission ridge. They hold both Lookout and Mission ridge, from which they threw shells on both the 4th and 5th instant. On the latter day about 150 shells were thrown by the enemy, inflicting, however, but little damage.

The general distribution of the rebel forces seems to be as follows:—General LONGSTREET, with his corps from LEE's army, holds the left, from Bridgeport on the Tennessee river to Treaton; JOHNSTON commands in the centre at Lafayette, and occupies the famous Lookout Mountain, and BRAGG commands on the right, at Dalton, with his right wing extended to a point below Cleveland. The design of the rebels seem to be to concentrate so strong a force around Chattanooga that they will be able completely to invest it, and to cut off all supplies from General ROSECRANS and entirely destroy his communications; and this having been done, to lay regular siege to Chattanooga. The rebel papers have had little to say of the progress of their operations before Chattanooga, but simply state that there is little prospect of an immediate renewal of hostilities.

Meantime, the *raiding* portion of the enemy's programme is being vigorously carried on by the formidable force of rebel cavalry. WHEELER's cavalry managed to cross the Tennessee river at Cotton Post ferry, near Nashville. After crossing, the main body moved right on in a northern direction. A part of the force fell in with the train of the Fourteenth corps, near Anderson, in the Sequatchey Valley, stampeded off the teamsters, and destroyed between 200 and 300 wagons, about 30 of which were loaded with ammunition, and the remainder with clothing and supplies.

The main body of rebels set out on they 31st, to the number of several hundred, as they were leaving the scene of destruction. The Second Indiana, First Wisconsin, and First East Tennessee Cavalry, however, came up and attacked them at once, and had a running fight with them to Dunlop, in which 120 rebels were killed and wounded. Our men used their sabres alone.

Most of the supplies for the Army of the Cumberland are carried over the mountains by pack mules, on account of the difficult transportation. The trains are much annoyed by rebel sharpshooters between Bridgeport and Chattanooga, who daily pick off teamsters, mules and horses.

THE intelligence from the other parts of the field is given in the Editorial pages.

DRILL-CLUBS.

DRILL-CLUBS date from the National rush to arms at the siege of Sumter. It is surprising to note the rapidity of their growth, and their universal prevalence and popularity —every village having its own. In those days, everybody was hungering for military knowledge, and a man would as soon scheme to escape dinner as to dodge the drill. The old drill-schools, the militia companies, could not contain the hornet of neophytes—a million strands. And indeed they themselves were the first to take the field, transferring their armories to camp and garrison. Their place and functions the drill-clubs assumed, and served a great purpose. That purpose was to diffuse everywhere rapidly and acceptably an acquaintance with arms and the rudiments of soldiery. It required means attractive to all classes, and capable of training at once a hundred thousand men.

But the exigency is over. Conscription now supplies fresh material to the service, independently of voluntary acts, drill-clubs; and the Army itself is the drill-club of raw recruits. The question now is, whether the drill-clubs are sufficient for future and continuous "home defence;" if not, whether they can be made substantial and trustworthy—whether they cannot be settled and solidified into a system of chartered companies.

It is clear, at all events, that while drill-clubs are fostered, the old militia organization declines. Their vitalities are in inverse proportion. In these days, everybody wants to know a little of tactics, the first step to CAESAR. But to make a club will furnish, without the mechanism of the militia corps, the compulsory parades, the restraints of military subjection, and the liability to bear arms in time of public peril. The militia loses strength in two directions—on the one hand, to the Army, drained of its fighting men, on the other, to the drill-clubs, because they also instruct in the profession of arms, and claim in return no devotion of the skill they impart to the public weal. We ought, therefore, to see whether drill-clubs are fully doing the work of their predecessors, and that, if not, the latter may be revived.

Now, these clubs are ordinarily subject to no orders but of their own making, to no commanders but such as they depose at pleasure. No authority can coerce them into service in their corporate capacity. Mustering to perform escort, to quell a riot, to guard property—these are voluntary acts, and no compulsion can extort them. And though encouraged in organization and drill by the public applause, and directly assisted, it may be, with money or equipments by city or State, yet the latter cannot control them in any measure to its purposes.

These statements, of course, impute to drill-clubs no lack of patriotism. They have sometimes been of great value; as in Pennsylvania, during the rebel foray. But however worthy individual members, the organizations are not an adequate basis of defence. If it be true that they depend on their temporary inclination, determines whether an emergency shall call them out. That liberty would make many slow, in troublous times, to buckle on the harness. And, indeed, many might well hesitate to volunteer for rough service, who would undertake to discomfit and put to the rout of a genuine authority, whom honor and duty bound them to obey—the authority of commissioned officers, backed by that of the commonwealth.

In case of alternation, for example, between Government and people, these societies might take to looking into the merits of the case before acting—asking time to consider whether "it will pay" to do anything. Imagine an army which should have the habit of pausing before opening fire, to indulge in general discussion as to "why and what for"—private A being of the opinion that there was too much politics mixed up in the thing for him; private B, that it was all a trick to make money and bounce up the stocks; and Mr. C concluding it an even thing, with wrong on both sides, and a good chance to escape altogether. In a critical hour, the majority of the armed force of any State should vote it incredient, upon the whole, to volunteer their aid? Or, suppose that one, two, or a score of the drill-clubs take ground *against* the civil authorities, in some momentary frenzy such as overtook whole districts in the community? For we must reflect, that these clubs are the chief part of our organized reserves. In some States, they outnumber the militia companies five to one, and contain a good share of all the able-bodied men. We do not, indeed, suppose probabilities; but to discuss what is between to speak of possibilities. We can afford to scrutinize narrowly the military system which trains so much of the strength of the State to the use of arms, without yielding her, in return, the privilege of commencing it by her defence.

The arms, also, of militia companies, were wont to be directly under the control of the civil authority. It could easily take them away at need, close up the armories, and disband the organizations. On these conditions the masters of ordnance issued arms and ammunition; and even then, in general, by no means all of the militia companies were dealt out. But when the war broke out, some States hastened to equip partially or fully the reserve guards, so that a such localities, the irresponsible drill-clubs either have possessed or still do possess, most of the serviceable arms. Not a few clubs might decline, in time of peril, either to use or to surrender them. Such as own their rifles and equipments could not be forced to give them up, and even the scattered State arms might be collected only after dangerous delay, or with difficulty secured at all. It would be well, therefore, for each State, quietly recalling its arms, if issued to raise and equip a militia force, which, though smaller than the other, would be more systematic and consolidated, more intimately allied to the Government, and therefore more trustworthy.

There is a great difference between drill and discipline—between the art of brandishing a weapon through the manual of arms and the habit of prompt and thorough obedience to orders. In the former, drill-clubs are creditably taught, but in discipline, many resemble rather a debating society or a caucus, than a body of soldiery. Good sense, indeed, remembers here as elsewhere, and so may the fear of ejection from the club. But there is an obvious lack both of incentives to discipline and the means of enforcing it. An exception now and then occurs in a company like ELLSworth's. But it is an exception; and even to such, an unwarranted degree of license in command is accumulated. Besides, the very fact that such a corps is the cynosure of all eyes, will do much for its success, and no such means of discipline could be relied on now, the public gaze being properly concentrated on the Army and Navy.

The chances are, therefore, that drill-clubs for the expressend of defending the State from peril, at all times and by any sacrifice. The drill is a means to this end, and not to the end of personal security or personal advancement. The only volunteering is the act of enlistment; after that, there is simply obedience to orders. The individual assuming duty, at some time, is what the recruit will expect; but it is more than the drill-clubs bargain for. Ordinarily, the militia need anticipate little hardship, or even trying discipline. But in these days they may well be prepared for a taste of danger, and, to encounter this, the difference of purpose, will contribute to their superiority over drill-clubs. In the latter, also, shirking duty is more to be apprehended, there being less publicity and less disgrace.

A thorough and creditable militia organization would call out credible volunteers. Many, unable from one of the hundred reasons, to take the field, would aid the good cause in this way at home; amongst them, many who volunteered for the war, but failed to pass the surgeon, and doubtless some compelled under the late draft, the mere sessions of the militia would be a sort of patriotism. Even veterans, discharged by reason of sickness or wounds, no longer fit for arduous marches, for rough work at the intrenchments, or the strain of the hard-fought battle, but still yearning for something to remind them occasionally of the old life, would find a place in the military organization. The returned two-years and nine-months men might be moved by the same motive, if not rather, indeed, by the devotion which prompted their earlier answer to the call of the country. In short, there is a great army of men at home already fitted, or nearly so, and more or less trained for service, to whom the militia appeals.

But it is to the drill-clubs, as being already organized military bodies, that one naturally turns for beginning the reactivation of the militia. Especially is this true, now that the interest in the clubs on the wane, and their old spirit and usefulness dying out. But their best men transfer themselves to a stable and vigorous organization of militia The movement will stir the chaff from the wheat. It will drive away many who joined the school for "a gay time," who see the uniform and the ridiculous in the commander-in-chief of display; who value the armory chiefly as a jolly clubroom, a loafing and smoking room; who shirk the drill when they can, or at best, selfishly take it up as a cheap gymnasium for personal health, with no purpose of future usefulness. It will drive away, also, those who use the drill-club a sort of cover for refusing to incur the liability to stern service. But it will draw together such as stand ready for real sacrifice in the time of need. And mean-spirited must the man be, who, in times like these, shrinks from doing that little for the country.

MAURY'S METHOD AND CURRENT STUDIES.—A late number of *Galignani's Messenger* has the following paragraph :—

"A few months ago we noticed a series of articles published in the *Revue Maritime et Coloniale*, by Commander BOURGOIS of the French Navy, in which he attacks Captain MAURY's well known system establishing the law which regulates winds and tempests.

"In the same review Captain JULIEN, whose labors in the same field of inquiry about two years ago on the same of readers may recollect, replies in this fortnight's *Revue Contemporaine*, admitting the correctness of Commander BOURGOIS' nautical observations, but denying their validity as a refutation of Captain MAURY's system, which rests upon the simple and beautiful principle of a particle of air describing a double circuit, constantly driven from one pole to another, and passing alternately through the different regions of our atmosphere. This alternate motion of ascent and descent occurs only in certain distinct zones, and therefore, for the other points of the globe, the particle of air, driven by the two currents, placed one above the other, and acting in opposite directions. Commander BOURGOIS denies the existence of this calm of the Equator; but Captain JULIEN and Lieut. MAURY himself admits that they are variable and traversed by the winter monsoons. Commander BOURGOIS then establishes a new system of compensation occurring at the surface of the globe, instead of being effected by the intersection of the upper strata of the atmosphere with the lower one. Captain JULIEN shows that this system is far more complicated than Captain MAURY's, which has now been confirmed by experience.

"Our author completes the distinguished American's defence with various arguments which we must omit as not calculated to interest the reader."

THE THIRD CORPS UNION.

THE officers attached to the Third Army Corps of the Army of the Potomac, have organized a "Third Corps Union," the objects and purposes of which are defined, the following Constitution and By-Laws. We are informed that the Union has been instrumental in encouraging a proper *esprit du corps* among its members, and in stimulating harmony and good feeling :—

DECLARATION AND PREAMBLE.

The Third Army Corps having been one of the first corps organized under the Government of the United States, and in view of its eventful services during the present rebellion, in commencing officers and dearms of perpetuating its history, to pay proper respect to its deceased members, to aid the families of deceased officers or members of war, and to extend during life the harmony and friendship now existing, have resolved to form an association for the furtherance of these objects, and have therefore adopted the following Constitution and By-laws for its government :

Among the various battles in which the Third Corps has been engaged are the following: Williamsburg, 5th May, 1862; Fair Oaks, 31st May and 1st June, 1862; The Orchards, 26th June, 1862; Glendale, 30th June, 1862; Malvern Hill, 1st July, 1862; Bristoe Station, 28th August, 1862; Bull Run, 29th August, 1862; Chantilly, 1st Sept., 1862; Fredericksburgh, 13th Dec., 1862; Chancellorsville, 2d and 3d May, 1863; Gettysburg, 2d and 3d July, 1863; Wapping Heights, 24th July, 1863; Yorktown and other skirmishes.

The following distinguished officers of the Army graduated from this Corps :

Major-Generals S. P. HEINTZELMAN, JOSEPH HOOKER, C.S HAMILTON, O. O. HOWARD, I. B. RICHARDSON, PHILIP KEARNEY, JOHN SEDGWICK, WINFIELD SCOTT HANCOCK, DANIEL E. SICKLES, HIRAM G. BERRY, DAVID B. BIRNEY, and C. W HUMPHREY.

Of the above-named officers, Generals KEARNEY and BERRY were killed in action, and General RICHARDSON died of wounds; while Generals HEINTZELMAN, HOOKER, HOWARD, SEDGWICK, and SICKLES have been wounded, HOWARD losing an arm and SICKLES a leg in the service.

The following Brigadier-Generals have been promoted from the field-officers of the Corps :

Brigadier-Generals H. D. TERRY, from Colonel 6th Mich. 1st; JOHN C. CALEF, Colonel 2d New York; ALEX. S. NELSON TAYLOR, from Colonel 3d Excelsior vols; REUBEN COWDIN, from Colonel 1st Mass. vols.; GERSHOM MOTT, from Colonel 6th New Jersey; HIRAM BERDAN, from Colonel 1st Excelsior vols.; CHARLES K. GRAHAM, from Colonel 6th do.; FRANK B. NICKERSON, from Colonel 1st Maine vols.; STEPHEN G. GRAVELEY, from Colonel 3d Michigan vols. CHAS. T. CAMPBELL, from Colonel 57th Penn. vols.

CONSTITUTION.

ARTICLE I.

This Association shall be known as the "Third Corps Union."

ARTICLE II.

All officers who have at any time belonged to the Third Army Corps, and participated in any of its battles shall be eligible to membership.

ARTICLE III.

The annual meeting of the Association shall be on the 6th day of May in each year (anniversary of the battle of Williamsburg) and when that day falls on a Sunday, the meeting to be held on the Monday following. The election for officers for the ensuing year will take place at the annual meeting, and all other legislation as may be necessary for the benefit of the Association. A due observance will be also had in regard to the illustration of the history of the Corps.

ARTICLE IV.

The members of the Association in good standing will wear its badge, which must be obtained from the Treasurer.

ARTICLE V.

No part of this Constitution shall be altered or amended except at the annual meeting, and then only by a vote of two-thirds of the members present.

BY-LAWS.

ARTICLE I.

Officers.

SEC. 1.—The officers of this Association shall be a President, Vice President, Corresponding Secretary, Recording Secretary, Treasurer, and a Council of Administration, consisting there be but one Director from each Brigade, including the Artillery Brigade.

SEC. 2.—The following named persons shall be known as and constitute the first officers of the Association :—

Major-General DANIEL E. SICKLES, commanding 3d Corps President; Major-General DAVID B. BIRNEY, commanding 1st Division, Vice President; Major H. E. TREMAIN, A. D. C. 3d Corps, Corresponding Secretary; Captain J. C. HIBBS, A. D. C., 1st Division, Recording Secretary: Brig.-General GERSHOM MOTT, 3d Brigade, 2d Division, Treasurer.

Brigadier-General J. H. HOBART STERRETT, 1st Brigade, 1st Division; General J. H. WARD, 3d Brigade, 1st Division; Colonel R. De TROBRIAND, 3d Brigade, 1st Division; General CHARLES K. GRAHAM, 1st Brigade, 2d Division; General W. E. BREWSTER, 2d Brigade, 2d Division; General G. MOTT, Third

Brigade, 2d Division; Captain G. E. RANDOLPH, Artillery Brigade.

The above named officers to hold their positions until the regular annual meeting, when an election for officers will take place, to which all members in good standing are eligible.

ARTICLE II.

Duties of Officers.

SEC. 1.—The President shall preside at all meetings of the Council and Board of Directors, and shall exercise a supervisory control of the organization. The Vice-President shall preside in the absence of the President, and perform the duties of the latter. The Corresponding Secretary shall conduct the correspondence of the Union, and make a quarterly and annual report of the transactions of the Council. The Recording Secretary shall keep the minutes of all votes handed in, and not over three hundred dollars, and to make quarterly and annual report of the transactions of his department. The Board of Directors, of which the President and Vice-President of the Association shall be *ex-officio* members, shall be the executive department of the Union, and are required to conduct its affairs until the regular annual meeting, and to make a report of the condition of the organization and its transactions during their term of office, through the President.

Vacancies.

All vacancies occurring in the offices of the organization will be filled by the Board of Directors, and the officer in whose favor any of the officers of the Union should be permanently detached from the Corps, it will be deemed his office is vacant, and his place filled accordingly.

Meetings.

The Board of Directors shall meet on the 5th day of each month for the transaction of business. If the time specified for the meeting should fall on Sunday, then the preceding officer will call the meeting at such time and place as he may deem expedient, always providing that a meeting shall take place once in each month.

Membership.

All persons eligible to membership under the Constitution must be proposed at the regular meeting previous to that of the Directors, which must be accompanied by the initiation fee, and if an unfavorable view be had of the case, the fee will be returned. Three black balls will defeat the vote against the admission of a candidate he will be rejected.

The initiation fee will be ten dollars, and dues will be six dollars annually, payable in advance quarterly, and any member permitting dues to pass one year will be suspended from the privileges of the Union, and any member in arrears two years will be dropped from the rolls, and cannot be reinstated except by the unanimous vote of the Board of Directors, and then only on the payment of all back dues.

No member can be expelled, except on the decision of four-fifths of the Board of Directors, and then only after a proper trial and under written charges, except after a trial by General Court Martial and the finding and sentence are approved, in which the member would have been engaged in some transaction affecting his military status as an officer and gentleman; under which circumstances he will be summarily expelled, and the record of the Court filed with the Secretary.

Quorum.

For the legitimate transaction of business by the Board of Directors, at least three members of the Board must be present.

Alterations.

Any alterations or amendments to the foregoing By-Laws may be made by the Board of Directors previous to the annual meeting, to be submitted for approval at the next annual meeting.

CORRESPONDENCE.

PRACTICAL STRATEGY.

To the Editor of the Army and Navy Journal:

SIR:—Any person with an observant turn cannot fail to have been struck, in passing through the streets of New York, with the frequency of the word *practical* upon signs, in connection with the name or the occupation of the advertiser. A like observation must have been made by the same person of the frequency of the word *scientific* in a like connection on the signs of the streets of Paris. Now, each of these cant words, for such they are, adduces themselves to a rational inquiry. Does the man who, in Broadway, or in New York, advertises himself as "*practical plumber*," for example, appeals to the Anglo-American prejudice against theoretical men, and to the confidence in the "*Yankee Notion Un Ted*, in Paris, gives the world to understand that when he puts on his sign *spécialité de pants*, he is both theoretically and practically acquainted with the art, and that he proposes to be thought not scientific; whereas the American or Englishman would have put, above all things, suppose that he had never heard of the word theoretic? So also, when a man feels a like morbid desire to civilize and advance his profession, men of all deeds and words, he advertises himself as *scientific*, and in other case, however, the exhibition is a harmless one, as an appeal from one, filling a very narrow sphere, to a national weakness, and the scientific man of the one is the same as the same tone is taken up by one laying claims to superior intelligence, especially when he takes upon himself the vocation of a public teacher, through his writings, the matter becomes more serious, as the mischief may infect a far wider sphere, composed also of intelligent persons, but who are not conversant with what the writer claims as his specialty.

The foregoing reflections were elicited by the perusal of two pamphlets, by the same author, the one entitled *Practical Strategy*, the other *Winter Campaigns the test of Generalship*. That Mr. De Peyster has thumbed over a good many books, we have evidence in the quotations in his pamphlets, which, in fact, are hardly anything but a jumble of quotations. To how little purpose he has done his finger-reading, a perusal of his military essays will see at a glance. To go into a complete showing up of the absurdities, to say nothing of the ignorance or perversions of a foreign tongue by his mode of translation, would be a waste of writing materials. *Le jeu ne vaut pas la chandelle*. An example or two must suffice. Quoting an opinion of NAPOLEON, Mr. De Peyster says:—"When a nation has neither *mines* (which after all is but another word for *veterans*, or *practical strategy*) nor *money*, it must resort to a great measure," &c. Now the words in the parenthesis are Mr. De Peyster's interpretation of the word *frontiers*, very appropriately rendered in the French dictionaries or lexicons, and for which we use the word *skeleton*. Whether, as Mr. De Peyster says, the word *mines* is synonymous with, or synonymous in a great measure," any good military dictionary will decide. Whether *strategy* means strategy, as we understand it, or whether it means the art of strategy, or tactics, it would puzzle any one to learn from Mr. De Peyster's jumble. He seems to think, however, that it is quite appropriate to add the word *practical* to stand for all three. We have an instance of this clear conception of the distinctions in Mr. De Peyster's pen, on page 62 of *Practical Strategy*. DECKER, a very earnest writer and good soldier, theoretically and practically, berating some German generals such as WEIMPFEN was at Sedan, remarks, says: "But when theoretical strategy ventures to pretend that it "can force an enemy to abandon his position by simply "*manœuvring and without running the risk of fighting or encounters*, this magnificent theory is entirely refuted in practice." Now Mr. De Peyster sees the gist of these remarks in the words in italics! But we are not saturating *strategy*, but pretenders to the science. Mr. De Peyster, with great sclerosis, is not even a pretender to the science.

But let us close with Mr. De Peyster's military declarations, which, like the *Ostrich* of Marshal SAXE, were probably written with his head in the sand, and have for their nerve the misfortune of having been put into print. He winds up by telling us "No reference is made to the campaigns of NAPOLEON, because of the Corsican's detestation; never referred to except necessity compels.

"Such is the opinion of Mr. DE PEYSTER."

How much the world owes Mr. De Peyster for this magnificent sentence: that grandiose wave of the hand with which he dismisses NAPOLEON, the greatest military art, and seats *Practical Strategy* henceforth on his throne; whose principles through endless hyperborean regions shall test the genius of the world. Before this, even, HANNIBAL, CÆSARS, NAPOLEONS and WATTS De PEYSTERS must bow.

This emphatic declaration of his detestation of NAPOLEON is bright and luminous, and shows the efficiency of his two pamphlets, if Mr. J. WATTS De PEYSTER had recollected that NAPOLEON was a master of strategy, he would have given even the Devil his due. In proposing TRAUS as a model to generals, it might have been of service to these leaders who have displayed more military acumen than himself, to have cited the pointed example of the science which BONAPARTE, as first Consul, gave to MOREAU (another name to be detested) when he proposed to him, from MOREAU'S incapacity for such operations as the one he proposed to him, that he would be enlightening the public mind not on a dark lantern, which keeps everything in the dark but a particular point, however closely connected the rest are with it. The TRAUS of the Austrians, and all other good tacticians, are as nature fashions them; and, whether their campaigns are in summer or in winter, they will exhibit like qualities. Self-taught generalship, as elsewhere, others somewhere. The same great Captain conducted the disastrous winter campaign of 1812, who carried through the trying years of 1806-7, and who led the victorious armies of Eylau and Friedland. To very few of them—perhaps only to two in perfection—has it been given to unite the two grand gifts the beauty of wielding alike the powers of prudence and audacity; as to few, like SHAKESPEARE, has it been given to be equally felicitous in tragedy and comedy. History furnishes valuable lessons, where each general, as nature has endowed him, may glean much to aid him, and he will probably, after a struggle, glean enough to be able to assimilate with his natural food. If he attempts to go beyond this, he will certainly become only a mannerist, but his mind will be such wretched fulture as we find in other like instances. M.

THE TEXAS CAMPAIGN.

To the Editor of the Army and Navy Journal:

SIR:—The failure of the Texas Expedition suggests the inquiry, Who is to blame? I do not pretend to answer the question, but long residence in TEXAS and familiarity with its military resources, and its peculiarities as a foreign base coast, enable me to understand why failure so soon met his effort at Sabine Pass, and will be likely to follow similarly ill-advised attempts.

The coast of TEXAS differs materially from that of any other State in the Union. Generally it is a low and part shoal and difficult of access, and filling up from year to year by the deposits made along it from the waters of the Mississippi, and in a current which sets westwardly, and more inside of the Gulf stream, it presents peculiar dangers to navigation. The winds that prevail—unknown in other portions of the United States—are northers, which require that he who seeks to march into TEXAS with an army should make himself well acquainted with its coasts, its winds, and its seasons; or he will depend his communications, his forage, his transportation and his water; or in other words, the very existence of his army, upon what is always the chance, and at times subject to long-continued droughts. In 1859 and 1860 no rain fell in WESTERN TEXAS for fifteen months, and as vegetation dried up, the grass was always fired in the summer sun parch the prairies and destroy the grass, so that travelling becomes an impossibility; the traveller has to depend upon the prairie grass as food for his cattle. EASTERN TEXAS is largely wooded (we mean by Eastern Texas all that country north and east of the Trinity river), and is not so subject to droughts as WESTERN TEXAS. When the winter rains set in, the rivers of TEXAS rise and spread over their banks, sometimes for miles in width. The RIO GRANDE spreads out for six miles in width. The BRAZOS does the same, and every small stream also in proportion. The roads are execrable—for who ever saw good roads in a Southern country?—and the population of EASTERN TEXAS hostile.

It is through this country that General BANKS proposes to march with an army of thirty thousand men, for two hundred miles, crossing every river in TEXAS from the State line to HOUSTON. If the autumn should be dry, he will want forage; if wet, he will find impassable rivers, roads that artillery cannot traverse, and the keen northers to behold with men and his horses. This too, when at this season of the year the coast of TEXAS at various points can be safely approached, and men and *materiel* landed, while his supply to the army in the short and direct

It is said, and I fear with too much truth, that commands are given at Washington and expeditions started, over which the Commander-in-Chief of the Army and the Commander-in-Chief of the Army has any control whatever. I think we shall not be far wrong in saying that the Texas expedition is one of this kind. Indeed, I am well assured that neither the responsibility of this expedition nor the failure at Sabine Pass can be laid at the door of the War Department. We can safely say that they have been ignorant of the plans, and have not been permitted to control them. Let the result be what it may, we cannot but say that the blame can be attributed. It is one of those curious episodes in the war, the secret moves of which are not known, but which some future time may develope.

It must not be understood from these remarks, that the writer is opposed to an expedition to TEXAS; on the contrary, he has ever favored one. Had the Government done a year ago what it promised to do, we should have a very different state of affairs from what we now see. Instead of the pitiful attempt at Galveston, with its sacrifice of life, *materiel* and ships, and a town and coast strongly fortified, we would have had a large and powerful army and a fine force. Instead of a coast open to every supply which the rebels can want, and this source of supply encouraging materially the foes' army, we should have a loyal population and State, and the rebellion cut off in the far South. The moral effect upon the whole war in the North and in Europe, of a fine force in the Texas would have been incalculable, and given a different aspect to the war.

But we must ask, if TEXAS is to be occupied, why not send a cooperating expedition to the RIO GRANDE? To every one who knows the country the answer is apparent. The occupation is thought to be of the most importance. An army should march from Louisiana through TEXAS to HOUSTON and the interior, according to the season, through the rich prairie to cross. This can only be done in certain seasons of the year, causing delay and danger. The rebels, as they did before, would destroy their crops, drive off their forage to be safe and open, would devastate and harm, and take the life of every Union man that might be left in the country behind the army. Where, then, would be the loyal people? Would it to the French? Would they wish it? Could the French occupy it if they were, do WE? A new danger would present itself, and new complications.

But were the RIO GRANDE border once in our possession, a loyal population, and trade and communication, as we might expect and look for a different state of things. Property would be more secure, their armies would disperse and the laws and the people breed into their minds what would have an opportunity of taking the side that their welfare required them to espouse. Texas would be saved to us at either be destroyed or be in our possession. I trust yet that something of this kind has been done, and the campaign undertaken according to the advice of those who know the country, and under the command of officers who have served in TEXAS, and who are acquainted with its localities. TEXAS, with its extent of coast, is peculiarly open to an invasion to the whole cotton States of the Gulf. It is an empire in itself. Its people have suffered long and greatly. We pray that the blessings of peace may be to that State. Its people may no more make their hearts sick. But while we hope we fear. May our fears be as nothing, and our hopes become full certainty. TEXAN.

WHY NOT?

To the Editor of the Army and Navy Journal:

SIR:—I recently saw in a number of your paper (an old one, of course, to have found its way here) an extract from the English *Army and Navy Gazette*, stating that the officers of our Army and Navy guns were identical, and the projectiles, therefore, interchangeable, and praising us for such an improvement. The praise is well merited, but why should it remain so? The countless advantages of such an arrangement are too evident to require argument; especially when, as now, we have a foreign nation to look to for a model, as the Army officials have but recently resolved to have no smaller than 8-inch guns upon our sea faces, and are only *reporting* in favor of a considerable number of 15-inch, these larger calibres. The Navy is just springing into power, only commanding 11-inch guns from 32 to 100 pounders. Now there could be more opportune for establishing this system? Are there any arguments against the assimilation? Does it seem most powerful, unanswerable, they cannot be satisfactory.

Would it not be a great improvement, though a small check, to the corruption which exists in furnishing the material of war, if there were but one kind of projectile to be known? Every marineman, dealist, and sportsman can tell the difference between the calibres. All experience has proved that the inaccuracy of a soldier's fire arises from its being too high, and that this is increased in the excitement of battle and the hurry of loading. That setting a soldier in the habit, by the manual, of raising the piece when firing, and so to ensure inaccuracy, is fair cause for argument.

When the Volunteers entered upon the arduous duties of this war, many things, it must be confessed, existed of which they knew nothing, from knowledge from the Regular Army. But with the administration of justice, which is hardly guided by written law, but by tradition and precedents remembered by the older officers, Regular officers were not allowed to interfere. But this only amounted to folly. Having separate administrators and different ideas, of course most dissimilar systems of justice prevailed in the two services. But Regular officers are also allowed to disperse Volunteers, and still they continue to suffer from the sentences of Volunteer Courts Martial. The rare instances of the perversion of injustice should be, will and has soon be abolished?

Would it not increase its effectiveness against Cavalry, if the principle of the rocket were added to the rifle shell, the odor of the cowslip gas being offensive?

Should not Corporals receive more pay than Privates? either by decreasing the Private's pay one dollar, or increasing the Corporals'?

When Batteries serve together, should not the pieces weigh the same, so that the horses of both would always be in the same condition? Parrott's 10-lb. weighs 900 lbs., the Ordnance 3-inch weighs 840 lbs., and 12-lb. Napoleon 1,200 lbs. Would not, therefore, a 9-lb. smooth-bore, weighing 1,000 lbs., be better than the Napoleon, better for our service? The entire absence of good roads in a great part of our hilly country lends weight to this.

Florida, Sept. 25, 1863. Tyro.

THE MONITORS.*

To the Editor of the Army and Navy Journal:

SIR:—I have read with pain an article in your issue of the 12th inst., entitled "The Monitors," by an anonymous correspondent, "Sailor."

This article if left uncontradicted and its fallacious statements unrefuted, is calculated at the present time to be positively of much injury, appearing as it does in a journal devoted exclusively to military matters, and necessarily having a wide circulation. I trust, therefore, that you will grant me the favor of space to *defend*, as you have your correspondent to *attack*, our *national defenses*, while the Nation is engaged in a struggle for its existence.

"Sailor," after a couple of paragraphs of generalization, utters the truism: "There can be no doubt that, in a general contest, armor-plated vessels will resist the impact of shot better than wooden hulwarks," and concludes the sentence by the adroit abatement, "but of all these vessels, for the reason why a government or a people should run and over a class of vessels whose construction is such that they *have never yet resisted a heavy shot*." In the next short paragraph contradicts his former statement by acknowledging the victory over the *Merrimac* in Hampton Roads by the fleet of the "Monitors," then, as if in the affair which dictates recrimination of the navies of the world, he adds: "Though according to Confederate accounts, nothing but her light draft, which permitted her to run for shallow water, prevented her from being run down by the rebel vessel." This I leave to be utterly false. It was in effect of the *Monitor* during that battle; the *Merrimac* did run into us, but inflicted no other damage than a slight indentation of the iron armor.

Has "Sailor" forgotten that brilliant affair, the dashing and capture of the rebel iron-clad *Atlanta* by the Monitor *Weehawken*, commanded by the gallant Rodgers, in the short space of fifteen minutes? Has he read the letters of Captain J. P. Duncan, and other eye-witnesses, published some from the London *Times* in the *Herald* of a late date, besides the English correspondence of the principal daily journals; and if not, has he the confidence to consider them in any way very unbiased person, that to our *impregnable fleet* is mainly due our ability to *dictate hostile terms to the rebellion*?

Again, as if to render the unsuccessful attack of the ironclads on Sumter in April last still more humiliating in the eyes of our foes, he says: "Out of nine vessels in that attack, that five of the nine iron-clads which went into the action, were disabled in the short space of one hour, and rendered unfit for service of which we had a total loss." Is it not nearly because the tomb of its gallant Commander and brave crew." But then if it was not his purpose to mislead and sneer at the Monitor class of vessels, that the vessel which sunk was not a Monitor, but an iron-clad of radically different construction?

Then, as if to "cap the climax," he informs the foe of his country that "the inefficiency of the iron-clads as at present constructed, lies not in the ability of their armor to resist the impact of shot and shell, but in the extreme delicacy of the machinery which is the motive power and most important part of the structure depends," thus rendering the very part of the vessel on which its fighting properties depend liable at every moment, while in action to receive such injuries as to completely disable the ship."

It is a mystery that he does not write to Jeff. Davis at once, explaining to him that it is useless for the rebel authorities to direct their powerful cannon at the side armor of the Monitors—should be impregnable—but to direct their fire at the turret, that being filled with "delicate machinery." Fortunately, however, for the country, but unfortunately for the truth of "Sailor's" statements, the turret is also covered by delicate mechanism, and it is equally as impregnable as the side armor. Notwithstanding the terrible fire to which these turrets have at various times been subjected, in no case has the machinery which operates the turret been injured by the enemy's shot.

In most countries, it is a high crime to expose, particularly during war, the weakness of the national fortifications, vessels, &c., to the sole reason, apparently, that it has been guilty of this treasonable offence was from his utter want of ability.

Isaac Newton,
First Assistant Engineer U. S. N.

A DISAPPOINTED APPLICANT.

To the Editor of the Army and Navy Journal:

SIR:—One of the disappointed applicants for the position of Brigadier-General of Volunteers—Mr. Julius W. Adams, late Colonel of the 1st Long Island Volunteers—has indulged himself in a pamphlet letter to the Secretary of War, wherein he seeks to soothe his disappointment by a personal attack on Major-General Casey, President of the Board of examining candidates for the command of negro troops, before which Mr. Adams was ordered by the Secretary of War. Why Mr. Adams should choose to hold General Casey solely responsible for the adverse action of the Board in his case does not appear, except that in default of argument to prove them in the wrong, he resorts to the very poor resort to personal abuse of some one, and the General chanced to be the most eligible victim. As to the conduct of Casey's division at the battle of Fair Oaks, to which Mr. Adams refers, it is sufficient to say that the General's commission as Major-General of Volunteers and Brevet Brigadier-General in the Regular Army, date from the day of that battle, and were bestowed in testimony to his conduct on that occasion, where, with less than five thousand brave men, he stood the shock of thirty thousand of the enemy, and saved the left wing of the Army from the destruction that had been marked out for them. But this is a point upon which it is unnecessary to dwell, and it is difficult to see so precisely what bearing it has upon the question of Mr. Adams' fitness for the command of a brigade.

Though it does not have much application to the case, we are left equally at a loss to understand by what rule we are to consider the "number of miles-out" a writer must have spent engineer to entitle him to a position among the general officers of the Army. Mr. Adams certainly shows in a very prominent light his ability to read in no small degree the estimation of others, as in his own belief, very competent as a civil engineer. It would have been well for him had he been more civil as a writer, and had remembered that before he sought to extend the circle of his sympathizers by rushing into print, that there is a saying about those who live in glass houses, which contains a world of wisdom for such as he.

The whole question in dispute is a difference of opinion between Mr. Adams and the Board as to his fitness for the position to which he aspires. Unfortunately for Mr. Adams the Board were in the majority, and in spite of letters from Horace Greeley, and other discriminating military authorities, he finds himself minus his negro brigade. He is unable to see the justice of the fact, that of his questions to the test of which he was subjected." At these he is very naturally disgusted, and he has indeed reason to be, a fact which he has wisely ignored in his pamphlet. His complaints, too, that he was not subjected to an examination in cavalry, artillery, and infantry tactics, as in regards to mention that the result of the preliminary examination in the company drill and the Army regulations to which he was subjected, were sufficient to keep the officer who examined him in these branches to vote for his rejection altogether. He was found equally deficient in the battalion drill, especially for one who had commanded a regiment in the field "during three arduous campaigns with the Army of the Potomac." Nor was he more fortunate in his partially bright on the other subjects of his examination. Had he expressed a desire for an examination in the higher branches of military science, that, too, would, no doubt, have been granted; but the examination to which he was subjected resulted so poorly that the Board charitably saved him the mortification of further trial. The questions in mathematics, of which he makes complaint, were such as an engineer officer of experience in the field would certainly be to be familiar with, and were simply propounded for the purpose of testing his general intelligence and ability, which certainly have a direct bearing upon the question of his fitness to command.

In making up his standing, one member of the Board voted to reject Mr. Adams, another to make him First Lieutenant of the 2d class; another member voted to make him a Captain; and finally Casey, against whom he directs his assault, alone voted to appoint him Major of the

* The following are the questions, as given by Mr. Adams in his pamphlet:

A company in one rank, how count off to form the rear rank for Skirmish?

A company marching by the right flank, how form line of battle on the right?

Describe the movement of each rank.

A company marching by the right flank, how will they be faced by the word halt?

What is the interval between the ranks?

What the interval between files?

Where is the captain placed in marching by wings?

How many company officers are with the colors?

What sentinels are not given the countersign?

How many pay and master sergeants are with the colors?

To whom do you send them and how many?

How does a battalion break by the flank, and how do the rear?

How break a regiment from line to the rear into column?

What are the words of command in the different column marching by the front, to the right into line of battle?

What is the *name* of regiment in the first case?

How break a line into division (two company) columns?

How form double column from the company column of company?

How form square from line of battle with least loss of time?

How many ranks in square? Where are they to be in condition?

Form line of battle in the shortest time on the other side?

How attack a square? How the cavalry in division column?

What is the interval between battalions in line of battle?

What between brigades?

What distance in rear of a single line is the artillery to be posted?

What distance in rear of a double line?

Where is the artillery placed in column of route?

What is the difference in command of column to order to his subordinate officers?

What are the advantages of operating by interior lines?

What are the disadvantages?

What is the logarithm of zero?

What are the disadvantages of exterior lines?

Wherein does a parabola differ from a hyperbola?

What is the characteristic of an ellipse?

What of a hyperbola?

What of a parabola?

What are the asymptotes of a hyperbola?

What section of a cone is a circle? A parabola? A hyperbola?

What is the equation of a line?

What the equation of a circle referred to his axis?

Can a cask filled with water be barred by adding a pint of water alone?

What is the strongest form of arch?

Can an arch be constructed of unequal radii?

What is the region of Brush?

What engineer officer was at Madagascar from the coast of Africa?

What is the theory of light?

What are the principal elements of ancient times?

Size of modern?

Who was the last conqueror in the general of ancient times?

What countryman was Alexander the Great?

What is the meaning of the word Cæsar?

What are its co-ordinate branches?

What is the crossing of the Rubicon?

Have the States in the rebellion right under the Constitution?

By the laws of nations, how do we stand related to the States in rebellion?

What is the greatest river in South America?

What river in S. America empties into the Caribbean Sea?

Where is the Lake Titicaca?

Why did the Roman government declare war against Mithridates?

What country was Hannibal?

Where was Carthage?

Who conquered him Carthaginians?

What is the largest island in the world?

What do you consider as the evidences of great powerfulness?

1st class, to which the rest rather reluctantly consented, General Casey was induced to recommend him to the position from the charitable belief that he might have been somewhat confused before the Board, and also from the high character of his letters. His conduct would seem to have warranted such a vote.

In answer to Mr. Adams' complaint, that he should be asked to subject himself to a preparatory examination, it is sufficient to say that this was in accordance with the rule established by the Board, a departure from which would create a precedent that might prove a source of embarrassment. Had he exhibited superior military attainments, the Board would gladly have recommended a waiver examination, as they could then have done so without embarrassment for the future.

Washington, Oct., 1863. S.

LIEUTENANTS' RANK IN THE NAVY.

To the Editor of the Army and Navy Journal:

SIR:—A subject of much importance to naval officers has lately come under the observation of many of their friends; and as the officers are forbidden to communicate with the Press upon their own behalf, we beg you to accept from an earnest friend of the service what, in simple justice, should be especially known.

To this end I send to you, in company with this note, a transcript of a communication addressed to the Secretary of the Navy, and signed by twenty-three Commanders and Lieutenants. The memorial bears with it its own explanation in great degree; but I hope you will allow me, nevertheless, briefly to state the principles involved in the cause which have rendered it necessary. In 1840 an order was issued from the Department giving Lieutenants after twelve years of commission, the rank of Commanders, while Lieutenants, previously ranking above Surgeons, received similar rank after fifteen years of commission, or upon promotion. Accordingly the Lieutenant, no matter what his merit, could obtain promotion, as late as 1861, only after an average service of fifteen years. In 1861 the rank of Surgeon was received at the same time with Captains.

Pursers can next to receive the same privilege: and shortly afterward it was extended to Engineers. Meanwhile the civil war broke out; and, the military arm of the service being largely increased, the appointment of Lieutenants was made upon the principle of fighting their way upward. They were the less prepared, therefore, to learn, a few months since, by a new order that the Engineers of the Navy, Surgeons, Pursers and Engineers receive the rank of Commander in five years, and that of Captain in ten years, from the date of their original appointment, not only from its favoritism to non-constants, but because of it assuming to overrule the decision of the Board, by which, from the first, and which, being less exacted by Congress, ought first to be repealed by the law-making powers.

The fact that the Lieutenant's pay should be now in full operation), is to place the Junior Paymasters of fifteen years, in rank with every Captain on the list; and the inducement to the Lieutenant to remain in the line, therefore to the service. To strike such a blow at the military pride of the officers at a supreme moment like the present, is so obviously unjust, that we feel assured that the Secretary of the Journal so influential as that over which you preside will be found on the side of justice. The more the hindered feelings of the officers are wounded grievously, and you need not be reminded that it is not Surgeons and Paymasters who have contended and conquered in the great battles and steamers against the tremendous defences of the enemy. There needs no oracle to proclaim that military reward should follow military service. That it causes serious consequences of a regulation, which gives these rewards to non-combatants at the expense and to the great injury of the real combatants, you will perceive. But I cannot prolong my great delay probable in applying the remedy. The memorial, however, I respectfully send you; and hope we do hope that, upon a reminder from the Press, the authorities at Washington may give the subject early consideration.

I will only add that Lieutenant Rowan, the present rank of Commander, whose service has exceeded the term of thirty-two years. He is at present the senior military officer on one of the most active stations in the world—a fact which he will be ranked by both Surgeon and Chaplain of his own ship—the latter having entered the service sixteen years later than himself. Such a position as this is under his command, but who is, nevertheless, his superior officer, went into the service while Rowan was in the midshipman's berth—a period in which the Fleet Surgeon first served. Much grosser anomalies than this are constantly liable under the present system of promotion, and it is for the sake of abating a like correction that I have to request you to publish this communication, together with the enclosed copy of the memorial.

Yours truly,

New-York, Friday, Oct. 2, 1863.

THE MEMORIAL.

To Hon. Gideon Welles, Secretary of the Navy.

The undersigned, officers of the line in the Navy of the United States, have the honor to call your attention to a grave hardship of which is not easily expressed in words, the "Extract from Regulations of the Navy," dated March 21, 1863, giving and defining anew the relative rank between the Line and the Staff officers of the Navy.

These regulations appear to be imperative, inasmuch as they confer upon the Secretary of the Navy no discretion as to relative rank, which is, so far as the undersigned are informed, as yet unregulated by law. Under the "Extract" referred to, the Surgeon, Paymaster which already exist, to the detriment of the line officers, to a still more injurious extent.

These regulations direct Surgeons, Paymasters and Chief Engineers, after five years' service as such, to rank with Commanders, and, after fifteen years, with Captains.

The effect of this is that every Commodore's Staff officers over three years in the grade will become entitled to the rank of Captain, while the senior of a Staff officer's position has, by depending over his commission, become a Commodore. Thus, a Surgeon of five years' rank rank with, if not above, Commanders who have been thirty years in the line, and Surgeons of fifteen years rank with, if not above, Captains of nearly forty years' standing.

This spirally promotion of Staff officers is arbitrary, and does not depend upon merit or upon distinguished conduct before the enemy.

It does not give the line officer the advantage that examination of selected that competition any further, to show that such a scale of promotion is unjust. It is unjust, because the essence of military service lies in nature on the part of the Line officer, which makes him temporarily the inferior of Staff officers again and again in the course of any one man in a brief time, reduces him below them, must inevitably be fatal to the feeling of military pride which, in the case of the line officers, has been considered as the sustaining principle of military organization, and which is, in effect, the vital element of military honor.

* The publication of this communication has been delayed by an accident which prevented it from getting into the hands of the printer.—Ed.

The undersigned are at a loss to understand why, at a time when they are threatened with imminent danger, the fate of the country and of them is to be tender a point. They are unable to see how the safety is the relief of this awful strife, upon the issue of which depends the future of this country depends, and of the conduct of which they are the leaders, is to be about their followers, and their own private affairs. They are willing to be this unduly advanced in a military rank over their heads. They are willing to be overlooked for any length of time, they should be thus compelled to surrender what they consider to be a calumny to their sense of self-respect, as well as to their professional usefulness and standing, and so far beyond the power of a Court-martial to inflict upon them. They are willing to be overlooked for any length of time, they should be thus compelled to surrender what they consider to be a calumny to their sense of self-respect, as well as to their professional usefulness and standing, and so far beyond the power of a Court-martial to inflict upon them.

Officers are not responsible but most correctly to request the attention of the Secretary of the Navy, as the guardian of their rights, to conduct which he is sworn, to the following facts, and to inquire if, under them, they believe, will be jeopardized by the contemplated appointment of rank, and the consequent loss of pay, which it may be entailed, that means may be taken to procure the repeal by Congress of the law under which the appointment is made.

They suggest, as fair to all parties, and as conducive to the welfare of the Navy, that a number of Engineers in Chief be appointed, with Pursers, Paymasters, and Chief Engineers to rank with, but not above, their juniors in the several grades, and that they be paid as such from the date of their appointment.

Exceptional cases among Staff officers to be promoted, on occurrences, to be considered.

The undersigned close this statement by the expression of their conviction, that the adoption of the plan they have suggested will be the only way to be made to endure the humiliation of being thus subordinated, by a mere accident of time, to those who are not only their equals, but are entrusted with the high responsibilities of command, and are even at present their superiors in rank, and who, in the event of war, may be placed in the position of being under the command of their own juniors.

It is useless to say that the Navy is a system made up of rank, and while they do so, it will be difficult to keep hook-weights from catering to the public appetite for reading on the war.

In the course of time we shall obtain have ample materials for the history of the late contest. The Great Rebellion. Undoubtedly there never was a war in which such clouds of intelligent witnesses, capable of telling us their experiences of events, took a part. Even the celebrity of our armies is composed of enlightened, observing men; and some of the most vivid descriptions of battles, marches, and camp life which we have read have been in letters from privates in the rank and file—bits of direct insight quarried from the mine of living experience. Of course our commanders have had larger ranges of knowledge, and some, it is to be hoped, will be found to put on record their views of the campaigns in which they have contributed to the history of his great campaigns. Of course the official records of the War Department, the Adjutant General's office and the office of the General-in-Chief contain mines of material; but it may be years before they are given to the public, and the student of war and the military historian will probably have to wait long before he can hope to have access to these rich treasures. In the meantime we urge on all whose vocation places them in intimate contact with the transactions of the war to bear in mind the importance of putting on record, for permanent use hereafter, whatever they may know of memorable events. It is not always easy for those who are carried along in the tide of exciting times to remember the *historical* character of what passes before their eyes. *History* history is so much more real and direct a handling than *theology* that even the actors are apt to forget that posterity claims an interest in what they are doing.

The anonymous officer who has compiled the "Annals of the Cumberland" does not fairly come under the censures we have cast on the unsatisfactory character of the official history-writer. It is an unambitious series of biographical sketches, descriptions of departments, accounts of expeditions, skirmishes and battles, police records, and miscellaneous incidents and reminiscences. We dwellers east of the Alleghanies have had little to do with the army of the Cumberland; the Army of the Potomac nearer to us in space, and perhaps in affection, and made familiar to us by the copious writing up it has received from the journals, has somewhat dulled the public interest in our other armies in the field. This is unjust. The great armies of the West deserve to be known better by the people. The fortunes of the Army of the Cumberland have been varied and wonderful. No army has a more glorious record. At present it occupies the first place in the public interest. Its position, grasping the vitals of the Confederacy, reduces all our other armies in the field to a subordinate place. The present publication, therefore, though not a production of any marked intrinsic merit or importance, is a timely one, and its portraits and biographical sketches of the Generals whose names have become familiar as household words, its analysis of the organization of the army and its record of events, will help the public to needed information on these matters.

The first portion of the work consists of detailed and accurate biographies of the leaders, corps, division and brigade commanders and their staffs. The list is not, however, complete, as we find several, among them Generals CRITTENDEN, WOOD and GRANGER, omitted. Whether the officers named objected to be put in the book, or the author was deficient in information, we have not been informed. The plan is following set by sketches of the Army Departments—Quartermaster's Department, Commissary Department, Medical Department, Signal Corps, &c., &c. Then we have a sketch of the battles and operations of the Army. The beginning of which is now the Army of the Cumberland, the nucleus around which this magnificent force has aggregated, was a small body of Kentucky volunteers, assembled at Camp Dick Robinson, General ROUSSEAU, at Camp Joe Holt, near Louisville, Kentucky, in the Spring and early Summer of 1861. Camp Joe Holt is in Jefferson county, within a hundred miles of the Ohio river, and here made a Military Department, and Brigadier-General ROBERT ANDERSON was assigned to its command. The Department of the Ohio, as it was extended over the whole State of Kentucky, and the State of Tennessee, and was designated the Department of the Cumberland. On the 15th of November, GEORGE H. THOMAS took command, General ANDERSON's health failing. In November, SHERMAN was relieved by General BUELL, and the little army of the Cumberland was merged into the army of the Department of the Ohio. On November 1862, there was a new arrangement of Commands, and the commanders, Tennessee, east of the Tennessee river, and Northern Alabama and Georgia, were made a Department, under the revised name of the Cumberland, and General ROSECRANS, into which Kentucky was again transferred. The Department of General ROSECRANS is now essentially the same.

Under General BUELL the organization of the army was but a small beginning; but under General BUELL it grew to formidable dimensions and an excellent organization. It now began to strike telling blows, and to participate in actual war in the battles of Piketon, Prestonburg, Middle Creek, Mound Gap, Somerset, Camp Wild Cat, Rockcastle, &c. Later, after the first decided Union victory in the West, it will be remembered was won by General THOMAS, the hero of the Mill Springs battle, and the capture of Forts HENRY and BUELL and GRANT, and Commander FOOTE's fleet of gunboats, made their advance on the whole front of the enemy, extending from Cumberland Gap to the Mississippi. The main features were the reduction of Forts Henry and Donelson in Tennessee, the capture of the enemy's army, and the subsequent compulsory evacuation of Columbus on his left, which was speedily followed by the reduction of Island No. 10, by the combined land and naval operations of General POPE. Then followed the summer campaign into Southern Tennessee and Northern Alabama—pushed as far as the city of Huntsville. Meanwhile, the troops were left for nearly a year under command of General BUELL, and the celebrated battle of PERRYVILLE, or, as it was by others named the "Fourteenth Army Corps," and the command of the Department and Corps was assigned to Major-General ROSECRANS, then at the head of the army in Mississippi, and just emerged from the smoke and carnage of the bloody and victorious fields of Iuka and Corinth.

At the time General ROSECRANS assumed command the ranks of this army had been thinned by disease, battle, and the nameless vicissitudes of war. In every respect it was largely overworked. Nearly every division of its number, disheartened and dispirited, had deserted. More than *twenty-six thousand men* were reported as absent, unauthorized semi-monthly reports for November 15th, two weeks subsequent to the change of commanders, show that a total of 36,896 officers and men were present for duty in the whole army—were absent from their command: The army was composed in about equal proportions of veteran soldiers and new recruits. The former were worn out by service, and the latter were inexperienced in drill and discipline, with officers often ignorant and sometimes dissipated. The sum up, briefly, the army was, in fact, broken, its confidence destroyed, its discipline relaxed, its courage weakened, and its hopes almost gone. Such were the circumstances under which General ROSECRANS assumed command. The country will probably never know the amount of toil which that General had to endure to restore the Army of the Cumberland out of chaos into some form fit for the purposes of military work. In two months he advanced from Nashville, fought the battle of Murfreesboro', and one of the most toughly-contested of the war, and in which the flesh and generosity of human nature conspicuously shone this time, through the months of silent preparation, during the spring of 1863, up to the triumphant advance in June, and the occupation of the line of Tullahoma, the history of the Army of the Cumberland is fresh in the memory.

Apropos of the battle of Stone river, we extract for the truth of history some passages from an intercepted letter written by Major General BRAGG, Confederate Commander, in relation to General BRAGG's staff. They completely refute the official statement of BRAGG in regard to the termination of the battle, and are conclusive as to where victory ultimately remained. He says:—

"General BRAGG is not a man competent to command an army in the field. I think myself he is a very good expression. Some event he is a good. I think myself he is a very good expression. Some event he is a good. I think myself he is a very good expression. Some event he is a good

MOUNTED TROOPS AND RAID SERVICE.

THE following suggestions are the result of a quite extended experience in cavalry raids, and particularly in the expedition of Brigadier-General SAMUEL B. CARTER, in January, 1863, from Lexington, Ky., into Virginia and Tennessee. They are prepared by Major T. B. BROOKS, now attached to the staff of Major-General GILLMORE:

OBJECT OF RAIDS, AND MEANS TO SUCCESS.

Crippling the enemy by intercepting his dispatches, capturing or destroying his supply trains, breaking up his lines of communication, destroying his means of transportation and provisions, ascertaining the position, composition, and strength of his forces, and capturing his stragglers, are the duties for which well-mounted Volunteer Riflemen are best adapted. It may be called Scouting, or Raid Service. It often better to destroy one railroad bridge, or one salt well, than to kill or capture a brigade. If the enemy be in the way of accomplishing an important object, he should be surprised and fought impetuously. If this cannot be done, it is usually better to avoid than to meet and fight him, for that will consume time.

Rapidity of movement, in order to surprise an enemy, perfect secrecy of purpose, boldness, deception (General CARTER's command found it easy to pass for Confederate cavalry), reliable guides, who know not only all the roads, but also the blind bridle paths, every inhabitant, his politics, the produce of his farm, his stock, &c.—these, together with a proper equipment, are the elements of success. A thorough *inspection* just before starting, by a competent and experienced officer who knows the object of the expedition, must be made, that each officer and soldier of the command may carry just what is necessary to success, and no more—not one ounce, for that ounce may break down his horse. General CARTER's baggage-train for his large staff consisted of *one mule*, and he was partly loaded with hay required for his horses. The stock should also be carefully inspected and none but good animals taken, for all others are sure to give out.

MATERIAL FOR MOUNTED TROOPS.

Rapidity of movement being the chief element of success, it is evident that *horsemanship, &c.*, an ability to ride fast, and to travel out of a horse or mule with the least injury to the animal, is the most important qualification for troops intended for this service. In the Volunteer service this qualification is only found among the men who have been brought up among horses. Kentucky and Ohio rosser furnish the largest and those from our Northern cities the smallest per-centage of men of this class. The idea should be inculcated among mounted men that their most important duties as soldiers are, to keep their horses in good condition, well shod, well fed, well watered, and by practice this, and who keep up their stock by pressing go od animals, cannot be easily caught, and can greatly harass and injure a superior force. Lieut. MORGAN's men were an instance. Those who is not a good shot should be mounted for raid service. Yet he may be fit for infantry. To transport a soldier several hundred miles and back and then have him waste the few shots he may be called upon to fire is too hazardous to the success of such enterprises to be tolerated. If a soldier be a horseman and a marksman, and thoroughly drilled as a skirmisher, and acquainted with his arms, he is fit for raid service.

ARMS FOR MOUNTED TROOPS.

Experience shows that the cavalry sabres which are seen dangling from the sides of four-fifths of our mounted volunteers (greatly fatiguing both men and horses), have played a very unimportant part in this war, particularly its raid service, where mounted troops have been most useful; and also that on each page of the manual of arms for cavalry or given as more annoyance than his *assumed* riflemen, having no sabres. Whether this be because the topography of this country is not adapted to the tactics of this arm, or because the volunteer service does not afford sufficient time and proper instruction for sabre practice to be proficient in its use, or because them has been a great change in the relative importance of the sabre and fire-arms, on account of improvements in the latter, the fact still remains and should not be ignored in arming our mounted men.

The sabre in its construction and use was perfected before the invention of gunpowder, and necessarily played an important part in the hand to hand fighting of a former age. Now, the fire-arms kill the swordsman before he can reach his opponent, hence the revolver has taken the place of sabre while the rifle is the main dependence. For raid service four-fifths of the men should have repeating or breech loading rifles, and one-fifth sabres, and every man should have a revolver in his belt. MORGAN's men preferred SHARPE's rifle. Mounted riflemen should habitually fight dismounted, and in open order. They should be thoroughly drilled as skirmishers, and be good marksmen. No man who cannot make his weapon tell is worth mounting. If in addition they understand thoroughly the use and care of the horse, they need know very little of cavalry tactics. Familiar with sabres, however, should be drilled in the cavalry tactics.

The spectacle of the 9th Pennsylvania, dismounted and deployed as skirmishers, at Jonesville, Va., in January of this year, each with a muzzle-loading rifle and heavy sabre at his side, was ludicrous in the extreme. Their sabres prevented the use of their rifles effectually as light troops when dismounted, and, conversely, their rifles would have greatly interfered with the use of their sabres, on horseback. It is evident, therefore, that these arms do not belong together. They should have hung their sabres to their saddles on dismounting.

The 2d Michigan cavalry, without sabres, but armed with COLT's revolving rifles and revolvers (which are superior if not the best), have been very successful in the many fights and skirmishes in which they have been engaged. Their officers claim that they have never been repulsed, and they think it is chiefly owing to their being properly armed.

STOCK, EQUIPMENTS, ETC.

The moment we give up the sabre as a weapon, and cavalry charges in which it is efficient, as the tactics for mounted men, we have no further use for the classic "war horse," partaking of the courage and spirit of the dashing trooper who rides him. For mounted riflemen want only rapid, safe and economic transportation. It is not impossible that picked mules for this kind of service, particularly for mounting a regiment that has been serving as infantry, would answer better than horses.

Whichever kind of stock be used, it should be kept up by "pressing" fresh animals to supply the places of those that give out on the march. In raids the marching is always rapid, and forced marches have frequently to be resorted to. The column cannot be halted on account of sick, lame, or overtasked animals, nor can their riders walk or be left behind. The "pressing" should be, of course, from disloyal persons, and should always be done, if possible, by the quartermaster, and the animals obtained from him. In rapid marches, however, this is sometimes difficult; and if it cannot be done, at least the sanction of the company commander should be obtained, and a formal receipt for animals pressed should be examined by him, or else, sometimes, better horses will be left behind than those taken, and the animals of loyal men will be pressed when others could be obtained.

The shoes should always be taken from the horses left behind, as in many instances fresh animals will have none. Each soldier in the expedition should have two or more shoes, depending on the probable length of march and kind of country to be passed over. These should be fitted to his horse before starting. He should have at least thirty-five nails, pointed and ready for use. Without a shoe not absolutely worn out, no horse should be pushed severely. The success of a cavalry expedition might depend on the loss of one horse-shoe. Shoes should be frequently examined, and when found loose, immediately reset. At least one good blacksmith should be with each company, and every soldier should be required to do no duty except shoeing. My belief is that the MCCLELLAN saddle is too heavy for raid service. The complete equipment has too many parts, and each part is too heavy—there is too much surplus strength. The Confederate saddle is considerably lighter, and said by those who have ridden for a long time on each to be the more comfortable.

In packing saddles for transportation of commissary and ordnance stores for raids, those articles which will most likely be found in the country visited, should be taken in the smallest quantities. Salt, for instance, can be found almost anywhere. Therefore, in an expedition similar to General CARTER's, each mule should carry about 90 rations of bread, 100 of coffee, 100 of sugar, 100 of salt, and enough salt meat (bacon is best) to make a total of from 150 to 200 lbs. depending on the character of the road, &c. Hard bread should not be packed in bags—it gets broken up and wasted. Light boxes are preferable. A small tarpaulin, having eight holes in the edge with which to fasten it down, should cover each saddle.

EFFECT OF GENERAL CARTER'S MARCH ON HORSES.

General CARTER's command consisted of 949 Volunteer Cavalry, belonging to the 2d Michigan, 9th Pennsylvania and 7th Ohio. The Ohio troops were raw, having been in the service but a short time. The Pennsylvania men had been longer in service. The command marched from December 20th, 1862, to January 9th, 1863 (resting two days out of the time—December 23d and January 6th), 19 days—465 miles—average 24 miles per day. Taking out the two days rested, the average is 27 miles per day marched. The command was in the Cumberland mountains in the enemy's country five and one-eighth days, during which time they were out of the saddle but 30 hours. Average per day for this time, 31 miles. On this side the Cumberland, in Kentucky, the average was 21 miles.

CHARACTER OF THE ROUTE.

Seventy-eight miles were first-class pike; three hundred and one miles were poor dirt wagon roads; and eighty-six miles a bridle path, over much of which the horses were led. For three days the roads were rendered impassable by heavy mud; afterwards the weather was favorable. Ten important mountain ridges were crossed and recrossed. The crossings were mostly difficult, the roads or paths being steep and rough. Many streams and rivers were forded, but no one, no difficulty was experienced, though a rain would have rendered many of them impassable for several days.

This march proved to be far more than the stock could endure. Two-thirds, at least, of all the horses taken gave out and were left behind sick, lame, or exhausted. Many of them died. Many horses were pressed to replace them. A greater per centage of these gave out, considering the circumstances, than of the original animals. About 200 hundred men returned to the Blue Grass region dismounted.

MARCHING THE COLUMN.

To keep a marching column "closed up" is always difficult, but particularly with cavalry in single file on a rough path in the night. If a soldier goes to sleep, his horse stops, or if there be a considerable interval in the column when it arrives at the forks of a road, or if the word "halt" has not been communicated along the line when started from the rear, the column is broken in two, occasioning much delay, especially if the guides happen to be with the forward part. If the following rules be observed, the difficulty will be much lessened :—

1. The march of the whole column should be regulated *by its head*. Hence the advance guard will regulate its march from the rear, keeping a chain of videttes in plain sight and hearing of each other between it and the head of the column, to preserve the communication.

2. Each company commander should keep the soldiers of his company "closed up," thus making a unit of it.

3. Each company and battalion commander should habitually march to the rear of his command, each command having a commander, and each unit a leader.

4. The officer at the head must always keep in plain sight and hearing of the rear of the column next before him. In this way the responsibility of breaking the column can be fixed.

5. The staff officer should always march at the head of the column to regulate its marching. When a difficult defile has been passed by the whole column, it should be halted for the purpose of "closing up," and when this is done the word "forward" is passed from the rear along the column, by the staff officer, to the commander of the advance.

Short halts at regular intervals, for the soldiers to adjust their saddles, accoutrements, clothing, &c., would, I think, prevent much straggling and demoralization, and would not in the end, lessen the distance marched. If an officer or soldier is allowed to fall out of the column to attend to such matters, it is very difficult for him, and annoying to his comrades (especially in a narrow path) to regain his place in the column. The commanding officer and his staff should habitually march about one-third the length of the column from the head—sometimes more and less, as circumstances dictate. One or more of the most intelligent guides should be constantly with the commander, one or more with the advance guard, and one with each separate command in the field.

General CARTER was experienced from the led mules in the column. It was with great difficulty that they were made to "keep up." If an animal gives evidence that it will fail on a forced march, and another can be obtained, it should be left behind at once. Pack animals can only be kept up in this way—the animal must be led; each colt after leading an animal has a long goad, with which he whips the led animal ahead of him, while his own is whipped by the next man following him. Experience proves it to be much more fatiguing to both men and animals to march in the rear of the column than in front. Hence the rear of a column should be frequently changed, so that each company may in turn be at the head of the column.

A REBEL VIEW OF LEE'S REPORT.—The Richmond *Enquirer* of October 3d, comments as follows on General LEE's official report of the Pennsylvania campaign :—

"We have before us the official report of General LEE's many military operations which the public has been permitted to see. It is that distinguished commander's own account of the battle of Gettysburg, the end of his unsuccessful battle at Gettysburg.

"Considered as an historical and literary effort, this paper does not surpass the idea that if the world should hereafter possess a second LEE's Memoirs of the War it would be unequal to the first. Dispassionate, calm, bears the name of his less famous but not less able sire. It is, however, scarcely fair to contrast this plain document with the glowing and highly-colored pictures which pages the best statements of military design and reason in the whole range of the English language.

"The report is an outline of events already familiarly known. Much that might be said is evidently avoided. The reason why the work was not finished and the victory completed on the first and second days, when it might have been, is not given. Why the battle was fought on ground at Gettysburg with the speed which would have been more

had General Lee been informed of the position and force of the enemy. Why was he thus informed? The answer which may be drawn from this report is, that General Lee did not have the cavalry under his hand to reconnoitre and bring information. He says that he left Stuart in the Valley, to guard the passes of the mountains, for some time after the entrance into Pennsylvania, and he does not appear to have had the use of the mounted force until the battle was joined at Gettysburg. The fact that the cavalry of the Confederate army was insufficient, is the most palpable reason of the failure in Pennsylvania, and, perhaps, the key to all the mystery of Gettysburg.

One other fact is drawn from the general tenor of this dispatch in consoling. General Lee is evidently not one of those who regard defeat as disgrace. Defeat may have been a critical error, or that its partial failure is a solid reason why no further operations against the enemy should be attempted. But defeat in itself a priori is evidently a man who would neither be dazzled by success nor emasculated by defeat. We have room to hope that if he does not renew his grand designs, he will not abandon them. And he will replace it in the future by some other essentially the same; and that he recognizes, as much as Napoleon's last maxim, that the most magnificent achievements in war, as in other things, are generally accomplished after one or more partial or complete disappointments.

ARMY AND NAVY PERSONAL.

GENERAL Wadsworth left Washington on the 8th, for New Orleans, where he is to have an important command.

BRIGADIER-GENERAL Whipple has been appointed Chief of Staff to General Rosecrans, and has left for Chattanooga.

GENERAL S. M. PLEASONTON, late commander of the Pennsylvania Reserves, is in Philadelphia.

COLONEL Dudley, Inspector on Major-General Rosecrans' Staff, came North on the 13th, on a sick furlough.

GENERAL Banks has returned to Baltimore from his late visit to Ohio.

ENSIGN Howard, of the *Ironsides*, was killed by the explosion of the torpedo which sunk the steamer that vessel.

On Monday Rear-Admiral Samuel F. Dupont, visited the Russian fleet in our harbor, accompanied by Captain Percival Drayton, of the Ordnance Department of that post.

BRIGADIER-GENERAL H. D. Terry, commander of a Brigade in the Department of the Gulf, has come home to the North for a few weeks on sick furlough.

CAPTAIN Charles Read, of the Mounted Regiment, taken prisoner with most of his command at the last capture of Winchester, lately died of consumption.

CORONEL Sandford Conover, commanding the 6th New York Artillery, who for several months had been lying dangerously ill at his residence in Brooklyn, has recovered, and is now in Baltimore.

CAPTAIN D. A. Dehan, 97th Company, 1st Battalion, Invalid Corps, has been assigned to the command of the Provost Guard, Washington, *vice* Lieutenant Smith, ordered to the regiment.

FIRST Lieutenant Edward King, Company H, 66th New York Infantry, has been appointed Aide-de-Camp on the Old Capitol, by Captain Todd, on the charge of desertion.

CAPTAIN J. J. Comstock, late of the 3d Rhode Island Regiment, has received a commission from the President as Major in the 14th Regiment Invalid Corps Artillery.

COLONEL Percy Windham has asked for a Court of Inquiry, with a view to ascertain the reasons why he was respectfully relieved from all military duty.

GENERAL Hartruff has been relieved of the command of the Ninth Army Corps, and appointed to another command.

HENRY R. Sandford, a private in the 5th Regiment, New York Artillery, has received the commission of Second Lieutenant.

CAPTAIN Smith, who has acted as purveyor for the Convalescent camp, near Washington, fell in a fit, at the camp, on the morning of the 13th, and died before assistance came.

A SPLENDID sword was recently presented to Major-General G. K. Warren, commanding Second Corps, Army of the Potomac, by citizens of Cold Springs, N. Y.

BRIGADIER-GENERAL Hamilton, who is at the siege of Fort Hudson, has nearly recovered. He has been at Newport, R. I.

MAJOR Thomas M. Vincent, Assistant-Adjutant-General, has gone to West Point as a member of an important court-martial, which is ordered to convene there for the trial of Cadet Cadmus.

MAJOR-General Dix, with a portion of his Staff, left New York on the 12th, on a tour to New-England, for the purpose of aiding in inspecting the fortifications and military posts in his department.

IN view of the conscientious, able, and unwearied services rendered during the present war by Surgeon William J. Dale, as Surgeon-General of Massachusetts, he has been made Brigadier-General by the Governor.

COLONEL Frank Wheaton, commanding 19th Missouri Regiment, a German officer of considerable distinction, and well-known among his countrymen in Illinois, has died from wounds received at Chickamauga.

LIEUTENANT James, son of the English author, G. P. R. James, has resigned his position in the volunteer service to fill the one of Captain in the United States Engineering Corps, to which he was recently promoted.

GENERAL Elliott, lately commanding the third division of the 3d Corps, Army of the Potomac, has accepted the position of Chief of Cavalry on the Staff of General Rosecrans, and has left for Chattanooga.

AN elegant sword, with gilt mountings and silver scabbard, has been presented to Captain Woodbury of Battery D, 4th U. S. Artillery, by the non-commissioned officers and privates.

THE sad intelligence reached this city on Saturday night, that Captain Thomas Mair McKay, Company F, 20th Regiment, Massachusetts Volunteers, was shot dead by a cockatspot, on the 4th inst., near Culpeper.

JUDGE-ADVOCATE General Holt's review of the evidence in the investigation of the evacuation of Winchester by General Milroy, entirely exonerates that officer from any blame.

THE Volunteer Engineers at Morris Island have a society among themselves to assist the families of any of their number who are killed or disabled. Thus, the other day $200 was promptly sent to the widow of Sergeant Clark, who was killed.

AT a meeting of the officers of the 15th Regiment, New York Engineers, Engineer Brigade, at camp near Rappahannock Station, Virginia, October 1, 1863, appropriate resolutions respecting the death of Major Walter Cassin were unanimously adopted.

A set of resolutions issued, sending Captain Parker, of General Martindale's Staff, to Governor Seward Banks, has been revoked. Captain Parker is assigned to duty at the headquarters of the Department of Virginia, General Ingraham, of the 38th Massachusetts, is assigned to the duty of examining prisoners at the Capitol Prison.

SURGEON Steamer *Circassian*, 5, from Pensacola, Key West and Charleston Bar, arrived at Fortress Monroe on the 16th. The yellow fever was very prevalent at Pensacola when she left. Acting Assistant Surgeon J. H. Jenkins of steamer *Potomac*, had died of it. At the time of the leaving of the *Circassian* from Pensacola the surgeons had gained the control of the fever.

LIEUTENANT George B. Stockwell, of the Ninth New York Cavalry, has been dismissed from the service on policy duty near Falmouth, of congestion of the brain, superinduced by disease brought on by exposure. Major Charles McLane Ruff, of the same regiment, has received an honorable discharge from the service on account of physical disability.

In addition to the duties which he is at present performing, Lieutenant-Colonel C. L. Kilburn, Assistant-Commissary General of Subsistence, at Cincinnati, Ohio, is ordered to take charge of the subsistence of the Army of the Departments of the Cumberland, Ohio and Western Virginia, and make tours of inspection to the different points under his supervision, as often as he may deem it necessary for the interests of the service.

THE Peterburgh, Va., *Express*, of October 7, pays the following complimentary notice of Captain Read: "We regret to hear that Major-General George H. Thomas, who fought so obstinately under Rosecrans, 'the bouncy cull,' at Chickamauga, is a native of Southampton County, Va., and was born in Jerusalem, the county seat. It is said that General Thomas has refused to join the Yankees in their deeply perverted at the course he has pursued. He is a graduate of West Point, and is said to possess military ability of a high order."

THE following changes, captured at Winchester five months ago, and sent to Washington last week from Richmond: James Harvey, One Hundred and Tenth Ohio; Geo. H. Hamner, Eighty-Seventh Pennsylvania; G. Taylor, Fifth Michigan Cavalry; E. W. Brady, One Hundred and Sixteenth Ohio; D. C. Eberhart, Eighty-Seventh Pennsylvania; Jesse N. Dupuy, Fifth Michigan Cavalry; E. A. Ambler, Sixty-Seventh Pennsylvania; James T. Brown, Sixth Maryland.

GENERAL Charles B. Stuart, of New York, lately Colonel of Engineers in the Army of the Potomac, and formerly State Engineer of New York and Engineer-in-Chief of the United States Lake Survey, is ordered by the President [in pursuance of the resolutions of the Legislature of New York of April, 1863,] to consult with the Engineers appointed by that State and Board, in respect to the surveys for the enlargement of the State Canals between the Hudson and the Lakes, and to the best and most economical plan for works, so as most effectually to promote the National interest.

THE following is a list of the cadets admitted to the Naval Academy last February: Charles Alfter, Wisconsin; George E. Allaire, Pennsylvania; Charles H. Balance, Illinois; Wm. Butler, Massachusetts; Charles Christopher, Ohio; George H. Church, New Jersey; James W. Cowie, Iowa; Saml. H. Cumbaugh, Kentucky; Richard H. Dana, Maine; George A. Dewey, Vermont; Charles H. Dodge, New York; Mansell R. Field, Jr. New York; Fernando P. Gillmore, Ohio; Walton Goodwin, Maine; Fredk. B. Grinnell, New York; Percy Grosvenor, New York; George K. Hutterton, Massachusetts; Fredk. S. Kirkland, Wisconsin; Henry C. Lamb, Ohio; Wm. C. Leutze, District Columbia; Wm. M. Little, New York; Leavitt C. Logan, Ohio; A. C. McMechan, Nebraska; Henry B. Mansfield, Massachusetts; Wm. Mintzer, Pennsylvania; John H. H. Peshine, Missouri; Chas. L. Phillips, Pennsylvania; Alfred S. Post, New York; Thomas D. Sedman, Vermont; Huntington Smith, Maine; Wm. Storrow, Jr. Massachusetts; John M. Taft, Rhode Island; Hamilton M. Talbman, New York; Samuel W. Terry, New York; Wm. Terry, Washington Territory; Samuel W. Very, Massachusetts. Mr. Ballmer has since resigned, and Mr. Butler died.

LETTERS FROM MAJOR-GENERAL MCCLELLAN.—The election in Pennsylvania having now been decided, we feel at liberty to publish the following letter, as an historical document of interest to the Army:—

Trenton, N. J., October 12, 1863.

HON. CHARLES J. BIDDLE, Philadelphia:—

DEAR SIR:—My attention has been called to an article in the Philadelphia *Press*, wherein I had reference to the managers of the Democratic meeting at Allentown, disproving the objects of the meeting, and that, if I voted or spoke, it would be in favor of Governor CURTIN. I am informed that similar assertions have been made throughout the State. It has been my earnest endeavor heretofore to avoid participation in party politics, and I had determined to adhere to this course; but it is obvious that I cannot long maintain a silence under such circumstances. I therefore request you to deny that I have written any such letter, or entertained any such views as have been ascribed to me in the Philadelphia *Press*. I desire to state clearly and distinctly that, having some few days ago had a full conversation with Judge WOODWARD, I find that our views agree, and I regard the election in the Governor of Pennsylvania called for by the interests of the nation. I understand Judge WOODWARD to be in favor of the prosecution of the war with all the means at the command of the loyal States, until the military power of the rebellion is destroyed. I understand him to be of the opinion that while the war is waged with all possible decision and energy, the policy directing it should be in consonance with the principles of humanity and civilization, working no injury to private rights and property not demanded by military necessity, and recognized by military law among civilized nations. And, finally, I understand him to agree with me in the opinion that the great objects of this war are the restoration of the unity of the nation, the preservation of the Constitution, and the supremacy of the laws of the United States. Should my own opinions entirely agree upon these points, I would, were it in my power, give to Governor CURTIN my voice and my vote.

I am very respectfully yours,

GEO. B. MCCLELLAN.

The following dispatches in regard to the arrest of the disunion members of the Maryland Legislature, in the early part of the war, are also of interest:—

(Confidential.)

HEADQUARTERS ARMY OF POTOMAC, }
WASHINGTON, Sept. 12, 1861. }

Major-General N. P. BANKS, U. S. A.:

GENERAL:—After full consultation with the President, Secretaries of State, War, &c., it has been decided to effect the disunion members of the Md. Legislature. Arrangements are made to have a Government steamer at Annapolis to receive the prisoners, and carry them to their destination.

Some four or five regiments will be under your orders to be arrested to-day. When they meet on the 17th, you will please have everything prepared to arrest the whole party, and be sure that no one escapes.

It is understood that you arranged with Gen. DIX and Gov. SEWARD to have the steamer. It has been suggested to me that the meeting might take place on the 14th: please be prepared. I would be glad to have you advise me frequently of your arrangements in regard to this very important matter.

If it is successfully carried out it will go far toward breaking the back bone of the secession party. I will probably be well to have a special train quietly prepared to take prisoners to Annapolis.

I leave this exceedingly important affair to your tact and discretion—and have but one thing to impress upon you—be absolutely sure of success and secrecy. Success is the highest regard, I am, my dear General, your sincere friend.

GEO. B. MCCLELLAN, Maj.-Gen. U. S. A.

To Major-General BANKS:

HAVE you any more of your friends to send from Frederick to Annapolis. Please answer at once. I wish to know on account of ordering of Boat.

Major-General MCCLELLAN.

COMPLIMENT TO ADMIRAL FARRAGUT.—In a note to the New York Board of Commissioners of Pilots, declining an occasion in the harbor on a certain day on account of a previous engagement, Rear-Admiral FARRAGUT says on the same day, the Russian Admiral LESOFFSKY pays the following high compliment to Admiral FARRAGUT: "This visit, gentlemen, is not the mere one of friendly intercourse between private individuals, though perhaps the Admiral was not ready to consider me as a private man, but as an old military regulations, do the same for a person of high military rank after the accomplishment of signal service in war. This message I look upon as the highest testimonial in favor of Admiral FARRAGUT, as the most remarkable and successful naval leader of his age, and of our most high consideration and respect to the American nation, to whom the hero belongs."

OUR GENERALS.—The London *Saturday Review* thus commences an article on the "American Campaign":

"Although no General General has as yet shown the qualities of a really first-rate man, yet the armies of the Northern States are at least in a respectable condition for the work of fair abilities; and both the tone of their dispatches and the methodical manner in which the operations of the several campaigns are conducted, show that the Federal officers are of a different stamp from some who held high appointments in the earlier stages of the war. The movements of the several armies engaged in the invasion of the South are slow, and apparently serious none of the qualities which characterize high genius of war, but they are the correct, or at least safe, of the troops. But steadily, and with a striking fixity of purpose, the work proceeds; step by step the invaders are advancing into the heart of the country, and the ultimate issue of the war foreshadows an important crisis about to take place."

A COMPLAINT.—An English navy officer, who signs himself "One who unfortunately belongs to the Navy," writes to the London *Morning Post* to complain of the treatment his service has to endure. He cites the "hard fact" that few sons of naval men become candidates for entry into the service: "The reason of this," he says, "is, that the naval officers, except employed afloat—which in most instances "barely yields them a sufficient income to live upon—are "placed, immediately they are on shore, on a footing little "inferior which is wholly insufficient for their maintenance. "This measure is peculiar to that branch of the service which is open to free entry, and is a system which keeps them at "best as gentlemen paupers."

A GENERAL officer in a letter to the Editor of the JOURNAL says:—"I wish you would say a few words for that little book of COPPÉE—the *Manual of Courts-Martial*. I wish I could compel every officer to have one of these books. My copy is in such demand that I have given it up altogether. I have been obliged to furnish by others making out proceedings wrong, and this little book they can always carry in their pocket to refer to."

NOTICES TO CORRESPONDENTS.

The Editor of this JOURNAL will always be glad to receive from officers in the two services, correspondence and general communications of a character suited to its columns. It is necessary that the name of the writer should, in all cases, accompany his communications, not for publication, but as a guarantee of good faith.

Officers are specially requested to give us early notification of all personal matters of general interest; of the movements of vessels; of casualties among officers; and military and naval events.

The Editor will, at all times, be pleased to respond, in these columns, to enquiries in regard to medical and other matters.

From professional men the medical service should be glad to receive communications on military hygiene, practical surgery, and reports of notable operations and novel forms of treatment.

The subscription price of THE ARMY AND NAVY JOURNAL is FIVE DOLLARS a year, or THREE DOLLARS for six months, invariably in advance. Remittances may be made in United States funds, or Quartermaster's, Paymaster's or other drafts, which should be made payable to the order of the Proprietor, W. C. CONOVER.

Subscribers who fail to receive their paper promptly, will please give immediate notice of the fact.

The Editor does not hold himself responsible for individual expressions of opinion, in communications addressed to the JOURNAL.

The postage on the JOURNAL is twenty cents a year, payable quarterly in advance, at the office where received.

All communications should be addressed to the ARMY AND NAVY JOURNAL, New York.

ANSWERS TO CORRESPONDENTS.

BOSTY.—The Second Auditor of the Treasury has decided that a volunteer non-commissioned officer or private, who enlisted for "three years unless sooner discharged," is not entitled to the $100 bounty in case of his discharge previous to the expiration of his term of enlistment, by reason of the majority of the regiment to which he belongs.

A. T.—If you wish to enter the navy, ship as a sailor, do your boat, and the officers of your vessel will always be ready to recommend you for promotion, if you deserve it. We have many instances before us which prove that it is best to go through the hawse-hole and not to enter by the cabin windows.

CRITIC.—There was an inaccuracy in the answer to your question last week, which escaped notice until it was too late for correction in more than a portion of our edition. The Maj.-Gen. Grover referred to in the Army list is "distinguishing mark" of three silver embroidered stars in his shoulder strap, the one in the centre being larger than the other two.

U. S. ARMY AND NAVY JOURNAL.

NEW YORK, SATURDAY, OCTOBER 17, 1863.

THE INITIATIVE OF WAR.

It is not a gratifying reflection that at this stage of the war the minds of men should be fastened, not on the point where we are to strike at the rebels, but should be waiting in incertitude to see where the rebels will next strike at us. We do not pretend to speak for our military principalities and powers, who may have combinations and plans of which we do not dream; but the general physiognomy of the theatre of war wears a defensive rather than an offensive aspect. Our military forces in the field are at this hour an army raised to ward off a blow, rather than raised to fall in majesty and power on the heads of our enemies. Men ask, "What are the *rebels* about now? Are they "massing in Virginia, or are they massing in Tennessee?" Do they mean to fall upon ROSECRANS or "upon MEADE?"—questions very easy to ask, but very hard to answer, and with the most momentous issues, too, hanging on the answer.

This attitude may be unavoidable, but it is a weakness, notwithstanding. To be master of the situation in war, no belligerent can afford to sacrifice the advantage of the immense moral power of the *initiative*. And especially is it an inversion of all just relations that the party whose theory of the war is *offensive*, should dance attendance to the doings and designs of the side to which is assigned a merely *defensive* part. As a general rule the belligerent that boldly seizes the initiative and keeps his adversary to follow his lead, is there are few commanders that have the audacity displayed by TURENNE, who, when his opponent, MONTECUCULI, passed to the left bank of the Rhine for the purpose of invading Alsace, disregarded the initiative of his adversary, and himself crossed to the *right* bank, thus obliging MONTECUCULI to beat a hasty retreat back again. NAPOLEON has said that TURENNE is the only General on record whose daring increased with years and experience, and no man's military career, save that of the author of this saying, affords happier illustrations of the fine results of a well-chosen initiative.

The rebels, conducting the war on the theory styled "defensive, with offensive returns," have on several memorable occasions retrieved their menaced fortunes by the skillful seizure of the initiative. Among the most bold and successful of these may be counted BRAGG's invasion of Kentucky, in the summer of 1862, and LEE's invasion of Pennsylvania, in the summer of 1863. In order to take the offensive, the different rebel armies in Tennessee and Kentucky advanced in several columns from the Cumberland mountains, as a base of operations against the communications of the Ohio Army, thereby threatening to cut General BUELL's communications with Nashville. The Union commander, in order to counteract General BRAGG's movement, fell back on Nashville. Meanwhile the rebel commander encountered this movement of the Union Army by his advance into Kentucky, where he took hold of General BUELL's communications by his attack on Munfordville; thus obliging the Union commander, in order to prevent being cut off entirely from his base, to fall back on Louisville.

This offensive campaign regained to the rebels the whole State of Tennessee, and threw the war in the West back one entire year. The invasion movement into Pennsylvania, in June of the present year, was made with a similar view. General HOOKER, it was well known, was preparing again to pass the Rappahannock to retrieve his defeat at Chancellorsville, and make a new advance on Richmond. Suddenly, however, he finds himself, instead of being able to go forward, compelled to fall back by a movement of the rebel army on his right flank. LEE moved rapidly into Maryland and Pennsylvania, obliging HOOKER to countermarch after him; and although the rebel commander was unsuccessful in respect of the crowning object of the campaign, namely the capture of Washington, yet he was successful in his subordinate aims, and in all that which in his official report he claims to have sought—that is, to throw the Union Army back on its base, recover Virginia, and above all, use up the season fit for active operations.

There can be little doubt that the rebels are meditating preparing for a new initiative; it must be confessed the opportunity is favorable for them to do so, and the worst of it is that we seem to be passively waiting to see what they *will* do. It is commonly assumed that their next movement will be a renewed attempt to dislodge General ROSECRANS from Chattanooga. But is there any assurance that they will not aim at a bigger game? Assume that, counting on a great depletion of the Army of the Potomac, they with great secrecy and celerity withdraw all the forces that were taken from General LEE and return them to him, meanwhile making vigorous demonstrations on ROSECRANS' communications to cover the movement? Suppose this to be done, and quickly. LEE repeats his twice-tried advance against Washington? Suppose even that the late suspiciously-audacious demonstrations on MEADE's flank, compelling him to fall back from the Rapidan to the Rappahannock, are already the preliminaries of such a coup? It is neither without the range of probability nor probability, that it is quite within the range of rebel precedent. One thing is certain: to lie by in idleness along the whole line is simply to invite rebel combinations of this kind.

There is but one means by which we can frustrate all such designs. This is to take the initiative ourselves instead of yielding it to the rebels. To do this could only be justifiable on the plea that we were weaker than the rebels—weaker either in numbers or the ability to use numbers. We cannot put forward the former plea, and we would surely not be willing to put forward the latter. In making these remarks we cannot fairly be accused of intermeddling in matters, the control of which rests exclusively with those who are officially charged with the conduct of the war; for it is not a question of a special act, but of a general policy.

The theory of the war is offensive; its practice should be made to conform. It is mortifying to be lost in this bewildering coil, waiting to see what the rebels will do; instead of, as masters of the situation, compelling them to follow *our* lead.

RETROGRADE MOVEMENT IN VIRGINIA.

It is difficult to form any satisfactory estimate of the military operations of the past few days in Virginia; for all published accounts are obscure and contradictory, amid which we discern moving masses, marches, and countermarches, feints and counterfeints that bewilder the brain and pass all understanding. General MEADE has changed his front, and retired North of the Rappahannock, to the Manassas plains. It seems evident that this backward movement of the Army of the Potomac was caused by the advance of the rebels, who, taking the initiative, on Saturday began a movement by the left on MEADE's right flank. The assertion of the official telegram that the retrograde movement was made in execution of a previously-formed design, has in it few elements of probability. General MEADE's orders were to hold his position on the Rapidan unless actively menaced in superior force. We take it that he esteemed the rebel manœuvres of this nature, and not a mere raid of STUART's cavalry, as has been pretended.

To counteract the rebel movements, General MEADE made a skilful manœuvre, as though he would advance on the rebel communications—throwing his corps forward to the Rapidan, and some of his cavalry across it. This seems to have had the effect of recalling the rebels from their intended flank movement, and having thus gained time, General MEADE, early on Sunday morning, retired his army from the Rapidan to the North bank of the Rappahannock—his rear being covered with the cavalry, which had numerous encounters with the enemy's mounted force, pressing close upon the retreat.

It is of course impossible to say what the rebel design may have been in this offensive movement. Gen. LEE would hardly have attempted anything so daring, had he not felt prepared for battle, and able to cope with the force of MEADE. Still, he may have imagined the Potomac Army weakened much beyond the actual fact, and may too adventurous enterprise on his part may soon be dealing the final blow at the Potomac—that gallant army of veterans whom we cannot think of but with tenderness and pity—is good for another Gettysburg!

The action of General MEADE throughout this affair seems to have been excellent—the movements and manœuvres conducted with great skill and prudence—and we will wait a while ere before we yield credence to the report that this gallant soldier has been relieved of the command of the Army of the Potomac by DANIEL E. SICKLES.

THE army of General ROSECRANS has undergone an important reorganization. A General Order has been issued consolidating the Twentieth, (late McCOOK's,) and the Twenty-first, (late CRITTENDEN'S) Corps, into the Fourth Army Corps, under command of Major-General GORDON GRANGER. This will leave General ROSECRANS' command proper in two Corps—the Fourth, under General GRANGER, and the Fourteenth under General THOMAS. All the divisions of the army will be consolidated into six—the divisions of BAIRD, DAVIS and ROUSSEAU under command of General THOMAS, and those of WOOD, SHERIDAN and PALMER under General GRANGER. This will give the army a more compact form, and put its members under tried and thoroughly capable men. Hitherto, unhappily, both wings have been under men who were not of this stamp—the right under one whose name is synonymous with defeat and rout; and the left under a gallant and chivalrous man, but one who confessedly had no other aptitude for military affairs. The six divisions commanders we have named are soldiers of a high order of merit, than whom there are none abler in the field. Major-General REYNOLDS assumes the important and responsible position of Chief-of-Staff, in place of Brigadier-General GARFIELD, who vacates to take his seat as member of Congress from Ohio. REYNOLDS was the gallant companion in arms of General GRANGER, during the early campaign in Western Virginia. He is a West Pointer of thoroughly-trained soldier, full of resources, and gifted with a great capacity for business. A better Chief-of-Staff could not be desired. A desirable change has been made by the appointment of General BRANNAN to the position of Chief-of-Artillery, in place of Colonel BARNES, whose health will not allow him to be all conducive to the good of the army, and are themselves no slight reinforcement to its moral and material strength.

LORD RUSSELL, in his late speech on the policy of Great Britain with respect to the relations of that power with this country, makes very satisfactory declarations which leave no room for question. "Everything," says he, "that the law of nations requires—everything "that our law, that the Foreign Enlistment Act requires, "I am prepared to do; even if it should be proved "to be necessary for the preservation of our neutrality, "*that the sanction of parliament should be asked to "further measures.*" This should be done by Parliament, and not only so, but the question should be put upon a definitive basis in the code of international law. The matter of iron-clad steam rams really introduces a new point into the relations of neutrality towards belligerents. The existing somewhat elastic

maritime code permits neutrality to fit out war ships for a belligerent, provided the armaments be not put on board, and we have seen ships of war dispatched from British ports, their armament sent in neutral bottoms, and the war ship taking on its armament at sea without our having the ability to do more than make unavailing reclamations against a procedure, which, while not in absolute violation of the *forms* of law, is yet a flagrant outrage of its *spirit*. But with respect to iron-clad steam rams, there is no such ground for cavils, doubts or evasions. Such a vessel is of itself a complete engine of warfare. It needs no armament. Its offensive power lies in its ability to run into and sink wooden ships. A neutral government, therefore, which permits such a craft to be put afloat ceases to be a neutral, and enters into the belligerency just as completely as if it sent forth a regiment of armed troops to take part in the strife.

A CORRESPONDENT of the *Post* lately asserted that he was informed by artillery officers that the cause of the failure of the Greek fire at Charleston was due to the defectiveness of the shell used for the PARROTT gun, and intimating that the order of the general use of these projectiles in the Army was to be found in the fact that certain Government officials were interested in contracts for their manufacture. Though professing to understand nothing about ordnance, and getting his information second-hand, he attempted to criticise the guns and projectiles on the "principles of mechanics."

To all this Captain PARROTT responds, saying:—"It "is quite true that difficulties have occurred in the "use of my shells, but other kinds have not been free "from similar, and, perhaps, more serious objections. "Experience and care are required for the improvement of all matters of detail, and these have been faithfully rely on them to correct errors in the manufacture and the use of my projectiles. The 'principles of mechanics' summoned against me by your correspondent have not prevented a success of the shell in the ten-inch, or three hundred-pounder gun, at least as decided and complete as ever obtained with rifled ordnance. My shells are made to order, and pressingly ordered both by the Army and Navy "is true, but the insinuation made against their "officers, or any other person, by 'Ordnance,' under "the guise of 'it is reported,' is destitute of the "shadow of a foundation."

BELOW we subjoin a recent order of the Confederate War Department, respecting money sent to prisoners in Richmond, which will be of interest to those who have friends retained as captives of war. The order it will be observed is under date of September 15th, and has not we believe been made public before. Previously to the adoption of the new policy declared in this order, all moneys remitted by the friends of prisoners had been retained by the rebel officials. Remittances will now, however, be paid over to the parties to whom they are sent. It would be advisable to have all letters containing money addressed in a sealed envelope directed to Brigadier-General MEREDITH, United States Commissioner for Exchange of Prisoners, Fortress Monroe, Va. Letters to prisoners should be unsealed. Boxes containing clothing can be sent. They should be addressed to the name of the person, "prisoner of war, Richmond, Va.," and forwarded by Adams Express Company.

CONFEDERATE STATES OF AMERICA, WAR DEPARTMENT, } RICHMOND, Va., Sept. 15, 1863.

Brigadier-General WINDER:

GENERAL:—You will hand over such gold as may be sent to the prisoners, accompanying to them that, being money recognized by both Governments, it is handed to them in kind, and that if at any time they wish to convert it into Confederate money, they can do so, at any time, at the market price in this city. If the amount received be in the Federal paper, you will exchange the same in kind, as is at present done with money by the Confederate Government, nor can its value already be changed, but it will at their option be converted, at current rate of exchange, into Confederate notes, and such notes delivered to them, or retained as kind for their future use. Your obedient servant,

JAMES A. SEDDEN,
Secretary of War.

JNO. H. WINDER, Brigadier-General.

SINCE November 1st, 1862, the PRESIDENT has made 211 appointments in the Regular Army. Of this number 145 are from the ranks. The promotions in the same service since that date amount to 220. The casualties number 209, as follows:—Resigned, 60; commissions vacated under sec. 7, act June 18, 1864, 10; commissions vacated by new appointments, 15; declined, 3; cashiered, 3; died, 53; not confirmed by the Senate, 12; discharged under the act of August 5, 1861, 9; discharged under the act of May 20, 1862, 12; revoked, 11; dropped, 1; dismissed, 28; cashiered, 3. The appointments in the Volunteer force are: Major-Generals, 44; Brigadier-Generals, 127; Aids-de-Camp—Majors, 21; Captains, 47; Assistant-Adjutant-Generals—Majors, 31; Captains, 119; Judge-Advocates, 8; Assistant-Quartermasters, 178; Commissaries of Subsistence, 137; Surgeons, 82; Assistant-Surgeons, 66; additional Paymasters, 188. The casualties among the Volunteer force are: Resigned, 130; commissions vacated by new appointments, 13; declined, 59; not confirmed by the Senate, 54; acquitted by the Senate, 11; revoked, 13; cancelled, 1; died, 29; discharged, 17; dropped, 1; dismissed, 7; cashiered, 1.

THE Monitor *Manhattan* was launched from the yard of Messrs. SECOR & CO., Jersey City, on Wednesday, October 14th, at a quarter to one o'clock. The launch was successfully accomplished, the vessel gliding easily from the stocks. The yard was opened to the public, who thronged every available place. Many ladies and Naval officers lent their presence to enliven the scene. Among the latter we noticed Admirals FARRAGUT and GREGORY, Commodores STEVENS, LAWTON, FAHON, KIMBALL, and Engineer CUNNINGHAM; Captains DRAYTON and FILLEBROWN; Lieutenant GREGORY and Ensign FARRAGUT. Several officers from the Russian fleet in the harbor were also present. The vessel was christened by Miss INGERSOLL, granddaughter of Admiral GREGORY. The *Manhattan* is similar in all respects to the *Tecumseh*, a full description of which we gave a few weeks since. She has two of MARTIN'S Tubular boilers, and is expected to steam ten knots. This is the fourth vessel built by Messrs. SECOR within fourteen months for the Government. The three others are the *Oonaneho*, *Weehawken*, *Tecumseh*, and now the *Manhattan* follows. The *Mahopac*, a *fac simile* of the *Manhattan*, is on the stocks, and to be launched in two or three weeks. A double-ender—the *Mohongo*, takes the place of the *Manhattan* on the stocks. Her keel is already partially laid, and she will be hurried forward with all speed.

THE situation before Charleston, though a great attack was put upon the rebels, is in fact little remained unchanged in every respect, with the single exception of the daring attempt of a rebel expedition to blow up the *Ironsides* and the ships lying with her in that vicinity. The attempt was made in a little cigar-shaped craft, on the bow of which was fastened a torpedo containing sixty pounds of powder. It succeeded in making its way down till near the *Ironsides* before it was discovered, and steering toward that vessel struck her midships, when the torpedo exploded. No damage, however, was done to the *Ironsides*; but the nondescript itself was destroyed or sunk, and with it perished two of the four rebel officers who had undertaken to engineer it. The two others, Lieutenant GLASSELL, (formerly of the U. S. Navy,) and "Sailing Master" ROGERS, were picked up floating on the water. The explosion was severely felt in the *Ironsides*, but no material damage was done to her hull, engines or armament. One of the bulkheads of the vessel was knocked in on the one side, and all his fittings shaken. The rebel papers attribute the failure to two causes—an insufficient amount of powder in the machine, and its being wrested too near the vessel. It is reported that another attempt of the same kind, with another infernal machine, was made the following night, but was frustrated.

IN the southwest, forces of rebel cavalry and artillery, reported as being quite strong, have been threatening the Memphis and Charleston Railroad. General HURLBUT'S force has been constantly skirmishing with them, defeating every attempt to do serious damage. On Sunday morning, the 11th inst., several culverts were destroyed in the vicinity of Germantown and Collierville. On the 12th an attack was made by CHALMERS, with cavalry and artillery, reported 5,000 strong, upon the garrisons at Colliersville (consisting of the 10th Tennessee Infantry), driving them into the fortifications and burning their cantonments. During the fight, Major-General SHERMAN and Staff, with the Seventeenth and Thirteenth regulars, arrived upon the train, *en route* to Corinth. They disembarked, engaged the enemy, and repulsed him with heavy loss. The rebels lost 9 killed, 27 wounded and 9 missing. Colonel ANTHONY'S loss was about the same number.

THE report from Richmond is that the programme of the rebels is to tear up the Memphis and Charleston Railroad, when JOE JOHNSTON will move into West Tennessee, and make his headquarters at Jackson; but the statement has in it few elements of probability.

GENERAL BURNSIDE has been pushing his advance along the East Tennessee and Virginia Railroad, and on the 6th inst., 10th inst., overtook the rebel force under MUDWALL JACKSON and General WILLIAMS at Blue Springs. The enemy were in strong position, and a sharp engagement ensued, when at sundown they were driven from the field. The next morning the rebels continued the retreat on the Greenville road, General BURNSIDE'S force in pursuit. His loss was some 65 killed and wounded.

A DISPATCH from Major-General SCHOFIELD to the General-in-Chief, dated St. Louis, October 13, says that Gen. BLUNT has beaten the rebels under SHERAW three times, and is still in close pursuit, and that their escape is hardly possible. Two expeditions recently sent into North-eastern Arkansas have captured and sent to Pilot Knob over 100 prisoners. A subsequent dispatch, dated the 14th, says that General BROWN brought the rebels under SHELBY to a decisive engagement on the previous day. The fight was obstinate, and lasted five hours. The rebels were finally completely routed, and scattered in all directions, with the loss of all their artillery and baggage, a large number of small-arms, and prisoners. The enemy's loss in killed and wounded was very large.

A DISPATCH from Leavenworth, announces the killing and capture of nearly all of General BLUNT'S Staff and body-guard. It appears that the rebel general COBELL, with, it is reported, about 3,000 of COOPER'S force, crossed the Arkansas river east of Fort Gibson, on the 6th inst., joined COFFEE at Cowskin Prairie, Mo., determined to make a raid into Arkansas or Missouri. General BLUNT being informed of a threatened attack on Fort Smith, left Fort Scott for the endangered post. He, with his escort, was attacked by 300 rebels in Union uniform, near the encampment of Lieutenant POND. His escort broke, and all but 100 ran. The rest killed. General BLUNT, however, escaped; and, meeting reinforcement took command of them and started in pursuit.

IT is with much pleasure that we acknowledge our indebtedness to numerous gentlemen in the Army and Navy for the prompt and cheerful support they have given the JOURNAL. We have published in the numbers already issued, contributions from some of the most experienced and most distinguished officers of the two services; and we are daily gratified by the reception from all portions of the country of cordial expressions of interest in the enterprise we have undertaken, as well as by expectations of important valuable contributions. The ARMY AND NAVY JOURNAL has already secured a circulation which more than realizes the most sanguine of the expectations of its proprietor, and secures its permanent existence.

GENERAL FOSTER officially reports that the expedition sent out on October 6th, the 6th inst., under General WISTAR, to break up or capture the guerillas and boats' crews organized by the enemy in Matthews county, had returned. It having the main accomplished its object. Small captures of men and horses were made, and many boats destroyed. General WISTAR reports the Fourth Colored Infantry to have marched thirty miles in one day, with no stragglers.

OUR Russian visitors continue to be piled with attentions, and banquets, gotten up by public bodies and private individuals, are in store for them in this city, and they are daily receiving invitations to visit other places, where it is the intention of the authorities to give them grand public receptions. The danger is that we will wear them out with our hospitalities.

HEADQUARTERS, ARMY OF THE POTOMAC, }
October 15, 1863.

The Major-General commanding announces to the Army that the rear guard, consisting of the Second corps, was attacked yesterday, while marching by the flank. The enemy after a spirited contest was repulsed, losing a battery of five guns, two colors and 450 prisoners. The skill and promptitude of Major-General WARREN, and the gallantry and bearing of the officers and soldiers of the Second corps, are entitled to high commendation.

By command of Major-General MEADE.
S. WILLIAMS, Assistant-Adjutant-General.

COLONEL J. W. TURNER, Chief of Artillery to Major-General GILLMORE, has been promoted to be a Brigadier-General.

BRIGADIER-General Solomon Meredith, of Indiana, has recovered from his wounds, and is about to take the field.

LETTERS from Port Royal state that Colonel SERRILL, of the Engineer Regiment, has tendered his resignation to General GILLMORE.

MAJOR J. W. ABERT, of the Engineer Corps, U. S. A., is announced upon the staff of Major-General GILLMORE. His will have the management of records and topographical surveys under his control.

CAPTAIN John H. MOORE, Chief Quartermaster to Major-General GILLMORE, has been relieved at Brig.-Gen. SAXTON'S request, and is Chief Quartermaster at Beaufort, N. C. He is succeeded at the front by Capt. Dunton, A. Q. M.

GENERAL BURNSIDE'S forces engaged the enemy on the 10th at Blue Springs, Tenn. We lost sixty killed and wounded, among them the following officers:—Captain Negley, Ohio Volunteer Corps, killed; Lieut. R. Chessman and Lieut. Wm. Penn, 2d Ohio, wounded; Lieut. A. Goodell, and Lieutenants R. M. Holmes and H. S. Robinson, 10th Mass., wounded.

FOREIGN NAVAL AND MILITARY MATTERS.

VOLUNTEER corps are now organizing in Sweden on the same plan as in England. The object is the defence of the country against invasion, in case the regular army should be employed abroad.

The *United Service Gazette* learns that Rear-Admiral Sir JAMES HOPE, K. C. B., has been nominated successor to Vice-Admiral Sir A. MILNE, K. C. B., as commander-in-chief of the North American and West Indies station.

THE Navy of the Italian Kingdom is to be increased from 83 to 118 vessels. Of the new vessels, 24 will be first-class iron-sheathed frigates, 6 second-class, 6 batteries, &c., 12 corvettes, 12 gunboats, 15 advice-boats, 14 transport ships, and 9 steam-tugs of wood.

A CONTRACT has been entered into by the French Navy Department, for a large quantity of armor plates required for vessels of war now on the stocks, and which are to be launched before the close of the year. A large sum was devoted to the construction of these armor plates by the marine budget for 1863.

THE Paris correspondent of the *Morning Post* says: "It is feared in Paris that the British Government is about to become less indulgent toward the South as "regards the building of vessels intended for war purposes, which will affect the policy of the French Government and the Southern cause."

MEXICAN advices, says the London *Daily News*, state that General Forey and M. Saligny had been recalled by order of the French Emperor, and that Bazaine had taken command of the troops. The french forces (1,200 men) took possession of Tampico on the 8th of August last. The negotiations between the government of President Juarez was postponed till the conclusion of the rainy season.

THE British Government has resolved to build large forts of iron round the depots commanding the entrances to their chief naval arsenal. The difficulty is to get a foundation, but it is proposed to construct a number of caissons by Iron Shoeburyness, to be raised upon shipways, which latter are capable of being removed from under the tower, which will by its own weight sink down and find a foundation on the sea.

IN the English Army, the diseases of vice create greater havoc than disorders of any other type. Medical statistics show that in the Bombay and Bengal armies one man in three, in the Madras army one in four, is tainted by venereal disease. In India and the colonies the French system for confining within certain bounds vice which no human power can suppress, is being gradually adopted and with the happiest results, as far only as the mitigation of disease and the salubrity of its type are concerned.

THE British Admiralty is now bestirring itself in the matter of guns, and testing heavy ordnance on board ship. Two guns of 12 tons weight and 10-inch bore are to be mounted immediately on the *Excellent*, one of them being rifled on the so-called shunt plan, and the other a smooth-bore. The rifled gun will fire a projectile of 250 lbs. weight, and the smooth-bore a round ball of 150 lbs.; the rifled gun will also fire a round ball, Sir W. ARMSTRONG having in his later weapons joined in using the smooth-bore muzzle in the rifled gun.

THE *Scotsville* of Toulon states that several ironcased ships on a new model are about to be launched, which will far exceed in power of resistance any ship of war yet launched. They are to be called "bulldogs," and are intended especially for the defence of the coast of France. It is added that the plan on which these new ships are to be constructed is the result of the examination of twelve plans submitted to the Minister of Marine, and that was not any good was selected from each plan, and a very perfect iron-cased ship was the result.

THE annual report on the British military prisons presents some curious statistics of the number of soldiers committed to military prisons for being drunk. In the five years 1858–62 the annual commitments in England averaged 73 to 10,000 on the force stationed in England; in Scotland the average was 122 in 10,000 on the force stationed there; in Ireland, 301. In the next five years the annual average fell to 73 in England, 64 in Scotland, and 143 in Ireland. In the last five years it has been 79 in England, 70 in Scotland, and but 68 in Ireland. It will be seen that the decline of the commitments in Ireland is enormous, but still greater in Scotland. The reason is given, according to the nationality of the men, but locality of station.

THE British *Naval and Military Gazette* seems to doubt the efficiency of iron-clad ships, and does not subscribe to the opinion that the *Royal Sovereign*, built on Capt. COLES' plan, is the *beau-ideal* of the British navy. It believes in such a disguised ship, but that what they may be easily worked without the ponderous machinery adapted to revolving turrets. "We would, according to our usage, so define the construction of ships "if requisite, the *one gun of great calibre* should be, *pro tem.*, the sole dominant destructive weapon reserved for the deadly blow, the remaining guns "being protected by close air-tight ports, when not demanded for action, but of that stinging quality at "your mast, not exceeding the 32-pounder (or 68-pounder 12-pounder) as would materially eat up and gall "a chased or chasing foe. The fault we find with the "heads of our departments is the deference of proper "trial. It seems as if they had sworn to despise "every mode of experiment but *the one* on which "their hearts were set—indeed almost to the extent "of paralysis; so it is at this moment that, were an "action to occur, we should learn that an adequate "chase gun, with adequate fittings, was the main "thing deficient; and yet, our *lobbing shot* from the "despised 32-pounder would destroy the screw or "rudder of the largest ship afloat, and at a distance "to which none of the 68's can carry."

THE London *Mechanics' Magazine* for September 26th has a leading article on "American Heavy Ordnance," supplementary to the one we copied last week. It commences by saying that the construction of heavy ordnance suited to meet all the requirements of practical warfare, presents one of the most difficult problems which task the inventive powers of the age of the 19th century. The English, it acknowledges, with the rest of the scientific press of the country, have not a single gun capable of firing a shot over a 100 lbs. weight, which is thoroughly reliable, or in which they can rely for half an hour in action. The obstacles to the general introduction of heavy ordnance in England, of not less than increased a hundredfold by complicated breech-loading machinery, deemed indispensible, obtained at a vast expense, and usually found wanting in the day of trial.

A COMMISSION of officers of the navy and of engineers of the three Scandinavian kingdoms has been for some time assembled in that capital, to deliberate on the measures to be taken for combining in a common action the land and sea forces of Denmark, Sweden, and Norway, in case the former power should be attacked. The Danish Minister has taken into consideration by the commission is that for the future the vessels of the three powers shall be constructed on a uniform plan, and armed with guns of which they may form a compact fleet in the Baltic, and as much as possible of the same rate of speed, so that they may receive the same instructions and act with regularity. The command will, it is said, be conferred on Prince OSCAR, brother to the King of Sweden, who is already admiral-in-chief of the fleet.

DR. BENJAMIN FRANKLIN BATES, of London, has invented some improvements in the construction of cannon. According to this invention, a hole, smaller than the bore, and parallel therewith, is bored through the breech end of the gun. Each projectile is provided with a long rod or bar, which in loading the cannon is inserted through the hole in its breech; at the front end of the rod is an enlargement or head, which, however, is smaller than the bore; this head may be solid, or it may be pierced with a hole, which during this enlargement is placed a loose disc which fits the bore accurately; the periphery of this disc may, if desired, be provided with packing, or it may also have flanges material combined with it; the rod at the rear end of the projectile is, by preference, polygonal in section, with corners of a size to fit and slide in the hole; the rod from end to end of its length, as though the rod were twisted; the hole in the breech end of the cannon is formed with a recess to suit the rod, and the rod is fixed in the recess, when the piece is fired, the projectile, in addition to being propelled forward, will at the same time be caused to revolve on its axis by the loose disc fixed on the head of the projectile, by preference, does not rotate with the projectile, but the rod of the projectile turns in a hole in the disc; as soon as the projectile leaves the gun the resistance of the air will cause the disc to slip off the bar at its rear end, or the disc may be made to separate into two or more pieces as soon as it leaves the gun. If desired, the hole through the breech end of the gun may be closed, as soon as the rear end of the projectile passes out of it, by means of a sliding piston, or otherwise for that purpose by a spring. The hole in the breech end of the gun may be provided with a close-fitting plug; the gun can then be loaded at the muzzle in the usual manner, the above described, or when the plug is fixed in the hole the gun may be used as an ordinary smooth-bore gun.

EARL RUSSELL ON SHIPS FOR THE REBELS.

On the 26th of September EARL RUSSELL was entertained at Blairgowrie, Scotland, by a number of his friends, and made a speech of interest and importance on the foreign relations of Great Britain, and especially as to the charges that the British Government had suffered ship-of-war, designed for the rebels, to leave British ports, he said:—

"Well, there come new complaints—a complaint on the part of the American Minister, that they let loose from the port of Liverpool, which afterwards committed depredations on their commerce. Gentlemen, it would lead me far if I were to go over all the complaints of that kind, but you must know that in order to prove an offence you require such evidence as can be sifted in a court of law, and it was upon the evidence before a court of law, it would have been found that we had sufficient evidence to condemn her, because, by an evasion of the law, the ship was fitted up without the arms necessary for her equipment, and these arms were conveyed to her in the waters of a foreign country very far from the jurisdiction of England.

Gentlemen, these questions must be weighed, and I think there will be weighed, and I believe have been weighed, not by the Government of the United States of America, in the balance of equity. We know that the Foreign Enlistment Act said that, as far as possible, we should put a stop to fitting out of application. The principle is clear enough. If you are asked to sell muskets, you may sell muskets to one party or the other, and to swords, pistols, rifles, or cannon; but you may sell a ship in the same manner. But if you, on the other hand, train and discipline a regiment with arms in its hands, or allow a regiment to go out with arms in their hands to take part with one of two belligerents, you violate your neutrality and commit an offence against the ship department. So in the same way in regard to ships, if you allow a ship to be armed and go at once to make an attack on a foreign belligerent, you are rendering yourself liable to your own law, taking part in the war, and it is an offence which is punished by the law. But then question arises, as you justly remark, difficult problems—as to whether, for instance, a thousand persons here may go out as laborers to the United States of America, and when they arrive there, unite may go out in another ship, and when they arrive in America, these thousand laborers, having had an understanding that they were to meet in America, should there, in the army with three thousand muskets; though, if that had been done in the territory of the Queen, and on the soil of this country, it would have been illegal.

There are other questions with regard to ships that have lately been prepared in this country. Armed ships are in many cases built to receive the usual equipment known in wars in times past, but they are themselves without any fighting equipment, formed for sale or offence and use. They are steam vams, which might be used for the purposes of war without ever touching the shores of the United States, and which, therefore, are not armed ships of the description known, indeed to depart from this country, not to enter into any Confederate port, not to enter into the ports of a belligerent, would, as I suppose, secure our good faith to great suspicion, and I feel certain that if, during our war with France, the Government of the United States had required the blockade at Brest, whatever reasons they might have urged in support of that, we should have considered it a violation of neutrality. We, on the other hand, have prepared for that. Everything that the law of nations requires, everything that statutes that the Foreign Enlistment Act requires, in an impartial sense, we think we should be proved to be necessary for the preservation of our neutrality, that the sanction of Parliament should be given to the measures. In short, Parliament should be asked to give us the power which, in the case of a war between

causes are masters of the situation, not only on account of their great resources, their superior numbers, and their better credit, but because they are enabled to evoke more action from science than their enemies. We have consumed years and millions starting in endeavors to perfect a system of Armstrong artillery, and are not advanced, according to the report of the last Commission of Inquiry, beyond the old 68-pounder; whereas the Federals, in a few months, have quietly done wonders. English artillerists are startled at the results which have been achieved. The Federals have thrown explosive shells from their guns with astonishing precision. The South should have calculated on the enormous mills. The Secretary of the North has not even a superior scientific faculties of the North. The Secretary of War is the case in the ancient and bloody arbitrament of battle; and English journalists and caricaturists, now they see the shells exploding in the Confederate ranks, call it the invention of torpedoes. Our last number contained a description of these "harmless" toys, for which they were ridiculed, which have been so liberally distributed in the Mississippi river and Charleston harbor. Our people are not to be caught by such "traps." Yankees, and blew her launch to fragments; a few moments after, another exploded, and then another. These torpedoes were contrived by Lieutenant Glassell, of the Confederate States navy. At they float down the tide the anchor-chain of the vessel which is to be destroyed catches the ropes which attach the torpedoes to the torpedo-boat, and explodes them on the sides of the vessel. It so happens, however, that these machines are no respecters of persons, and, as they float down the tide, they are as likely to sink the enemy's gunboats as the transports of friendly vessels laden with friendly assistance, which may have left the harbor.

Captain MAURY, who is by far the most scientific man the Southern States have produced, has just written a long letter to the *Times*, which the London journal prints on the ground of the inhumanities committed by the Northern armies. He omitted to state that Southerners commenced, through Maury, and others, the system of torpedo warfare—that Maury, and that the *Alabama* and *Florida* privately destroy what they cannot appropriate on the high seas. He omitted to state that these vessels burn the ships they capture at night-time, so that they may attract other ships to the scene of conflagration, and thus destroy more. He also failed advise Captain MAURY to read EMERSON'S Essay on "Compensation." Whatsoever men sow, that shall they reap. The Southerners have sown the wind, and are deservedly reaping the whirlwind.

STAND BY THE GOVERNMENT.

In a late number of BROWNSON'S *Quarterly Review* there is a strong article in the editor's best style, entitled "Stand by the Government," in which a severe rebuke is administered to those feeble patriots who have quailed before the first outcry raised against the war for the denial of peace and submission. The reviewer is equally severe upon the politicians who had no other ground of appeal beside the salvation of the principles of their party. He says:—

"We have been struck with the absence of all real patriotic fire in those who appeals the civil war has elicited. We detect bodily an indication of deep and abiding attachment to the old, and a lack of enthusiasm for the new and forward. Our poets might as well be foreigners as natives. We sing as a recent people, as a people without ancestors, and without posterity. We have no memories even to have gathered for us around our native land. A stranger would say of us, that we have pitched our tents rudely and hastily on our dwelling-place, and that we have yet learned to look upon our country as our mother, and to feel every blow aimed at her a blow aimed at our own life. We love our country because we like liberty, democracy, political equality, or because it is one in which we have a fair chance to make our fortune, and to rise in the world, and not because it is a blessed privilege to serve it, and to sacrifice ourselves for its unity and integrity, existence and glory. It is a great evil. We feel it, and we deplore it deeply; we love our country because it is our country; because for many generations it has been the home of our fathers; and because, as we hope, to be the home of our children. Because we are familiar with it; because it is associated with all our joys and sorrows; and because it is a part of our life as a part of us. We hold every inch of territory covered by the dear old flag consecrated ground, worth living for and worth dying for. But, for the most part, we have no respect for it, nor he who would counsel it, because he dreads the waste of blood and treasure caused by war, would, on slight occasion, devote his own and his children's property, and sell our house to satisfy his greed. He only is fit to be reckoned an American citizen, who can give up all for his country, and defend the unity and integrity of her territory to the last gasp. We have no patience with those white-livered politicians, whose only hope in the crisis is to secure their dividends. The country will hardly fail to estimate them finally at their real worth.

He takes radical ground against rebellion:—

"The most hateful thing on earth is rebellion, and we have uniformly held aloof from the Kossuths and the Garibaldis. We do not sympathize even with the Poles in their uprising against their EMPEROR, and we are not pleased to see the Government giving commissions in our Army to men who were rebels in their own principal States of the Austrian land. What absurdity to commission rebels to fight the battles of legitimacy, of law and order, to uphold the Government against rebels. It is calling in Satan to cast out Satan, or the Devil to expel sin. Send out the Archaus from the camp, if you expect your cause to succeed. We are no admirer of the EMPEROR of the French, and we would gladly see liberty developed and extended in France, but not by rebellion or revolution. No institutions founded by violence, in contravention of the great principles of law and order, can ever be salutary. Liberty must be in the people before it can be in the laws, and political and social constitutions must be generated, developed, not created. We oppose rebellion, on principle, for conscience sake. We advocate the subjection of the Rebels, not because they are aristocrats, not because they are slaveholders, pro-slavery men, the South-Carolinians, or any other party because they are rebels, making war on the sovereignty of the Nation, the authority which they and we are alike bound to obey. They have cease to be rebels only when they submit and return to their allegiance, and we will recognize them as fellow-countrymen, and as fellow-citizens, and respect their rights and property as our own."

Discussing the question of negro enlistments, Dr. BROWSON says:—

"The profession of arms should be regarded as a liberal profession, and the soldier should rank next after the priest. None but sons of the *gentry* should be permitted to make themselves soldiers. And not officers in the fullest sense of the term should have the honor of fighting the battles of their country. In this way the Army may be made a noble institution, and be regarded as a liberal and honorable profession. It would be, if so made, an honorable distinction; and one sons might feel proud of. Then, too, the Army would not be a subdivision merely on the battle-field to badges of honor, and passports to favor. There is more in this than our shoulder-straps and epaulettes. We have never aspired to be people we have been. We are passing from the aristocracy of birth to that of wealth, and the latter is hardly of a nation of shopkeepers, speculators, and demagogues. We must have an Army and Navy that will be known to us as respected, but which we are ready to advise, and success to our diplomacy. The way to insure peace is always to be prepared for war. The way to have a nation from becoming effeminate, cowardly, corrupt, rotten, is to cultivate the military spirit, which keeps alive its manhood."

He contends that we have officers superior to those of the Rebels:—

"We have officers enough in our old Regular Army who, if they were brought forward, would prove more than a match for the best of the Rebel Generals, JOHNSTONES, the LONGSTREETS, the JACKSONS, the HILLS, the EWELLS, the BRAGGS, the PRICES, and the PEMBERTONS of the rebel army. There were a few of the latter who showed, in the early days, to be proved disloyal, three to one; but we have kept them, for the most part, in the background, and the Rebels have thrust forward their ablest Generals, and given them the highest commands. Our Government, had its policy in the beginning tended to military success, we must believe, would have done the same thing."

DR. BROWSON claims that our reverses are not due to the inferiority of our generals or to any lack of pluck on the part of our troops, but

"To the superior organization and more rigid discipline of the rebel army; and the superior organization and more rigid discipline of the rebel army are due to the fact that the Rebels have no militia, and ours is composed almost entirely of volunteers militia. We have not sufficiently considered that the Rebels have been drilling regular troops with State militia. Militia can never be as well organized, officered, and disciplined, as regular troops. In an army composed of militia, there will be more and finer officers of the regiment. In the volunteer militia the company elect, or are supposed to elect, the officers, and the regimental officers are elected by the line officers, and not commissioned by the State Governor. Thus the regiment is organized by State power, and the formation of the regiment is the only power which is to employ it. This, of itself, is a great evil, and affects the unity and efficiency of the military organization. The first principle is to obey implicitly our place in an army, and not only places unworthy men in command, but establishes a false relation between officers and men. The men look upon the commissioned as pretty sure to be the one elected, and the company, which is the unit of the army, is to a great extent disorganized. The company officer is not a unit, and is not in form. The officer elevated from the ranks by the suffrages or his equals, cannot, if he would, place himself at once in the position which he ought to maintain in their regard the rigid discipline necessary to render his company really efficient. The poor organization and discipline of militia destroys the unity, efficiency of the regiment, and the inefficiency of the regiment destroys that of the brigade, that of the brigade that of the division, and thus we have a great disastrous to the corps d'armée, and cause the defeat of the whole army, as we saw at Chancellorsville, and would have seen at Shiloh and at Murfreesboro', if the men were promptitude and resource of the commanding Generals. We have attributed our failures almost uniformly to the inefficiency of officers; we should at least have put if we attributed them to the disjointed organization of the Army, and to the inefficiency, ignorance, incapacity, disorganization, and indiscipline of most of the regimental officers, and most frequently to the line or company officers.

Of the Conscription law he says:—

"The Government has taken one step in the right direction. The Conscription law passed by Congress at its last session is a great advance on the previous laws of defects. The clause exempting the conscript by his paying three hundred dollars to the Government is an error. The drafted man should either be compelled to serve personally, or to procure a substitute, as was the case originally with the French law. The change in the French system has been introduced by the present EMPEROR, as alleged, for the purpose of getting a body of mercenary troops more devoted to his personal will than the conscripts are supposed to be. But it will will than the conscripts are supposed to be. But it will thus only enable wealthy and the rebellionly inclined to escape, by a paltry fine, the military service they owe to their country, and which they ought to be compelled to perform. The making of clergymen subject to draft is another serious error, and unworthy of even a nominally Christian nation. The ministers of religion are the ministers of peace, and the discipline of the Church renders them irregular, if they shed Blood. *Sacerdos abhorret a sanguine*, is a maxim that it is well never to forget. But the gravest error of all is in making the conscripts State militia, instead of regular troops of the United States. There is a big gain in the mode of making troops, but all the inconveniences of the volunteer system remain, so far as relates to the appointment and commissioning of officers, and the organization and discipline of the Army. The Confederates avow State sovereignty and act on the principle of National Sovereignty; we avow National sovereignty and we practically act on it, but act on the principle of State sovereignty. States-right cause in everywhere to embarrass the National Government, and to paralyze its efficient action. The people, too, have a foolish prejudice against raising and organizing a regular army. It is the creature of a few republics. There is, we are sorry to see, with many, from whom we have a right to expect better things, a disposition to sink and even obliterate our Regular Army as much as it can, and even a determination to suppress our Military Academy at West Point. Yet the Academy furnishes us our best officers, and will continue furnish them, if the number of regular Army officers ordered there, would be for less efficient than it now is. There are men, of the highest and purest and noblest heads; would you, therefore, break up your colleges, and dispense with liberal education altogether? Not every graduate of West Point is a military genius, but, other things being equal, the education he receives there is of immense advantage. Some men may rise to distinction and fame out eminent scientific men who have never had a university education; so some men may become distinguished generals without having been educated at a military school, but never without having received somewhere, in some form, a real military education. A regular army is far less expensive than a volunteer army, and with a regular force to far less loss of life in accomplishing the same objects than with volunteers. War is always to be carried on, or guarded against, with the best and most experienced men to be had a regular army proportioned to its probable wants. We must abandon many of the principles which have many of them as old fogies, and have the manliness to adapt our measures and our institutions to the new wants and circumstances that the Rebellion and the growth of the nation have created."

With the hopeful federal and determined words he closes the article:—

"We must say to the people also, that we are too much in a hurry, and too impatient to have the war speedily ended. We forget that our Generals are not conducting operations for the public eye, as we yet in the North-West States; but in a country where there are few good roads, and where a great part of the land is covered with dense mountains and forests, and ravines, and still covered with the dense primeval forests, where neither cavalry nor artillery can act with any effect, and hardly operate at all. There is hardly a battle-ground in all Virginia suitable for two armies seventy-five thousand, or indeed fifty thousand each. We have not yet got the right or correct information of the real character of the Southern States. Their topography is almost entirely unknown to our engineers, and our engineers have to feel their way as they advance. The elder NAPOLEON'S and the younger NAPOLEON'S campaigns are no criterion by which to judge of ours. We must not exult when we hear of a victory, as if the Rebellion was crushed, nor be cast down as if all were lost when our arms meet with a reverse. Rebellion is not yet put down, and will not be this year nor next. We must make up our minds for a long and arduous war, which will test to the utmost our power, our pluck and our resources. The end we are fighting for is one worth fighting for, even if we fall in the struggle. We shall fall gloriously, if we shall triumph at last, in spite of the politicians, copperheads, faint-hearted Union men, and secure this great country to the enjoyment of freedom and political life. There is, when we look at the end, no reason for despondency."

MASSACHUSETTS VOLUNTEERS.

The following appointments were issued during the week ending October 10, 1863, by direction of the Governor of Massachusetts:—

Second Lieutenant Thomas Hamilton, Company O'Brien, 1st Cavalry, to be Captain, July 29, 1863, vice Black, dismissed the service.

First Lieutenant Charles Ellis, 2d Battalion of Sharpshooters, to be Captain, August 8, 1863, vice Roche, dismissed the service.

Second Lieutenant Edward Murphy, 2d Cavalry, to be First Lieutenant, August 4, 1863, vice Miller, discharged the service.

Second Lieutenant Joseph Bunnell, 2d Cavalry, to be First Lieutenant, July 29, 1863, vice O'Brien, promoted.

First Lieutenant Charles A. Herbert, 2d Infantry, to be First Lieutenant, August 4, 1863, vice McNamara, wounded.

Second Lieutenant Edward Bishop, 2d Infantry, to be First Lieutenant, August 4, 1863, vice Lyon, promoted.

Second Lieutenant Henry Thompson, to be Captain, September 23, 1863, vice Hampson, to be Captain, September 23, 1863, vice Lyon, promoted.

Second Lieutenant Edward H. Graves, 4th Infantry, to be First Lieutenant, September 23, 1863, vice Hampson, promoted.

Sergeant-Major Frederick Fiske, to be First Lieutenant, September 23, 1863, vice Markland, killed in action.

First Lieutenant Samuel J. Fletcher, of Northbridge, to be Captain, September 23, 1863, vice Hampson, killed in action.

First Lieutenant George W. Brown, of Leominster, to be Captain, September 23, 1863, vice Lyon, promoted.

Second Lieutenant James May, of Fitchburg, to be First Lieutenant, September 23, 1863, vice Hampson, promoted.

Second Lieutenant Henry G. Bradley, of Gardner, to be First Lieutenant, September 23, 1863, vice Brown, promoted.

Second Lieutenant David H. Field, of North Brookfield, to be Second Lieutenant, September 23, 1863, vice Hampson, promoted.

Second Lieutenant Nelson V. Stanton, of Northbridge, to be First Lieutenant, September 23, 1863, vice Fletcher, promoted.

Second Lieutenant Thomas Jordan, of Fitchburg, to be First Lieutenant, September 23, 1863, vice Hodgdon, discharged.

Second Lieutenant Joseph Thomas, of Gardner, to be First Lieutenant, September 23, 1863, vice Murray, discharged.

Second Lieutenant Joseph Woodbury, of Worcester, to be First Lieutenant, September 23, 1863, vice Stevens, promoted.

Sergeant George H. Simmons, of Fitchburg, to be First Lieutenant, July 4, 1863, vice Brown, promoted.

Sergeant Henry A. Bennett, of Fitchburg, to be First Lieutenant, July 4, 1863, vice Fitchburg, promoted.

Second Lieutenant Charles Henry W. Bond, of West Roxbury (45th Regiment, M. V. M.), to be First Lieutenant, October 6, 1863, vice Hampson, promoted.

THIRTY-FIRST REGIMENT.—Private S. MASS, M. D., of Boston, to be Second Lieutenant, October 10, 1863, vice BROWN, commissioned Surgeon 6th Corps D'Afrique.

FIFTEEN REGIMENT.—Assistant-Surgeon Paul G. Garvin, M. D., of Nashua, 12th Infantry, M. V. M., to be Assistant-Surgeon, October 6, 1863.

FIFTY-FIRST REGIMENT, (VETERAN VOLUNTEERS).—Sergeant Henry L. Swords, of Charlestown (5th Regiment), to be Second Lieutenant, October 6, 1863, vice Garrison, deceased. Orders No. 70, War Department, series of 1863.

SEVENTH BATTERY OF LIGHT ARTILLERY.—Second Lieutenant Wilbur G. McCurdy, of Lowell, to be First Lieutenant, September 30, 1863, vice Farrar, deceased.

Sergeant Charles W. Brigham, of Lowell, to be Second Lieutenant, September 30, 1863, vice McCurdy, promoted.

SEVENTH UNATTACHED COMPANY HEAVY ARTILLERY.—Second Lieutenant Ernest Unatreckt, of Boston, to be First Lieutenant October 7, 1863.

William B. Hale, of Rowley, to be Second Lieutenant, October 7, 1863.

By order of the Commander-in-Chief.

WILLIAM SCHOULER, Adjutant-General.

ARMY GAZETTE.

VANITY REDUCED.

HEADQUARTERS ARMY OF THE OHIO, }
KNOXVILLE, TENN., Sept. 20, 1863. }

General Field Orders No. 15.

For the purpose of enforcing the character of Colonel John De Courcy from the injurious imputations which are cast upon it by certain false and calumnious reports, charging him with acts of which he was innocent, the Commanding General desires to state, as an act of justice to Colonel De Courcy, that he received from him a Confederal Gap solely for writing a letter to his commanding officer, Brigadier-General Sheridan, a copy of which letter is given below.

This letter was written to General Shackelford, at a moment which ended for ever all reply comparable at every other moment, because, ever, of exhibiting such a spirit, this letter in a flourish of vanity, consisting of quotations from Napoleon, was written in a moment of insubordinate ill nature, and which implies that he can perform a work to which the real message will not refer. It is a letter of falsehood that he was wholly unequal.

In charity to Colonel De Courcy's public record the following is not inserted.

[COPY OF CORRESPONDENCE.]

HEADQUARTERS U. S. FORCES, in front of }
CHATTANOOGA, TENN., Sept. 20, 1863. }

COLONEL DE COURCY, Commanding U. S. Forces south of the Ohio:

COLONEL—I herewith the Gap of Confederal, which you have demanded of General Frazer, commanding at this Gap, according to your surrender of the Confederal forces. You will please receive and retain. I want to know your position. I want to know if you are willing to obey my orders. I occupy it, and prevent the enemy from escaping in that direction. I want to concentrate my forces, and I want to know if you are willing to obey my orders. The enemy is in a position from which I cannot escape. I want to know your position. I want to know if you are willing to obey my orders. The enemy is in a position from which he ought not to escape, and if possible must be destroyed. I want to know if you are willing to assist thoroughly the country on the north side of the Ohio.

I am, Colonel, very respectfully,

J. W. SHACKELFORD,
Brigadier-General Commanding.

CHARLES CAMPBELL, Assistant-Adjutant-General.

To General SHACKELFORD, Commanding U. S. Forces south of the Ohio:

GENERAL—I received the dispatch of the 7th, and I shall fully inform your chief of staff and circumstances which will show that I have not been unfaithful to the duties of a soldier, and that I have been the military profession almost continuously ever since my eighteenth year. For the above reason I am deeply insulted by General Burnside and appointed to this independent command, receiving from him orders, not as an officer under command, as I believe he treated to my experience and local knowledge.

I hope and believe that I shall conduct myself in this mission so as to enable you to enter the Gap.

I have the honor to be, sir, your obedient servant,

JOHN DE COURCY,
Colonel Commanding U. S. Troops south side of Gap.

For the letter Colonel De Courcy is relieved from command, and no officer will be allowed to remain in this Army who displays such a spirit of insubordination to loyalty and presumption of which the patriotism and the public good.

By command of Major-General BURNSIDE.

LEWIS RICHMOND, A. A. G.

PERSONAL DISCUSSIONS OF OFFICERS.

HEADQUARTERS ARMY OF THE POTOMAC, }
CULPEPER, Oct. 8, 1863. }

General Order No. 94.

The Major-General commanding calls the attention of all under his command to paragraph 220 of the general regulations for the Army. It being as follows:

Paragraph 220. Differences or discussions among any class of military men, having the character of conveying personal reflections, or tending to the publication thereof their superiors or others in the military service of personal matters, whether official or unofficial, are highly reprehensible, and will be severely punished.

This regulation has hitherto to a certain extent been practically disregarded in this Army, but recent occurrences make it imperative upon the Commanding General to insist upon a rigid observance of its requirements. Any officer who shall hereafter violate existing orders on the subject, is declared that meetings or combinations among officers or men, for the purpose of expressing sympathy with the opinions or others on the military service, in the way of presentations, or their disapprobation of the acts of their superiors in the line of the military service, by resolutions, will be considered as violations of the regulations, and punished accordingly.

By command of Major-General MEADE.

S. WILLIAMS, Assistant-Adjutant-General.

FUENTE DEL MUERTOS.

HEADQUARTERS DEPARTMENT OF NEW MEXICO, }
SANTA FE, Sept. 15, 1863. }

A Board of Officers, to consist of Captain Allen L. Anderson, U. S. Army, acting as Engineer Officer; Captain Theodore H. Dodd, 1st Infantry, California Volunteers; Second Lieutenant Young, Fifth Infantry, California Volunteers, is hereby convened to meet at Fuente del Muertos, N. M., on the 15th day of September, or as soon thereafter as practicable, for the examination of Fuente del Muertos, and select near that spring the exact site for a Military Post, which will be the most eligible one which is to be garrisoned by one company of infantry and one of cavalry.

The Ojo de las Muertos is the point on the Jornada where, since the immigration of Indians here from the Bosque Redondo, the water to small the approach of the tired and thirsty wayfarer. From the neighborhood it has gained its name, from the number of graves many a mile away. They would then crawl stealthily near the spring, and be found dead in the morning, pierced with arrows, or the cows would be was dead. So frequent were these murders that a hundred years ago the spring was called "Fuente del Muertos." It is about this portion of the road between Fra Cristoval and Robledo, a distance of eighty miles, that the Indians infest it. The road, however, through a pass in the mountains which the Military Post is intended to command, the Indians have learned that it is useless to attempt to drive the flocks and herds they have stolen from grazing grounds east of the Rio Grande. Here, while the command remains, the Indians and Mexican robbers this great thoroughfare, it will be a protection to the many persons passing and repassing between Santa Fe and the mines, and to cross the Jornada.

The post will be included within the District of Arizona, and unless otherwise ordered, by competent authority, will be known as Fort McRae, in honor of Captain Alexander McRae, of the U. S. Third Cavalry, who fell while gallantly fighting for the Union, on the field of Valverde, New Mexico, on the 21st of February, 1862.

General Carleton has in his report of the battle of Peralta and touching tribute to Captain McRae—

"On this list of the names of several accomplished officers and many brave and noble men, who have exhibited the last and highest example of unconquerable loyalty and patriotism, I have only to recommended to the respect of our country, and their relatives and friends to the sympathy of our countrymen."

"Among them, however, is one, isolated by peculiar circumstances, whose memory deserves a nobler from a nobler authority than mine! I allude to Captain McRae, who, devoted to his profession, and of a loyalty that will be remembered in the annals of this war, and of a family that will be honored in the annals of this war, and of a family that will be honored in the annals of the bar and high-minded gentleman, he had lived, an example of the best and highest qualities that man can possess."

"His position never sent to the field a more chivalrous soldier to battle for what was just, and to stand firm by the Old Flag, than young McRae. The ethics of the question, whether he should be true to his country and to his profession, he had determined in his mind by a geographical line traced upon the earth. The feuds due to his country were the same to him as those due to his God. In that it was right for him to be true true, and he exercised friends, mine. He died as he would have wished to die, battling for what he knew to be right. And the gallant Old North State, blushing for the sins of some of her children, will point to his grave as that of the memory of this young patriot; and, like Cornelia, she will yet point to his jewel, and say, 'This is my jewel, and I have been allowed to lay a breath of treason.'

By order of Brigadier-General CARLETON.

R. DE FARRARD,
First Lieutenant Colonel, Volunteers, Aide-de-camp.

TRANSFERRED.

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE, }
WASHINGTON, October 12, 1863. }

General Orders, No. 332.

The Counties of Hancock, Brooke and Ohio, in West Virginia, are hereby detached from the Department of Western Pennsylvania and assigned to the Department of West Virginia, under Brigadier-General B. F. Kelley.

By order of the Secretary of War.

E. D. TOWNSEND, Assistant-Adjutant-General.

GENERAL BURNSIDE'S CONGRATULATORY ORDER.

HEADQUARTERS DEPARTMENT OF THE CUMBERLAND, }
CHATTANOOGA, October 2, 1863. }

Order No. 8.

ARMY OF THE CUMBERLAND:—You have made a grand and successful campaign; you have driven the rebels from Middle Tennessee and occupied the strongholds which they deemed impregnable as the scenes of a broad river, crossed it in the face of a powerful opposing force, and, after a series of brilliant manœuvres, by the aid of the unparalleled passes, some forty miles between extremes. You concentrated in the face of the enemy, herculean labor, the entire mountain of Rouge, which you drove from Shelbyville to Tullahoma, of Johnston's army from Bridgeport, and the line of communication of Bragg's corps, and for two days held them at bay, giving them blow for blow, with heavy reinforcements. You then, by the aid of the 11th corps, which you withdrew in the face of overpowering numbers, to occupy Chattanooga, and forced the enemy to battle.

You have accomplished the great work of the campaign; you hold the key of East Tennessee. The Government and the country owe you a debt of gratitude.

Let this reflection remain console you for the regret you experience that the arrivals of fresh hostile troops forbade your re-enforcing the field to crown the victory. You have driven your foe defeated, and earlier for your brave companions who by your side fought and fell. The honor you have won will be shared by every night, considering the odds against you, unless you have lost your courage. You will be proud of your record, your colors full of victory, and deserving of success, heretofore you have been the victim of circumstances over which you had no control. You have been fighting us, but which make you invincible even those who have been your unconscious instruments.

The General commanding earnestly begs every officer and soldier of this Army to unite with him in thanking Almighty God for His favors to us. In gratitude for the success which He has vouchsafed to all the officers and soldiers of this command for their energy, patience, and unconquerable courage, manifested on every occasion by those who fought with such unflinching resolution.

Neither the history of this war nor probably the annals of any battle, formed a loftier example of obstinate bravery and enduring endurance in every circumstance, than the conduct of Longstreet's corps in their assault on the Rock, many times, to hold their positions, under the fire of their own batteries, and overwhelming troops from all the corps, on the afternoon of the 20th of September, in the battle of "Chickamauga."

(Signed) W. S. ROSECRANS,
Major-General Commanding.

EXEMPT FROM DISMISSAL.

The following named officers, charged with offences, and heretofore published, are exempt from dismissal by the President of the United States, having made satisfactory defence in their respective cases, viz:

Captain Jas. M. Wilson, 10th United States Infantry.
Captain James Mooney, 10th United States Infantry.
Captain H. L. Cunningham, 1st Battalion 14th U. S. Infantry.
First Lieutenant William Black, 24 U. S. Infantry.
Second Lieutenant Charles Hoffman, 24 U. S. Infantry.
Second Lieutenant Madison Earle, 12th U. S. Infantry.
Lieutenant W. L. Hall, 2d U. S. Artillery, Brevet Brevet.

The following named officers charged with offences, and heretofore published, are restored to duty by the President of the United States, the Military Commission instituted by Special Orders No. 53, approved 6th inst., having found that the charges preferred had satisfactory defence has been made in their respective cases, viz:

Captain Edward Heyl, 5th Ohio Volunteers.
Captain Charles J. Wickersham, 5th Pennsylvania Cavalry.
Captain J. Hamilton Lee, 5th Ohio Volunteers.
Lieutenant Henry A. Ferrald, 22d Massachusetts Volunteers.
Captain Jeremiah McLain, 19th Illinois Light Artillery.

NOTICE TO DELINQUENTS.

The following officers having been reported at the Headquarters of the Army for not having rendered their returns, they are hereby notified that they will stand dismissed the service of the United States, unless within thirty days from the publication of this, they appear before the Military Commission in session in Washington, of which Brigadier-General Thomas is President, and make such satisfactory defence to the charges against them:

Adjutant-General's Authority.

Captain L. Edwin Knapp, 6th Michigan Volunteers.
First Lieutenant George W. Jelly, 6th Pennsylvania Volunteers.

First Lieutenant J. B. Williams, 6th Pennsylvania Volunteers.
First Lieutenant John R. Reynolds, 6th Pennsylvania Volunteers.
Captain Richard H. Brunner, 7th Maryland Volunteers.

Detention.

Captain D. Rowley, 69th New York Volunteers.
Second Lieutenant F. Stanley Beacham, 7th Maryland Volunteers.

Captain John J. Prentiss, 1st Rhode Island Cavalry.

Failing to report at headquarters Provost Marshal's Office, under the draft.

Surgeon William Worthington, 83d Pennsylvania Volunteers.

Failing to report at Annapolis, Md., as ordered.

Captain E. D. Wilcox, 10th Regiment Veteran Volunteers.
Captain Adam Bodenstein, additional A. D. C.

Failing to report at Columbus, Ohio, as ordered.

Surgeon Jonathan Thomas, 1st Ohio Volunteers.
First Lieutenant Symmes Gardner, 18th U. S. Infantry.
First Lieutenant Joseph Wheeler, 19th U. S. Infantry.

Being in the city of Washington without authority, and presenting a pass to cover this offence after it had been committed.

Second Lieutenant John R. Kane, 8th U. S. Cavalry.

Issuing a pass to Brevet Lieutenant John H. Kane, 8th U. S. Cavalry, to cover the offence after it had been committed.

First Lieutenant B. Jones, 8th U. S. Cavalry, commanding recruiting rendezvous.

Approving a pass issued to Brevet Lieutenant John H. Kane, 8th U. S. Cavalry, to cover the offence after it had been committed.

Lieutenant Edward Myers, A. D. C., and acting Assistant-Adjutant-General, Major Wheelon, commanding cavalry depot, Camp Buford, Maryland.

DISMISSAL.

During the week ending Saturday, October 10, 1863.

Surgeon James C. Fisher, U. S. Volunteers, for persistent failure in making to the Surgeon-General's Office monthly reports of Marine and duties, as required by circular from that office, to date October 5, 1863.

Captain James A. Anderson, 50th Ohio Volunteers, to date October 5, 1863, for absence without leave, conduct prejudicial to good order and military discipline, and for habitual drunkenness.

First Lieutenant Charles P. Bowers, 8th New Jersey Volunteers, to date October 10, 1863, for absence without proper authority, as has been published officially September 18, 1863, and failed to make such report as required by the Regulations.

First Lieutenant Patrick Gallagher, Invalid Corps, to date October 5, 1863, for habitual drunkenness, and for conduct unbecoming an officer and a gentleman.

First Lieutenant Edgar A. Morse, 36th N. Y. Volunteers, previously dismissed, amended to date February 8, 1863.

Second Lieutenant William H. Hall, 50th Illinois Volunteers, to date October 5, 1863, with loss of all pay and allowances now due, or which may become due him, for habitual drunkenness, for failure to appear and for absence without leave.

Second Lieutenant Thomas G. Owen, 8th U. S. colored troops, for drunkenness, to date October 9, 1863.

RESIGNED.

First-Lieutenant George A. Bennet, 4th New Jersey Volunteers, honorably discharged to date August 26, 1863, on account of physical disability, is honorably discharged, to date April 6, 1863.

First-Lieutenant Wm. Hamilton, 4th New Jersey Volunteers, honorably discharged previous to dismissal, to date September 25, 1862.

Colonel Edward Ferrero, 51st New York Volunteers, honorably mustered out of the service, as of the date his regiment went out of service.

MEDICAL DEPARTMENT.

RESIGNED.

Surgeon W. Fitzpatrick, U. S. Volunteers.
Assistant-Surgeon Charles A. Leale, U. S. Volunteers.

ORDERED.

The General Hospital of Gallipolis, O., to be discontinued, and all the patients that can bear removal be sent to Baltimore; those that remain will be quartered in a private house in that town.

NAVY YARDS.

BROOKLYN NAVY YARD.

Work at the yard is brisk as ever. Five vessels are on the stocks, and twenty or more undergoing repairs. Two double-enders are in the dock for repairs and movement; and the *Wyandanch* is progressing satisfactorily. The *Monmouth* was docked out of the Dry Dock on Saturday. The *Canandaigua* has been docked, and the *Ethan Allen* is in the *Sorrivier*. We have made particular inquiry concerning the new fleet of four wooden steamers, said to have been ordered by the Navy Department, and can learn nothing of any who had received orders for them at this Yard. Indeed, the Yard is already so full that no plans could be found for them until the double-enders are launched. The Steamer *Sassacus* is to be launched on the 20th inst. Chester, for the *Richmond*, Capt. T. A. Jenkins, for Mobile; the *Grand Gulf*, Commander Rawson, for Wilmington, and the *Hartford* on the 27th. The *Grand Gulf* will be commissioned on the 20th inst., and will lay or two for Pensacola and New Orleans. The *Supply* is also loading with ordnance stores, destination not reported.

Paymaster Rowan has been ordered to the *Grand Gulf*, which lets on Monday.

Commodore George M. Russom; Lieutenant and Executive Officer, Frederick Rodgers; Acting-Assistant-Surgeon, George R. Bigelsbuhan; Acting-Assistant-Paymaster, E. R. Southworth; Acting Ensign, Edward Hall; Acting Master's Mates, Wm. H. Jones, James Doyle, ; Engineers, Acting-Second-Assistants George W. Shank and H. D. M'Ewen; Acting Third-Assistants S. Stillings, Scot Wheeler, Benjamin Courtney, Thomas Mason, R. C. Bates; Acting-Master's Mates, James Courtney, Thomas Mason, M. H. Greaves; Commander's Clerk, W. S. Dick; Paymaster's Clerk, A. B. Gilbert.

The following named officers have reported for duty at the Yard: Acting-Master Silliss, from the Rappahannock; the *Wilde Rowland* from the *Hippodrome*. The screw steamer *Penobscot* returned to the yard on Saturday night. The *Sassacus*, it is now said, is immediately repaired, and left Sunday night.

BOSTON NAVY YARD.

The first trial trip of the double-ender *Sassacus* has taken place at this Yard. Being the representative of a new class of twenty-seven vessels, the trial was looked forward to with much interest, and proved to be entirely satisfactory. The machinery worked well. The first of the double-enders, it will be remembered, have proved failures in some important points, but the *Sassacus* seem to be happily overcome in the new ones. The *Sassacus* is observed as follows:—Lieutenant commanding, Francis A. Roe; Acting-Master and Executive Officer, Wm. Hamilton; Acting-Master, Wm. C. A. Jones; Acting-Ensigns, Augustus Adey, Farley Hopkins, E. A. Sawyer; Master's-Mates, Henry O'Hara, Gideon H. Smith, E. A. Trusty; Engineer, Acting-Second-Assistant, Wm. Hunter; Third-Assistants, P. C. Reilley, R. N. Ellis, D. W. Griffy and John W. Burley; Acting-Gunner, Neil Mathis; Paymaster's Clerk, Jas. Barter; Acting-Assistant-Surgeon, Benjamin Clarke, Michael Cleary; Paymaster's Clerk, Gustave Dietrich.

The 60-gun steam frigate *Niagara* has been put in commission with the following officers:—Commodore, Thomas J. Craven; Lieutenant Commanding, J. S. Barnes; Surgeon J. L. Fox; Paymaster, C. H. Wilkinson; Chief Engineer, Isaac Hazlehurst; Lieutenant Commander A. Hitchcock; Lieutenant, Edward Myers, A. D. C.; Fleet Surgeon, Wm. Maxwell; Fleet Paymaster, Wm. Speiden; Fleet Engineer, Wm. Wood; Captain's Clerk, Charles Hall; Second Lieutenant, L. F. French; Master, William Watson; Acting Ensigns, A. C. Rhodes, Wm. Hall, Jr., Wm. H. Hall, Jr., Edward Barter; Acting-Master's Mates, Benjamin Clarke; Captain's Clerk, Michael Cleary; Paymaster's Clerk, Gustave Dietrich.

The following named officers have been put in commission with the following officers:—Commodore, Thomas J. Craven; Lieutenant Commanding, J. S. Barnes; Surgeon J. L. Fox; Paymaster, C. H. Wilkinson; Chief Engineer, Isaac Hazlehurst; Lieutenant Commander A. Hitchcock; Lieutenant, Edward Myers, A. D. C.; Fleet Surgeon, Wm. Maxwell; Fleet Paymaster, Wm. Speiden; Fleet Engineer, Wm. Wood; Captain's Clerk, Charles Hall; Second Lieutenant, L. F. French; Master, William Watson; Acting Ensigns, A. C. Rhodes, Wm. Hall, Jr., Wm. H. Hall, Jr., Edward Barter; Acting-Master's Mates, Benjamin Clarke; Captain's Clerk, Michael Cleary; Paymaster's Clerk, Gustave Dietrich.

The following named officers have reported for duty in connection with the following officers:—Commodore, Thomas J. Craven; Lieutenant Commanding, J. S. Barnes; Surgeon J. L. Fox; Paymaster, C. H. Wilkinson; Chief Engineer, Isaac Hazlehurst; Lieutenant Commander A. Hitchcock; Lieutenant, Edward Myers, A. D. C.; Fleet Surgeon, Wm. Maxwell; Fleet Paymaster, Wm. Speiden; Fleet Engineer, Wm. Wood; Captain's Clerk, Charles Hall; Second Lieutenant, L. F. French; Master, William Watson; Acting Ensigns, A. C. Rhodes, Wm. Hall, Jr., Wm. H. Hall, Jr., Edward Barter; Acting-Master's Mates, Benjamin Clarke; Captain's Clerk, Michael Cleary; Paymaster's Clerk, Gustave Dietrich.

Some dissatisfaction has been expressed by the sawyers in the Yard, on account of an order received from Washington delaying them to work by candle-light instead of by the day as formerly. They have been receiving $2.50 per day, and the new order is to the effect that they shall work only ten hours, and receive only two dollars. This change is understood to be made so as to conform with the custom and prices outside the Yard. The average number of men em-

pigged in the Charlestown Yard during September was 3,360, and the amount of the registered tonnage put by for that month will be 256,397 74.

The iron-clad *Monadnock*, the first iron-clad frigate ever built at this yard, will probably be ready to launch in a fortnight. She is a double-ender vessel of 1,564 tons register, and calculated to carry four guns. She will cost about half a million dollars.

The arrivals at the yard are as follows: frigate *Sabine*, receiving ship, from Gloucester; steam sloop *Vandergrift*, from the West Indies, via Philadelphia, and the new gunboat *Agawam* from a successful trip of six days, and the Queen from off Charleston, all on the 10th.

PHILADELPHIA NAVY YARD.

The *Galena*, which has been in the dry dock for some time past, undergoing repairs, was taken down and hauled to the south wharf, and the *Quaker City* was put into the dock and repaired. The *Memphis* received a part of her stores yesterday. She will sail on Saturday for the Gulf of Mexico, to relieve the *Richmond*, now at Pensacola, from New York, arrived yesterday morning, bides with stores for the ordnance department. The crew of the *Alliance* will be transferred to the *Richmond* to go into this service.

The *Tuscarora*, Commodore Wm. Reschendorff, sailed on the 15th with sealed orders.

VARIOUS NAVAL MATTERS.

The propeller *Albert Dupont* has been purchased by the Government. She is a substantial boat, named after Captain Dupont of New York.

A letter received in Boston, from Beaufort, says:—"The pirate *Gordon* was destroyed by the gunboat *Ellis Harbor*, in one of Wilmington, armed, awaiting a chance to run the blockade. There are eight United States vessels at present blockading that port."

The rebel steamer *R. R. Lee*, six days from Wilmington direct, arrived at Halifax, on the 13th inst., with 400 bales of cotton and turpentine on board. The *Lee* was chased by a Federal blockader, and has a shot hole in her.

A Fr. Hebon letter reports the capture of a Greek steer on the coast of Africa by the United States steamer *Mohican*, and the disposition of them will be sent to the West Indies, and 200 of the best of them have been selected for the use of the officers of the Mohican's Indian regiment. The barracoons on the coast are reported full of slaves, ready for shipment.

The Navy Department is still in great want of steamers. It is found that nearly one-half the vessels will have to be idle for a time for want of men. The pilot service will be resumed in the Government steamers, which will relieve a large bounty. The privateersy of some steamer has already accumulated to the amount of a single day at Key West last week amounted to over $60,000.

Charles H. Sanborn, of Boston, has proposed to the Navy Department to construct a submarine battery, similar to that lost. He and any or all other vessels sunk in or near the harbor of Charleston, S. C., will raise, if the Navy Department will allow him to do so, recovered, or will pay $5,000 for each of the above named steamers sunk in the harbor of Charleston, and will also pay for all materials except of all that may be recovered to some Court of Admiralty for adjudication of the amount to be paid for the same.

Steamer (Privateer) *Morse* has relieved the *Mystic*, doing guard duty off the harbor of Wilmington, N. C. She is a fine vessel, and will service on the Pamunkey river and tributaries last summer, and has at present with her the gunboat *Commodore Barney*, which is expected to join the fleet shortly. She was one of the early purchases of the Government, and has been in the service ever since. She is now a crew of about 100 men, officers. Her battery is very formidable, consisting of two 100-pounder rifled guns, and four 9-inch Dahlgrens, and two 12-pounder Dahlgren howitzers.

The midshipmen who returned in the steamer *Pocahontas* reported at the Naval Academy at Newport last Saturday. The Academy is in full operation, and the number of cadets is 400. The whole number of midshipmen on probation is 486. This does not include the first class, who graduated last June, and who will be detained here until the new service, being attached to different vessels as midshipmen. After graduating they will be sent to the Gulf, to the Academy, Annapolis, and to the European squadron, to Europe. The following are the first five in the first class:—Midshipmen Wm. Wise, Pennsylvania; Chas. Belknap, Pennsylvania; Wm. Conarra, Indiana; 4. William B. Hoff, Philadelphia; 5. Richard P. Leary, Kentucky.

A letter from an officer on the United States sloop-of-war *Kearsarge*, dated Rio, August 20, says:—"We arrived in the Boston *Journal*, 30 days ago. We are all ready for the pirate *Florida*, in the Straits, unless sharply and long bombarded by Monroe. We have had a good account of ourselves. But the French gunboat *Couleuvre* will receive the twenty-four boats of the *Florida*, and the *Kearsarge* and the *Tuscarora* and *Wachusetts*, at Southampton. This makes our retirement difficult, for the *Kearsarge* is the only fast sailer in the squadron, which is strongly defended, and difficult to force, not to mention half a dozen fleet sailers ahead of her. We are in for it at last, and we must be a long distance out, owing to the rocks and shoals which have abounded, and will be dangerous to approach in the night or dark night."

The steamer *Britannia*, which will be remembered was captured last winter by the *Santiago de Cuba*, and recently repaired at Boston, has arrived at Nassau, New Providence, and has left for her old stockade at Wilmington; but, having a green set of engineers on board, they neglected to keep the fire of her furnaces low, the consequence of which their becoming settled inside the plates, the fire burnt and destroyed what was left of the vessel. She is a total wreck, and consequently the ship was unfit for further service until proper repairs. The steamer *Britannia* was formerly the Cuban blockade runner of the *Dacotah*, commanding officer of the North Carolina squadron, which blockades Wilmington, and has captured many blockaders from the *Quaker City* and *Cambridge* in charge, ordered the pursuit of the ship by the steamer *Victoria*, and the steamer *Victoria* has just completed of Fleet Engineers Frank Gavitt of the *Minnesota*, Joseph Dalton of the *Ossipee*, and Thomas Gray of the *Susquehanna*, which vessels are ordered to the vessel to the Gosport Yard for repairs.

Off the Navy in the Gulf is doing a fine business. The British steamship *Alice Vivian*, from Liverpool, with a cargo of coal, for Mobile, was captured off the Rio Grande by the U. S. steamer *De Soto*, Commander Wm. H. Wilkins, and sent to Pensacola for adjudication. Also the British steamship *Cambridge* (under *Texas* from Mobile, off the mouth of the Mississippi. The *De Soto* has been very successful in the Gulf, and has captured, for a year vessel, at a cost of $70,000. She has on board 250 bales of cotton, and a valuable cargo. The following prize vessels are also at New Orleans, awaiting condemnation: Steamer *Rosemary*, from Nassau, with a cargo of arms; steamer *Antonia*, from Havana for Mobile—asserted cargo; steamer *Warrior*, from for Mobile—asserted cargo; schooner *Peace*, from Havana for Mobile—cargo, cotton; schooner *Caitlin B.*, from Havana for Mobile—asserted cargo; schooner *Ann Maria*, from Havana for Mobile—asserted cargo; schooner *Empire of Texas* coast, asserted cargo; steamer *William Bagley*, from Havana for Mobile—asserted cargo; steamer *Lizzie*, from Havana for Mobile—cargo, cotton; schooner *Peace*, from Havana for Mobile—cargo, cotton; schooner *Lizzie*, from Havana for Mobile—cargo, cotton; schooner *Fanguard*, taken off Ship Island—cargo, cotton.

NAVY GAZETTE.

ORDERS TO COMMANDERS.

GENERAL ORDER, No. 84.

U. S. Mississippi Squadron, Flag Ship Black Hawk, Cairo, Ill., August 20, 1863.

By Order 89 it will be seen that the River Mississippi is now divided into Districts, and that the command of a division of Gun-boats and Mortar Boats from Commanders are ordered to repair to any points they are to report to the Commanding Officer of the District in which they may be stationed, and to do their duty to report by first opportunity anything that may occur to them. Officers are to keep their vessels, and their engines, ready to proceed a short distance, above and below, and to prevent the passage of rebel troops or munitions of war across the river. Prize masts are required to be kept in proper position and ready to send for.

Generous good feelings with the inhabitants, and allow no impressments to be committed by officers or crew.

Pay particular attention to all general orders.

Watch all passing vessels. Boats are guns are on duty at all times, and see that they are kept in proper condition.

Make all reports to commander of division, who will sign all requisitions, &c., for if too far off, send all requisitions to Captain Pennock, at Cairo.

Notify the commander of division when short of coal and send steamers. If the station is too far from the commanding officer, report by letter, and officer in charge of station will be considered under command.

As the dispatch vessels go down, find out when they will return, and have the sick and their accounts ready to go up in her.

Send all deserters to the first vessel you will see at some Mosquito Hospital, without further order than that of the Commander.

Send contrabands to Cairo, if they wish to go, and if not, but fix as near their ready for anything. Be careful that torpedoes are not drifted down on you, and examine the bottoms of the vessels of boats. Never anchor exactly on the same place, but shift position often.

By Order of
Rear-Admiral Commanding Mississippi Squadron.

DISPOSITION OF THE VESSELS OF THE MISSISSIPPI SQUADRON.

General Order, No 89.

U. S. Mississippi Squadron,
Flag-Ship Black Hawk, Cairo, Ill., Aug. 19, 1863.

Owing to a change in the line of my command, and the additional length of River to be looked after, it becomes necessary to make a different disposition of the vessels.

From New Orleans to Donaldsonville, will constitute the First District.

From Donaldsonville to Red River, the Second District.

From Red River to Vicksburg, the Third District.

From Natchez to Vicksburg, the Fourth District.

From Vicksburg to Helena, the Fifth District.

From White River to Cairo, the Sixth District.

From Cairo to the Ohio River, the Seventh District.

From Cumberland River to its source, and the Upper Ohio, the Eighth District.

Each District will be under the command of Divisional Officers, who will be responsible to me for the vessels in their Districts.

The vessels in the Districts are not to be ordered away from that District by any superior officer, unless it be by me, when that a great emergency exists for doing so.

By Order
DAVID D. PORTER,
Rear-Admiral, Commanding Mississippi Squadron.

PRIZE MONEY FORFEITED.

Navy Department, October 6, 1863.

General Order No. 29.

In the case of the schooner *Prince Alfred*, captured by the U. S. steamer *Saugatuck*, September 6, 1861, and the schooner *San Juan*, captured by the U. S. steamer *Sumter*, October 12, 1861, the facts have not yet been forwarded to the Department, and the distribution of the prize money cannot be completed.

The Department therefore finds it necessary to declare that the time set down in the Prize Act of August 6, 1861, have ceased to be. Captain John A. Chanmey, who commanded the steamer *Saugatuck* at the time of the capture of the *Prince Alfred*.

The "Act for the better government of the United States," approved April 23, 1800, provides that

"The commanding officer of every ship or vessel in the Navy, who shall neglect or refuse to use his utmost endeavors, shall carefully preserve all the papers and writings found on board, and transmit the same to the Secretary of the Navy, shall forfeit all his share of the prize money."

Such forfeiture is ordered to be enforced, and shall transmit to the Navy Department the facts in the case, necessary to pay the prize money to the officers and crew of the vessels who are entitled to a share of the capture, inserting therein the quality of vessel, the number and rating of officers and crew, and the gross money resulting from such capture, and suffering such further delay as may arise in a court-house shall adjudge.

A similar law, providing the same penalty for the failure to transmit prize lists to the Navy Department, was passed "for the better government of the Navy of the United States," approved July 17, 1862.

The Department has no discretionary power to remit this forfeiture. Its duty is enjoined by the statutes, and it is the duty of the officer to see that the law has been violated, and its purpose defeated, and that the officers and crew of the vessels are suffering the consequences of a culpable neglect by their commanding officer of a duty so important.

Its powers to create a court-martial with a view to the further punishment of the officer responsible for neglect of duty is suspended by exercise the power. But it trusts that this example of a faithful enforcement of the law, in the case of the schooner *Prince Alfred*, will have the effect of preventing similar neglect of duty on the part of commanding officers making captures.

GIDEON WELLES,
Secretary of the Navy.

REGULAR NAVAL SERVICE.

DETACHED.

Lieutenant Commander H. Walker, from the *Constellation*, and ordered to report to the *United States*.

Chief Engineer Thomas Williamson, from the Board of Examining Engineers, and ordered to the *Hartford*.

Second-Assistant Engineer Edward W. Rogers (sick), from the *Canandaigua*, and awaiting orders.

Boatswain Thomas Hogan, from the *Atlanta*, and ordered to return to the *Vermont*.

Acting-Assistant Paymaster Geo. W. Carrick, from the *Pocahontas* (sick), and granted one month's leave of absence.

Lieutenant J. P. Robertson, from the Asylum, Philadelphia, and ordered to the *Wabash*.

Lieutenant-Commander Samuel Magee, from the command of the *Pioneer Frederica*, and ordered to command the *Commodore Read*.

Commander Thomas Craven, from the *Wachusetts*, to the *Sabine*, and awaiting orders.

Lieutenant-Commander J. C. Beaumont, from the command of the *Nantucket*, and ordered to duty in the South Atlantic Blockading Squadron.

Lieutenant-Commander Joseph Fyfield, from the *Niagara*, and ordered to duty at the Navy Yard, New York.

Lieutenant-Commander Wm. Gibson, from the Naval Academy, and ordered to command the *Nantucket*.

Lieutenant Wm. N. Jeffers, from the *Sabine*, and waiting orders.

Lieutenant Wm. Conner, from the *Sabine*, and awaiting orders.

Paymaster Geo. E. Turner, from the *Sabine*, and waiting orders.

Paymaster Wm. Gates, from the *Vermont*, to the *Sabine*.

Surgeon Edward Shippen, from the *Sabine*, and awaiting orders.

Surgeon Wm. Gardner, from the *Sabine*, to the *Vermont*.

Surgeon Wm. Carpenter Wm. Carpenter Wm. Carpenter Wm. D. Jenkins, and Salmuker Jones, from the *Sabine*, and awaiting orders.

Ensign Henry J. Blake, from the *Sabine*, and ordered to the *Vermont*.

First-Assistant-Engineer Thomas S. Cann, from special duty at New York, and ordered to the *Sabine*.

First-Assistant-Engineer James R. Rosston, from the *Roanoke*, and ordered to the *Sabine*.

Gunner Elijah Haskell, from the *Saratoga*, and ordered to the Naval Magazine at Port Royal, Gunner Benjamin Bunker, detached and waiting orders.

ORDERED.

Third-Assistant-Engineer Charles F. Staples, to the *Penobscot*.

Third-Assistant-Engineer Charles H. Hall, to the *Canandaigua*.

Commodore Thomas Turner, to special duty at New York.

Ensign Henry M. Hoyt, to the South Atlantic Blockading Squadron.

Acting-Assistant-Surgeon Wm. Harris, preparatory orders for Chicago Rendezvous.

Gunner Stephen Young, to the *Saratoga*.

RESIGNED.

Henry W. Speiss has resigned his appointment as midshipman at the Naval Academy.

ORDERS REVOKED.

Paymaster George Plinkener orders to the *Vandalia*.

ORDERS REVOKED.

Midshipman Wm. H. Whiting, promoted to the grade of Acting-Ensign, and ordered to the steamer *Hartford*.

Midshipman Douglas H. Cassel, to the grade of Acting-Ensign, and ordered to the *Pembina*.

DEATHS.

Deaths in the Naval Service, reported during the week ending October 10, 1863:

Joseph D. Lisle, Paymaster, yellow fever, September 25, U. S. steamer *Pocahontas*.

Henry C. Bassell, Third-Assistant-Engineer, pernicious fever, September 21, U. S. steamer *Richmond*.

Fred. K. Whitlock, Paymaster's steward, pernicious fever, September 28, U. S. steamer *Hartford*.

Joseph Mollet, Third-Assistant-Engineer, pernicious fever, September 21, U. S. steamer *Richmond*.

James Lee Carrigue, Third-Assistant-Engineer, yellow fever, September 24, U. S. steamer *Pocahontas*.

Washington Taylor, contraband, yellow fever, September 24, U. S. steamer *Pocahontas*.

James D. Manning, Acting-Ensign, gastritis, September 29, U. S. steamer *Courier*.

Edward Finn, coal heaver, pneumonia, September 24, Naval Hospital, New York.

Peter Hughes, marine, congestion, September 25, U. S. steamer *Fig*.

Wm. F. Hemsworth, Third-Assistant-Engineer, remittent fever, August 26, U. S. steamer *Narragansett*.

Frank Lewis, seaman, remittent fever, August 8, U. S. steamer *Narragansett*.

Jackson Quick seaman, congestion, September 21, Naval Hospital, New York.

John George coal heaver, remittent fever, September 28, Naval Hospital, New York.

James Portevans, Acting Master's Mate, September 28, U. S. steamer *Tulip*.

John Tye, boatswain's mate, gunshot wound, September 1, U. S. steamer *Commodore Barney*.

Eph. Brown, ordinary seaman, consumption, August 20, U. S. steamer *Vermont*.

Thomas Fitzgerald, seaman, consumption, Naval Hospital, New York.

John Rainsford, seaman, desmenth and drowned, Naval Hospital, New York.

James K. Jones, landsman, meningitis, Naval Hospital, New York.

Henry Moore, landsman, pneumonia, Naval Hospital, New York.

James H. Faulkner, landsman, pneumonia, Naval Hospital, New York.

George W. Clark, first cabin boy, typhoid fever, Naval Hospital, New York.

John Jones, coal heaver, typhoid fever, Naval Hospital, New York.

Fred. McMullen, marine, delerium tremens, Naval Hospital, New York.

Charles W. Peck, Acting-Assistant-Surgeon, yellow fever, September 24, U. S. steamer *Pocahontas*.

James Johnson, seaman, enlargement of heart, U. S. steamer *Tempest*.

Alonzo S. Howes, seaman, emphysm, U. S. steamer *Penguin*.

Alfred B. Gregory, Master's Mate, pistol shot, September 24, U. S. steamer *Wyandank*.

U. S. COAST SURVEY.

NOTICE TO MARINERS—ATLANTIC COAST—APPROACHES TO PORTLAND HARBOR.

The following rocks, not upon any chart, have been surveyed by Lieut. Commander Edward P. Phelps, U. S. Navy, Assistant U. S. Coast Survey:—

1. Ram Island Rock, 24 feet water. Portland Light-house, N. W. nearly, distant 1¾ miles. Middle of Ram Island, N. N. W., distant 1¼ miles.

2. Willard's Rock, 21¾ feet water. Portland Light-house, N. W. by N. ¾ W., nearly, distant 2¼ miles. Ram Island Ledge Light-house, S. W. by S. ¾ S., distant 2¼ miles. Trundy's Reef Buoy, N. W. by W., distant 1¾ miles.

3. West Cod Ledge, 21 feet water. Portland Light-house, N. W. by W. ¾ W., distant 2¾ miles. Ram Island Ledge Light-house, S. W. ¾ S., distant 2¾ miles. Alden's Rock Buoy, S. W. by W., distant 1¾ miles.

4. Cowan Rock, 24½ feet water. Portland Light-house, N. W. by W. ¾ W., distant 2¾ miles. Ram Island Ledge Light-house, S. W. by W. ¾ W. distant 2¾ miles. Alden's Rock Buoy, S. W. by W., distant 1¾ miles.

5. West Bass and Coy Rocks, 27 feet water. Cape Elizabeth East Light-house, N. W. by W. distant 3¼ miles. Bare on Richmond Island, N. by E. ¾ E., distant 3¾ miles. Alden's Rock Buoy, N. E. by N. ¾ E., distant 3¼ miles.

6. Richmond Island Rock, just above water. Bare Richmond Island *fairies* boat water on it. The spot is not dangerous. The distances are in nautical miles. The depths are from low water.

Coast Survey Office, Sept. 15, 1863. A. D. Bache, Superintendent.

The following casualties among officers occurred during the recent cavalry fight on the Rappahannock:

Killed.—Captain John Pierce, 6th New York Cavalry; Major Van Voorhies, 18th Pennsylvania Cavalry; Captain Wm. Conrad, 6th New York Cavalry; Captain Grinton, 6th New York Cavalry; Captain Dodge, Co. C, 6th Michigan Cavalry.

Wounded.—Captain Downing, 2d Artillery, badly; Captain David Oliphant, Co. B, 6th Mich.; Captain R. Fiegerbush, Co. A, 6th Mich., severely; Adjutant J. Lansing, 6th New York Cavalry; Lieutenant D. E. Chaffee, 6th Regulars; Lieutenant-Colonel Crocker, Inspector-General, upon General Pleasanton's Staff, shot through the thigh; Major A. Paloti, 1st Michigan; Surgeon Forward, 6th United States; Captain W. F. Dye, 6th New York; Captain Dimmick, 6th New York; Lieutenant W. Atkins, Co. D, 6th New York; Lieutenant G. A. Eddy, Co. A, 6th Michigan; Lieutenant Wm. Bennett, Co. B, 6th Michigan; Lieutenant F. Bly, Co. M, 9th New York; Lieutenant A. C. Robinson, Co. F, 9th New York; Colonel Sawyer, 1st Vermont; Captain Wm. Conrad, 6th New York, was wounded and taken prisoner; Captain Rhodes and Lieutenants Prentiss and Vose, of 1st Rhode Island Cavalry, were seriously wounded.

The following is a list of the officers of the U. S. Revenue-Cutter *Jackson*, which is doing guard duty at Baltimore, together with a list of vessels boarded by them during the month of September:—Captain, S. Cornell; Second Lieutenant and Executive Officer, H. D. Hall; Third Lieutenant, W. S. Simmons; Boatswain, C. Olive; Gunner, M. O'Donnell; Carpenter, B. Long.

Vessels Boarded.—Ships, 4; Barks, 15; Brigs, 17; Schooners, 326; Sloops, 94; making a total of 1,023 of all classes.

Lieutenant Mat. Sievers, of Battery A, First Virginia Light Artillery, has been sentenced by a Court-Martial at Camp Barker, Washington, to be dismissed the service. The President has approved the sentence.

GOVERNMENT AND PRIVATE ARMORIES.—In addition to the large number of muskets manufactured at the Government works in Springfield, and which amount to upward of three hundred thousand per annum, there are a vast number of private establishments throughout the Northern States, which turn out from two to five thousand muskets per month each, exclusive of rifles. These various manufactories are situated at Hartford, Norfolk, Windsor Locks, Norwich, Middletown, New Haven and Winchester, Ct.; Providence, R. I., Manchester, N. H., Windsor, Vt., Trenton, N. J., Hoboken, Newburgh, New York city, Williamsport and Lock Haven, N. Y. Besides these, there are more than fifty establishments where separate parts of muskets and rifles are manufactured in large quantities, and purchased by Government to supply the places of the large number destroyed in the service. It is estimated that the private armories alone now are manufacturing monthly upwards of one hundred thousand stand of arms. The Government contracts for these arms extend to January next, and the total number of muskets will then have been produced will be enormous. The cost of manufacturing a musket at the Government works is estimated at about $9; but the contract price to the private arms companies is $20 for those which equal the Government standard in every respect, $19.99 for those which lack a little in finish, $19 for the next grade, $18 for the next, and $16 for the lowest and poorest which are accepted.

As the arms are finished, they are sent away to the various Government arsenals, principally made in New England to Watertown, Mass., where they remain until the exigencies of the service require them. At the present time, there is a sufficient number of new rifled muskets of the best quality on hand to fully equip all regiments to arm the entire levy about to be called into the field, and should the war continue so long, there will be enough manufactured during the next twelve months for a new levy of over one million of men. These arms, it must be remembered, are entirely independent of those ordered by the respective State governments, to which would be the amount very largely.—*Atlantic Monthly.*

THE FATE OF AN INVENTOR.—In a letter to the *Times* attention is called to a death which occurred a few days ago in an obscure street in Newport, Monmouthshire—that of Mr. Thomas Baldwyn Rogers, formerly of Nant-y-glo. He died in the deepest poverty, although the one or of iron rollers for puddling furnaces, now universally adopted in the iron trade, and which have realized immense fortunes for others. His invention was not patented, and so far from receiving reward, he was dismissed from his employment at a large iron-work in South Wales on account of his having committed the indiscretion of having invented an extraordinary piece of iron metallurgy. When the distressed condition of the poor old man became known, a subscription was opened for his immediate relief, and efforts are now being made in South Wales to save her from the same wretchedness.

PLAN FOR FILLING UP DEPLETED REGIMENTS.—Governor MORTON, of Indiana, has submitted to the War Department the following plan for filling up the depleted regiments of three years volunteers:—Certain members of old regiments, say one for each Congressional District, are to be detailed to recruit the numbers or the oldest in organization, and these detailed officers will re-enlist for three years, shall be brought home to recruit, the officers and men to be furloughed for such time as the Governor of the respective States may determine, for the purpose of recruiting for their respective regiments. At the expiration of the term of furlough, the regiments shall be returned to the field, and a like number of old regiments in service, organized in like manner and recruited, the men who enlist to be mustered out at their first terms of enlistment have expired, receiving $100 bounty for their services and $402 bounty awarded the veteran regiments for future service. This plan will place the regiments organized in the field as regards the bounty, on the same footing with those of 1862.

THE young Duke de Penthièvre, son of the Prince de Joinville, lately paid a short visit to Washington previous to his departure for Europe. The young prince made a cruise in honorary rank on board of the United States ship *Macedonian*, and exhibited so precocious a proficiency in as not yet seventeen years, that Captain Gillis appointed him sailing-master, and as such he exclusively and successfully brought the frigate into Cork Harbor, Ireland. His object in visiting Washington was to take leave of the President and undergo his final examination for lieutenant, for which purpose a special board was appointed, composed of Admirals Hull and Smith and Commodore Craven. The result of the examination was extremely satisfactory. The Duke stepped during his visit to the house of the Spanish Minister, who on the evening previous to his departure entertained at dinner, in honor of his distinguished guest, the Secretaries and Assistant Secretaries of State, War and Navy and the officers who had examined him.

MR. DAVID WILLIS, agent for the Executors of Pennsylvania, announces that the arrangements are nearly completed for the removal of the remains of the Union soldiers who fell at and near the Gettysburg battle-field to the burying-ground which is being prepared by the several States interested for their repose, and for proper burial. All the dead are to be removed, and those who died buried in collins and buried, and the graves of those marked or known will be carefully preserved, and those marked in this soldiers' cemetery. It it is the intention of the friends of any deceased soldier to have the remains taken to their homes, they will have to make known the design immediately to Mr. WILLIS, whose address is Gettysburg. Those who desire to do so in this way will be very desirable not to disarrange the order of the graves. Rewards are offered for the recovery of body lists.

The Board will deliver the oration on the consecration of the national cemetery, on the battle-field of Gettysburg, on the 19th of November next.

OUR BIG GUNS.—Speaking of the bombardment of Charleston, and the destruction of Sumter by our guns, the London *Times* says:—"It is quite clear, and that fort, and the shelling of Charleston from five miles' distance, the London *Telegraph* adds:

"If the Americans are vain of being 'big,' why not do them the justice of confessing that they are also 'big' in their cannon? Considering their sufferings and their engines and methods of warfare." Twice in the course of this tremendous struggle they have created the complexion of the science of destruction—once on the water and once by land."

MARRIED.

[Announcements of marriages and deaths should be paid for at the rate of fifty cents each.]

WEBB—WEBSTER.—On Thursday, Oct. 8, at All Saints, Brighton, England, by the Rev. Mr. Lee, Capt. ISAAC PEIRCE WEBB, U. S. A., 3d Mass., daughter of Mr. Robert Webster, of Boston, Mass.

HOWE—PIERCE.—In Pembroke, Mass., Oct. 7, by Rev. Mr. Hatch, Lieut. THOMAS PIERCE HOWE, 2d Mass. Cavalry, and Miss FRANCES PIERCE.

KANE—BLAINE.—October 7, U. P. KANE, U. S. N., to MISS ANNIE G. BLAINE, all of Boston.

WHITE—CRAIG.—In New York, on Monday, Oct. 12, at the house of the bride's father, by the Rev. Dr. Cheever, Lieut. COLONEL THEODORE WHITE, U. S. Army, to CORA, daughter of Gen. Louis Craig.

WHITE—HOWARD.—In Boston, Oct. 14, by the Rev. J. Cummerman, Capt. P. R. WHITE to MISS MAGGIE B. STEW-ART.

WRIGHT—BENEZET.—In New York, on Thursday, Oct. 8, by the Rev. Dr. Vinton, Capt. H. WRIGHT, of Indiana, to MISS ELIZABETH BENEZET, daughter of the late Gen. A. G. BENEZET, of New York.

WOOD—BIDDLE.—In Philadelphia, on Wednesday, the 7th inst., by the Rev. THOMAS G. ALLEN, Mr. WILLIAM HENRY WOOD, of Boston, to MISS MARY BIDDLE, daughter of the late Capt. JAMES BIDDLE, of the U. S. Navy.

WOOD—BIDDLE.—In Philadelphia, on Wednesday, the 7th inst., by Rev. George Bringhurst, Rector of St. Paul's, Mr. WILLIAM WOOD, of Boston, to MISS MARY HERBERT, daughter of Philadelphia.

THOMAS—FEAR.—In Washington, on the 7th inst., at St. John's Church, by Rev. Dr. Pyne, Lieut. ALFRED L. THOMAS, U. S. Navy, to ANNIE E. FEAR, of Georgetown.

DIED.

CATHER.—In Washington, on the 8th inst., in the 8th year of his age, CHARLIE, youngest son of the late Capt. E. A. CATHER, U. S. Army.

CATHER.—In Washington, on Thursday, Oct. 8, Major WILLIAM CATHER, Assistant Quartermaster U. S. Army, late of Logansport, and Springfield, Ohio.

CLARK.—At Mount St. James Hospital, New Orleans, on the 6th inst., Private HORATIO CLARK, Co. B, 2d Regiment, Cavalry of Wisconsin, Mess. Captain in the 8th Regiment, Corps d'Afrique, Gen. Ullman's Brigade, aged 22 years.

INCOMPARABLY the best Book about the War.—*Washington Chronicle.*

A FAITHFUL PICTURE of the Soldier's actual daily Life in the Camp, the Fight and on the March.—*Christian Inquirer.*

THE BIVOUAC AND THE BATTLE-FIELD;

OR,

CAMPAIGN SKETCHES OF VIRGINIA AND MARYLAND.

By CAPTAIN WILLIAM F. NYE.S.

12mo., cloth, $1.25.

☞ HARPER & BROTHERS will send this work by mail, postage free, to any part of the United States, on receipt of the price.

Captain Noyes' "Bivouac and Battle-field" is a record of the personal experiences of one of Gen. Doubleday's first staff officers. Virginia, and so deeply and pathetically that the reader will at once comprehend the daily routine of a soldier in active service. It is full of anecdotal incident and of striking descriptions, and is a most delightful and attractive volume.

From the Christian Inquirer.

We have seen no account which conveys so fully and faithfully the soldier's actual daily life in the camp the fight and on the march. * * * There is a genuine flavor of camaraderie and soldier-like spirit in the tone which will recommend it to those fellowship with the subject. The book contains also a few humorous side of camp-life given the book a spirit more than ordinarily attractive to the general reader.

From the Philadelphia Inquirer.

The battle pictures are very fine, and the philosophic comments are admirable.

From the Portland Transcript.

His pictures of campaigns are the most vivid we have seen. * * * The Valley campaigns of the army of South Mountain is a remarkable specimen of word painting.

From the Washington Chronicle.

Encompassing the best book we have yet seen on the war and its results. It is full of incident and is intense interest, and have learned more from it of what we have seen and heard than from anything recorded learn from books. So complete is the spirit of truthfulness that pervades it, we cannot doubt the author and we are glad that he saw, and almost felt all that he tells.

SURGEON-GENERAL'S OFFICE,
WASHINGTON, October 15, 1863.

An Army Medical Board will meet in the city of New York, on the 16th instant, for the examination of candidates for admission into the Medical Staff of the Regular Army.

Applicants must be between 21 and 30 years of age, and graduates of medicine.

Applications must be made to the Secretary of War through the Surgeon-General of the Army, at the residence of the applicant, and the date and place of his birth, and the names of two responsible and respectable testimonials of moral character.

No allowance is made for the expenses of persons undergoing the examination, as it is an indispensable requirement of law.

There are now several vacancies in the Medical Staff of the Regular Army.

By order

C. H. CRANE,
Surgeon U. S. Army.

NEW YORK.

TREASURY DEPARTMENT, OF.
OFFICE OF THE COMPTROLLER OF THE CURRENCY.
WASHINGTON, August 19th, 1863.—Whereas, by satisfactory evidence presented to the undersigned, it has been made to appear that the Second National Bank in the city of New York, in the county of New York and State of New York, has been duly organized under and in conformity to the provisions of the act of the 3d of February, entitled "An Act to provide a national currency, secured by a pledge of United States stocks, and to provide for the circulation and redemption thereof," approved February 25, 1863, and has complied with all the provisions of said act required to be complied with before commencing the business of banking:
Now, therefore, I, Hugh McCulloch, Comptroller of the Currency, do hereby certify that the said Second National Bank of the City of New York, County of New York, and State of New York, is authorized to commence the business of Banking under the said act aforesaid.
In testimony thereof, witness my hand and seal of office, this thirteenth day of August, 1863.
[SEAL.] HUGH McCULLOCH,
Comptroller of the Currency.

U. S. FIVE-TWENTIES.
The undersigned, as General Subscription Agent, is authorized by the Secretary of the Treasury to continue thereof at this popular Loan, and Taxes, which yields so large a proportion of the Revenue. At about two hundred millions subscribed, and this amount is rapidly increasing. It is quite within the circulation of the National Banking Associations now being formed in every part of the country. But short time must elapse before this loan is wholly absorbed, the demand from Investors increasing especially—being quite active.
As it is well known that the Secretary of the Treasury has ample and unfailing resources in the shape of an ample annual revenue, and the whole faith of the most bearing Legal Tender Treasury Notes, it is nearly certain that it will not be necessary for him, for a long time to come, to issue further permanent bonds, for therefore, the whole faith of the people is God.
These considerations must lead to the prompt conclusion that the time is not far distant when these "Five Twenties" will be at a premium, and those who subscribe for the result with the "Seven-Thirty" Loan, when it is all out, and could no longer be subscribed for at par.
Take it.

SIX PER CENT. LOAN.
the interest and principal payable in coin, thus yielding about 8¼per cent. per annum, at the present premium on gold.
It is called "Five-Twenty," from the fact that while the Bonds may run for twenty years, the Government has the right to pay them off on or after five years, if they see fit.
The interest is paid half yearly, on the first days of November and May.
Subscribers can have Coupon Bonds, which are payable to bearer, or Registered Bonds, which are transferable only on the Bonds of similar denominations; but in addition Coupons.
These "Five-Twenties" cannot be taxed by States, Cities, Towns, or counties, nor by the General Government, to a higher rate than 6 per cent. on the amount of income, when the income from all sources is more than $600 per annum. Consequently, all other investments, such as mortgages, railroad stocks, bank stocks, and from them to five per cent. on the capital invested.
Banks and Bankers throughout the country will continue to dispose of these Bonds on the same terms by or otherwise properly attended to.
The Treasury Department has perfected such arrangements for the prompt delivery of Bonds, subscribers may be assured that they will be delivered to them on or within ten days. The arrangement will be found to be quite satisfactory to the subscribers, as well as the Government.
JAY COOKE, Subscription Agent,
No. 114 South Third Street,
PHILADELPHIA.

UNITED STATES
ARMY AND NAVY JOURNAL;
A WEEKLY NEWSPAPER, DEVOTED TO THE INTERESTS OF THE ARMY AND NAVY, AND TO THE DISSEMINATION OF CORRECT MILITARY INFORMATION.
THE ARMY AND NAVY JOURNAL is established in the United States to supply, it will be conducted by no clique. Its columns will be open to all. Its independence of sectional and political bias, its influence will be directed solely to the maintenance of the honor and glory of the Army and Navy, and the defense of the public service in all its departments. Its aim will be to secure to the honorable soldier and sailor every competent authority, and to the country every competent subordinate, in the discharge of the duties of their several offices, to the degree of the ascertaining, and to the full and reliable record of all exploits of interest and value in any war undertaken by the United States, or in which we are interested in the act of war. The Departments of the Government, as well as Congress, in their association with maritime operations, will receive adequate attention to this element in the history of nations; and our Commercial Marine will also have an appropriate record. Annual subscribers will receive copies of the JOURNAL without stamps from week to week.
The JOURNAL will contain, if satisfactory occurs in all parts of the world of value to our Army and Navy, and to the country, and to assist in the defense of every place in all its parts, and communications on any subject within its province are at all times hereby invited. Those interested in the Art of War. It shall be the aim of the JOURNAL to make it such as to be welcomed in Military and Naval quarters, but at the same time a journal for the people, lively, pictorial, which will be read with interest by the families and friends of those connected with the Army and Navy, and by the great body of the reading community.
The importance which Military and Naval affairs have assumed in the United States, and the imperatively demands that they should have in the press a journal which shall represent them, and which shall exercise an influence in the discussion of subjects connected with the Military and Naval Establishments of the country, similar to the National Union, shall commend itself to the public as a journal of the first class, and shall receive a liberality in every line, forward, hospital and warlike. In a word, the JOURNAL is intended to become a needs a demand, and it shall be the purpose of the proprietors of the JOURNAL to spare no expense which will be found to recognize as their organ, and which shall be worthy of the support of the Army and Navy of the class in the world. Arrangements for efficient and regular correspondence with the most important writers on Military and Naval affairs in the United States and Europe have been effected, and much space is still secure to the JOURNAL early and complete returns of Military and Naval matters.
From the numerous expressions of approval the ARMY AND NAVY JOURNAL has received, the following will be selected as the following:
From Major-General GEORGE G. MEADE,
Headquarters Army of the Potomac,
Washington, D. C., Oct. 6, 1863.
I have received several numbers of the ARMY AND NAVY JOURNAL, and have been much pleased with it. I believe they bear of the promise of usefulness in this journal to the military and naval service, which will be read with interest, and I therefore herewith enclose the subscription for one year.
Very respectfully, your obedient servant,
GEO. G. MEADE, Major-General Commanding.
From Brig.-Gen. R. B. CAMPBELL, *Commanding Department of Kansas.*
"It would seem that the country requires such a paper, and I trust it will receive the support which its merits deserve. I very best wishes, military and naval, in the Republic. A paper like the ARMY AND NAVY JOURNAL is much needed, and I hope it will receive the full measure of success which its enterprise."
From Brig.-Gen. JAMES F. CURTIS, *Commanding 3d Army Corps.*
"I trust the ARMY AND NAVY JOURNAL will be a success."
From Major-General JOHN G. BARNEY, *Second Division 16th Army Corps.*
"I am pleased with the ARMY AND NAVY JOURNAL, and wish it success."
From Major-General JOHN A. DIX, *Commanding Department of the East.*
"I am pleased with the ARMY AND NAVY JOURNAL, and wish it success."
From Major-General JOHN E. WOOLEY, *Second Division 16th Army Corps.*
"I am pleased with the ARMY AND NAVY JOURNAL, and wish it success."
From Brig.-Gen. ROBERT C. BUCHANAN, *Commanding Department of the Ohio.*
"I am pleased with the ARMY AND NAVY JOURNAL, and wish it success."
From Prof. H. COPPÉE, *University of Pennsylvania.*
"A paper of the character of the ARMY AND NAVY JOURNAL is formerly silent while my knowledge has been a failure; but now I am pleased to find it a brilliant success. It is full of interesting intelligence and official information—its excellent scientific articles, and its literary merit, all combine to make it a paper of great value. I wish it success, both as a paper, and as a literary adjunct, and pray you continue to send me your publication."
From WILLIAM H. RUSSELL, *Correspondent of the London Times.*
"Of the numerous notices of the newspaper press, we have room only for the following:
